Mr. PASTORE. Mr. President, on Thursday, March 23, 1961, my colleague from Rhode Island addressed the National Civil Liberties Clearing House in Washington, D.C. The subject of his remarks was "Liberalism's Responsibility" and I ask unanimous consent that my colleague's remarks be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

LIBERALISM'S RESPONSIBILITY

(Speech by Honorable Claiborne Pell of Rhode Island, before the National Civil Liberties Clearing House, March 23, 1961, Washington, D.C.)

Ladies and gentlemen and those interested in civil liberties—and I don't believe that these are mutually exclusive terms—I am indeed glad and honored to be here with you this evening. First, as a brandnew Senator, ranking 100th out of 100, I would like to briefly assure you of being a bona fide liberal. I have been arrested three times by Communist officials and three times by Fascist officials; a nice liberal balance.

The theme I would like to go over with you today is to show how illiberal we liberals can sometimes become. The maxim I want to underline this evening is a very old-fashioned one indeed: "What is sauce for the goose is sauce for the gander."

By this I mean we must be dedicated to our liberal traditions, even when such dedication would appear to go against our short-term interests, or, at first glance, produce results that go against our liberal grain.

At this point, we should examine the definition of a liberal. To my way of thinking, the best definition of a liberal is a person with an open mind—that is why there can be liberal Republicans as well as liberal Democrats. The success of the open mind, which permits constitutional change without revolution was best shown in the past century by the triumph of the liberal tradition in Britain, which produced the great reform bills in that country.

The liberal tradition means that we must protect the rights of those who urge causes which we may abominate. The statement attributed to Voltaire, "I disapprove of what you say, but will defend to the death your right to say it," might well be our guide.

The long experience of mankind indicates that the restless groping thinker is as necessary to the growth of ideas, as is the honeybee to the pollination of flowers. Of course, every democratic society has its crackpots, its lunatic fringe, its subversives, most of whom make no impact whatsoever upon a civilization. The reason is that just as a better version of the truth will supersede the previously accepted, so the nonsensical will be discarded.

Truth crushed to earth will rise again; a lie or a false theory, though raised to the skies, will fall, in the end, of its own lack of susbtance.

Mr. Justice Holmes called the exchange of men's thoughts "the free market of ideas." It is the consecrated purpose of the first 10 amendments to preserve and protect the rules of fair trading in that market of fair play. And in that course, not delude ourselves into believing that we are self-righteously dispensing the boon of a society so strong that can dispense small favors. A new world is upon us, with new frontiers which expand at the speed of electricity and spaceships. We shall have to stretch our minds, our senses, our spirits, and our hearts to encompass the new world forming. Our old concepts will need considerable review, and we will not further our effectiveness by precluding full consideration of every thesis, no matter how novel or painful. The absolute necessity for entertaining painful criticism has been recognized by even the most stable of institutions. St. Benedict, in discussing the methods of conducting a monastery, once declared, "If a pilgrim monk come and should reasonably, modestly, and charitably censure or remark upon any defect, let the abbot consider the matter precedently, lest perchance the Lord have sent him for this very end."

But, just as you can get upset with those you love—your parents, your spouse, or your children—so, too, I find myself disturbed when I find friends, calling themselves liberals, who show as closed a mind as those they criticize.

I believe that the very essence of the liberal way is to provide for its own continuous self-criticism. The liberal way reaches its peak, not as a recital of the status quo, but as a means of making conditions better. It means that we cannot benefit by our mistakes, unless they are identified and frankly discussed. Let us look at the truth, however painful it may be.

For instance, we liberals must and do oppose a man being denied any position of honor or trust on account of race, color, or creed. Neither, however, should a man be given preference for a particular office because of race, color, or creed. Public office of any kind should not be assigned on a de facto proportional representation based on race, color, or creed. I am not blind to the fact that such de facto political arrangements exist, but I believe that liberals, given their strong desire to see minority groups afforded equal opportunities, should not fall into the trap of urging that a person be given preference for a position because of his creed, color, or country of ancestral origin. We politicians are sometimes guilty in this respect when we put together, or even seek office on the theory of the "ethnic balanced ticket."

We have pointed, and justly, to the shocking abuses of segregation by law in Southern States. But can anyone doubt that economic segregation in effect at least as cruel exists in the Northern States? And how many liberals sign restrictive covenants when they buy a house?

The United States to a Negro, or even to a Jew does not yet have the fullness of opportunity that it should. Just the other day, I noticed that our new Secretary of State, Dean Rusk, bought a house in Washington, and, in buying it, he refused to sign a covenant committing him when he sold it not to sell it to any non-Caucasian, i.e. a Jew, a Negro, or an oriental. Because our Secretary of State refused to sign this covenant, and was merely putting into his personal life our supposed beliefs, it made headline news around the country. What is even more significant is that the Supreme Court has ruled that these covenants are illegal and unconstitutional.

Actually, when Dean Rusk and I were working together in the Department of State some 15 years ago, I can recall that the only place where we could eat with our colleague, Dr. Ralph Bunche, was in the Union Station cafeteria. Even the official State Department cafeteria was segregated at that time.

So, while the United States seems full of opportunity to many of us, and to our children, it really does not seem to offer the same full open doors to all our citizens.

The very word "liberal" has become a bit tarnished. I know in my own campaign I sometimes found myself even leery of the word "liberal." In fact, I characterized myself as a forward-thinking Democrat. The reason for the lack of popularity of the term "liberal," an adjective that 20 or 30 years ago carried with it the highest connotation of fine, good thinking, is partly the acquisition of rigidity and the performance of illiberal acts by so many of we liberals.

Some of the finest words in the English language are to be found in the definition of the word "liberal"—"large and noble way, generous, bounteous, openhanded, ample, free from restraint, not narrow or contracted in mind, broadminded."

In a discussion on philosophy, by its very nature, it must be personal. One's own experiences and environment mold and frame the individual. Therefore, I ask your indulgence tonight in talking from a very personal point of view.

I mentioned a moment ago my belief that no man should be given preference for public office by virtue of race, creed, or ancestral origin. Actually, I have vested interest against proportional representation on any such basis. I was a member of a minority in my State primary campaign, and many people thought because of this my chances of election were not too good. Yet this factor was scarcely mentioned, and the people of Rhode Island were kind enough to make me the first unendorsed candidate for a statewide office to win a primary in the history of our State. And, in the November general elections, they gave me the largest plurality in the history of our State. Why? It seems even stranger when you realize that earlier in the primary, my party leadership voted against me 30 to 1, the labor unions twice supported my opponent, and even highly respected polls portrayed me as being defeated in the primary by a margin of 4 to 1.

The answer, to my mind, lies in a bit of history and in our liberal tradition. The first settlement in my State of Rhode Island—Providence—was founded by Roger Williams in 1636 in the spirit of real religious tolerance. One of the first actions of the settlers of Providence was to provide for religious liberty and complete separation of church and state. In his most celebrated work, "The Bloody Tenent of Persecution," published in 1644, Roger Williams asserted that "God requirith not an uniformity of religion," and held that pagans, Catholics,

and Jews had a natural right to religious liberty. During Roger Williams' presidency of the colony, Jews and Quakers were welcomed to Rhode Island. Rhode Islanders are proud to have the oldest Jewish synagogue in America located in my own home city of Newport.

But even the tolerance established in early Rhode Island on occasion was found lacking. Even then there was room for improvement, as it was not until February of 1783 that Roman Catholics were given political privileges, and Ann Hutchinson, having fled from Boston, was unable to stay on in Rhode Island and departed for Connecticut. Then, she continued to live and practice her tolerance until scalped by a local Siwanoy Indian Sachem, called Wampage. And here, parenthetically, I must add that my own eldest daughter is called Wampage, for this very Wampage was my own direct forbear. And so, I guess I, too, am guilty and should hang my head in shame since this forbear of mine literally scalped the Liberal tradition.

In any event, as I worked and fought in my political campaign, I came to realize how deeply ingrained was the liberal tradition in my State, real liberalism, not skin-deep liberalism. All our children had been taught and had absorbed this liberalism in their schools, public or parochial. If my State had not been liberal-minded, or open-minded, I, as a member of a minority, as an inhabitant of that portion of the State which has not been represented on the ticket for many years, who was regarded by many political leaders as being as impossible, improbable, and implausible a candidate as came down the pike in many a year, would never have been elected. So, I guess, my own appreciation of and gratitude to the liberal tradition is more ingrained than that of most people. In this connection, during my own few months in the Senate, I find myself constantly examining my own liberal conscience.

There is the question of limiting debate in the United States Senate. At the moment, because of the urgent necessity of strong civil rights legislation, liberals are pushing for a majority cloture rule, whereby a bare majority of those present and voting can cut off debate.

From the long-term viewpoint, let us not lose sight of the fact that we liberals have used the filibuster a number of times to prevent hasty consideration of what they consider to be damaging legislation.

There was the case of the Vreeland-Aldrich currency law, 1908: It was hoped by the framers of this legislation that it would provide a more elastic currency and stabilize the values of many securities. Conservatives had been alarmed by the number of bankruptcies and other financial difficulties which had been experienced in 1907 and felt that measures must be taken to preserve business. The opponents of the plan considered it just another device by which the privileged few could tighten their control upon the country's capital and credit.

That towering Liberal, Senator Robert M. La Follette, Sr., of Wisconsin, led a filibuster against the bill during which, on one occasion, he spoke continuously for more than 18 hours.

There was the resolution to admit New Mexico into the Union in 1911. Proposals had been made to admit both Arizona and New Mexico, but Arizona had been eliminated because of provisions in her proposed Constitution for popular initiative, referendum and recall; provisions which were opposed by many conservative Senators. Senator Robert L. Owen, of Oklahoma, who favored admission of both New Mexico and Arizona, filibustered against the New Mexico resolution for the purpose of persuading the majority to agree to include Arizona. His filibuster resulted in only partial victory. It succeeded in killing all statehood legislation for the session.

There was the tidelands oil debate in 1953. After the Supreme Court had decided that certain submerged lands lying offshore belonged to the United States rather than the abutting States, proposals were made to confirm title to these lands in the States. Senator WAYNE MORSE, of Oregon, was one of the most tireless opponents of such proposals. Between April 1 and May 5, while the Senate debated the tidelands measures, Senator MORSE spoke often and long for a good cause, with one of his speeches setting a new record of 22 hours and 26 minutes. The measures were defeated.

I do not believe that any minority should have the right to indefinitely prevent the Senate from reaching a vote. However, it seems to me that there is danger also in terms of making sure that the minority has a right to be heard, if we permit a simple majority in the Senate to cut off debate, unless ample provision is made to not only permit full debate, but allow ample time for the alerting and marshaling of public opinion. Actually, I believe that the three-fifths compromise that will probably emerge is a pretty fair one.

The essence of fair play is that the rules must work both ways. For that reason, I believe the time has come when we liberals and progressives must take counsel with ourselves. Frankly, to the extent we do not practice what we preach, we shall be deemed hypocrites; and to the extent that we seek laws to enforce upon others what we do not observe ourselves, we shall be deemed seekers, not of the rights for all, but of special privileges for ourselves.

For example, it is our position that financial institutions, as custodians of the Nation's savings, are to be held as fiduciaries of highest trust, and subject to regular report, inspection, and regulation by the Government. Can we possibly argue that such duty is lessened if the depository happens to be the funds of a labor union?

We have often deplored the voicelessness of the stockholder in the large corporations and the vested interest of management in its own perpetuation. But is it not true that in some unions the individual worker is nigh as voiceless as the stockholder in a large corporation?

Liberals, as persons dedicated to man's inalienable right to seek the truth, find political requirements abhorrent in the field of the performing arts. We condemned, and rightly so, attempts to prevent Paul Robeson from giving concerts.

However, liberals would do well not to forget the furor caused over the award of the Bollingen prize for poetry in 1948 to Ezra Pound. At that time, the liberals called for a congressional investigation of the Fellows of the Library of Congress in American Letters, who made the award. "The Fellows" included such people as Conrad Aiken, Archibald MacLeish, Robert Penn Warren, and William Carlos Williams. The award was also bitterly attacked by one of our leading liberal magazines, which, on the other hand, has consistently opposed the House Un-American Activities Committee.

Let us also not forget that in early 1949, representatives of the Nation's leading liberal veterans' organization, the American Veterans' Committee of which I am proud to be a member, picketed Carnegie Hall in New York against the proposed appearance of the brilliant German pianist Walter Gieseking.

I know all too well, my fellow liberals, that we are human. We are bound to make mistakes.

I am also aware that in my talk tonight I have only pointed out where liberals have failed. I cite these instances because I believe that liberals, as peoples who strive for open minds, must set the most rigorous standards for their conduct. What I am saying is that what is sauce for the goose is sauce for the gander.

Jesus Christ gave us something to think about when he said "Be ye doers of the word and not hearers only. For if any be a hearer of the word, and not a doer, he is like unto a man beholding his natural face in a glass. For he beholdeth himself, and goeth his way, and straightway forget what manner of man he was."

Sell America Campaign

EXTENSION OF REMARKS
OF
HON. PAUL G. ROGERS
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 29, 1961

Mr. ROGERS of Florida. Mr. Speaker, because of the hearings beginning today before the Commerce Subcommittee of the House Interstate and Foreign Commerce Committee on proposals to increase foreign travel into the United States, I believe the editorial "Sell America Campaign Should Attract Foreign Visitors to America" will be of interest to all Members. This editorial appeared in the Fort Lauderdale News of Fort Lauderdale, Fla., and was written by Editor Jack Gore. Interest in these proposals to ease travel restrictions and otherwise encourage visitors is widespread and editorial comment has been encouraging, as will be found by reading the well-expressed views of Mr. Gore:

SELL AMERICA CAMPAIGN SHOULD ATTRACT FOREIGN VISITORS TO AMERICA

Among the most sensible and perhaps the most workable suggestions of many advanced by President Kennedy a few days ago for halting the flow of gold from this Nation was a proposal to embark upon a "Sell America" campaign designed to attract more foreign visitors to the United States.

While this proposal has been advanced before by various groups and individuals who believe this country is missing a good bet by not jumping into the oversea tourist market with both feet, nothing much could be done about it until somebody high up in Washington was ready to go along with the deal.

The difficulty in launching such a campaign does not lie in the fact that there isn't a great deal of interest overseas in visiting America. The interest is there, and always has been, but up to now there have been two major barriers standing in the way of any successful "Sell America" campaign.

The first of these barriers has always been the cost barrier. Up until recently a trip to America, even on a short vacation basis, was a luxury that could be afforded by only a relatively few foreigners.

But two factors have acted to change this in recent months. The big industrial revolution overseas has now created a fairly substantial market for American vacation packages. More people now have both the desire and the resources to travel, and the advent of the jet-air age has now brought this country within easy reach of the lucrative foreign travel market.

But even so, American interests can never develop this market until our own Government acts to make it a good deal easier for foreigners to enter this country on a temporary basis.

Many people don't realize it but it is a tedious and sometimes a highly exasperating task for foreigners to get a visa to enter our country. Most other nations make it very easy for Americans to enter their countries. Redtape is cut to a minimum and seldom does an American traveler face any embarrassing questions or extensive investigations into his background before he is permitted to enter a foreign country.

But over here we operate on a much more exclusive basis. Our policy has always been to screen potential visitors very closely with the result that visas are not too easy to secure, and those who wish them usually have to go through a long rigmarole and an indefinite waiting period before their clearances can be issued.

Under the circumstances it is no great wonder that most foreign travelers prefer to go other places rather than go through the tedious process of getting a visa to come to the United States.

President Kennedy has recognized this difficulty and, as part of his "Sell America" campaign, he has proposed an easing of the visa restrictions as a means of encouraging more foreigners to visit this country.

We think that is a splendid move as with Americans now spending well over $2 billion annually in visits to foreign countries, we think it is about time we take steps to make this travel flow more than just a one-way street.

As many of our Broward County business people already know from their experience with foreign passengers from cruise ships docking at Port Everglades, one of the great attractions this country has to foreign visitors is the wealth of high quality merchandise available in our stores and shops.

It is not at all unusual for wealthy foreigners to spend upward of $1,500 on a single shopping trip of just a few hours duration hereabouts, and while these people may not be exactly typical of the average foreign visitor, it can be taken for granted that if our travel restrictions were eased most of the people who would come here from other lands would return well loaded with American merchandise.

When one considers the vast vacation resources, cultural opportunities and the host of other attractions our Nation has to offer foreign visitors, it seems rather ridiculous to bar these people from our shores by technical restrictions and redtape that other nations have long since gotten rid of in the interest of drawing American tourists.

It was just a short time ago that a veteran foreign correspondent wrote that it was hard to find any anti-American sentiment among Europeans who had been to America and seen for themselves how we live and what our country is truly like. The bulk of the anti-American sentiment, he wrote, is centered among those who have never visited America and have formed their impressions from distorted propaganda and stories circulated by our Communist enemies.

The world we live in today is no longer cut apart by boundless oceans which separate one continent from another by days of tedious travel. Now we are living in an era of fast transportation which brings all nations much closer together, and Americans are taking advantage of this jet travel age to travel abroad in constantly increasing numbers.

This, certainly, should not be a one-way street. There are uncounted thousands of foreigners who have the resources and who would like nothing better than to make a trip to America. We should make it easier for them to do this, as we will not only give a lift to our own economy but we will wind up making more friends for ourselves abroad than we can ever make by giving away our dollars.

Seize the Initiative

EXTENSION OF REMARKS
OF
HON. HOMER E. CAPEHART
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Wednesday, March 29, 1961

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD, an editorial from the Indianapolis News dated Saturday, March 18, 1961, entitled "Seize the Initiative."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SEIZE THE INITIATIVE

The Communist strategy of protracted conflict is finding almost classical expression in the tiny Asian kingdom of Laos.

Essentially, this strategy is to use the threat of force simultaneously in several key areas of the globe, without actually exercising it sufficiently to provoke a showdown. Korea may have been an exception to this policy, although there is reason to believe the outcome there was about what the Kremlin had in mind all along.

In Laos the Communists have strength available to them to overrun the whole kingdom. But so far they have made no such attempt. They may be deterred in part by fear of an all-out war. But their larger consideration seems to be to wage a campaign of attrition—a technique which has in the past proved effective in diffusing the conventional military strength of the United States.

Were this country, for instance, to decide to clear the Communists out of Laos short of using ultimate force, a painful effort equaling or surpassing that in Korea would be required. And even then the Red rebels would merely withdraw to communized North Vietnam, where they would continue to be a threat.

So we hesitate, and in our hesitation entertain notions that Laos can be "neutralized" at the conference table. This mood of indecision is the true objective of the Kremlin in thrusting Laos into a twilight zone just this side of all-out war. At the conference table, experience has shown, threat-of-force strategy can gain bloodless victories. For example, the Communists might promise to behave in Laos if we will be more "reasonable" about Berlin.

There are two effective responses to this strategy. One is war, in which none of our superior force is held back, no substitute for victory sought. But war on such a potential scale is a court of last resort.

The other response, never yet tried to its fullest in dealing with the Kremlin, is to take the offensive in protracted conflict.

Where and how?

This newspaper long has believed that the softest spot in world communism's armor is Germany. Rather than go to the surrender table to haggle over a meaningless "agreement" on Laos, why shouldn't America enter into unilateral negotiations aimed at achieving a United States-West German peace treaty—and, beyond that, agitate militantly for the removal of all foreign forces from East Germany?

Granted, this involves many complex problems. But the effort would capture the initiative from the Kremlin, and alleviate pressure on such areas as Laos.

We shall never win by going to the enemy hat in hand; let's try to make the enemy come to us for a change.

The Soviets' Real Goal in the Underdeveloped Countries: Hit the United States Where It Hurts

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Wednesday, March 29, 1961

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an excellent appraisal of the economic offensive being conducted by the Soviet Union entitled "The Soviets' Real Goal in the Underdeveloped Countries: Hit the United States Where It Hurts," which has been prepared by a well-known and highly competent observer, Maj. Gen. Julius Klein, retired.

I commend the reading of this excellent analysis, together with that of concurrent studies on the same general subject, which has been prepared by General Klein, to the careful reading of the American public.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

THE SOVIETS' REAL GOAL IN THE UNDERDEVELOPED COUNTRIES: HIT THE UNITED STATES WHERE IT HURTS

Exercising sole command and direction of a concerted economic offensive by its constellation of captive states, the Soviet Union is carefully selecting targets in Asia, Africa, and Latin America, through which it is striking at the economic foundations of the United States and the free world.

Selection of the target countries is governed by these considerations:

1. The extent to which new and as yet tenuous governments afford opportunities to bring about the installation of Communist regimes.

2. The existence of economic conditions which make possible entanglement in the Soviet web, i. e., single commodity countries which are in urgent need of substantial exports to aid their future development.

3. The existence of natural resources which, while unneeded to supplement Soviet raw material requirements, may be of key importance to the United States or other Western nations.

To these countries, Soviet pied pipers herald the economic growth and the rise in living standards of Soviet bloc countries by way of showing what can be achieved by new and weak states prepared to follow the Communist blueprint.

The newly developing countries are in the midst of a population explosion. By 1970, a 30 percent increase can be expected in these lands, as against a predicted world average of only 20 percent. The aspiration of the former colonial peoples to decent living standards is being shrewdly exploited by Soviet economic planners and strategists. Since 1954, the Soviets have pledged the equivalent of billions of dollars in credits to developing nations. India has been given a billion and a half rubbles in industrial credits alone. Indonesia has been promised 1 billion rubles, Mexico 400 million, Ethiopia 400 million, and Guinea is on the waiting list for a handsome but as yet unannounced figure. Cuba and Argentina in Latin America and Finland are other beneficiaries of Soviet largess.

The Soviets are backing their low rate loan program with a capital investment pro-

gram whose outcome cannot be foreseen. One of their prize exhibits is a steel mill in India. Two other mills have been built or are in construction, financed by Britain and West Germany. The Soviets alone are in a position—should the political reward be appetizing enough—to serve notice at a given moment that they have decided to make the Indian government an outright gift of this industrial facility. The Soviets can do this anytime it would serve their purpose. Unlike the British and the Germans, who must account to lending institutions, shareholders, etc., there is no one in all the Russians to say nay to Khruschev if he should decide to make an outright gift to India (in the name of Soviet-Indian brotherhood, of course) of the fruits of Russian workers' toil and a Russian treasury unbeholden to anyone but the ruling Communist camarilla. For the basic premise of Communist economic policy is that trade and investment must be used to reward the Soviets' friends and punish their enemies.

High on the list of implements to execute this commandment is price cutting in world markets. As Soviet prices are not cost prices but arbitrary or political prices, there are virtually no limitations on price cutting. This device has been used directly against the United States without warning. And even a country with comparatively little dependence on imports and exports is not completely invulnerable to the effects of this type of competition. There can be no doubt that we would feel very serious effects if the Soviets were to attack our economy with the entire force of the heavy potential they and their captives command. The foreign trade monopolies of the Soviets dispose over a variety of weapons, ranging from considerable underpricing of their own exports to dishonest trade practices and unannounced price reductions. They have shown a keen sense of timing in the use of the price-cutting device. The Soviets have been supplying potassium to U.S. purchasers at prices up to $2 less than their nearest American and European competitors. During the strike of the United Steelworkers, the Soviets sold 2,500 tons of pig iron in the United States.

With a full bag of tricks that includes such harassing techniques as dumping, initiating politically motivated purchases at premium prices or other sacrifices, and steadily enlarging the ranks of their economic dependents in underdeveloped countries, the Soviets continue to probe the possibility of further incursions into western Europe.

The arithmetic of international trade shows that at the present time 21 percent of U.S. exports, amounting to about $4½ billion, go to Europe. The loss of export markets for grain, dried fruits, raw products, etc., would be a severe blow to the U.S. economy.

Meanwhile, the urgency of the situation created by creeping Soviet envelopment of countries on which the United States depends on such key products as mineral oil, rubber, copper, and tin, etc., is highlighted by the following table showing the degree of dependence of the U.S. economy on essential imports:

Raw material	Main supply source	Degree of dependence, in percent
Natural rubber	Southeast Asia and Liberia.	100.0
Tin	Southeast Asia and Central America.	100.0
Chromium	Turkey and South Africa.	91.3
Manganese	India and Africa	85.9
Tungsten	South America, Canada, and Australia.	58.6
Bauxite	Canada, Jamaica, and Surinam.	78.4

With few exceptions, these supplier countries and regions are getting concerted attention by the Soviet economic juggernaut, while at the same time Soviet hawkers are busily peddling in Europe raw and basic materials available to them in excess of their own requirements. They are making it plain that they are prepared to cut their shipping costs and take other losses to supplant the United States as a supplier of raw materials needed by the European states. Any significant success in these operations will mark the first step in creating western European dependence on Soviet raw material imports with consequences whose gravity defy imagination.

CAN WE GO IT ALONE AGAINST THE SOVIET ECONOMIC CHALLENGE?

The Soviet economic offensive against the United States is being waged by a Communist phalanx whose component parts are the Soviet satellites, organized and directed under the central command of the Kremlin. What must be recognized is that this is a multilateral threat which cannot be dealt with unilaterally. No Western state, no matter how powerful, can hope to contain, much less overcome, this assault through sole reliance on its own resources.

American leadership in forming the North Atlantic Treaty Organization was a tacit admission that unilateral defense against Communist military attack was impossible. While time still permits, while the United States and her friends in western Europe still retain command of superior productive resources, our common survival demands that the Soviets' multilateral economic threat be met by a multilateral defense.

A go-it-alone policy which assumes that we have the economic self-sufficiency necessary to survival or which places reliance on protective tariff devices will fall far short of providing the means to defend against Soviet economic encroachment or to mount the counteroffensive vital to free world security.

At the Paris Conference, December 19–22, 1959, the United States took the initiative in urging closer Atlantic cooperation in the economic sphere. The U.S. move was motivated by anxiety over the potential political impact on European solidarity of the divisions between the two European trade blocs (European Economic Community and European Free Trade Association). A concomitant U.S. concern was the effect that prolonged differences between the two trade groupings might have on the development of coordinated Western policies with regard to aid to the underdeveloped countries.

It cannot be again said that formidable problems loom in the path of organizing a coordinated Western defense against the Soviet economic thrust. But it is equally clear that the Western nations are heading for a moment of decision at breakneck speed. The imperative of the Soviet challenge demands that Western ranks be closed or the way will be open for the Soviets to pick off individual European states like a marauding wolf preying on sheep that have strayed from a protected flock.

Clear thinking observers of the Soviet grand design for economic conquest, economists and geopolitical authorities on both sides of the Atlantic who have followed the course of Soviet economic expansion closely, are in general agreement on steps that should be initiated without delay to check and overcome the Soviet drive. They are:

1. The Western nations must move promptly to coordinate their trade and economic policies as a first step in marshaling their combined productive strength to meet the Communist economic challenge in Asia, Africa, and Latin America.

2. The primary focus of the Western nations must be on using their economic resources to assure the achievement of full employment and the maintenance of high living standards in the Western community. Simultaneously, they must marshal their productive might to assist in raising living standards among the neutral and uncommitted nations of Asia and Africa, as well as among the friendly nations of Latin America.

3. The Western nations must establish a common front in trade relations with the Soviet bloc. The Communists should be given to understand in no uncertain terms that if they persist in waging political and economic war against any nation or combination of nations in the West, particularly through the use of dumping and price-cutting tactics, they can expect retaliation of the type West Germany has taken against East Germany because of the threats to Berlin.

4. The Western nations must examine candidly and without regard to short-term profits the effect of trade with the Soviet bloc in terms of how this trade is used to further undermine the Western position in Asia, Africa, and Latin America. This will demand the voluntary acceptance of discipline by the private sectors of the Western economies. It will be necessary for governments and private industry alike to face up to the fact that undisciplined Western trade with the Soviets generates a flow of hard Western currency to the Communists, who can be counted upon to use it to underwrite the destruction of Western economic foundations.

5. Essential to the organization of an effective coordination of Western trade and economic policies is a greater degree of uniformity in the control of exports to the Soviet bloc. It makes no sense for the United States to restrict shipments of certain types of industrial equipment to the Soviets when this same equipment is shipped eastward by other Western nations. As long as these goods fill gaps that cannot be met by the Soviets' own productive resources, as long as the Soviets are thereby helped to allocate part of their own industrial production to achieve their political objectives in the Afro-Asian and Latin American nations, not just the United States but the entire Western community is the loser.

6. The Western nations would better serve their own interests and the interests of freedom in general if they were to route capital investment goods now going to the Soviet bloc to non-Communist countries in a sufficient state of development to use goods effectively. Undoubtedly, this would entail financial sacrifices. But in the long run it would serve to free these countries from dependence on the Soviets and would go far toward preventing their political subjugation by the Communists. It would, therefore, strengthen the general climate of freedom.

7. The Communist economic challenge has underscored the need for expanding the participation of private investment in the development of Latin America and the new states of Asia and Africa. An enlargement of the private investment role can ease burdens that would otherwise have to be imposed through fresh Government levies on already restive taxpayers. At the same time, private investment is a powerful implement for overcoming Communist propaganda against the private enterprise system and helping to build and strengthen the will to freedom among peoples whose political destinies hinge on the outcome of the gigantic ideological struggle between communism and the community of free nations. But if private investment is to contribute effectively toward building the will to freedom among underdeveloped and politically uncommitted nations, a system of firm and binding international safeguards will have to be established that will assure investors against loss through arbitrary confiscation or expropriation.

The United States has sought to deal with this problem through a system of bilateral treaties backed by an investment guarantee program. A European solution, spurred by West Germany's leading banker, Hermann Abs, has been proposed in the form of a multilateral draft convention under which signatory nations—both exporters and importers of capital—would agree to protect the rights of private investors.

A reexamination of this proposal by the United States is in order, for without U.S. leadership the adoption of this needed covenant would be unlikely and needed sources of venture capital would remain untapped.

For Rails in the Future

EXTENSION OF REMARKS
OF
HON. HOMER E. CAPEHART
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Wednesday, March 29, 1961

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial which appeared in the Indianapolis Star on Sunday, March 26, 1961, entitled "For Rails in the Future."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FOR RAILS IN THE FUTURE

The railroads of the country have started a new drive in their campaign to shake off the strangling web of outmoded Government regulation and frustrating handicaps of an unfair tax position and competition which is subsidized out of public funds.

The railroads were the first to feel, as an industry, the strong arm of Government regulation. No one today argues the fact that they brought it on themselves. But that was in the last century. It was in an era long since vanished. Since it vanished there has been a procession of Government administrations dedicated to getting America out of the horse and buggy days. But the Government itself is still there, as far as its attitude toward transportation is concerned.

The Government still regulates the railroads as if the times were the same as they were three-quarters of a century ago. It still behaves as if the railroads had a monopoly on transportation and were waiting breathlessly to start gouging a helpless public the instant Government's control is relaxed the least bit.

This goes on despite the fact that Government itself supports facilities used by competitors of the railroads, and in some cases has actively sponsored the development of competing services. Public tax funds are used to build and maintain highways over which roll trucks and busses. The Government maintains guidance and other necessary services for airlines, and controls traffic in the air. Airports and other terminal facilities are often provided with public funds. Government funds maintain the waterways over which barge and ship traffic moves.

All of these provide tax-subsidized competition to the railroads. Besides, the Government in the past has paid direct subsidies to airlines and ship operators, to encourage them. Some fees and special taxes are paid in connection with highway and air facility use; the use of waterways in general is free. In none of these cases are user charges based on any kind of formula intended to reflect reasonable cost allotment for commercial, profitmaking use of a public facility.

To compete with these, railroads build and maintain their own rights of way and terminal facilities. When a new road is built, or an old road or waterway relocated, the railroads must bear the cost of making their crossings conform to the new construction.

In addition to paying these costs, the railroads also pay property taxes on these rights of way and facilities.

The railroads are barred, however, from making use themselves of public highways, waterways or airways, except under certain limited circumstances.

It is for these inequities that they seek correction. They want to be freed from regulation based on conditions which no longer exist. They want their competitors using publicly owned facilities to pay user charges which accurately reflect a fair share of their cost, including the taxes which would be paid on such facilities if they, like rail facilities, were privately owned. They want the right to own and operate other types of transport equipment, in conjunction with conventional rail operations.

To accomplish these gains, the railroads will need a lot of friends at court. They will need friends, and they ought to have them. For rail transport is still basic to the American industrialized economy and it will continue to be in the foreseeable future. Its survival therefore is essential.

Basic or not, the railroads can survive only if they are able to meet their competition and function at a profit. This is primarily a responsibility of management, but management now is hamstrung. It cannot make and put into effect the decisions which the situation requires, and it has no defense against competition subsidized with its own tax money.

Rainbow Bridge

EXTENSION OF REMARKS
OF
HON. CLAIR ENGLE
OF CALIFORNIA
IN THE SENATE OF THE UNITED STATES
Wednesday, March 29, 1961

Mr. ENGLE. Mr. President, preservation of the Rainbow Bridge National Monument in southern Utah is of concern to Californians. So is the construction of Glen Canyon Dam on the Colorado River, which will back up water close to Rainbow Bridge.

The Bakersfield Californian, which is devoted to the cause of conservation of our natural resources, has expressed this joint interest in a recent editorial which emphasizes the need for settling the Rainbow Bridge issue. I, too, suggest that the solution advanced by Secretary Udall is a worthy proposal.

Accordingly, I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

RAINBOW BRIDGE COMPROMISE REASONABLE

It is hoped that Secretary of the Interior Stewart L. Udall is successful in his efforts to settle the dispute involving the picturesque Rainbow Bridge area and the Glen Canyon Dam project, an altercation that has brought into play the most energetic spokesmen on the part of both conservationists and water development exponents.

Rainbow Bridge, one of the West's most spectacular sights and the largest natural bridge in the world, is located in southeastern Utah on almost the Arizona border. The monument, established a half century ago, is difficult to reach and it is visited by a comparatively small number of persons each year, yet it is certainly deserving of preservation, and indeed its remoteness assures a longer existence than if it were immediately accessible to great numbers of tourists.

For those who wish to read more about it and see some excellent photographs of the bridge, we recommend the latest book on our national parks and monuments published by the National Geographic Society. Unlike most natural bridges, Rainbow Bridge arch is curved and symmetrical and it rises more than 300 feet above the canyon floor.

When the Upper Colorado Storage Act was passed in 1957, it contained a provision that no project could bring water near the bridge, in answer to those who contended that the water would destroy it. But to keep water away would cost $25 million in works, and getting this kind of money for such a purpose from Congress is highly doubtful. Department of the Interior geologists say that water would not erode or harm the bridge.

Secretary Udall, to meet the objections of the conservationists and assure progress of the Glen Canyon Dam, has suggested that the national mounment containing the bridge be expanded and made more easily accessible to the public and water be allowed to back up to the bridge without the construction of the costly works. The water, as he notes on advice of the geologists, will not harm the bridge, and more people will be able to see this extraordinary natural wonder.

Competent authorities in Washington and elsewhere have expressed approval of the suggestion by Secretary Udall, and it is hoped that the idea will be given legislative sanction so that the dilemma involving Rainbow Bridge National Monument, which may later be expanded into a national park to include more of the startlingly beautiful scenery in the area will be resolved.

Mr. Udall is to be commended for his suggestion and for his genuine concern over the problem of protecting and preserving the natural scenic areas under his charge.

Wrong Way in Laos

EXTENSION OF REMARKS
OF
HON. HOMER E. CAPEHART
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Wednesday, March 29, 1961

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial which appeared in the Indianapolis News on Monday, March 27, 1961 entitled "Wrong Way in Laos."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WRONG WAY IN LAOS

There are reasons for gratification in this country's response to the crisis in Laos. The suggestion that America is willing to take action to stop the communization of this Asian kingdom, conveyed by President Kennedy in his press conference last Thursday, is one of them. The unity of the two parties in recommending a firm stance is another.

Yet the net effect is disturbing. For it appears the United States is prepared to commit the paradoxical error it committed in Korea—that of being too soft and too reckless at the same time.

In Korea, it will be recalled, America found itself on a bloody treadmill. U.S. troops were ordered to "push back" Communist aggression, but not to pursue the aggressors and destroy them. The Chinese Communists, were able to fight from a "privileged sanctuary" north of the Yalu River. American fliers were given the almost impossible task of knocking out bridges on a river which they could not cross. Staging points for Communist arms and supplies were completely invulnerable.

We were involved in a war which, by definition, we could not win. Our commitment was total—the sacrifice of thousands of American lives; yet that sacrifice became a horrible waste because the goal we sought to attain was strategically meaningless: namely, that of stalemating communism, rather than defeating it.

The identical situation seems to be taking shape in Laos. President Kennedy, of course, said merely that if Communist intervention did not stop, we shall "consider our response." This could mean almost anything, but the mobilization of American forces has suggested it means committing our own troops to the fighting. If this proves to be the case our commitment, as in Korea, would be total. But, again as in Korea, our objective would be without merit.

Kennedy's stated goal is to achieve Lao "neutrality," as specified by the Munich-like Geneva Conference of 1954. That goal would be achieved, presumably, by driving the alien troops back across the border into Communist-ruled North Vietnam. Assuming this happens, with American lives being lost in the process, what happens then? We can only speculate, of course, but the Korean example and administration rhetoric suggest something like the following:

First, since our aim is "neutrality," we could not very well pursue the attackers into their homeland. That would be an attempt to eradicate the force which has caused the trouble, an objective we clearly have repudiated.

Second, since Laos is not to be a "cold war pawn," it is unlikely we should hold the area under our own military stewardship. More probable is that the three-nation Commission advocated by Britain would take over, until it could install a government to its liking. Since this Commission as now envisioned would contain one Communist and one pro-Communist representative, we can imagine that the new "neutral" government would be neither strong nor anti-Communist. Then the Commission would withdraw, and leave the new government to its own devices.

At that point, what is to prevent the Communists, in China or in North Vietnam, from invading the country once more, and starting the whole bloody process over again? Nothing whatever. After the sacrifice of American lives, the United States would have achieved precisely nothing.

For an alternative to this dismal go-round, we should pay close attention to Soviet policy in Laos. Whereas our goals are limited, but our commitment total, the Communists have completely reversed matters. Their goal is total—the communization of Laos. But their commitment is limited: no Russian troops are involved in the fighting; it is being conducted by proxy regimes in Asia—and even that fact is not officially acknowledged; they may withdraw from the struggle or return to it at their own convenience, because they know we will not carry the fight to their homeland.

In such a contest, it is clear Moscow holds all the aces. The Kremlin is playing for huge stakes, and risking little or nothing. We are risking everything, in terms of American lives, and can expect to win nothing.

The alternative, therefore, should be to reverse the order of our policy: (1) To establish as our goal, not a neutral Laos, but a free and anti-Communist Laos; (2) to employ to that end, not American troops, but the troops of our allies in Southeast Asia, who are ready and willing to take on the Communists and carry the fight to victory.

Televised Presidential Press Conferences

EXTENSION OF REMARKS
OF
Hon. EVERETT McKINLEY DIRKSEN
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Wednesday, March 29, 1961

Mr. DIRKSEN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an interesting article entitled "Kennedy Fluffs in TV Press Talk," written by David Lawrence, and published in the Washington Evening Star of March 27, 1961.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

KENNEDY FLUFFS IN TV PRESS TALK—ARGUMENT AGAINST LIVE COVERAGE SEEN IN ERROR ON FIRMS MAKING $1 MILLION

(By David Lawrence)

President Kennedy made a serious mistake at his press conference last Thursday which ought to spell the end of so-called live performances on radio and television. For the net effect of the error—which, of course, was unintentional—was to mislead the American people and give them an erroneous statement about the minimum-wage legislation now pending before Congress. The President's exact words are recorded in the official transcript as follows:

"I find it difficult to know why anyone would oppose seeing somebody by 1963 paid $1.25 in interstate commerce, and in the new coverage we're talking about businesses which make over $1 million a year, and I find it difficult to understand how anybody could object to paying somebody who works in a business which makes over $1 million a year by 1963, $50 a week."

It will be noted that the President twice used the phrase "make over $1 million a year." Probably most listeners agreed immediately with the President that any company making such a profit could well afford the increase from $1 an hour to $1.25 and that those opposing such an increase would just seem to be cruel-hearted, selfish businessmen. This is the kind of innuendo which adds to class antagonisms and is the sort of argument on which the labor demagogs thrive.

But what are the facts? The legislation now pending in Congress doesn't make any such classification of businesses with profits of $1 million or over per year. Instead, the bill sponsored by the President—and which was defeated last week by the House of Representatives—called for measurement by gross receipts or sales of $1 million and not by profits. The language in the bill read "$1 million gross annual volume." There's a vast difference, of course, between what a business takes in and what it has left after paying wages and other expenses, as well as all taxes.

Indeed, out of the total number of businesses in the United States, at least 90 percent do not make as much as $1 million a year after taxes.

The bill as finally approved by the House last week would exclude a lot of service trades altogether and would continue existing exemptions for employees of hotels, restaurants, lunch counters, cafeterias, hospitals, laundries, dry cleaners, motion picture theaters, amusement parks, parking lots, beauty shops, barber shops, gasoline stations, and automobile sales dealers. The reason for this is that many of these employees get tips and other gratuities which increase their income, or else they are largely part-time workers anyway.

The new House bill would require an employer who operates five or more retail chainstores in two States to come under the law, but, if any such chainstore has gross receipts of less than $250,000 a year, it would remain exempt.

Now why is there opposition to these measures? Some employers say it will force many present employes out of work altogether. Unions want the legislation because it will enable them to press for a raise in wage scales generally. For, obviously, giving a worker the new $1.25 minimum will cause another worker alongside of him who already gets $1.25 an hour to feel that his pay ought to be stepped up because he had previously been rated higher in skill or experience than the $1-an-hour employe. It really could bring demands, even during the recession, for a new cycle of wage increases and could affect wage differentials all along the line and not just the employes at the minimum-wage base.

Unfortunately, the whole presentation made on this issue is an example of how onesided and unfair is the system of forming public opinion by presidential press conferences, since the President of the United States can unwittingly make erroneous statements, and the many millions of persons throughout the country who hear him have no chance of being given immediately the true facts when errors are made.

One solution of the dilemma is to abandon the live presentations and let them be recorded on tape for showing later in the day or evening, as are so many other television programs. This would afford an opportunity in the meantime for careful revision of any factual errors or misstatements instead of allowing errors to mislead the American people. There is altogether too much preoccupation hereabouts with publicity stunts and live shows for political purposes instead of interest in the orderly and impartial processes of transmitting the Government's information to the people.

Donations of Surplus Personal Property for Purposes of Education, Health, and Civil Defense

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 29, 1961

Mr. McCORMACK. Mr. Speaker, under leave to revise and extend my remarks, I insert in the CONGRESSIONAL RECORD herewith a report from the Department of Health, Education, and Welfare which shows that eligible educational, health, and civil defense units received surplus personal property with acquisition cost of $25,310,206 in the month of February 1961. This brings the total for the fiscal year to $206,304,524.

The report follows:

DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE

OFFICE OF FIELD ADMINISTRATION

Surplus personal property report for the month of February 1961

Goodby Freedom of Speech?

EXTENSION OF REMARKS

OF

HON. JAMES ROOSEVELT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 29, 1961

Mr. ROOSEVELT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Churchman for March 1961, an independent journal of the Protestant Episcopal Church:

GOODBY FREEDOM OF SPEECH?

Americans who value the free speech guaranteed by the Bill of Rights had better be concerned about the recent Supreme Court decision on censorship. By the close vote of five to four the Court ruled that cities and States may require a censor's permit before a film may be exhibited to the public. Four States and eleven cities have such licensing systems. The four dissenters, Chief Justice Warren, Hugo L. Black, William O. Douglas, and William J. Brennan, Jr., branded the majority ruling as a retreat from free speech, adding that the opinion comes "perilously close" to holding that a licensing system may also be applied to books, newspapers and periodicals, radio, television, public speeches, and every other medium of expression. Said Chief Justice Warren, "The Court no way explains why moving pictures should be treated differently than any other medium of expression." This is a strange departure by the Court from its earlier decisions that invalidated individual censors' rulings. It will be a great day for American freedom when every clergyman is forced to submit his sermons to a public censor—perhaps J. Edgar Hoover?—before he enters his pulpit.

Aid to the Handicapped

EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Wednesday, March 29, 1961

Mr. MUNDT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a copy of a letter I received from one of my South Dakota constituents. This letter describes in most eloquent terms the problems facing the parents of deaf and other handicapped children. As the Congress discusses the overall aid to education legislation, I should like to call the problem presented in this letter to the attention of every Member. Certainly we owe it to our handicapped children to provide them a chance for a better life.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

Senator KARL E. MUNDT,
Senate Chamber, Washington, D.C.

DEAR KARL: I don't know whether you are aware of it or not, but I have a son 8 years old who is deaf. At the age of 3 we sent him to Milwaukee to a special school. He was there for 1 year. During this time my wife became ill. For a number of reasons it became necessary that he return to South Dakota for his schooling. Since that time he has attended South Dakota School for the Deaf in Sioux Falls.

At the age of 6 months we took him to Dr. Jordan at Vermillion. At the age of 1 year we took him to Dr. Gregg in Sioux Falls. At the age of 1½ years we took him to Dr. Timothy Smith in Omaha. At the age of 2½ years we took him to Dr. Myklebust who is the head of Northwestern Aphasia Clinic.

About a year and a half ago we went to Dr. Graham Smith in Minneapolis and to Dr. Lassman who is on the faculty of the University of Minnesota. We were advised by Dr. Smith that his partner, Dr. Bofenkamp, also had a deaf son. He had traveled the width and breath of the United States and decided that the one outstanding school for the deaf was St. Joseph's of St. Louis, Mo. We applied for Robert's admission therein approximately 1 year ago. Last summer we had a special tutor from their school for 6 weeks who stayed with us.

This school has a waiting list much greater than its present enrollment. We were unable to get Bobby into such school. We personally visited the school last June for a period of several days. We were quite awed by the progress that they can make in speech and lipreading for totally deaf children. We were quite heartstricken to think that our son was unable to get into this wonderful institution. We have our application for a tutor this summer also and are hoping that Bobby will be allowed to attend the school next year.

In all our travels around the country it is amazing that it was not until our son was 8 years old that we knew what would be the best available education for him. It was also quite a shock to realize that there is an extremely long waiting list in this school even though the tuition alone is $1,500 for a 9-month school year. I believe it is quite obvious that the total expense would be approximately $2,400 for a 9-month school year and still there is no room available even to those who can afford this payment.

It has been a traditional function of government to care for the handicapped. This has been true not only in this country but throughout the world. At this juncture, when the Federal Government of this country is presently contemplating assuming new responsibilities in the field of general education, it is amazing to realize what a poor job is being done in the field of a traditional duty, education of the handicapped; namely, the deaf.

If you could but see the results of St. Joseph's as compared to those being done by our governmental institutions in this field, it would be quite a disappointment to you. If you were a parent of a deaf child on the outside looking in, it would be life's greatest frustration. You would learn with joy what could be done and with sorrow what the lack of enough facilities excludes. If parents such as we, who can afford the financial burden of special training for a handicapped child, cannot avail their child of first-class educational opportunities because "there is no room at the inn," what must be the chances of the other thousands of persons with a similar handicapped problem?

At St. Joseph's they have two teachers for approximately every six children. The one teacher does the general teaching and the other keeps taking one child aside and giving individual attention to any faults made in speech, lipreading, et cetera. By the time the children are 8 years old they are able to begin communicating by means of voice and lipreading. The emphasis on speech and lipreading extends beyond the classroom and every phase of the school life.

The public schools in this field normally have one teacher for every eight students. When they leave the classroom they are in charge of a housemother with no training whatsoever in dealing with the deaf. Even though the school might claim to be an oral school, all those we have seen use signs almost exclusively outside the classroom. Naturally the results are very poor as compared to a school such as St. Joseph's. This is no one's fault except the limitation in the budget. There are no funds to hire specially trained persons as housemothers and, in fact, at one time the teachers in the South Dakota School for the Deaf in Sioux Falls were being paid less than their counterparts in similar grades in the public school system in Sioux Falls.

I am certain that there is no provision in the new Federal aid to education bills for education of the deaf.

Why is it that deafness has received such slight consideration in our great country? Possibly it is because it does not dramatically meet the eye as the crippling diseases and similar handicaps. It just very silently passes you by.

It would seem to me that these people need a champion. I hope that you will use your wonderful ability at oration in their behalf. I am certain that God could have given one man no greater glory on this earth than to be the spokesman for the 145,000 deaf people of this Nation.

It would appear to me that the great opportunity for the education of the deaf in this country comes now when our Congress is considering national educational matters. It would certainly be tragic if a traditional field of education is ignored while new obligations are assumed.

I know that at this time there are efforts being made in Minneapolis to establish for the Midwest a school for education of the deaf. I have heard that this group might be interested in obtaining a Federal grant or loan for this purpose. I do not know definitely what they have in mind, but would assume that it is something along the line of the Hill-Burton. I will try to find out what they have in mind and let you know.

As a friend I ask you to give this some consideration.

Yours truly,

JOHN ZIMMER.

Statement Signed by 250 Leading American Professors

EXTENSION OF REMARKS

OF

HON. JAMES ROOSEVELT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 29, 1961

Mr. ROOSEVELT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following ACLU press release and attached statement urging discontinuation of the House Un-American Committee, signed by leading American professors:

NEW YORK, N.Y., March 19.—A statement signed by 250 leading American professors called today for abolition of the House Un-American Activities Committee because the committee has "repeatedly undermined the freedoms essential for national well-being."

The statement, released by the American Civil Liberties Union, under whose auspices the professors were canvassed, declares that the HUAC "continues to abridge citizens' rights of free speech and association (and), we call upon the House of Representatives to vote it out of existence. To perpetuate this committee is to perpetuate a threat to our liberties."

The professors who signed the statement are actively engaged in teaching. They come from 79 colleges and universities, including many of the major educational institutions, and cover the fields of economics, English and modern languages, government and political science, history, law, natural sciences, philosophy, physical sciences, and sociology.

The ACLU's executive director, Patrick Murphy Malin, and Prof. Louis M. Hacker, chairman of the union's Academic Freedom Committee, noted that the professors had approved the statement personally and their action does not commit their institutions.

Amplifying the professors' statement, Malin and Hacker declared that even though the House of Representatives recently had approved the HUAC's appropriation, the educators' appeal is being issued at this time to alert the public and the Congress to the basic issues involved. "We are engaged in a long-range campaign to make clear to the American public and through it, to the Congress, the great harm done to civil liberties and freedom by the HUAC. The distinguished men and women who have signed this statement are concerned, as is the ACLU, that the HUAC's attacks on free inquiry and free expression must cease. We feel this even more strongly in view of the Supreme Court's recent Wilkinson and Braden decisions which upheld the committee's power to investigate those who criticize it. This creates an urgent need for wider understanding of the dangers of the HUAC so that, in the near future, legislation action to end the committee will result."

The full text of the statement follows:

"STATEMENT URGING DISCONTINUATION OF THE HOUSE UN-AMERICAN COMMITTEE, SIGNED BY LEADING AMERICAN PROFESSORS

"As educators actively engaged in teaching we are dedicated to the proposition that free enquiry and free expression nourish mental growth and are thus basic to our Nation's strength. The House Committee on Un-American Activities has in our opinion repeatedly undermined the freedoms essential for national well-being. We call on the House of Representatives to abolish the committee.

"During its 24-year history the House committee has been unrelenting in its harassing of teachers. It has again and again subpenaed them. It has grilled them about their political associations, past and present. It has enquired into the textbooks they use. In these ways the committee has created fearfulness within the academic world—and, perhaps even more dangerous, public distrust of teachers and the institutions in which they serve.

"By exercising the powers of prosecutor and judge, the committee has caused grievous harm to teachers and weakened the educational process. Two professors have served prison sentences after invoking the first amendment. A much larger number of teachers, some in the public schools, have lost their positions, either because they declined to testify before the committee about what had been in most instances youthful associations, or after they had been publicly named by it. Those dropped have often found it impossible to obtain new teaching positions. As a consequence, educational abilities and skills developed through long years of training have been withheld from the community. And this at a time when qualified teachers are in tragically short supply.

"The committee has latterly improved its hearing manners; it has also attempted through consultations to examine the causes for the spread of communism throughout the world. Yet it continues to be careless or unscrupulous in vilifying its critics. Students who assert their legitimate belief that the committee should be done away with because it has seriously damaged freedom have been labeled Communists or

dupes of Communists. The same fate has befallen others who have sought openly to discuss the merits of this governmental organ. Democracy cannot flourish when a legally unaccountable body intimidates dissenting citizens.

"Under these circumstances, we find it understandable, though deplorable, that many teachers, in the colleges and universities, as well as in the public schools, have grown timid about stating, even for classroom discussion, ideas which someone later might interpret as subversive. 'There can be no academic freedom,' Mr. Justice Douglas has said, 'in that environment. Where suspicion fills the air and holds scholars in line for fear of their jobs, there can be no exercise of the free intellect.'

"Unlike the House committee, we are not afraid. 'Exercise of the free intellect'—to examine and to test ideas, behavior and institutions, wherever found—is our duty as teachers and scholars. In the troubled world in which we live, where the battle for men's minds will be the decisive factor, it is imperative that we expose students to all manner of beliefs so that they will be able to differentiate for themselves between the true and the false, the beautiful and the spurious. Only free minds thus rigorously trained can triumph over Communist and other totalitarian ideologies, all of which we condemn and eschew.

" 'Exercise of the free intellect' will in no way endanger the country's internal security. Whenever and wherever agents of totalitarian powers commit acts of subversion, the Government's counter-intelligence agencies, with their professional staffs, may be relied upon to detect such activities. This is the only proper—and effective—way of dealing with such conspiratorial aspects of the Communist movement.

"We recognize that the House committee's roving commission 'to investigate un-American propaganda' was found to be constitutional by the U.S. Supreme Court in the Barenblatt case in 1959, and was reaffirmed in the recent Wilkinson decision. But both decisions were by a narrow 5–4 majority. We applaud Mr. Justice Black's dissent in both cases. Speaking for himself and three other members of the Court, he declared in *Barenblatt:*

" 'The first amendment says in no equivocal language that Congress shall pass no law abridging freedom of speech, press, assembly, or petition. The activities of this committee [on Un-American Activities] authorized by Congress, do precisely that, through exposure, obloquy, and public scorn.'

"Not only teachers, but all Americans, we insist, must be free from trial by publicity—from what Mr. Justice Black has called 'exposure, obloquy, and public scorn.' We would be the first to concede that teachers have no greater rights than other citizens—just as they have no lesser rights.

"Because the House Un-American Activities Committee continues to abridge citizens' rights of free speech and association, we call upon the House of Representatives to vote it out of existence. To perpetuate this committee is to perpetuate a threat to our liberties.

"All of us, inside and outside the university and college community, must understand the threat, must call upon our legislators to act to end it. Let us head Judge Learned Hand's admonition that we not 'rest our hopes too much upon constitutions, upon laws, and upon courts. Liberty lies in the hearts of men and women; when it dies there, no constitution, no law, no court can save it; no constitution, no law, no court can even do much to help it.'

"PATRICK MURPHY MALIN,
"Executive Director, American Civil Liberties Union.
"LOUIS M. HACKER,
"Chairman, Academic Freedom Committee of the ACLU.

"(The institutional affiliation of the remaining signers is for purposes of identification only and in no way commits the institution to the views expressed.)"

Kennedy's Foreign Aid Will Boost Socialism

EXTENSION OF REMARKS
OF
HON. HOMER E. CAPEHART
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Wednesday, March 29, 1961

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article which appeared in the Indianapolis Star on Sunday, March 26, 1961, entitled "Kennedy's Foreign Aid Will Boost Socialism," by Michael Padev.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

KENNEDY'S FOREIGN AID WILL BOOST SOCIALISM

(By Michael Padev)

WASHINGTON.—The main feature of President Kennedy's foreign aid program is its emphasis on so-called long-term planning. The Presidential foreign aid message says that "special attention" should be given to "those nations most willing and able to mobilize their own resources, make necessary social and economic reforms, engage in long-range planning, and make the other efforts necessary if these are to reach the stage of self-sustaining growth."

The message further stresses the need for "long-term planning and financing" and says that all aid plans should be "tailored to meet the needs and the resources of each individual country, instead of a series of individual, unrelated projects."

CALLED "ESSENTIAL"

In talks with newsmen, spokesmen of the Kennedy administration have further emphasized the importance of country-by-country and long-term economic planning, which is said to be "essential to serious economic development." Foreign states which do not engage in long-term economic planning would—under the Kennedy aid proposals—get less assistance than foreign countries which operate long-term plans for economic growth. The same idea—long-term economic planning—was stressed in Mr. Kennedy's aid proposals for Latin America.

Now let us see what all these high-sounding phrases—long-term planning, economic growth, social progress, mobilization of resources, etc.—mean in practice. They mean one thing only—the organization of a Central Government planning authority controlling and directing all economic activities in the state. This, of course, is another word for socialism, or state capitalism, or statism or any other "ism," including fascism, which preaches the gospel of a centrally planned and Government-controlled economy.

Socialist philosophers and propagandists have been attacking the free enterprise capitalist system for many years—indeed for many decades—mainly on the ground that the free economy allows the growth of individual and unrelated economic projects, while only socialism, through central government planning and control, could guarantee long-range economic development. We also know that all Socialist countries in the world (and this, of course, includes all Communist states) boast with their long-term economic planning—their 5-year, 7-year and 10-year economic plans. Soviet Russia has been developing under long-term economic plans since 1929. Red China has lived through several economic plans and so has Soviet enslaved East Europe.

Needless to say, Castro's Cuba also has a long-term plan for economic growth. So does Nehru's India—and the purpose of the Indian plan is to make the Indian economy Socialist—this is proudly admitted by the authors of the plan, as well as by the leaders of the present Indian Government. By contrast, no free enterprise capitalist country is ever subjected to government economic planning (except in wartime). We have only to look at the economies of the United States, Canada, Britain, West Germany, Japan, France, and other free states to see this obvious truth. The more an economy is centrally planned and government controlled, the more it is Socialist. The less it is government planned and controlled, the less it is Socialist. A country is completely Socialist when all the economic activities of its citizens are planned and controlled by the state.

SOCIALIST ENTERPRISE

If President Kennedy's foreign aid proposals are approved by Congress, and long-term country-by-country economic planning becomes the guiding policy line of the American foreign aid program, the United States will find itself, within the next few years, supporting and financing—on an international scale—the greatest Socialist economic enterprise of our time. As each country receiving U.S. assistance would be encouraged to organize a central economic long-term planning authority, more and more states would adopt Socialist principles and programs for economic development, until finally, all the so-called less developed nations become Socialist, in fact, and, perhaps, even in name.

What would happen to political freedom in such Socialist economies? It would, of course, die, because it would be strangled by the powerful central planning authority, which—and this is a crucial point—would enjoy political power as well. We should never forget that the economic planners and controllers in all these states would be their political rulers, too. This is, in fact, the most dangerous side of government long-term economic planning—that it is done by the same people who exercise political power. Give to any government the power to control all economic activities in the country and you are well on the way toward the absolute totalitarian states and the destruction of both economic freedom and political democracy.

Federal Aid to Education

EXTENSION OF REMARKS
OF
HON. RALPH J. RIVERS
OF ALASKA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 28, 1961

Mr. RIVERS of Alaska. Mr. Speaker, in my testimony today before the Subcommittee on General Education of the House Committee on Education and Labor, I pointed out that Alaska, among other impacted districts, would lose instead of gain under provisions of H.R. 4970 as presently written, which is the administration bill for Federal aid to education. Since my testimony also referred to the other States, I am prompted to make known to all my colleagues the substance thereof. In general, I speak in support of this legislation, which represents an effort on the part of the Federal Government to improve and equalize minimum standards

of education throughout our country, and I find from discussing this subject with many of my fellow Alaskans that my State may be recorded as strongly in support of the principle of Federal aid to education. This enthusiasm, however, has been postulated upon the understanding that appropriate legislation designed to carry out this urgent national purpose would increase financial implementation of Alaska's school program as well as the school programs in the other States. Imagine then my consternation, and like feelings on the part of my fellow Alaskans, when analysis of H.R. 4970 disclosed that Alaska, which is a recipient of Federal school impact funds, would get $68,800 less per year under said bill than if it had never been introduced. This figure is based upon an estimate for 1962 shown by the following figures from tables prepared by the Department of Health, Education, and Welfare.

STATE OF ALASKA ASSISTANCE TO IMPACTED SCHOOL DISTRICTS

Under Public Law 874:	
If retained as is	$8,090,300
If amended by title II of H.R. 4970	7,577,800
Loss, this phase	512,500
Under Public Law 815:	
If retained as is	2,447,300
If amended by title III of H.R. 4970	2,336,000
Loss, this phase	111,300
Total loss under titles II and III	623,800
Offset by $15 per pupil payment	555,000
Net loss under H.R. 4970 if enacted with titles II and III retained	68,800

As you may know, several of our colleagues have advised that similar losses would result to their impacted districts if H.R. 4970 is enacted as written. I expect that H.R. 4970 was drafted in haste, and that HEW knew this committee might in the course of its studies discover inequities and take appropriate amendatory action to remedy the miscarriage of this program as it would apply to Alaska and a few other districts.

From developments thus far I am able to pinpoint several alternative remedies.

May I first mention the idea of extending Public Law 815 and Public Law 874 in full force and effect. In H.R. 3677, the gentleman from Michigan [Mr. O'HARA] proposes a 2-year extension, the gentleman from New York [Mr. PIKE] through the medium of H.R. 3566, proposes a 4-year extension, and Senator ENGLE has introduced in the Senate S. 1078 to make permanent the existing provisions of Public Law 815 and Public Law 874. The purpose of any of these proposals can, of course, be accomplished by striking all of the titles II and III from H.R. 4970 and substituting simple extension provisions. This I recommend and would fully support.

Passage of H.R. 4970 after being so amended would produce for Alaska the estimated sum of $555,000 the first year, $645,000 the second year, and $750,000 the third year over and above entitlements under Public Law 815 and Public Law 874. Because of the many financial demands upon Alaska incident to these first years of statehood, there is an acute need for such aid to help meet the educational demands of Alaska's rapidly increasing school population and for improving its already excellent public school system, with regard to which high standards are maintained in spite of handicaps. Because of the high cost of construction and high operating costs, Alaska disburses approximately 50 percent of its total tax revenues, both State and local, in behalf of education, including support of the University of Alaska.

A related factor to consider is that Federal aid to education in Alaska looks more impressive dollarwise than in practical results. According to statistics prepared by the Office of Education of the U.S. Department of Health, Education, and Welfare, the per pupil cost in Alaska of a minimum school facility under Public Law 815 came to $2,300 in 1958 and $2,630 in 1959. In New York, for the same period, the 1958 cost of $1,810 shrank to $1,750 in 1959. Ranking the States in this regard from highest to lowest, the median is found in Maine with a 1959 per pupil construction cost of $1,1150, which is less than half of such cost in Alaska. This, I believe, graphically demonstrates one of the handicaps with which Alaskans are confronted in maintaining their school system.

Reverting now to another idea, I would like to have you consider a defect in title I discovered by Dr. George Rogers, in analyzing the administrative procedure involved. Dr. Rogers, a highly competent economist presently on the faculty of the University of Alaska, has pointed out that in computing the total earnings of individuals within each State and in the Nation as a whole, the statisticians at the Department of Health, Education, and Welfare have included the pay of military personnel within each State and the Nation as a whole. As you know, the total of individual earnings within each State is divided by the number of pupils therein to determine the income per public school pupil for each State. We also know that the pay of military personnel is exempt from State taxation and would not, therefore, reflect upon the ability of a State to maintain its public school system. Accordingly, the pay of military personnel should not be included. Although this factor increases total individual earnings within all the States on an average of only 3½ percent, it hits Alaska very hard. Tax-free military payrolls constitute 26 percent of total individual earnings within Alaska. Accordingly, an entirely false impression is created as to total earnings of individuals in Alaska subject to State taxation, with the consequence that Alaska is erroneously rated in this regard as one of the richest States and placed in the category of States slated to get only $15 per pupil as contrasted with more than twice that much for certain other States. This military pay factor, unless corrected, will also adversely affect other States within which are located substantial military establishments. Thus, individual earnings throughout the program should be computed without including the pay of military personnel. This point, which was brought to light by Dr. Rogers, has already been submitted to the Senate Subcommittee on Education by Senator GRUENING of Alaska as part of an amendment which he has proposed to S. 1021, the Senate counterpart of H.R. 4970. Senator GRUENING's amendment would also take into account comparative costs of construction in the several States. The remaining feature of his amendment, which is postulated upon retention of titles II and III, would add $84 million to the $666 million already specified for fiscal year 1962 to accomplish the purpose of offsetting losses to the impacted school districts which would result from the cutbacks under Public Law 815 and Public Law 874.

Another alternative which would resolve the problem as to Alaska has been suggested to the Senate Subcommittee on Education by Senator BARTLETT of Alaska. Senator BARTLETT suggests, if titles II and III are to be retained, that there be created a discretionary fund to be administered by the Secretary of Health, Education, and Welfare for supplemental grants to remotely located school systems suffering unusual transportation and climatic problems and where estimated construction costs exceed the national median by a factor of two or more.

Mr. Speaker, I feel that all of us recognize the desirability of preventing the inequities which would flow from H.R. 4970 if it were enacted in its present form. Therefore, I wish to be counted among those who strongly support appropriate amendatory action. My choice of the proposals which I have mentioned would be an extension of Public Law 815 and Public Law 874 in full force and effect, together with a provision requiring exclusion of the pay of military personnel in computing total individual earnings.

Hon. Leroy Johnson

SPEECH
OF
HON. RALPH HARVEY
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 28, 1961

Mr. HARVEY of Indiana. Mr. Speaker, I wish to express my own sympathy to the wife and family of our former colleague from California, Leroy Johnson. He was my good friend, and his counsel when I first came to Congress was of considerable assistance. As an aviator during World War I, he brought to the Congress an invaluable experience especially to the Armed Services Committee where he served with distinction. A devoted servant to his district and country, he was likewise devoted to his wife Betty and their family.

Our hopes are that the passing of time will soften the loss and bring to them a sense of satisfaction because of his great contribution to his country.

Fair Labor Standards Amendment of 1961

SPEECH
OF
HON. JOHN V. LINDSAY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, March 24, 1961

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H.R. 3935) to amend the Fair Labor Standards Act of 1938, as amended, to provide coverage for employees of large enterprises engaged in retail trade or service and of other employers engaged in commerce or in the production of goods for commerce, to increase the minimum wage under the act to $1.25 and hour, and for other purposes.

Mr. LINDSAY. Mr. Chairman, I support a $1.25 minimum wage bill and expanded coverage. It is my intention, therefore, to cast my vote for the committee bill and against the substitute bill, which is a flat $1.15 bill with less coverage.

An adequate minimum wage is not a vehicle for Government regulation of industry nor should it be. The goal of any minimum wage legislation should be to afford a minimum standard of living and a healthy atmosphere for competitive industry without turning loose the long tentacles of Government that could strangle the efforts and ingenuity of a free economy.

The bill before us providing for an increase to $1.25 and extending coverage to certain retail and service industries by means of a dollar volume test is both realistic and sound. Competitive advantage based on substandard wages will be reduced. Less efficient businesses will seek to offset any increased labor costs by improvement of production methods. Greater productivity will increase purchasing power, relieve localities of unemployment claims, and go a long way toward enabling workers receiving substandard wages to gain a reasonable standard of living.

In my view there should be no argument as to the propriety of the dollar volume test. The committee bill presents no severe departure from the traditional concepts of commerce and production for commerce. An enterprise engaged in activities affecting commerce is by no means a novel test. Nor is the dollar volume test so applied. Such a test has been sustained by the courts over and over-again witness the Taft-Hartley Act and the Landrum-Griffin Act. There is no dubious scheme here to include enterprises unrelated to each other, for only those industries bound by a common chain of business can be related. Furthermore the legislative record written thus far is most explicit on that point. Conversely the interstate commerce test of the substitute bill strikes me as being quite arbitrary. It predicates coverage on businesses which have five or more outlets in two or more States. This can result in the anomalous circumstance of the marginal small business being covered and a large big-dollar volume competitor being exempted.

I am not persuaded by the argument that the economic impact of a minimum wage increase will be unfavorable. The history of the Fair Labor Standards Act does not bear out such a contention. The increased labor costs to the employers have been adequately offset by other internal improvements geared to greater production. This benefits the employer and the employee. Higher minimums in the past have not increased unemployment.

Lastly, a realistic $1.25 minimum wage bill is badly needed for it will certainly help to reduce runaway industry. This is serious in New York and it is equally serious in many sectors of the Nation. We cannot continue to provide a climate that produces less than minimum standards of living, reduced purchasing power, runaway industry, unfair competitive advantage and heavy drains on local communities for welfare assistance.

We can go a long way toward improving such conditions by enactment of a sound minimum wage bill. The prescription has been written. I hope that we can resolve our differences on coverage extensions and provide new ingredients for a healthier economy by enacting this bill.

Encourage Travel to the United States

EXTENSION OF REMARKS
OF
HON. PAUL G. ROGERS
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 29, 1961

Mr. ROGERS of Florida. Mr. Speaker, during his economic message to the Congress the President indicated the need to increase foreign travel into the United States and suggested that action be taken in this field. Hearings are now being held by the Commerce Subcommittee of the Committee on Interstate and Foreign Commerce on several proposals to assist this worthy effort. Editorial comment in Florida has been most favorable to such a program and because it is timely to the current hearings, I request that the editorial of the News-Tribune, of Fort Pierce, Fla., be placed here in the RECORD:

PROMOTING TRAVEL TO THIS COUNTRY

President Kennedy, in his special message to Congress Monday on the gold problem, emphasized the important role played by tourism in the economy.

Americans now spend about $2 billion abroad in pleasure travel each year. Foreigners visiting this country spend about $1 billion a year. The difference accounts for a substantial proportion of this country's deficit in the balance of payments.

President Kennedy did not propose setting a limit on the amount Americans can spend abroad. He did suggest that Congress seek to discourage some spending abroad by reducing from $500 to $100 the duty-free goods Americans can bring home.

Such a change is not likely to result in a substantial cutback in spending by Americans abroad. The great bulk of these expenditures are for transportation, food, and hotel accommodations. A study of 65,000 customs declarations made by the collector of customs in New York during July of 1959—a heavy travel month—showed that 82 percent of returning travelers spent less than $200 on gifts and similar items; only 10 percent spent more than $500. Spot checks since 1959 have confirmed the original findings.

A more effective means of reducing the dollar gap is through increased spending of foreign tourists in this country. Last year, 5,384,000 visits were made to the United States. But 4.8 million were by Canadians and Mexicans and many of these were by the same persons who crossed the border frequently and stayed for short periods. Only 544,000 visitors from another continent came to the United States last year, compared to the more than 700,000 Americans who visited in Europe in 1959.

Each visitor to this country spends an estimated $200 in addition to expenditures on transportation. This obviously could be a sizable source of income. But the United States to date has made only the most superficial efforts to attract more visitors.

President Kennedy has promised that the Departments of Commerce, State, and Treasury will announce a major program to encourage more travel to this country. An effective program could yield important dividends in understanding as well as needed foreign exchange.

Galindez Will Be Vindicated

EXTENSION OF REMARKS
OF
HON. WILLIAM FITTS RYAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 29, 1961

Mr. RYAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address which I delivered on Saturday evening, March 18, at the Columbia University Club in New York City at a dinner commemorating the fifth anniversary of the disappearance of Columbia University Scholar Jesus de Galindez. The dinner was sponsored by the Inter-American Association for Democracy and Freedom.

My address follows:

GALINDEZ WILL BE VINDICATED

Five years ago last Sunday Jesus de Galindez vanished from the heart of New York City. Some of you knew him, perhaps as a young man in Vasconia, or later here in the New World where he continued to fight for the principles of freedom and human dignity.

I did not have the pleasure of knowing Dr. Galindez. But as a graduate of Columbia Law School and as Democratic leader of the seventh assembly district, which encompasses Columbia University where Dr. Galindez studied and taught, I have had a deep interest in the matter since the first chapters of this horrid international crime began to unfold.

THE TRAIL LED TO TRUJILLO

I profoundly regret that I was not a Member of Congress 5 years ago. Galindez deserved the most ardent pursuit of his murderers by all legitimate means. A mountain of evidence indicated Dominican complicity in the disappearance of Galindez. The Department of Justice followed the trail straight to Trujillo's door.

Trujillo frustrated U.S. legal procedures by refusing to drop the mantle of diplomatic

immunity from General Espaillat, the Dominican consul-general in New York, who was seen at the airport when the abduction plane was rented. But alternate procedures were available. Congress, through its investigative powers, should have brought to public attention the evil nature of the Caribbean dictatorship that dared to carry out its terroristic activities within the United States. Furthermore, the U.S. Government could have carried its charges against Trujillo to the Organization of American States.

I am aware that the Inter-American Association for Democracy and Freedom has done much to combat Trujillo's sinister machinations in the hemisphere. Your constant efforts to throw the spotlight of truth on the Caribbean situation have helped considerably to neutralize Trujillo's venal propaganda. You can take much satisfaction in the fact that the millions of dollars Trujillo spent for whitewash have been largely ineffective.

GALINDEZ IS NOT FORGOTTEN

This gathering tonight is proof that Galindez is not forgotten, and that there are those who will not rest until the perpetrators of his dastardly kidnaping and murder are brought to the bar of public condemnation.

This year, the fifth anniversary of Galindez's disappearance, there are hopeful signs that his unwavering courage and devotion to justice were not in vain. As Dr. Galindez repeatedly urged, the United States has abandoned its disastrous and farcical policy of regarding Trujillo as a reliable and honorable ally in the defense of Western civilization. Gone, too, is the old excuse that denouncing Trujillo's outrages would constitute "intervention." The United States has realized at last that sweeping Trujillo's brutal behavior under the rug weakens the moral foundations of hemispheric unity and emboldens the dictator to commit more repugnant crimes.

How pleased Dr. Galindez would have been to hear Douglas Dillon, when Under Secretary of State, tell the House Agriculture Committee that the Generalissimo is "a tyrant, a torturer, and a murderer."

FLAGRANT VIOLATIONS

The change in policy is clearly reflected in the inter-American community. In May 1960 the Inter-American Peace Committee—headed by the U.S. Ambassador to the Organization of American States—made an unprecedented investigation of the violation of human rights in the Dominican Republic. The Peace Committee delivered a severe condemnation of the Dominican Government for its "flagrant violation of human rights." The verdict came as no surprise to those familiar with brutal conditions in Trujillo's fiefdom. But, coming as it did from an unimpeachable international organization, Trujillo's powerful apologists were dealt a heavy blow.

The Peace Committee went further. Just as Galindez had argued previously, the committee declared that Dominican violations of human rights aggravated tensions in the Caribbean area.

A PLOT THAT BACKFIRED

Trujillo fought back with his usual terroristic methods. Holding President Betancourt responsible for the stiffening inter-American attitude toward his regime, Trujillo plotted with and aided enemies of the democratically-elected Venezuelan Government. He personally supervised a mission sent to Caracas to assassinate President Betancourt. The plot, as diabolic as the Galindez kidnaping backfired. As you know, Betancourt miraculously lived through the explosion that turned his car into an inferno.

Again the Organization of American States moved. For the first time in history, the inter-American organization invoked collective sanctions against a member state. The Foreign Minister, meeting at San José last August, agreed to break relations with the Dominican Republic, embargo all armaments shipments to the country, and to consider the suspension of trade in other articles. Subsequently, the OAS extended the embargo to include petroleum, petroleum products, trucks, and truck parts.

Trujillo's mask of respectability finally had been ripped off. No longer can he masquerade as a stanch Catholic, an ardent anti-Communist, a great humanitarian. He stands naked in the public eye: "a tyrant, a torturer, and a murderer."

THE "BENEFACTOR"

Take, for instance, Trujillo's pose as a good Catholic. The pages of the CONGRESSIONAL RECORD are full of praise for Trujillo, the Catholic benefactor. As a religious man, observers could be expected to ask, how could Trujillo be guilty of the savage excesses of which he is accused? Trujillo apologists are going to have a hard time peddling that line in the future.

Ever since the roundup and sadistic treatment of scores of Dominicans from good families suspected of plotting against the Generalissimo, the church has spoken out. The first step was a pastoral letter of January 1960, in which all six Dominican bishops called clearly for "freedom of conscience, press and assembly," for a climate of liberty, and for an end to "anonymous denunciations." Since then, Trujillo has made war on the church.

INSULTS BY RADIO

Trujillo's Radio Caribe launches a daily, virulent assault, calling priests "psychotics, perverts, parasites." The Papal Nuncio, Archbishop Lino Zanini, has had his life threatened, and the Minister of Justice and Worship called him "an international provacateur."

One month ago Bishop Reilly of San Juan de la Maguana was cut off the air during a sermon when he said that reports in the government-controlled press and radio of the country are untrustworthy. Trujillo's agents constantly intimidate Boston-born Bishop Reilly.

The Bureau of Investigation of the National Catholic Welfare Conference reports that Trujillo's stepped-up antichurch activities include the expulsion of 150 Sisters in charge of government hospitals and charitable institutions, and about 50 priests; the closing of 3 Catholic schools which have had government subsidies; the promulgation of a law to eliminate all religious instruction for Catholic children in primary and secondary schools.

Meanwhile, Trujillo, the supreme cynic, presses his long campaign to have the church accord him the title of "Benefactor of the Church."

A SUDDEN SWITCH

Trujillo's pose as a firm friend of the United States in the cold war also has crumbled. In the time it takes to snap a light switch, Trujillo reversed his position a full 180 degrees.

First, he put through his docile Congress a constitutional amendment legalizing the Communist Party. Then his news media began to take a new tack. Radio Caribe, the dictator's powerful Caribbean mouthpiece, blasts a constant diatribe against the United States.

Some samples: "Sowing disunity is the policy being pursued by the North American imperialists against the countries of Latin America"; "General Eisenhower is waging a war against Latin America on behalf of the monopolistic interests"; "the most inveterate enemies of Dominicanism—the priests, those traitors and vagabonds, and the Yankee imperialists."

PRAISE FOR CASTRO

We know, too, that last August the Generalissimo sent emissaries to Europe for a series of secret meetings with Iron Curtain country leaders. Trujillo also switched gears on his opposition to Castro. It is reported that Johnny Abbes, a former secret police chief who is violently anti-American, and General Espaillat, who figures so prominently in arranging the kidnaping of Galindez—attended a secret meeting in Cuba. There they concocted a nonaggression pact between the two Caribbean dictators. Since then, Trujillo's news media have only praise for Castro.

While the figurehead President of the Dominican Republic occasionally makes sounds along Trujillo's old line of strong ties with the Western democracies, the real power rests with the gang of hotbloods, including Abbes, Espaillat and Ramfis Trujillo, who passionately hate the United States. And let no one doubt, it is the Generalissimo himself who has given them the go-ahead.

TRUJILLO EXPOSED

Under these circumstances, anyone who continues to extol Trujillo as "our great and good friend and ally" and as "a bulwark against communism" is ludicrous.

Trujillo at last has been publicly exposed as the menace Galindez knew him to be. Like a leper, he is quarantined in the hemisphere. But like the calculating caudillo he has been for over three decades, he still sits at the seat of power.

The OAS boycott has been largely ineffectual in bringing Trujillo to his knees. He can buy oil from the Near East, trucks and spare parts from branch plants in Europe.

The embargo has intensified a recession already underway because of failing commodity prices and large expenditures for arms. The economy is at a standstill. The Treasury is out of foreign exchange. Public works expenditures have been cut to the bone, throwing thousands out of work. Fearful of political upheaval, private investment has ground to a halt.

TRUJILLO TAKES THE MONEY

Trujillo, however, simply cinches in his people's belt while looting the Treasury to make deposits to his personal accounts in Canada and Europe.

Meanwhile, Trujillo's principal income earners, sugar and coffee, are unaffected by the sanctions. Some people contend that cutting off purchases of sugar from the Dominican Republic will hasten the demise of the dictatorship. Perhaps. But it is doubtful that even this slap at Trujillo, who owns 65 percent of Dominican sugar production, can push him from his throne. He can still sell on the world market.

I do believe, however, that the United States should not make it any easier for Trujillo by cutting him in on the extra quotas which results from the cutoff of Cuban sugar from the U.S. market.

Last year Secretary of State Herter pleaded in vain with Congress for authority to bypass the Dominican Republic in purchasing the extra sugar needed to fulfill Cubas share of the U.S. market. The Eisenhower administration wisely canceled a special, 2-cents a pound premium—the only authority the administration had to reduce some of the windfall benefit showered upon the Dominican Republic, since Congress had not acted.

TIME FOR CONGRESS TO ACT

Last month President Kennedy likewise asked Congress for discretionary power to purchase the amount of the Dominican Republics windfall sugar from other suppliers. I am hopeful that Congress will act this time, and I suggest that all of you express your views on this matter to your Congressmen.

Meanwhile, mere punitive action is not enough. Revulsion against Trujillo's crimi-

nal despotism must not blind us to the problem of what comes after his fall. Will Ramfis and his henchmen, schooled in the generalissimo's savage and totalitarian methods, seize control? Will Communists move in to steal power from sincere patriots whose inexperience in representative government makes them easy prey for trained agents?

Trujillo, Jr., or any of his ilk, spell a continuation of the brutality and oppression which have infected the area during the generalissimo's reign. A Communist takeover would exchange a home-grown tyrant for one manipulated by Moscow and Peking.

ENEMIES ON THE LEFT AND RIGHT

The problem extends beyond the borders of the Dominican Republic. The dedicated men throughout the hemisphere who are struggling to make representative democracy a reality in their countries have much to fear from either of these possibilities. We have seen how Trujillo's interventionist tactics can threaten the security of a neighboring country. We are learning, now, to what extent Communist agents will go in the hemisphere to impede or wreck reforms initiated by democratic regimes.

The best defense of freedom in the Western Hemisphere, in my view, is the uniting of the democratic forces against their common enemies of the right and of the left. As Professor Galindez himself wrote in his "Era of Trujillo":

"The only truly effective way to confront communism is through a positive policy which can solve social problems with justice and freedom, with that freedom which both the Communist regimes and the Latin American dictatorships lack equally."

Jesus de Galindez did not sacrifice his life in vain. His voice and his pen were brutally silenced, but today his ideas permeate our hemisphere. Earlier this week, 5 years almost to the day since Galindez disappeared, the President of the United States delivered a stirring speech which mirrors Galindez' credo.

Said President Kennedy last Monday: "Our unfilled task is to demonstrate to the entire world that man's unsatisfied aspiration for economic progress and social justice can best be achieved by freemen working within a framework of democratic institutions. Our alliance for progress is an alliance of free governments—and it must work to eliminate tyranny from a hemisphere in which it has no rightful place. Therefore let us express our special friendship to the people of Cuba and the Dominican Republic—and hope that they will soon rejoin the society of freemen, uniting with us in our common effort."

President Kennedy goes on to pledge U.S. help in the battle against poverty, ignorance, hunger, and disease. His message is a masterful blueprint for inter-American cooperation. It now remains for the American republics to take concrete action along the path outlined by the President.

The United States alone can accomplish little in Latin America. It is the Latin Americans themselves who must remove the obstacles in their social and economic systems which hinder development.

UNITE THE REFORM LEADERS

There is one major thing the United States can do. We can act as a catalyst. We can unite those liberal reform leaders in the hemisphere who have demonstrated a willingness to proceed in orderly fashion with the difficult task of reconstructing obsolete societies. We should build a democratic fraternity, united in its determination to resist tyranny and united in its resolve to raise the living conditions of the mass of people.

Those leaders clearly devoted to freedom and reform should be shamelessly favored. They should have easy access to our highest officials and speedy action on their requests for assistance.

AN END TO DICTATORSHIP

The social ferment in Latin America today cannot be stifled. Its energies can, indeed must, be channeled into constructive purposes. The fraternity of builders will be able to inspire the spark of hope for a better future around which the restless youth of the continent can rally.

This meeting tonight is a reminder that there are many who yearn for an end to totalitarianism. Multiply our numbers by those in cities, towns and villages throughout the hemisphere and you will find a considerable force. We must each, in our own way, continue to struggle against the forces of tyranny. In paying our respects to Dr. Jesus Galindez, a gallant fighter for the rights of man, let us renew our own determination to work for the realization of Galindez' goal: a free and prosperous America.

Do-It-Yourself Farm Kit

EXTENSION OF REMARKS
OF
HON. FRED SCHWENGEL
OF IOWA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 29, 1961

Mr. SCHWENGEL. Mr. Speaker, recently I took the floor of the House to voice some of my reservations about the administration's jerry-built plan to help the farmer. It pleased me to note that a recent editorial in Life magazine expressed many of the same reservations. Under leave to extend my remarks, I call the attention of the Members to this editorial, "Do-It-Yourself Farm Kit." The editorial follows:

DO-IT-YOURSELF FARM KIT

President Kennedy, whose programs have maintained a generally high batting average for statesmanship, struck out ignominiously in his proposed solution for the farm mess, our No. 1 domestic scandal.

The only farm commodities in trouble are those which are under close Government control and subsidies. One might logically suppose that Kennedy would try to get these, too, out from under that kiss of death. Instead, his program would do just the reverse. It's a sort of do-it-yourself kit for many commodities which would allow farmers to write their own tickets on prices and production. By so doing, it would offer them the opportunity to mess up, themselves, commodities which the Government otherwise might not be able to mess up for them.

This is the way it would work: If, say, mustard-seed growers decided their product needed less production and higher prices, they would elect a committee to work out a program of crop control and minimum prices which, if approved by two-thirds of U.S. mustard-seed growers and the Secretary of Agriculture, would go into effect. Congress would have a veto power over the program, but if it did not use that veto in 60 days, then the plan would become operative. In other words, Congress would abdicate its control of farm programs.

The scheme is modeled after the system which already exists for tobacco. Under it, growers have voluntarily cut their overall plantings more than 15 percent since 1955, but have kept their prices so high that they are beginning to price themselves out of their once lucrative export market. And the system itself resembles the kind of price-fixing cartel for which industrialists can be—and recently have been—sent to jail.

Vermont's liberal Republican Senator GEORGE AIKEN made this wry comment: "If the farmers can get together to write their own program with the Secretary of Agriculture, why can't the manufacturers get Hodges to do the same for them and the labor unions get Goldberg?"

Moreover, each commodity program would be vertical, i.e., unrelated to any other. How foolish this would be is illustrated by the tobacco program itself—where the land taken out of tobacco production is often put into corn and wheat, whose surpluses are the two worst already plaguing the Nation. Quite likely, the mustard-seed growers in our example would do the same with their cutback acreage (present laws allow 15 acres of wheat to be raised exempt from controls).

What makes the program even more mystifying is that it is virtually identical to one which Texas Congressman W. R. POAGE introduced last year. It never had a ghost of a change of getting through Congress. Some of Kennedy's own advisers doubt if this warmed-up version has any better chance. We certainly hope not. As we have repeatedly urged, the only way to stop the farm scandal is to stop it—by restoring a free market to those crops still victimized by controls, by helping the marignal farmers to get off their unproductive land and by ending the subsidies which simply pile new gluts on old.

This Is Our Town

EXTENSION OF REMARKS
OF
HON. GEORGE A. GOODLING
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 29, 1961

Mr. GOODLING. Mr. Speaker, several years ago grave doubts arose in some minds when a large corporation purchased an old, established family firm in York, Pa. Comparable transactions had not always fostered a better economic environment in the community. Some concern was felt when the Allis-Chalmers Manufacturing Co. purchased the S. Morgan Smith Co., at a time when it was the largest manufacturer of hydraulic turbines in the world.

The Smith Co. was established in 1877, incorporated in 1896, and remained in the family until purchased by Allis-Chalmers. The company has always been a very important segment of the economy in the York area. Prior to selling, the Smiths erected a new and modern factory. This plant has now become too small and plans are on the drawing board for further expansion. Mr. Burwell Smith and Mr. Beauchamp Smith, of the original Smith family, continue active in the management of the industry.

The company is now one of the bright spots in our local economy and has been a tremendous asset to the community.

By a strange coincidence, the A. C. Scope, a magazine published by the Allis-Chalmers Co., reached my desk the day the area redevelopment bill will be considered by the House. It contains a very informative article setting forth what one company and its employees are doing to help build a strong economy in the area, without governmental assistance. Today the House may well decide whether, in its opinion, the precedent of furnishing Federal aid to some areas in

direct competition with other areas receiving no assistance, shall be established.

The article follows:

Wimpy Fourhman, machinist at Allis-Chalmers York Works, bought a pair of shoes for each of his five children in York last September. In December, he repeated the purchase.

Otto Koerner, Yorks Works purchasing agent, authorized the procurement of tens of thousands of weld rods from York area manufacturers throughout the year.

At the same time, George Schmidt, a Works engineer, was planning better roads, parks, water conservation, zoning and land subdivision as a member of York area Planning Commissions.

Through men like Fourhman, Koerner, and Schmidt, the York area, day after day, is experiencing the snowballing effect of an industry on a community.

In York last year, Allis-Chalmers spent $8,453,000 for such items as payrolls, materials, taxes, and certain fringe benefits. These expenditures were repeated in all Allis-Chalmers plant communities, the amount varying with the size of the plant and local services available. These expenditures were multiplied for every other industry located in those communities.

The impact of an industry is felt well beyond the gates of a plant and the doors of employes homes; the full scope of employment brought about by an industry is broader than its roster of shop and office people; and, finally, the full story of industrial impact is more than a story of dollars and cents.

For every 100 industrial jobs in a community it's estimated that there is a net increase of 74 local jobs in other fields and an average annual increase of well over a half million dollars in personal income. These 100 industrial jobs mean 296 more residents, four more retail stores, 112 more households.

For every 100 Wimpy Fourhmans, additional jobs are created for something like 0.30 firemen, 0.66 bank clerks, 0.50 teachers, 0.20 shoe clerks, and 0.40 gas station attendants, 0.14 librarians, 1.3 food clerks.

Industrial paychecks make the Wimpy Fourhmans VIP's—very important purchasers—in their communities.

The shoes that must be bought and paid for are only a fraction of Fourhman's personal expenditures. Mrs. Fourhman explained that their growing children, ages 1½ to 9 years, are "hefty eaters." She said, "We buy at a locally owned chainstore and always in the large economy size. We buy potatoes in 100 pound bags, five or six big boxes of cereal a week, at least 20 quarts of milk a week, in addition to fruit juices. That grocery cart is really loaded when we do our Friday shopping."

Homeowners, the Fourhmans anticipate a sizable purchase for their house—a new rug, for example—every 3 years. With growing children, trips to the clothing store are regular events. A few month back, their 1956 Ford needed a new carburetor.

Fourhman recently bought a boat for family summer recreation. At Christmas, among the other presents, were four new pairs of ice skates. "And every now and then we buy a phonograph record," said Mrs. Fourhman.

The list, of course, could go on and on, with some variations, matches the shopping lists of most York families. The 247-yellow-page directory in the York telephone book probably summarizes the extent of purchases made by York Works families as well as any other source.

Like nearly all, if not all, York Works families, the Fourhmans do most of their buying right at home, although several large cities are nearby. "York has a nice selection of stores of all kinds. There isn't much you can't buy here," said the Fourhmans. "Anyway, we have no problem spreading our money around the city."

Koerner and his staff face a little different situation in their purchase of supplies and services for the company. The greater York area, with a population of 100,000, can hardly be expected to quarter the vast variety of suppliers required by any one industry. Yet, for its size, York has an excellent diversification of suppliers.

Koerner said, "We like to do as much buying as possible from local sources. Because of their location, they can usually give us faster service and naturally we all like to foster our own community—this is a matter of community pride.

"We must naturally be guided in our buying by considerations for quality, price, and service. The supplier who can give us the best combination of these three, regardless of his location, is the one from whom we buy. We find, however, that those items which are manufactured in York can generally be bought to advantage in York.

"Just as an example, in 1960 we spent in excess of $100,000 for electrical power for the York Works from our local utility. We bought approximately 500,000 board feet of lumber for such things as shipping boxes, crates, and skids from local firms and brokers. Some of this lumber was harvested right here in York County. We bought approximately 224,000 gallons of fuel oil from local firms."

York suppliers total well into the hundreds. As a company, Allis-Chalmers in 1960 used in excess of 10,000 suppliers.

The York Works buys more than materials. It uses the services of: local window washers, who periodically spruce up the plant, a dozen local trucking firms who pick up and deliver at the plant, a rigging firm well equipped to install equipment such as large cranes, a local test laboratory that occasionally checks out special materials, typewriter repairmen, independent businessmen hired on a contract-service basis.

One supplier spends most of his workday at the Works. He is Martin Paige, who, in conjunction with his parents, operates the two employee cafeterias at our No. 1 and 2 plants, plus cafeterias at two other York industries. On Paige's personal payroll are 11 full-time and 1 part-time employees serving the York Works.

Paige said, "I buy most of my cafeteria food products right here in York. I try to buy locally as much as possible."

Building contractor Deitz Smith also has a crew at the plant at all times. Later this year, when work on a new 650- by 56-foot addition gets under full swing, this crew will mushroom to between 40 to 50 men, including those of subcontractors.

Added to expenditures for payrolls and to suppliers are employee benefit costs. For example, for life and hospitalization insurance programs alone, the York Works spent $169,000 in 1960.

Beyond actual cash expenditures, industry attracts and holds people who contribute their time, as employees and as private citizens, to projects that benefit the community.

Fourhman, before transferring to the second shift, served as a scout counselor and on a scout troop board. Harry Shive, valve department sales service manager, is chairman of a sewer authority for Springettsbury township. Bob Scheffer, working foreman in the laboratory, is chairman of the West York Borough Council.

Considerable assistance is given schools. Phil Barnes methods supervisor of the tool design department has helped prepare, on his own time, a course in machine design for the Pennsylvania State University. This course will be available to local residents through the university's York campus.

Bill Kling, training and safety supervisor, has represented the company on an industrial committee to set up a safety program for the York Vocational School. Kling, along with other industrial relations department men, has participated in guidance counseling programs at York schools. The plant has been host to many tours for school groups.

Kling said, "We have donated remnant steel to the vocational school for training purposes. In a letter, the school's director said, 'This gift is symbolic of the close relationship which exists between the schools and local industry'."

Said Kling, "Allis-Chalmers and other industries in York want to do the best they can by the community. This is our town. Any good we can do comes back to us and our employees."

Financial support of schools cannot be overlooked. As taxpayers, both the Works and its employees do their share in providing buildings, paying teachers. The York Junior College, a privately operated institution of higher learning, has received monetary aid from the York Works, as have local hospitals and charitable organizations.

Through pensions, social security plus their own savings, the York Works elder citizens leave an impact all their own. The Works has 138 retirees to date. One of these—Martha Bender, 66 years old—is hale and hearty enough to bowl in two leagues each week.

She is still an active Red Cross volunteer. After 8 years' service, she has 680 hours as a Red Cross receptionist at the York hospital and the county home. She has no intention of slackening the pace.

Wherever you look in York, or around any Allis-Chalmers plant community, there are examples of industry and its employees fulfilling their obligations as good citizens.

Another Farm Experiment

EXTENSION OF REMARKS
OF

HON. HOMER E. CAPEHART

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Wednesday, March 29, 1961

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial which appeared in the South Bend Tribune on Tuesday, March 21, 1961, entitled "Another Farm Experiment."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ANOTHER FARM EXPERIMENT

The farm program submitted to Congress by President Kennedy does not promise an enduring, generally satisfactory solution of the farm problem which has become steadily worse year after year.

The administration proposes legislation ostensibly to stabilize the prices of farm commodities, to stabilize production, to stimulate farmers' earning power and to eliminate the vast stockpiles of commodities bought with the taxpayers' money. These are legitimate objectives.

In the new attempt to attain them, however, President Kennedy and his advisers project a shifting of production-control authority to the Secretary of Agriculture and the farmers themselves.

If Congress approved this program the Secretary of Agriculture would be authorized to supervise election of advisory committees

in each farm commodity grouping. The farmers in each group would elect the committee members.

If market prices dropped below certain levels the Secretary of Agriculture and the advisory committees would be authorized to project price-raising programs. If the price-raising project involved price controls or acreage controls, it would be submitted in a referendum to the farmers growing the affected commodity.

Among the devices that could be considered in the price-raising attempts, in addition to price controls and acreage controls, are flexible marketing quotas, incentive payments, surplus commodity purchases, payments for diversion of commodities into by-product usage or other usages, and export subsidies.

It is to be emphasized that although this program is supposed to abate the overproduction and stored commodities situation, the range of choices for the Secretary of Agriculture and the commodity growers' committee include things that have been tried without success from the general viewpoint.

Price supports have unbalanced markets and caused consumers to turn to some substitutes. Acreage control has been ineffective. Nowadays farmers can grow more on less acreage.

So in the last analysis, it seems to be a program for postponement of the vitally necessary showdown on the farm problem. Truly profound efforts to solve it would be delayed. That might give it practical political attraction.

In this projected setup the farmers would have opportunities to decide for or against more Federal control of their operations. They might not find that enchanting.

An important question is whether the majorities in the two Houses of Congress are willing to shift so much power to the Secretary of Agriculture and farmers' committees. Congress would have veto power if price supports and acreage controls were approved by two-thirds of the affected farmers where each commodity was concerned.

The legislators might be even less comfortable in that situation than they have been up to now—and most of them have been decidedly uncomfortable.

Connecticut School Superintendents Urge Federal Aid to Education

EXTENSION OF REMARKS
OF
HON. FRANK KOWALSKI
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 29, 1961

Mr. KOWALSKI. Mr. Speaker, I bring to the attention of the House a letter I received today from the Connecticut Association of Public School Superintendents, urging enactment of legislation providing Federal aid to schools.

It is significant that this organization of educators most familiar with the problems that exist on the local level has come forward with an endorsement of H.R. 4970.

As the letter points out, the Federal Government must recognize its obligation in the field of education.

The letter follows:

THE CONNECTICUT ASSOCIATION OF PUBLIC SCHOOL SUPERINTENDENTS,
March 27, 1961.

Hon. FRANK KOWALSKI,
House Office Building,
Washington, D.C.

DEAR MR. KOWALSKI: H.R. 4970, School Assistance Act of 1961, will benefit education in Connecticut as well as that in the rest of the country. It will make funds available from the Federal Treasury which collects these funds more economically and expeditiously than they can be collected in either local or State revenues, and to redistribute the funds without imposing Federal control or interference. Not only will this act give material assistance to schools, but it will also indicate to people in our country, as well as other countries, that our Federal Government is recognizing that education is vital to the welfare of the country as a whole, and should, therefore, be recognized as a responsibility to be shared by the Federal Government, as well as by State and local municipalities.

I respectfully urge that you support this bill in the U.S. House of Representatives.

Respectfully yours,
JOHN W. WALLACE,
President, Connecticut Association of School Superintendents.

Nigerians Are Eager To Learn

EXTENSION OF REMARKS
OF
HON. MARTHA W. GRIFFITHS
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 29, 1961

Mrs. GRIFFITHS. Mr. Speaker, in Africa a dynamic and somewhat impatient desire to get ahead is pushing the old way of life out of existence. Nowhere is this more visable than in Nigeria. The following article by the Detroit Free Press' man in Africa, Judd Arnett, gives a vivid impression of the vitality and energy of this country:

(By Judd Arnett)

LAGOS, NIGERIA.—By plane and auto we took to the boondocks again, traveling more than 600 miles roundtrip to visit the University of Nigeria, deep in the eastern precincts of this bustling eager nation.

The Honorable "Soapy" Williams led the way, rallying his troops against the inertias of fatigue and the midday sun, and in a moment, I will attempt to tell you why this junket was important.

But first a note about the new Africa that is being superimposed on traditions and cultures centuries old.

The bush dust scrubbed away, I am writing from an air-conditioned room in the Federal Palace Hotel in Lagos, which would not be put to shame by the Sheraton-Cadillac in Detroit.

Below, on a moonstruck veranda, African boys as neat as freshly starched napkins are serving high-caloried chow to suited and necktied business types. The stock market reports from London and New York were scanned here today, and five newspapers were delivered to my room this morning.

What I am trying to say is that the old Africa lives on in many ways in sundry places, but the new is also pushing in—an office building here, a school or factory there, a hospital where once trap-jawed crocodiles threshed in a slime-covered swamp. Roads have been built and there are airports near communities with improbable names.

I do not quite understand why they decided to build the University of Nigeria at Neukka, which is far off the beaten path even by African standards, but I presume there was politics involved. There usually is in such matters.

Anyhow, to reach Neukka we flew for 2 hours to Emagu then traveled another hour by motorcade, wending through a section inhabited by natives with primitive instincts.

By American standards, the University of Nigeria isn't much at the moment and will never equal Colgate or Harvard in physical facilities or quality of curriculum, but to the people of Nigeria it is the greatest thing that has happened to them save independence.

I am very proud that a Michigan school is associated with the development of this steppingstone to African intellectual uplift.

Michigan State University accepted a grant last year from the International Cooperative Administration to advise Nigeria in the founding and establishment of its school, and today there are eight advisers from East Lansing (plus one from Ann Arbor) at Neukka. Their problem is currently not to get things going—but to keep them from moving too swiftly.

For on a hot, wind-disturbed plateau outside of Neukka, buildings are going up out of cement blocks made by native workers; classes are being held in half-completed structures; homes are being erected for professors and staffers.

To give you some idea of the impatience of the Nigerians, remember that the first ground was not broken at Neukka until last September—but they wanted to have 5,000 students in classes by the first of the year.

The Michigan State advisers kept on the lid by a great deal of persuasion and limited the initial enrollment to 260, but the pressures for more pupils are mounting. One of these days, impatient Nigeria will have the largest university in Africa.

The Michigan State University delegation is headed by a distinguished educator, Dr. George M. Johnson, who serves as chief administrative officer and guiding light. Other advisers are Noble Bright, Jr., Richmond C. Davis, Alfred L. Edwards, LeRoy C. Ferguson, John W. Hanson, Masel C. Hill, Kirk Lawton, and Dr. Alvin P. Loving. A tenth member, Troy L. Stearns, will return to Neukka in 2 weeks.

Dr. Loving, on loan to the staff from the University of Michigan, is widely known in Detroit, where he taught for 16 years before transferring to Michigan State University.

At the present time, courses of instruction are limited to education, agriculture, sociology and economics, but these will be expanded as fast as teachers become available. I met as many students as possible during a too-limited stay, and you can accept this as the gospel truth: these kids are desperate for knowledge.

In a way, the University of Nigeria is typical of the nation—of the African countries I have seen. Nigeria has the most drive, the highest degree of vitality, the greatest burning urge to get ahead. And it is willing to pay the price of progress: already 43 percent of the national budget is going into education and there are schools everywhere.

The eagerness of the students comes down from their political leaders, who make no bones of the fact that they are going to push Nigeria to the absolute forefront of African nations, one way or another.

There is a brashness connected with this will to get ahead: at a luncheon following our visit to the school, the Premier of East Nigeria put it on the line—his country wants foreign capital.

"If we can get the capital," Dr. Michael Okpara promised, "we can get the experts. And then Nigeria will become a great bastion for freedom. * * *"

Nigeria has just about every problem, or challenge, you can think of, including poverty, illiteracy, lack of industry, political divisions inspired by tribalism, archaic means of transportation. Still, I do not sell it short.

For here the people have energy. To them, independence has also meant freedom—some people think the country has too much freedom, and this will be the hub of the political battles of the future. But now, at least, Nigerians are saying or writing what they think, with the press bordering on the inflammatory most of the time.

I have no idea what Governor Williams and his associates will recommend in the way of aid for Nigeria. Personally, however, this is one of the few places where I would like to see Uncle Sam go for broke. American dollars spent in this not-so-pretty but highly inspired nation might pay the free world big dividends in the years to come.

Nigerians are convinced their country is destined to become a major power in world affairs, and their nationalism is directed to this end. If we want to make a bet on spirit and enterprise, we could pick many worse places on the Dark Continent—but few better ones.

Educating Citizens to Dangers of Communism

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Wednesday, March 29, 1961

Mr. WILEY. Mr. President, in our life-and-death struggle with communism, the battle cannot be won unless the American people are fully educated and alerted to its dangers at home and abroad.

For leadership in this national endeavor, we cannot depend solely upon Uncle Sam. Rather, patriotic individuals, organizations, public information media, including newspapers, and others, must participate in such a national security program. The struggle against communism—if nuclear war can be averted—will be a long-run, not a short-term, battle. Controlling about a billion people and vast land and natural resources, communism is a formidable enemy. Unless we mobilize our people in spirit and action, we could well lose the contest.

If, however, we bring to bear the full potential of our manpower, brainpower and resources in all-out support of the ideals of freedom and how it can best serve humanity, then I am confident that we will win.

Recently, the Milwaukee Sentinel of Milkaukee, Wis., has been publishing a series of articles entitled "On Your Guard" written by Jack Lotto. The purpose of the articles is to keep readers on guard against Communist propaganda, as well as to provide a weekly roundup of Communist and pro-Communist activities. Reflecting a realistic, significant effort by an outstanding newspaper to alert and mobilize public opinion and action against the Red conspiracy, I ask unanimous consent to have some of this series printed in the Appendix of the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

REDS GIVE GO-AHEAD ON UNREST

(By Jack Lotto)

U.S. Communist bosses, in a secret "Little Kremlin" meeting, have given the go-ahead for an ambitious plot to stir nationwide unrest.

The Red decisions on their own version of the New Frontier, hold this grim promise for the immediate future:

Big strikes, wild demonstrations reminiscent of the thirties, and other mass forms of lawlessness to weaken our country at home and abroad.

No segment of the population will be immune from the Red agitational virus. As part of the Communist program of action, a special woman's commission is being established to concentrate on the female population.

Youth, labor, Negro, Spanish-speaking, religious and political groups are all targets in the planned bold onslaught against the Government.

The 50 members of the ruling national committee of the U.S. Communist Party okayed the troublemaking schemes at their second meeting since December 1959.

The Red commissars approved unanimously a resolution agreeing to continue to take orders from Moscow and reaffirmed their allegiance to revolutionary Marxist-Leninist doctrines.

They did so when they indorsed the December statement of the 81 Communist Parties in Moscow, which hid revolutionary aims behind talk of "peaceful coexistence."

This phrase, which will be heard with increasing frequency, in the Communist lexicon, does not mean peace or conciliation as many innocently believe.

Here is exactly what the Communists mean when they, from Premier Khrushchev down, talk about "peaceful coexistence."

This is the official text released by the world Communist movement and indorsed by the U.S. Communist Party:

"Peaceful coexistence of countries with different social systems does not mean conciliation of the Socialist (Communist) and bourgeois ideologies. On the contrary, it implies intensification of the struggle of the working class, of all the Communist Parties, for the triumph of Socialist ideas."

The U.S. Reds, in their conference, agreed that widespread unemployment makes conditions ideal for them to stimulate mass participation of the people. In plain talk, this means organizing big demonstrations. That's one of the meanings of the call that went out for a vast upsurge of the people and creation of sharper conflict between labor and management.

To gain even wider influence, the Communists are going to try to form coalitions or united fronts. Thus, they will attempt to join forces—temporarily—with many groups which oppose communism, but which may agree with them on a few points.

REDS SEEK BRAINWASHING OF NEGROES

(By Jack Lotto)

U.S. Communists are going to try brainwashing Negroes on a national scale.

They will attempt to convince the loyal Negro population to turn into a Government-hating mob of lawbreakers.

The creation of an antigovernment Negro force, allied with the world Communist movement, was a major decision at a secret meeting of the Communist Party's "National Negro Commission."

The 2-day strategy and tactics meeting, in Philadelphia, was attended by top Negro agitation specialists from all over the country, (including New York, Los Angeles, San Francisco, Baltimore, and Albany, N.Y.).

The main discussion centered on an agitational program outlined by party leaders Claude L. Lightfoot, of Chicago, and Moscow-trained William L. Patterson, of New York.

Lightfoot told the meeting that "U.S. Negroes must have knowledge of our mutual enemy and knowledge of when and how to fight against him. This the left can give to the Negro American."

The Reds agreed on a stepped-up plan of agitation and propaganda in heavily populated Negro and Spanish-speaking sections of the Nation.

They intend to pound home the claim that the "enemy" of all Negroes is the U.S. Government, while Russia and Cuba are their true friends and "allies."

They also will attempt to get Negroes to violate the Government ban on travel to Cuba.

"Negroes," said a Red document, "should be encouraged to visit Cuba."

The Government barred travel of all Americans to the Communist-run island after it broke off diplomatic relations with the Soviet satellite. The action followed a long series of insults, confiscation of U.S. property, and jailing of American citizens on trumped up charges.

Patterson, who set the tone for the conference, won hearty applause when he said the time was right for a "get tough" program to "force" the Government to end segregation.

He singled out New York, Philadelphia, Detroit, Cleveland, Los Angeles, and San Francisco as northern cities where concentrated mass activities could supposedly wipe out segregation overnight. This could happen, he asserted, "if we (Communists) work correctly, if the masses are drawn into unified action."

Meaning of such doubletalk from a Communist: Big strikes.

Said Patterson: "Let us help make history. Let us help increase the tempo and the scope of the struggles for equality * * *."

The Communist Party is never satisfied with legal ways to end problems. It prefers mob violence, strife, and class conflict—and will attempt to stoke mass disorder—for the benefit of the Kremlin.

REDS BLAME UNITED STATES FOR LUMUMBA DEATH

(By Jack Lotto)

The U.S. Communist Party this week hypocritically blamed the U.S. Government and the Rockefeller family for Lumumba's killing, and ordered demonstrations to continue.

A document drafted by the four-man secretariat showed the Reds intend to combine their agitation for the Communist-desired Congo with racial problems in this country.

The Communists want to curry favor with American Negroes by posing, falsely, as their champions and friends. In this manner, they hope to get many Negroes to back Communist demands for taking over the Congo behind a smokescreen of liberation talk.

All Reds and pro-Communist fronts in every phase of American life were told to keep the pressure on to win support for Soviet ideas.

Said the action-now manifesto: "We call upon labor and the American people—trade unions, people's organizations, churches, fraternal societies—upon women and youth, to demonstrate in every democratic and peaceful manner; in meetings, parades, and

through telegrams, resolutions and statements.

"The monstrous assassinations of Lumumba and his aids are crimes against colonial freedom and against the noble cause of Negro liberation in the United States. The United States stands guilty before world opinion of doing everything possible in creating the conditions which led to these barbarous crimes."

Unsaid by the Communists: The United States is supporting United Nations attempts to bring peace and stability to the Congo. The United States backed an African-Asian sponsored U.N. resolution to strengthen the U.N.'s hand in the Congo. The Soviet Union did not support the resolution.

The first big demonstration, openly organized by the Communist Party, was set for Friday night (March 3) in New York's Carnegie Hall.

This Red rally started out as an 80th birthday tribute to William Z. Foster, longtime party boss, now in Moscow. The death of Lumumba gave the Reds the opportunity to use the occasion to turn the pro-Red Lumumba into another propaganda martyr.

Among the claims by the Reds: The Rockefeller family has vast holdings in the Congo, and therefore this country supposedly would "risk a world nuclear disaster to protect their monopoly superprofits."

Also unsaid by the Reds: The Congo is rich in uranium deposits, which they want. The first American A-bombs were made with uranium from Katanga, a province now controlled by pro-Western President Moise Tshombe.

If the Reds really wanted to see peace in the Congo, they would back the U.N. instead of trying to undercut it. They want to get all U.N. troops out of the Congo.

"Let the Congolese people settle their own affairs" is the pious but phony chant of the Reds and their cohorts. What they mean is let the Soviet Union have a free hand in turning the Congo into another Red colony.

REDS PUSH 1961 U.S. HUNGER MARCHES

(By Jack Lotto)

The Communists are drumming up nationwide hunger marches.

Thirty-one years after they led the big March 1930 demonstrations, the Reds are working to spark new mass struggles.

The plans to sharply increase agitation among the Nation's unemployed were OK'd in a recent secret meeting of the party hierarchy.

A letter-directive to all district and State Communist locals ordered immediate concentration on the task.

A special depression issue of 100,000 copies of the party's newspaper was printed and is being distributed in key unemployment areas across the country.

Every article had one theme: The mass demonstrations and battles of the depression days have lessons for today's struggles. Meaning: Get such marches going again in major cities and State capitals—with one march toward Washington.

"Prepare for sharper struggles" was the word sent to the comrades by Gus Hall, national secretary of the Communist Party.

Indications are the Reds will begin setting up on local, State, and National levels so-called unemployment councils, as they did in the 1930's. Where such groups are already organized by legitimate labor unions, the Reds will attempt to infiltrate or "guide" them.

Said an editorial in the Worker, official party paper: "Only struggles like those waged by the unemployed and many unions during the 1930's can force new urgent advances on the welfare front * * * conferences of a few public figures along with union officials will not impress anybody * * * we need grassroots action and conferences of many thousands, if the country is to be really aroused * * *."

Thus, the Reds belittled the efforts of the anti-Communist AFL–CIO on the jobless problem. They claimed that only the Communists truly represent the needs of the unemployed.

The Communists see wonderful trouble-making opportunities in the real unemployment problem. Discontent is the breeding ground for the Reds to find recruits among those who have nothing to lose, and to push their divide and conquer strategy.

Among the proposals being peddled by the party supposedly to aid the jobless was one for a big increase in trade with Red China and Russia. Shipping strategic goods to the Communists to build up their war potential—now banned by law—would make plenty of work, the local Reds claimed.

Another demand in the peddling of utopian ideas to pose as the friend of the needy and unemployed: The U.S. Government should pay two-thirds of every jobless worker's wages indefinitely.

MARTH STERN TURNS PROPAGANDIST

(By Jack Lotto)

Amid the cries for revenge for Lumumba, a strange winter wonderland tale popped up in the U.S. Communist press this week.

The article appeared odd in Communist publications full of agitational directives, calls for mass meetings, etc., but the author was even more unusual.

It was the once-beautiful Mati Hari, and American fugitive, Martha Dodd Stern.

She and her multimillionaire husband, Alfred, have been wanted since 1957 on an espionage indictment, linking them with a big wartime Soviet spy ring in the United States.

The Sterns went into the "deep freeze" after escaping behind the Iron Curtain from Mexico, leaving behind a final diatribe, blaming the United States for world tensions.

The unusually lengthy and flowery story about a peaceful winter scene in a tiny Czechoslovakian village was actually a signal to the comrades. It meant that the turncoat daughter of a former U.S. ambassador was coming into the open to engage in a new role for the international Communist conspiracy—that of a propagandist.

One would hardly suspect the hard drinking, ruthless character of the woman who wrote colorfully of the supposedly blissful life under communism:

"Coming upon the healthy red-cheeked women was like walking into a garden of summer flowers. In their luscious colored kerchiefs and brilliant costumes, they moved gracefully, one more alluring than the next."

Contrast this with the last statement by Mrs. Stern, issued in 1957, when she arrived in Prague, and vanished:

"The ruling groups in the United States, instead of accepting the challenge of peaceful economic and political competition with the Socialist countries, launched a national policy of cold war, dedicated to greater and greater profits for the monopolists, and to the oppression, if not the destruction of mankind."

Imprisoned spy boss, Jack Soble, who admits receiving espionage reports from Mrs. Stern, told the writer that the accused agent, in her twisted loyalty to Russia, would go to any length to help the Reds.

She bragged to him how she stole U.S. Embassy secrets during her late father's term as Ambassador to Hitler's Germany in the 1930's. The information was turned over to a Soviet agent with whom she was having an affair.

It was she who first suspected FBI counterspy Boris Morros and so informed the Soviet Embassy in Washington. Luckily for the motion-picture producer, the Soviets took no immediate action against Morros.

Watch for possible big outbreaks of violence stirred by pro-Communists in Harlem and other Negro-populated areas of the country this week.

"Memorial" rallies for Lumumba are in the works, the biggest scheduled for New York's Harlem Sunday afternoon.

Soapy's Wife Proves To Be One-Woman Peace Corps

EXTENSION OF REMARKS

OF

HON. MARTHA W. GRIFFITHS

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 29, 1961

Mrs. GRIFFITHS. Mr. Speaker, Judd Arnett recently discovered that it is no mean task trying to keep up with a person as active as Mrs. Nancy Williams, wife of Assistant Secretary of State for African Affairs Williams. While accompanying her husband on his recent tour of Africa, Mrs. Williams displayed a vigor and stamina that came close to exhausting the male members of the entourage. In the following article, Mr. Arnett describes how this "one-woman Peace Corps" was able to project an interest, warmth, and understanding that found an encouraging response in all the people she met.

The article follows:

SOAPY'S WIFE PROVES TO BE ONE-WOMAN PEACE CORPS

(By Judd Arnett)

ANYWHERE IN AFRICA.—At dawn this hot and muggy morning, Mrs. Nancy Williams, the wife of G. Mennen, turned off the alarm and made ready for another day.

After a hasty breakfast she kissed ol' "Soapy," Michigan's ex-Governor and the incumbent Assistant Secretary of State for African Affairs, who said "Goodbye, Honey," no doubt, and then she resumed a schedule the likes of which would make a Marine gunnery sergeant go AWOL.

This is what she did:

At 8, met the embassy staff; 8:40, toured the embassy building; 9:30, had coffee with assorted American ladies; 10:30, departed for radio interview; 10:45, arrived at local YWCA; 11:15, inspected a maternity hospital; 11:45, visited a nursery school; 12:20, toured a girls' school; 1:25, lunched with a women's group; 3, chatted with a distinguished native lady; 4, romped through a museum; 5, was present for the opening of a library; 7, appeared fresh as a daisy at a sundowner, Africa's cocktail party, or reception; 9, dined with "Soapy" and important national politicians.

This was not an unusual day in the life of Nancy Williams, who has been on the campaign trail since 1948. It was just another whirl on the merry-go-round she has been riding since February 15, when she left New York as the only female member of the entourage bent on a hurried look-see at 16 African nations.

And now is the time for a public confession: The early skeptics, myself included, bow to superior strength and stamina. She has run us ragged, she has remained well and vital while the rest of us were going through various stages of the vapors—she has been the best advertisement America has had during this often trying month.

AFRICAN WOMEN GET A RAW DEAL

More than any other member of the American party, Mrs. Williams has met the people of Africa. Practically all her time has been spent in hospitals, schools, nurseries, market places.

She has left the politicking to others, her distinguished husband included, and as a result I suspect that she knows far more about the problems of this struggling, chaotic continent than any of the rest of us.

If Congress really wants to know what Africa is all about, perhaps they should call the Governor's wife to testify before the budget committees.

Certainly she would say kind words for the women of Africa, for she has told me that the greatest need out here is twofold with one central goal—the emancipation of the weaker sex through education and medical care.

By any standards, the African woman gets a raw deal, for she is the fetcher, the toter, the family member who does the work while the old man sits in the shade or goes fishing.

A common sight in all African countries is this: Here comes a housewife, a bundle of wood, or a jug of water, or a pan of food plucked from the forest, balanced on her head. More often than not, a baby will be riding on her back, held in place by a length of cloth.

You seldom see a man carrying anything. Yet men have all the hernia operations. Africa is not a woman's world.

One of the big problems in most native communities is lack of water, and Momma must do the going after and the bringing back. This keeps her busy and out of the affairs of the menfolk, who have a great deal of heavy thinking to do, and resent interference at the family levels.

THE WELL INTERFERED

The story is told of a tribe that lived for years, perhaps centuries, through succeeding generations, on a high hill. It was 5 hours, coming and going, to the nearest water, and the women made this trip each day during the long and hot dry season.

The British dug a well nearby, and cut the traveling time to a matter of minutes. Progress? For the women, yes. But for tribal life, this was a very disturbing development—for the distaff members of the community now had time on their hands, and it was soon common gossip that they were interfering in the orderly processes of government at the precinct level.

It is into this strange and curious world that Nancy Williams has injected her personality for 4 weeks.

The response to her has been overwhelming. More than once I have seen and heard groups of Africans applaud when Nancy Williams appeared. She has never been afraid, not even in the Congo, where you couldn't have offered enough money to get some of us into the native quarters.

Nancy Williams has been a "one-woman peace corps" in Africa. Leaving her at home would have been the biggest mistake "Soapy" could have made.

AFRICA'S NEED

Out of Nancy Williams' experiences in Africa have come positive impressions. This is what she believes:

The work of the missionaries, Protestant and Catholic alike, has been very impressive. Without them, Africa would be much more retarded than it now is.

It is a mistake, Nancy Williams insists, to "talk about Africa in the lump sum. Different countries have different problems."

The quickest way to help Africa "is to see to it that more little girls are admitted to the schools. If we teach them homemaking and sanitation, they will have a great influence on the welfare and progress of their nations in the years immediately ahead."

She believes, too, that the social graces should be imparted to the young girls of Africa.

In too many instances, international scholarship grants have been withheld from girls and women. Therefore, the higher education of Africans has fallen "out of balance."

In the field of health, Mrs. Williams has found a high incidence of gastric diseases. Some people are affected 95 percent of the time, with resultant drains upon their abilities to resist fevers. In her hospital tours she has also found ailments which "we have not seen in the States for a long time—leprosy, yellow fever, tetanus."

It is in the cities that the greatest progress has been made, and in these areas Nancy Williams has learned that the women of Africa are aware "that there is a better way of life. They are avid to share in it, for the sake of themselves and their families."

And above all, she is convinced that Africans are "the friendliest people on the face of the earth."

Plight of the New England Fishing Industry

EXTENSION OF REMARKS

OF

HON. BENJAMIN A. SMITH

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Wednesday, March 29, 1961

Mr. SMITH of Massachusetts. Mr. President, the New York Herald Tribune published two additional articles yesterday and today concerning the plight of the New England fishing industry. The last of these is about the vital work being done by the Federal Government to aid the industry through research. I would like unanimous consent to have these articles printed in the Appendix of the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

PROSPERITY ELUSIVE FOR U.S. FISHERMAN

(By William G. Wing)

GLOUCESTER, Mass., March 27.—The bronze fisherman that stands on the waterfront, staring out toward a sea where fewer and fewer Gloucestermen are fishing, seems to have a wistful expression these days.

Hard times have come to Gloucester's fishermen. Their fortunes have declined even though the United States remains one of the great fish-catching powers. The only countries that catch more, according to the Food and Agriculture Organization of the United Nations, are Japan and Communist China.

But since 1959, the biggest part of the U.S. catch has been for factories and chicken farms rather than food for people. These are the so-called industrial fish, mostly a sardine-like species called menhaden, which are squeezed for oil for paint and other uses and ground into meal for animals and poultry.

TITLE MOVES SOUTH

Most of this kind of fishing is done south of New England. Two years ago the menhaden fleet took away Gloucester's title as the country's first fishing port and gave it to Reedville, a pungent little village at the tip of the Northern Neck in Virginia.

Gloucester, like the rest of New England, is chiefly interested in edible fish, precisely the kind called groundfish. These are such species as cod, halibut, haddock, redfish and flounder that feed on or near the bottom—the "ground." They are scooped up in huge, bag-like nets and principally sold to such fresh-fish markets as the Fulton Fish Market in New York.

IMPORTED FISH BLOCKS

These markets have been hurt in the last 8 years by the advent of packaged, frozen, precooked fish. Right in the forefront of this new development is the city of Gloucester which has 25 factories processing fish. Fish is still the No. 1 industry here, with tourists second.

But Gloucester's fishermen haven't shared in the boom. The fish used in the frozen packages are the kind they catch—cod and haddock, mostly—but the fish that flow along the production lines here were caught by Canadians, Icelanders, Danes, Japanese and other foreign fishermen.

The reason is that the basis of the production lines is a commodity called fish blocks. These are frozen blocks of pure meat, uniform in size, that look like slabs of marble. They arrive in Gloucester stacked in holds of refrigerated cargo ships and move on to the production lines like lumber, first through bandsaws that cut them into small portions and then through cascades of batter and bread crumbs, tanks of hot cooking oil and then blasts in subzero air. Then the portions are sorted into boxes, sealed, stamped and sent away in refrigerated trucks all across the country.

U.S. MEN UNDERSOLD

New England fishermen have not been able to compete in the business of producing fish blocks for a number of reasons. Their prices for fish are low but foreign fishermen can sell lower. Workers in the foreign fish-block plants are paid less than Americans would work for. On top of this, the imported frozen fish have an advantage in quality.

The sooner a fish can be frozen after it is caught, the fresher it will taste. Foreign fishermen are closer to the grounds where the fish live. Boats from Nova Scotia and Iceland can get their catch to the freezer within a few hours; a Gloucester trawler that goes out to the Grand Banks may have to keep fish in its hold a week before reaching shore.

TOO INDEPENDENT

There are other factors that work against the Gloucester fishermen, including his temperament. Hazardous, chancy work at sea has made him one of the Republic's most self-reliant citizens. There are no employers and employees in the boat. The men work on shares. Independence has been a greater virtue among fishermen than cooperation. They just don't think in terms of organization and long-range plans in comparison to other industries.

They have never gotten much outside help. Fishermen stand in striking contrast to their fellow food-producers, the farmers, in regard to the Government and public money. Farmers are swathed in Government controls and protections, but fishermen's prices are not supported; they receive no subsidy—so far, at least—and the product with which they compete comes in from abroad with low duties or no duties.

GOVERNMENT EFFORT

Their foreign competitors on the fishing grounds usually are subsidized and often work as part of a corporate or government-directed effort. This sort of fishing is epitomized by a Russian fishing fleet recently described in an English newspaper.

The fleet showed up near some English trawlers and went to work like a naval task force, flashing signals and maneuvering itself into position. Within a short time, it

had swept up the fish in the area with the efficiency of a vacuum cleaner.

This is extreme but it may be the face of the future. Having to meet this kind of competition from abroad is bad enough, but what really rankles the Gloucesterman is the feeling that he has to meet it while his own country is working against him.

U.S. HELP FOR FOREIGNERS

The feeling comes from the fact that so many foreign fisheries have been made strong and efficient by American gifts and loans. American help for fisheries around the world from Albania to Vietnam has been on a tremendous scale as a means of helping these countries feed themselves again after World War II. The help has enabled some of the countries to acquire fishing facilities New England can't match. The Gloucesterman is galled by having had to help pay for them.

He is also hobbled by a law that forbids him from buying a boat on the open market. His boat is the biggest investment and usually the key to whether he can fish successfully. But he can't shop, like a yachtsman, for a boat built in a foreign yard. He can only buy an American-built boat which is generrally more expensive.

LAW DOESN'T HELP

The law that restricts him was passed to protect American shipbuilders. To offset the builders' higher prices, some shipowners are paid subsidies. Fishermen get nothing.

As a step toward correcting this situation, the last Congress appropriated $750,000 to be given as part of the cost of new boats, if the owner could prove his business had been hurt by imports. The money given could be up to a third of the cost of the boat. But not a cent was paid to fishermen last year because of technicalities in the wording of the legislation.

There are two Federal loan programs. One has loaned fish boatowners $11 million at 5 percent interest during the last 3 years for construction, repairs and equipment. Another program just starting will insure loans and mortgages fishermen obtain to build or fix their boats.

NEED FISH TARIFF

Asked what help they need to survive, fishermen have a standard answer: higher tariffs on foreign fish. Four attempts to gain an increase on imported fillets were made by the New England fishermen during the last administraton. The Tariff Commission approved two but both were denied by President Eisenhower.

The President said he was reluctant to impede trade with foreign nations. He also said he thought higher tariffs were not in the fishermen's best interests. Many others agree that a tariff would not accomplish what the fishermen want; they think it would run up the price of fish, make supplies more uncertain and make fish less acceptable to the public.

OPPOSING FACTORS

In Gloucester, the fishermen think there are two specific factors working against a higher tariff. One is that the U.S. Government would not raise the duty on Icelandic fish as long as we quarter our troops in Iceland. The other is that the automobile makers in Detroit are against a higher fish tariff for this reason: if the United States makes it harder for Canada to sell fish here, Canada may make it harder for Americans to sell automobiles there. Automobiles weigh more than fish in Washington.

Besides bitterness about imports, the age-old gripe of the fishermen is still current on the waterfront. This is that the fisherman is robbed blind by the middleman. The markup between prices paid at the wharves and prices paid by the consumer keep this alive.

MARKUP EXAMPLE

A week or so ago, for instance, fishermen here were getting 7½ cents a pound for flounder; the fillets were selling the next day in New York for 60 cents a pound. Since it takes 3 pounds of whole flounder to make one pound of fillet, the markup appears to be from 22½ to 60 cents. This is said to be a mild example.

The risks and waste in handling fish account for the markup and, as Heaven knows, marketing fish is a vast, complex problem of its own. Tomorrow we will look into the Federal Government's efforts to help fishermen through technical research.

UNITED STATES TURNS TO RESEARCH TO HELP FISHERMEN

(By William G. Wing)

GLOUCESTER, MASS., March 28.—No one before has seen what a trawler's net looked like as it scraped along the ocean floor, but here it was on a screen. The Government's fishery research people had put a television camera in a net and now were showing the film to an audience of trawler captains.

The film showed that as the net was dragged at about 3 miles an hour, the meshes opened wide. They were perfectly square. It was a brilliantly conclusive answer to the long-argued question of the shape of meshes under pressure. Most fishermen had thought they were pulled sideways and narrowed.

The lights went on and a fisherman said flatly: "That's not right."

"But you just saw it," the Government man said.

"Yeah," said the fisherman, "but I don't believe it."

This illustrates both the difficulty of forcing new ideas on that most conservative breed, fishermen, and also the sort of thing the Federal Government's Bureau of Commercial Fisheries is doing to learn basic facts about the ancient but little understood fisheries.

TRACK DRIFTING EGGS

Government researchers have tracked drifting cods eggs by dropping bottles from dirigibles, herded schools of herring with air bubbles, discovered new haunts of lobster and tuna and are spending endless hours twiddling with test tubes and sniffing, seeking to learn why a fish smells like a fish.

The television camera in the net showed not only the shape of the meshes but also the reaction of fish when a great gaping net comes blundering into their school; they turn and swim directly before it like dogs at a smalltown parade.

"It looks like the only fish that get caught are the ones that stumble," a researcher said.

Next the researchers plan to send men down to ride in the nets and watch what happens. An underwater car has been made from a plane's wing tank which will be towed directly in front of the net. The bomb-shaped car has short wings and holds two skin divers, one sitting like a tail-gun Charlie in the rear, working a television camera, the other in front working the controls.

TRIED LAST SUMMER

The device was tried out last summer and the only shortcoming was that the divers almost froze while being towed through the icy ocean of Cape Cod. More protection for them has been built in the car and this summer it will be used in experiments on electronarcosis. Electric shocks will be sent into the water to stun fish and cause them to stumble into the net. The Government's skindivers, who have the outlook of Nathan Hale, seemed unworried at the risk of both drowning and electrocution.

This research, as well as all the Federal efforts to help fishermen, is done by the Burea of Commercial Fisheries, which is part of the Interior Department's Fish and Wildlife Service. The Bureau is old—fisheries having been the first natural resource to arouse the American public's concern—but it has recently been given new life.

This came from the passage of the Saltonstall-Kennedy Act in 1954, allocating 30 per cent of the duties collected on fish imports for research to help the fisheries. The act gave the Bureau an additional $3 million a year, making possible many of the present projects in Gloucester.

The name of the act also explains why the Government fisheries people, if not the fishermen, seem heartened by the advent of the new administration. John F. Kennedy was well versed in the problems of Massachusetts fisherman as a Senator. As President, he mentioned fish in one of his first speeches, the message on natural resources. Gloucester noted that he called for increased efforts under Federal leadership to rehabilitate stocks of various fishes, including groundfish, the principal catch in New England.

VILLAGE IS HAPPY

(Gloucester also is not unhappy that Mr. Kennedy's replacement as Senator is the city's former mayor and former president of a fish-processing firm, BENJAMIN A. SMITH II.)

In Gloucester are the Bureau's North Atlantic headquarters and most of the Government's research activities. A big technological laboratory was opened last June, concerned with improving the quality of marketed fish, finding better ways to handle it and developing new seafood products.

At the State pier another Federal laboratory works to make fishing gear more efficient. It keeps the big trawler *Delaware* engaged in exploratory fishing from the Grand Banks to Bermuda. The Biological Laboratory, which worries about the management of supplies of fish in the ocean, is at Woods Hole on Cape Cod.

Smells and tastes of fish are studied at the technological laboratory. Scientists hope to find ways to stop the fishy smell that develops after fish has been kept on ice a week. They think it may also be possible to restore the taste and smell of fresh fish to the processed product, a standard procedure in some other foods.

PRESERVE FRESHNESS

The laboratory is also trying to pinpoint the change that takes place in all frozen fish with time, making it tougher in texture although not decreasing its nutritional value. The laboratory is working on new methods of preserving freshness, including storing fish in refrigerated sea water (which seems to keep fish up to 4 days longer than ice) and irradiation (under contract from the Atomic Energy Commission).

The *Delaware*, which uses the underwater television camera, is at sea most of the year. It found new supplies of tuna offshore and located lobster in deep water south of Georges Bank. The trawler is also used by the biologists at Woods Hole.

Some of these activities are watched with a skeptical eye by the fishermen. Their complaint is that the techniques developed by the Government are too visionary or too expensive to be of use to them.

"And if they find something like those offshore tuna," a fisherman said, "they run to one of those blasphemous obscenity conferences, tell them the exact location and some Nova Scotia trawlers will go and catch every one before any American has a chance."

Another kind of bitterness is aroused when a fisherman, slogging home through the streets of Gloucester after a poor trip, sees a Government man drive past him and

thinks: "There goes the guy who is using up the money that's supposed to help me."

A fisherman said: "The Government might find something good in all those laboratories, but when they do, there won't be any fishermen left to use it."

John T. Gharrett, who is director of the bureau's North Atlantic region, is convinced, that the Nation will soon have to turn to the sea for more protein. He is just as convinced that basic research is necessary to make sure the supply will be available.

Address by the Honorable Alan S. Boyd, Chairman, Civil Aeronautics Board, Before the Orlando Junior Chamber of Commerce on the Occasion of Aviation Day, Orlando, Fla., March 18, 1961

EXTENSION OF REMARKS
OF

HON. A. S. HERLONG, JR.

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 29, 1961

Mr. HERLONG. Mr. Speaker, on March 18, 1961, the Junior Chamber of Commerce of Orlando sponsored the celebration of Aviation Day in that city, and the city of Orlando took this occasion to rename its municipal airport in honor of a distinguished public servant, A. B. (Pat) Herndon.

We were honored on this occasion to have as our principal speaker another distinguished public servant, the Honorable Alan S. Boyd, Chairman of the Civil Aeronautics Board, whose speech I have asked unanimous consent to place in the RECORD:

ADDRESS BY HON. ALAN S. BOYD, CHAIRMAN, CIVIL AERONAUTICS BOARD, BEFORE THE ORLANDO JUNIOR CHAMBER OF COMMERCE ON THE OCCASION OF AVIATION DAY, ORLANDO, FLA., MARCH 18, 1961

On New Year's Day in 1914, on a typical sunny morning, Tony Jannus flew from Tampa to St. Petersburg. This flight marked the beginning of scheduled commercial air service in the United States. Florida was in the forefront of commercial aviation. On a greatly expanded basis, it still is; as we all know. We Floridians can be justly proud of this record and the part that men of this State, such as Pat Herndon, have played in developing the record.

Only a few months ago, on television, I had occasion to observe that no State of comparable size and population enjoys greater air service than Florida—8 of the 12 U.S. trunkline carriers offer services to and from the State. In addition, a local service carrier operates in the northern part. Four certificated carriers have their head offices here. Twenty-eight foreign airline companies come here from abroad, and five U.S. airlines operate abroad from Florida cities. The most modern air navigational, airport, passenger, cargo, and mail facilities are available to the public locally, along with the latest jet aircraft. Shortly Florida will also have the latest in all-cargo aircraft. Only last Tuesday the Civil Aeronautics Board released its opinion in the Southern Transcontinental case, which permits of single-carrier, single-plane service between Florida and California via the southern tier of States.

Still, there is much to be done. While we do honor to Pat Herndon by renaming the airport after him, and while we salute the aviation industry and its accomplishments, we should also concern ourselves with the record we will show to those who look back on our role in aviation 25 or 50 years from today.

Scheduled commercial aviation has undergone some radical changes and developments since the day Tony Jannus flew his primitive flying boat over the waters of Tampa Bay. Many of us became acquainted with flying during World War II. We were fascinated to discover that it provided a way of passage over mountains, swamps and oceans with ease, and at great speeds. We saw the development of airfields all up and down the peninsula of Florida. We thought that with the great advantages of flight, every town and city having an airport would be served with scheduled airplanes to anywhere—near or far.

The fact is that today many of these airfields have grown up in weeds and the sounds of an airplane taking off or landing haven't been heard in years. Real estate developers are now busy trying to salvage something by promoting these idle fields as industrial parks.

In this context of progress on the one hand, and distress on the other, let us see what has happened and what it means to a vital aggressive community such as Orlando. What, in short, are the lessons to be gained from experience?

These airports to which I allude were expensive to build and were intended to be valuable assets to the communities where they were located. However, it was soon discovered that very few people are willing to travel several miles from downtown to an airport to fly short distances and land at another airport several miles from destination. Furthermore, there are not enough people traveling in and out of many towns or cities to permit an economical airline operation which could provide a reasonably frequent service. The modern aircraft is a costly machine to buy and to operate, and no company can long remain in the business of providing air service unless it carries substantial loads.

So these airports did not become aviation centers essentially because there was not enough traffic to support them. The problem has become more acute with the advent of jet aircraft. They are larger and faster than anything we have previously known. They cost more to own and to operate. They cannot land and take off every few miles, or even every few hundred miles. If the cost of flying is to remain within reach, these planes must be utilized to serve only those places providing heavy traffic in passengers, cargo and mail.

In order to expect or require good schedules and good service from airlines, a community must provide the passengers and shippers. By this I do not mean all the traffic the community can generate; rather I mean all the traffic the airlines need to permit them to offer a satisfactory service and to be financially healthy as well as operationally sound.

Granted that air service must be reasonably adequate and reasonably priced to the public, and economically sound or at least potentially profitable on a system basis to the carriers, a serious question of necessity presents itself. Are too many airports being served by commercial airliners today? The facts that too many communities are receiving below average service, and that the airline companies are quite often losing their shirts in providing same, would seem to indicate that the answer to the question is "Yes," as unpleasant as that may be.

In the light of this inadequacy and uneconomy, and with an eye to a mounting Federal subsidy bill which must be checked at some point and eventually reduced, one is forced to conclude that the present situation cannot be permitted to continue, much less to deteriorate. The second question which presents itself is therefore: What is to be done about the problem?

One of the major factors giving rise to the problem of too little service at too many points is political. The residents of one town do not want to travel 15 or 20 miles to board an airplane serving a neighboring and perhaps competing community. This apparently is abhorrent to civic pride. Furthermore, if one city enjoys a certain level of service, its neighbors will not rest until they achieve the same or better. This can mean complaints to airline management, calls to Congressmen, petitions filed with the Civil Aeronautics Board, and, frequently, litigation.

It is often a physical and legal impossibility to oblige carriers to provide the same or a similar level of service to neighboring towns. Yet this is what is not only expected, it is demanded. The Civil Aeronautics Board has granted many such pleas in the past. It must be borne in mind, however, that the Board acted favorably on many of these applications on the basis of the economical characteristics of earlier types of aircraft. With a rapidly changing airline economy and equipment position leading to tremendously increased costs, it cannot be expected that the Board will always react favorably to petitions for airline service as it has done so often in the past.

The airplane knows no political boundaries. Flight operations must be established in the light of what an airplane is designed to do, not on the basis of what someone or ones would like it to do despite the economic facts of life.

The logical solution to our problem in my mind lies in the establishment and acceptance of the idea of regional airports. If we are to have a good airline service and a healthy aviation industry, there seems to be little other choice. At some point the economics of aviation will force us to give up the idea of a competing municipal or county airport for every town or community, and go over to the idea of several neighboring towns and communities supporting one airport for airline services which they can afford to build, and at which they will enjoy adequate service with modern flight equipment and facilities. This appear to be the best solution to the ineconomy of the so-called adjacent airport problem.

Any community desirous of becoming a central location for an airport serving neighboring communities must bend every effort to assure good roads and facilities in the surrounding area. It might even have to give credit to some other community in the airport name. It must provide facilities for a comfortable ride at reasonable rates between the airport and the destination of persons within its service area. Secure parking spaces should be provided at an absolute minimum cost to those who would leave their cars at the airport while on trips. Efforts should be made to extend the local telephone base rate area into the service area.

If Orlando aspires to this central position, most important is an active, intelligent campaign to convince your neighbors that the utilization of the Orlando facilities is in their interest. You now have here a good service pattern. With more air travelers you can demand and obtain a better one, particularly if neighboring cities will drop their present requirements in your favor. You will have to sell them on the proposition that by giving up their individual meager service, and by supporting a regional airport at Orlando, they will enjoy a superior centralized service with the latest facilities and adequate schedules. It is a hard but worthy task. Everyone can gain in such an exchange. If you accept this challenge, you will do a great public service and acquire the very finest transportation system in the process.

Protecting the Interests of Consumers

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 29, 1961

Mr. McCORMACK. Mr. Speaker, the attorney general of the Commonwealth of Massachusetts, Hon. Edward J. McCormack, Jr., who is my nephew, established in the office of the attorney general of Massachusetts some 3 years ago a consumers council, which has rendered outstanding service to the people and the consumers of Massachusetts in looking after and protecting their interests.

In connection with the bill to establish by law a consumers council on a cabinet level in Massachusetts, which bill is pending before the Committee on State Administration of the House of Representatives in Massachusetts, Attorney General McCormack appeared in support of the same, also Rev. Father Robert J. McEwen, S.J., chairman, Department of Economics, Boston College, Chestnut Hill, Mass., and who is chairman of the Massachusetts Attorney General's Advisory Consumers Council. In my remarks I include statements made by Attorney General McCormack and Father McEwen.

I note with pride that President Kennedy has recently taken a further important step in connection with protecting the interests of the consumers of the United States.

The statements follow:

PROTECTING THE INTERESTS OF CONSUMERS

Mr. Chairman and members of the committee, "for too many years the consumers' problems have been thought of as everybody's business but ignored as nobody's business. We now realize that everybody's business must be somebody's business.

In our fast moving, intricate, and impersonal economy a spokesman for the consumer is essential. The National Democratic platform in 1960 stated: "In an age of mass production, transportation, and advertising, consumers require effective Government representation and protection."

The Massachusetts Democratic platform in 1960 stated: "In these days of big business, big labor, and big government the consumers are in danger of being ignored. We favor creation of a consumers council."

I would like to point out just a few of the areas where this protection must be provided.

First, the consumer must be protected against deceit, dishonesty, and deception in the marketplace.

False advertising: An estimated $2 billion are annually taken from Americans by fraud. If to this figure is added the amount taken by schemes which are shoddy and disreputable even though technically within the law, the total amount is almost incredible.

Deceptive interest rates: Unscrupulous installment sellers and credit lenders are continually victimizing citizens through nondisclosure and camouflage of true interest charges.

Fraudulent selling schemes: Because of the negotiation of his promissory note a defrauded consumer is deprived of his remedies. Through high-pressure tactics of hit-and-run operators he is duped into purchases he doesn't need and cannot afford. Hardly a day goes by when I do not receive numerous complaints along these lines—many of them heartrending.

Second, the consumer must be represented in decisions involving the cost of living—in hearings on compulsory automobile insurance rates, on utility rates, on milk regulations, on railroad passenger service, and the like.

In 1958, I established an advisory consumers council in the office of the attorney general. This is a purely voluntary group of dedicated persons. They have had their work cut out for them. The council has protected the consumer by successfully opposing milk price fixing, and unwarranted curtailment of railroad commuter service. It has spoken for the consumer in hearings on automobile insurance rates. We have attacked fradulent food-freezer plans, price-fixing arrangements, and deceptive advertising.

To continue to be effective, the consumers council must be established on a statutory basis. Already New York, Washington, California, Texas, and New Jersey have formally recognized this need. Massachusetts must do the same.

The great majority of the business communities also recognize this need. The better business bureaus recognize the need.

Massachusetts cannot allow its citizens to be victimized by fraudulent selling schemes, by deceptive advertising, by camouflaged interest charges, or by unjustified increases in the cost of goods and service.

Deceit, dishonesty, and deception used against the consumer is a vital concern of Government. Unwarranted increases in the cost of living must be stopped.

The establishment of a consumers council in the attorney general's office is essential to furnish real representation for the millions of Massachusetts consumers.

CONSUMERS COUNCIL IN MASSACHUSETTS

(Testimony of Rev. Robert J. McEwen, S.J., chairman, Department of Economics, Boston College, before Committee on State Administration of Massachusetts General Court, March 15, 1961)

Gentleman: My name is Father Robert J. McEwen. I am chairman of the Department of Economics at Boston College and also chairman of the attorney general's advisory consumers council. Let me give you a little background to illustrate my interest in this area. I spent many years investigating the conditions for justice and equity in markets and in prices. One of my conclusions was that the market and price system would grow more perfect in proportion as we improved the intelligence and knowledge and freedom from fraud and coercion of both buyers and sellers.

In 1956 I addressed the convention of the Catholic Economic Association in Cleveland on this topic. Speaking of information on the properties and qualities of consumer goods and their substitutes, I said:

"Such, of course, is the information that consumer organizations typically try to provide for their members. Worthy of imitation too is the action of New York State in setting up a special department of consumer interests. Ideally the more knowledge a man has, the better should be his choice. Reformers might usefully concentrate their efforts on this factor. It may prove to be the best way to improve the correctness of markets without destroying freedom, mobility, adaptability, and initiative."

Later, speaking of the businessmen, the sellers in the marketplace, I asked:

"Are men chiefly moved, and should they be so moved, by the profit motive, by self-interest, by altruism, by service to society, etc.? There is a very strong movement in the United States at the moment, especially in the universities and the larger corporations, to emphasize the social duties and responsibilities of the businessman. So much so, that Professor Hacker, reviewing Clarence Randall's new book, could say: 'It is evident today that private enterprise and public responsibility can go hand in hand.'

"The outcome of this development could conceivably be the creation of a business ethos quite strong in its sense of social values which would effectively restrain individuals tempted to engage in submarginal practices. Perhaps the force of public opinion could be mobilized through institutions such as better business bureaus, consumers councils, etc. In this case the moral suasion of public opinion would be used to bolster an individual's sense of social duty or social responsibility."

Then my further study of constitutional and administrative law revealed a growing problem connected with the regulatory agencies. Both these factors made me conclude that an agency to give voice to a consumer viewpoint in economic affairs was extremely necessary and desirable.

I therefore appeared before the Massachusetts Legislature in 1958 in support of bills that had already been filed to establish a consumer counsel. At that time I pleaded with the general court to grasp the opportunity of leadership among the States and be the first State in the Union to set up officially a consumers council. I appealed to them at that time to keep Massachusetts' reputation as a pioneer and leader in social progress legislation.

You all know that this was not done and that we have lost the initiative in this matter to New York, California, Michigan, Connecticut, Washington, West Virginia, and so forth. In all these States, the consumer now has representation. I do hope that shortsighted and ill-conceived opposition will not thwart the adoption of a consumers council in Massachusetts until such time as Massachusetts finally falls in line as the 49th or 50th State in the Union to adopt such a measure.

In this connection, I may add, it would be doubly ironical if a leading son of Massachusetts, who now sits in a small private dwelling on Pennsylvania Avenue, should institute, as he has promised, a Department of Consumer Interests in the President's Office, while his native State still refuses to accept a consumer representative in the State government.

Let me now summarize the main benefits that would follow in Massachusetts from the establishment of the permanent consumers council.

1. Improved consumer information and education.

Competent political scientists and responsible business analysts agree that reputable businessmen selling first-class products will be helped by a high level of consumer information and education. Only that small minority of businessmen who are trying to put something over on the public would desire to have a low level of consumer education.

2. The good reputation of business as a whole.

Enlightened businessmen therefore should support this measure for increased attention to consumer education and protection. Such support will indicate their genuine interest in consumer improvements and their desire to assist the public—and incidentally all good businessmen themselves—in defeating and exposing the schemes of sharp operators or shady businessmen who would try to exploit the consumer.

Such operators and their tactics damage the good name of business as a whole, create a cynical distrust of the honesty and integrity of all businessmen and further widen the gulf between business and the general

public. It should be in the interest of all reputable businessmen to demonstrate their support for measures like consumers council bills to protect the consuming public.

3. Financial saving to the Commonwealth.

A permanent office of this nature will be an economical replacement for the hurried and last-minute special investigations that the general court sets up every time a problem becomes acute in this field. Appropriations for such special investigations frequently run in terms of $100,000 or $200,000, and there have been several examples of these in years past.

It should not be forgotten that many members of the general court have used the office of the Advisory Consumers Council in the Attorney General's office as a vehicle for handling complaints from their own constituents. These members of the house and senate should have a pretty good idea of the valuable function, in removing consumer complaints and consumer irritation, that the mere existence of such a consumer council can provide.

At this point someone may bring up the fact that there are allegedly many agencies already protecting the consumer, such as, the Massachusetts Federation of Taxpayers, Department of Public Utilities, and so forth. Gentlemen, can anyone still make that argument with a straight face after the reading of the Landis report?

4. Equality of representation for both business and the consuming public.

After all, gentlemen, it is well known that every business interest has its own government relations counsel and public relations counsel jealously watching its interests before both government bodies and the general public. Is it too much for the public to expect you to grant them the right to have similar representation, specifically assigned the task of representing the consumer interest in the State government?

Federal Aid Without Federal Control

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Wednesday, March 29, 1961

Mr. THURMOND. Mr. President, Col. W. D. Workman, one of the South's most distinguished newsmen and authors, has written an article on Federal aid to education which merits the attention of the Congress and the people of our country. It is entitled "Federal Aid Without Federal Control" and appeared on March 27, 1961, in a number of daily newspapers. I ask unanimous consent that a copy of this article which appeared in the Columbia Record of Columbia, S.C., be printed in the Appendix of the RECORD.

In this excellent article Colonel Workman points out that there can be no Federal aid without Federal control, and he recommends very highly two books by Mr. Roger A. Freeman entitled "Taxes for the Schools" and "School Needs in the Decade Ahead," which I have found to be most helpful and most scholarly prepared.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FEDERAL AID WITHOUT FEDERAL CONTROL
(By W. D. Workman)

"Federal aid without Federal control" is the spurious cry of those assorted educators, politicians, and do-gooders who wish Congress to dish out more money for schools, schoolchildren, and schoolteachers.

Yet without Federal control, there is grave doubt that mere financial assistance will do all those things the Federal aiders want done. This column opposes Federal aid, with or without control, but it seeks as well to expose some of the addled preachments with which Federal aid is being sold.

Federal aid is, of necessity, a pattern of redistributing that portion of the Nation's wealth which the Federal Government thinks should be applied to education. This obviously involves taking (through the compulsion of taxes) from the rich to give to the poor. For the Government has no money of its own—and what it gives away it must first take away.

MORE FOR LESS

If the poorer States are to benefit, they must get back from Uncle Sam more money than he takes from them. By the same token, Uncle must take more from the richer States than he will return to them. The net result will be that some States will have more money available for school purposes, while others will have less.

Let's assume that all Federal aid will be used for education, and that it will be in addition to school funds already being raised on State and local levels. What then?

A great deal of the criticism of American schools is directed at education in the teeming population centers of the Nation. These, mind you, are located in States where per capita income is high, where total wealth and taxable property are great, and which will lose rather than gain revenues under the redistribution device of Federal aid.

Is it reasonable to expect that a State or city which now tolerates inferior schools will immediately correct them under a program of Federal aid? Can we expect them to do more for their schools when they have less money with which to do it? The only guarantee of improved conditions would be through the imposition of Federal control, assuming that the "improvement" must be to national standards. This would give the lie to the chant "Federal aid without Federal control."

Federal aid without control would be ineffective. With Federal control, Federal aid inevitably leads to nationalization of education, further erosion of local self-government, and mass conditioning of youthful minds according to uniform standards prescribed from Washington. Actually, this is precisely what is desired by more and more professional educators who yearn to take over the Nation's schools—lock, stock, and barrel.

REQUIRED READING

This frightening state of affairs is evidenced on every hand. It is documented, with chapter and verse, in Roger A. Freeman's new book, "Taxes for the Schools." That work, a compansion to his earlier "School Needs in the Decade Ahead," should be required reading for both the proponents and the opponents of Federal aid to education.

It is worth the price for one chapter alone—"Powers and Responsibilities in Education," a thought-provoking exploration of all facets of Federal aid, and of the trend of professional educators to grasp the reins of school authority through Federal aid.

On this particular score, Mr. Freeman has served posterity by putting down in permanent form Paul Woodring's paraphrase of the Clemenceau axiom:

"Just as war is too important to be left to the generals, education is too important to be left to the educators."

An Address by Hon. Elmer J. Holland, of Pennsylvania, Before the Graduating Class of the McKees Rocks High School on June 7, 1955

EXTENSION OF REMARKS
OF
HON. JOHN H. DENT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 29, 1961

Mr. DENT. Mr. Speaker, as a member of the Labor and Education Committee, I have been privileged to hear our colleague, the Honorable ELMER J. HOLLAND, of Pennsylvania, as the presiding chairman on a subcommittee studying automation.

Back in June 1955, when the Congressman was still serving in the State senate of our great State he addressed a graduating class in McKees Rocks, Pa.

His prophetic words and grasp of our present problems of education, automation, unemployment, and economic decline shows that even at that early date he sensed the coming crisis in our body politic.

All too often we place too little attention to what is said and too much on the person saying it.

I served many years with our colleague, Congressman HOLLAND, in both the House and the Senate of Pennsylvania. I am privileged to serve with him here in Congress.

Congressman HOLLAND's many years of experience as a legislator, industrial leader, business executive, and a union representative qualifies him to head the serious and timely study of automation and its impact upon unemployment.

The American Nation today is in the same position as a tourist driving on a strange road without a map right after a tornado.

He is on his way, he can drive a car, he knows where he wants to go, but needs a guide.

In this day of our history we need a guide to direct our great and limitless production facilities, our fruitful farms and our abundant manpower on a route that will lead to ever-increasing human benefits and a safe arrival to our eventual destination, a better way of life.

Men like ELMER HOLLAND who devote their time and talents to charter a safe and sane course, pointing out the rocks and shoals give all of us added incentive and encouragement as we pilot and crew the ship of state.

Mr. Speaker, I believe the following address given years ago by Congressman HOLLAND is as timely and apropos today as it was then:

ADDRESS GIVEN BY HON. ELMER J. HOLLAND, 38TH DISTRICT, PENNSYLVANIA, BEFORE THE GRADUATING CLASS OF THE MCKEES ROCKS HIGH SCHOOL, JUNE 7, 1955

I remember the speaker at my high school graduation saying these words: "You are no longer girls and boys, but ladies and gentlemen. You have responsibilities. How you assume these responsibilities will decide—not only your future—but the future of the world."

This is truer today than then, as the world has grown smaller in judging distances due to advanced aircraft.

Do you realize that in your short 4 years of high school you have seen distance fade away? The jetplane has brought far distant parts of the world, that took weeks to reach, only hours to reach. And, with the coming of the atomic planes, who knows what speed of travel will be attained? Today we can eat breakfast in London or Paris and lunch in New York City.

Your generation shall write a chapter of history never equaled by any other chapter of history since the beginning of the world.

This chapter can be known as the great advancement of man in social and economic progress, or it can be known as the enslavement of man. Two hundred years ago our Western World experienced the beginnings of a movement that changed the lives of all mankind. It took men off the fields and out of small shops, it put them—for the first time—into factory life. It gave us mass production, and, through mass production, it gave us the first civilization in the history of the world in which luxury was not confined to just a few; it gave us, as well, a sense of hurry, of time, which is still unknown in countries that are "preindustrial"; it changed agricultural societies into mighty industrial nations; it altered the face of our own country, and it produced wealth, the like of which the world had never been before.

We were taught in school, as you probably were, to call this movement the 'industrial revolution." But today we find that name being changed. Today, we call it the first industrial revolution. For, suddenly, we find that our whole Nation is aware of a new movement—a new force—which holds promise of great social changes and increased economic benefits for all of us.

We are told that a new industrial revolution is in the making; in fact, it has already begun.

This second industrial revolution is called by the name "automation." This new word has cropped up in a changing America. It has been developed so recently that even the word is in few dictionaries. It is unfamiliar to many opinion makers. It is a mystery to the man in the street, unless it has cost him his job. I think that there is a good deal more confusion surrounding the word than some of us would like to admit. Perhaps the confusion begins in another word—in the much overused word—"revolution."

There seems to be a political revolution somewhere in the world at least once a year. And—every time a manufacturer puts a new girdle on the market, he calls it revolutionary. I even saw a sign in a New York bakery recently that read "Revolutionary New Old-Fashioned Doughnuts." But when we use the word "revolution" to describe the new movement of automation—we, of course, do not mean it in the sense of a political upheaval or of something that is merely new, gadgety or startling.

We mean it in the broadest sense of the word—in the sense in which we speak of the industrial revolution.

When we look back on that great upheaval 220 years ago—what was it that gave to it the name industrial revolution? Was it just the wonderful machines that lightened man's toil?

No; I think it was much more than this. I do not think it was used because of the riots that accompanied the introduction of some of the machines used at that time. Nor do I think it was used to describe the speed with which these changes took place. I believe it was used because the industrial revolution was revolutionary in the broadest sense of the word. It created a whole new environment for mankind.

The industrial revolution gave history more than just the steam engine, the cotton gin, the railway, and the power loom. It gave society—civilization—a whole new tempo; a whole new way of life.

As for the word "automation" I find it very difficult to define. Just what is "automation"? To some automation means nothing more than mechanization. It is a label that is applied to anything automatic—or even semiautomatic. To others it conveys a sense of robots, of machines that think and will eventually take over all of man's functions, to still others it means the answer for all our troubles by securing the 7-day weekend.

The Wall Street Journal has defined automation as: "Doing a job by machine with the minimum of human assistance. It implies also the use of electronic controls to automatically schedule and guide the production process".

It is, in simple terms, the highest stage of development in a completely automatic factory—where machines, untouched by human hands, can turn out a product untouched by human hands. This, then, is the beginning of an era when machines—not men—run other machines. This is the beginning of the second industrial revolution. The first one replaced man's muscles with machines. The second one is replacing man's judgment with machines.

Specifically, we are entering an age when a machine can dig a hole, measure it, decide the hole is wrong and correct its own mistake.

Output during the machine age increased productivity.

This came about as the machine took over jobs that man was doing or helped to do them faster—the conveyor belt, or a fork lift truck moved merchandise that a man used to push or carry—a pneumatic drill replaced the pick.

Through the years we have lost track of the men who were displaced by machines. They were absorbed by the expanding economy and shared heavily in the increased purchasing power as well as with shorter working hours.

This does not mean that all displaced workers shared well as there were many cases of bitter hardships when the conversions took place.

Today, we are entering a new era. One that dwarfs the past rate of increased productivity.

In the long run we will be bound to enjoy shorter hours and higher living standards, but in this changing period of automation, there will be many displacements which we hope will be temporary but which will cause much suffering.

Just to give you some examples of automation as it now operates—as of today: In a radio plant in Chicago, 2 men assemble 1,000 radios a day. It took 200 men to do this before automation. In an electrical equipment company, 90,000 light bulbs per hour are produced with 230 employees. Before automation they used 75,000 workers.

Utility and insurance company officials have stated that electronic brains, now available, will replace over 200 clerks with just 1 clerk on their bookkeeping staffs.

The Admiral Corp., with equipment it calls robot 1, can now assemble half a TV receiver chassis in a matter of seconds.

It is estimated that over 900,000 men in coal and steel have been displaced by automation. This is the dark side of automation. The benefits from the changes will be enormous eventually.

We can look forward to a day of astonishing living standards achieved by nominal working hours. But the penalties in the short run threaten to be mass displacement, as man gives way to automation.

What are these robots that can do the work of a man's mind? Basically, they are electronic brains that run on the principle of "feedback" or self-regulation. After they are set, or taped, they can regulate a producing machine.

The familiar household thermostat gives some idea of how they work. Once it is set to a certain temperature, it measures the temperature in the surrounding room and regulates the furnace so that the desired degree of heat can be achieved.

Today's machines are the peacetime results of the basic research and development that came about during the war as part of the atomic and guided missiles program.

We must remember that revolutions, such as we are now going through, never go backward.

Progress, and man's inventive genius, must be encouraged, but in this great process of automation man's dignity must not be lowered to that of a robot.

If all these improvements can be made for the betterment of man—and I believe they can—they will be a blessing. But if greed of money is to be made a standard, then they can be a curse.

It would, of course, be foolish to contend that automation is not without growing pains.

For any of us to minimize the widespread social and economic effects, that automation is sure to bring, would be to close our eyes to a fact that is already part of everyday life.

But I would like to emphasize that no one, today, is in a position to do more than speculate on the nature and extent of these social and economic effects—for no one has yet made the detailed analysis that is necessary for their true understanding.

While it is obvious that, in the long run, automation will be of tremendous benefit to all of us—it is the short run that worries most of us.

We should begin our planning and preparation immediately.

All parties—unions, management and Government—recognize they have a common interest in the successful integration of automation into our society. No one wants to see increased unemployment. All stand to gain by automation as long as we stand together.

Education is our primary need. We must learn that automation is something good and we must learn to use it—not fear it. Men, whose jobs may someday be replaced by machines, should be encouraged to begin their training in the newer skills which automation creates.

You younger people—with all of this before you—should further your education along the lines that will prepare you to take your rightful places in the development of this new discovery. You can be on the ground floor—so to speak—and grow with the industry.

Automatic factories will not be workless factories. There will be the need for more and more technicians and highly skilled maintenance men. We are already woefully short of personnel in this regard. The statisticians say that we need some 25,000 more engineers and 70,000 more technicians each year than we are now training.

Automation holds no threat to our economy. By giving us increased productivity—it promises to invigorate our economy.

I think it fair to say that automation offers as great a challenge—and reward—as any which we have ever known.

For the first time in history, technological progress—unleashed by the dynamic incentive system—is beginning to give people what they want.

All over the world, people are restlessly, grimly searching for a way of life that will give them what they want—and more and more of what they want.

Even we favored and fortunate Americans want more—more security, more inde-

pendence, more leisure, more freedom from drudgery, more and better homes and schools and communities. There's just no limit to our appetite for more.

By a happy combination of circumstances, we Americans have in our hands a magic key of priceless value. We Americans—the keepers of the key—must learn to know and appreciate the value of the thing we have. We must use it to help open up—for all mankind—ever greater areas of progress and hope.

You who are starting out have a great responsibility as well as a great opportunity. You are in a social dynamic changing world. You must find out what makes the world tick.

The great productivity, achieved by automation, must be balanced by a great consumers' buying power.

Keeping a "status quo" in a country—and not sharing the gains with the workers of the country—will cause injustices, poverty and hunger. We all know that the road to Communism is travelled through the wrinkles of an empty stomach.

Are these machines good or bad? Are they to be geared to unlimited production for the unlimited needs—of all the people? Or, are they to be geared for the benefits of a few selfish people, whose greed of profit shall dig our economic grave?

You are the ones who must answer these questions because it is your world, and you shall be running that world. Your generation shall decide whether or not we shall have peace, freedom, and social security or poverty, hunger, and desperation.

You are well prepared—coming from the community in which you live—where you are acquainted with the social and economic ills that your fathers lived through in the years gone by.

You now have your chance to build a better America.

Communism can be answered in only one way: that answer is that America can solve the problem of proving that—without taking away freedom, without taking away our liberty, and permitting the worker to share in the profits of his company—America can prosper and can prove to the world that we can produce for the joy of living.

I know that everyone of you are prepared and determined that your generation can accomplish this as a fact.

May God give you the wisdom and the courage to carry on.

Guiding Principles of Labor Law Administration Are Set Forth by NLRB General Counsel Stuart Rothman

EXTENSION OF REMARKS
OF

HON. JENNINGS RANDOLPH

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Wednesday, March 29, 1961

Mr. RANDOLPH. Mr. President, the lives of all of us are vitally affected every day by actions taken under our Federal labor laws. The administration of these laws is, therefore, extremely important to the welfare of every American, whether his primary interests lie with management, with labor, or as a member of the general public.

A set of seven principles for the administration of labor law has been developed by Mr. Stuart Rothman, General Counsel of the National Labor Relations Board, and published in the March issue of Manage, a magazine which is the official publication of the National Management Association.

These principles clearly state certain basic methods for the effective administration of Federal labor laws. Because Mr. Rothman has done such a superlative job of implementing these principles at the NLRB, and thus speaks with considerable authority on the subject, I ask unanimous consent to have this article printed in its entirety in the Appendix of the RECORD.

GUIDING PRINCIPLES OF LABOR LAW ADMINISTRATION

(By Stuart Rothman, General Counsel, National Labor Relations Board)

Alexander Pope once wrote, "For forms of government let fools contest; whate'er is best administer'd is best." In a free society, the very best in administration must be the goal of anyone who attempts the serious task of administering legislative enactments. And particularly is this true in connection with the administration of Federal labor laws, which affect so directly and so intimately the daily lives of the working men and women of America.

I should like to set forth briefly, my own views, based upon my experiences about the way labor laws should be administered, and the principles which a labor administrator should follow in order to carry out his responsibilities.

SEVEN GUIDING PRINCIPLES

1. First and foremost, labor laws deserve vigorous enforcement. The labor laws, like other laws, embody public policy which must not be frustrated by ineffective enforcement. However, vigorous enforcement does not contemplate punitive measures and reprisal; the emphasis is on sound and judicious remedies, comporting with the seriousness of the violation, and aiming for restoration of the injured parties to the status quo. Public awareness of effective enforcement will necessarily encourage voluntary compliance and thus avoid expensive and time-consuming litigation.

2. Prompt determinations at all points of the administrative process are essential. No one feels the drag of time more keenly them a person deprived of his lawful rights. A businessman harrassed by illegal picketing, a union wrongfully denied recognition, an employee discriminatorily discharged—all want and deserve prompt relief. Moreover, prompt handling reduces indirect losses for which the law offers no compensation, such as lost opportunities for new markets by businessmen and other employment by workers. Like vigorous enforcement, prompt determinations give impetus to voluntary and swift settlements and, where no settlements are effected, to better and fairer hearings in which the evidence adduced is fresh and the recollection of the witness is clearer.

3. Laws must be administered with both real and apparent impartiality. All of us necessarily have some predilictions and points of view which conscious or unconsciously may influence our approach to problems. Only by rigid and continuous effort can administration be kept free from these influences and impartiality be achieved. In the emotionally charged labor field, impartiality involves dealing evenhandedly with three competing interests—management, unions and employees. Impartiality is particularly important in my role as General Counsel for the Board, since my determination of whether to issue a complaint is not subject to review. I have been called a middle-of-the road General Counsel, and I think that is where a General Counsel should be. One of my first official acts was to stress among the employees of my office the need for impartiality and for avoiding even the appearance of favoritism.

4. Two-way channels of communication must be kept open between the Administrator and the public, including labor and management, if the Administrator is to secure the respect and trust of the people with whom he deals. What is needed is not only a closer understanding of the interests and positions of each side by the other, but also a determined effort to make clear to all parties their rights and obligations under the act.

5. Voluntary compliance and informal settlement are the best means of achieving harmony. Formal litigation, with its attendant acrimonious and other ill effects should be a last resort. Voluntary adjustment of disputes is the lifeblood of sound democratic society. Such adjustment not only enhances amicable labor-management relations, but also increases respect for law and permits the overburdened administrative agency to attend to other necessary tasks.

6. The agency must pursue personnel programs which attract, retain capable people. A labor agency responsible for the protection of the rights of working men and women should not lose sight of the fact that it, too, has responsibilities as an employer. Although Government service offers many unique advantages and satisfactions, the agency is in competition with private industry in recruitment. Enlightened personnel policies must be developed if the agency is to attract and hold the type of people it needs.

7. The Administrator must make a continued study of the laws, and suggest improvements. Social and economic changes over the years necessarily affect labor legislation. No one can have a better understanding of the measures necessary to maintain or increase effectiveness than those who have the day-by-day responsibility for the administration of a labor law. While ultimate solutions must come from legislative or executive action, the Administrator should provide constructive ideas and factual information from which to gage the impact of existing or proposed legislation.

APPLICATION OF PRINCIPLES

It is, of course, impossible in the limited space allotted to enumerate all of the techniques and devices I have applied both in the Department of Labor and at the National Labor Relations Board in effectuating the foregoing principles. In addition to the development of new management techniques, hard work, and maximum utilization of the available professional skills have contributed to the results achieved. A few examples will illustrate the effectiveness of the principles of administration to which I have tried to adhere in the administration of the Taft-Hartley Act.

Vigorous enforcement of the law has resulted in collecting more than $1,450,000 in back pay in the fiscal year 1960 for employees unlawfully discriminated against—the largest sum recovered in any of the past 10 years. Expeditious case handling also enabled my office to reduce the median time from the filing of a charge to the issuance of a complaint, from 76 to 44 days. Median time from the issuance of complaint to the close of hearing has been reduced from 95 to 44 days, and from the filing of the charge to the close of the hearing from 134 to 88 days. As of today, 87 percent of the unfair labor practice cases are disposed of, on an average, within 30 days after receipt. Our success in the fields of voluntary compliance and informal settlement is even more noteworthy. During the fiscal year 1960, more than 1,900 meritorious cases were settled; from the beginning of the year until August, the percentage of settlements rose from

48 to 66 percent. Contributing to our success in these areas have been innovations of such techniques as improved settlement procedures, the use of educational devices such as meetings with representative groups, the establishment of time targets for adjustments and complaint issuance, and concentration upon preventive law techniques.

I have particularly stressed the need for voluntary compliance in cases involving jurisdictional disputes at missile sites where I feel that the statutory procedures for handling such disputes are inadequate, because the Board is given no criteria for resolving the conflict, and the use of the statutory injunction proceeding is not conducive to industrial peace and cooperation. Unlike ordinary jurisdictional disputes, these disputes involve contractors as well as unions, all competing for work, and the construction industry joint board is not equipped to handle them.

In other matters, such as channels of communication, improved personnel programs, and impartial administration, progress cannot be measured by statistical data, but none of these fields has been neglected. For example, we have established in each regional office a regional advisory conference composed of local representatives of the regional offices, the labor bar, and labor law professors for exchanging views, disseminating information, and developing improved techniques; also an official has been made available in each regional office to discuss day-to-day problems with parties. Our present recruitment and promotional program is designed to attract highly professional help, to reduce turnover, and improve morale. Our record of impartial enforcement has been good because our primary aim is to be fair to all sides, and not necessarily to win all cases, although even so, we did succeed in 86 percent of the cases tried before the Board.

Finally, in the field of suggestions for improvements of existing legislation, I have, for instance, recommended corrective legislation dealing with national emergency strikes. Suggestions have heretofore been made to limit these strikes after the breakdown of collective bargaining. However, I believe that greater emphasis should be made on improving collective bargaining itself, placing the focus on the earlier bargaining stages. A redefinition of the statutory duty to bargain, insofar as it involves nationwide industries, may be helpful even if the changes effected are essentially procedural, such as requiring more detail in proposals, more utilization of mediation services, and more frequent bargaining sessions.

The principles which I have discussed do not, of course, exhaust the means by which we may achieve the very best in labor law administration. However, I sincerely believe that these principles, when carefully and intelligently applied, will go a long way toward insuring an administration that is effective and equitable.

Federal Aid to Education

EXTENSION OF REMARKS

OF

HON. J. ARTHUR YOUNGER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 29, 1961

Mr. YOUNGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial on the subject of Federal aid to education which appeared in the San Francisco News-Call Bulletin, of March 15, 1961:

SHORTSIGHTED SCHOOL AID

Catholic leaders, asking to share in Federal school aid, are making a mistake similar to that of local public school organization officials who are promoting the same kind of subsidy.

Catholic parents make great financial sacrifice to maintain their parochial schools. This is their privilege under a free, popular Government, just as it is the privilege of local school boards to manage their own public schools as they see fit. When either, or both, starts depending upon the Federal Government for substantial support, the loss of their independence of action is only a matter of time.

If the Federal Government puts up the money, it must make regulations for its spending. This is the beginning of thought control—however mild or well intentioned.

In totalitarian countries control of education is a primary aim. Early in the Nazi regime Hitler took over the free German school system, the primary grades through college in a deliberate and effective effort to snare young minds.

Nothing of the kind would be expected for America but a centrally-controlled school system would be a handy means to enforce educational fads or eager new political notions. Diversity of thought—many points of view on life—are prime requisites of social progress.

The American school system is nowhere near as bad as it is pictured by the enthusiasts for Federal intervention. Schools are being built and teachers hired to care for the new hordes of children though it must be admitted progress is too slow in many areas. And the rising cost of education has placed a backbreaking burden on real estate, which is a main source of this tax money.

The schools needs help but it is not necessary to gather them into a dangerous Federal system. If Congress really wants to help it can provide the means for the States to provide their own aid money.

This can be done by repealing some excise taxes such as those presently imposed on telephones and allowing the States to reimpose them.

Such a policy not only would preserve school independence, it would enforce economy since the States would be spending their own money instead of handouts wangled from Washington. There would be far less temptation to get as much as political pressure could provide and spend it carelessly on the theory there was plenty more where that came from.

Byelorussian Independence Day

EXTENSION OF REMARKS

OF

HON. WILLIAM FITTS RYAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 29, 1961

Mr. RYAN. Mr. Speaker, March 25, 1961, marked the 43d anniversary of the proclamation of independence of the Byelorussian Democratic Republic.

The Byelorussians form one of the many Slavic peoples who have lived under Rusian domination for centuries. However, they have tenaciously clung to their distinct national traits and have kept their national traditions alive. These sturdy and stouthearted people, numbering close to 10 million today, have lived in their historic homeland in the frigid north country between eastern Poland and Moscow throughout their recorded history, long before the rise of modern Russia. Early in modern times the country was conquered by Russian czars. Since then, except for a brief period after the First World War, these people have suffered under Russia's czarist autocracy, and today they are suffering under Soviet totalitarian tyranny.

Toward the end of the First World War when Russian autocracy was overthrown, peoples oppressed under that decrepit regime were freed, and they all proclaimed their independence. The Byelorussians were among the first to do this. On March 25, 1918, they proclaimed their national independence and founded the Byelorussian Democratic Republic. That historic event ushered in a new era. It was the rebirth of a free and independent Byelorussia, the most important landmark in Byelorussian history.

During the next 3 difficult years the new and weak state fought valiantly for its very existence, but in the end it was overwhelmed. Early in 1921 the country was overrun, and then made part of the Soviet Union. Thus ended independent and free Byelorussia. For 40 years these people have been living under the unrelenting tyranny of communism. Hard pressed, miserable, and constantly harassed, they still breathe the spirit of freedom and independence, and long for their deliverance from the Kremlin's tyranny.

Mr. Speaker, we commend them for their courage.

Byelorussian Independence Day

EXTENSION OF REMARKS

OF

HON. CHARLES S. JOELSON

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 29, 1961

Mr. JOELSON. Mr. Speaker, Byelorussia is the country extending from the western borders of Poland to the approaches of Moscow. It is a cold but fertile land, and its inhabitants are—for the most part—rugged peasants. These people numbering some 10 million have been living in that country from time immemorial. There they led a simple life and were content with their lot until they were brought under Russian czars early in modern times. Then began the unhappy period of their history. The Russians proved very oppressive, and they tried to absorb the Byelorussians by attempting to suppress all Byelorussian national traits. But the Byelorussians clung to these and struggled against the czarist regime to maintain their national identity, and to regain their freedom. In 1918 when that

regime was no more they asserted their freedom and independence.

Byelorussian leaders seized upon this chance, proclaimed their independence on March 25 and established the Byelorussian National Republic. Then it seemed all joy and gaiety for these oppressed people. They were enjoying their freedom and working hard to guard their well-earned freedom. But they were faced with numerous powerful foes, and among these Communist Russia proved formidable. Early in 1921 the Red Army attacked Byelorussia, overran it and soon the country became part of the Soviet Union. Since that fateful year, the Byelorussians have been suffering under Communist totalitarian tyranny in their historic homeland. But they still cling to their ideals, and still pray for their deliverance from Communist tyranny. On the 43d anniversary of their independence day we echo their genuine patriotic sentiments and wish them more power in their struggle for freedom.

Federal Aid to Education

EXTENSION OF REMARKS
OF
HON. CHARLES M. TEAGUE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 29, 1961

Mr. TEAGUE of California. Mr. Speaker, under leave to extend my remarks, may I call attention of my colleagues in the Congress to a letter just received from my constituent, Mr. Lewis E. Kimball, Jr., headmaster of Crane Country Day School, Santa Barbara, Calif.:

MARCH 23, 1961.

Hon. CHARLES M. TEAGUE,
House of Representatives,
Washington, D.C.

DEAR SIR: The matter of Federal aid to education, currently much in the local press, is now before Representative ADAM CLAYTON POWELL'S committee. It may be of help to that committee to have before it the statement of position taken by the California Association of Independent Schools. This statement was drawn up in response to an earlier attempt to introduce tax support of independent schools, and I have no reason to believe that the opinion of the members has changed since that time. I am enclosing a directory so that the association may be more closely identified.

The following is the policy statement regarding tax support of independent schools adopted by the CAIS May 4, 1956:

"POLICY ON TAX SUPPORT OF INDEPENDENT SCHOOLS

"Independent school initiative and enterprise contribute vitally to the growth of American education. This contribution is made possible chiefly through the freedom of independent schools from those regulations and controls which are inherent in and essential to tax-supported institutions. If their historic role in educational development is to continue, independent schools must maintain freedom to explore new methods and to evolve new patterns.

"It is our belief that the particular contribution of the independent school would be lost if any part of its educational program were financed directly through public taxation; therefore, we are opposed to either Federal or State direct support of nonpublic schools.

"Approved May 4, 1956."

Very truly yours,

LEWIS E. KIMBALL, JR.,
Headmaster.

Some Budget Director

EXTENSION OF REMARKS
OF
HON. EDWARD J. DERWINSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 29, 1961

Mr. DERWINSKI. Mr. Speaker, the following editorial in this morning's Chicago Tribune discusses recent profound statements by the Budget Director, Mr. Bell, in such a manner that further comment on my part is unnecessary.

SOME BUDGET DIRECTOR

Congress has listened to a lot of people spout a lot of economic nonsense, but surely it has never heard such concentrated nonsense come from a director of the budget as it did on Monday.

David Bell, who holds this position under Mr. Kennedy, appeared before the Joint Economic Committee to explain the Kennedy budget for 1962. He told the members what was already common knowledge: that the balanced budgets planned by Mr. Eisenhower for this year and next are out of date; that this year will end up with a deficit of about $2.2 billion, and that an even greater deficit is likely for 1962.

To cap it all, he says that it would be a serious error to reject public spending programs simply because we cannot afford them.

The Director of the Budget doesn't seem to be the least perturbed by all this deficit spending. On the contrary, he told the committee members that Federal outlays would be expected to climb steadily in the years ahead. He said that a consistent effort to balance the budget would be not only extremely difficult, but positively harmful. He said that deficits this year and next are "clearly essential to economic recovery" and won't lead to any significant inflation. And he said there is no use hoping for a decline in Federal spending unless there is a substantial reduction in armament.

What does Mr. Bell think the budget is? Most people think of it as something to live within. Historically it is based on the amount of money available to spend; the word itself, centuries ago, meant wallet. The British Government still "opens" the budget.

Our Bureau of the Budget was established in 1921 in response to protests that the Government was living beyond its means. It was designed to fix responsibility for a sound fiscal policy. In 1939 it was made an independent office under the President, but the law still says that its studies and reports are to be made "with a view of securing greater economy and efficiency in the conduct of the public service."

Here we have a Director of the Budget saying, in effect, that the budget should not stop anybody from spending what he wishes to spend. The agent who is expected to stand up against the extravagance of his colleagues (as Mr. Stans often did, to their discomfiture) is actually promoting extravagance. If the Budget Bureau is to become a spineless tool of the spenders, we would be much better off without either it or its Director.

"Flasher" Memorial

EXTENSION OF REMARKS
OF
HON. EMILIO Q. DADDARIO
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 29, 1961

Mr. DADDARIO. Mr. Speaker, I should like to call to the attention of my colleagues the following resolution which was adopted by the Connecticut House of Representatives on March 22. The resolution commends the establishment of the *Flasher* Memorial, dedicated to the heroes of the U.S. submarine force during World War II:

HOUSE JOINT RESOLUTION 80

Resolved by this assembly:

Whereas the Navy Department has recently made it known that it will turn over the submarine *Flasher* to the U.S. submarine veterans of World War II for the purpose of incorporating it in a permanent memorial to those men of the submarine forces who made the supreme sacrifice in World War II; and

Whereas one out of every five officers and men who served on submarines during World War II never returned from their last war patrol; and

Whereas the U.S. submarine force, comprising only 2 percent of the Navy, delivered a mortal blow to our World War II enemy, Japan, by sending to the bottom one-third of the warships and almost two-thirds of the merchant ships sunk by anybody and everybody; and

Whereas this country will always need the kind of skill, spirit, and devotion to duty shown by a submarine force of 14,750 officers and men which sank 1,178 enemy merchant ships and 214 naval ships, damaged hundreds of others and conducted fearless raids of all types without ever looking back; and

Whereas these are feats that any nation would be proud to have as a heritage; and

Whereas the U.S.S. *Flasher*, selected because it sank the most tonnage of any submarine during World War II, is symbolic of all the submarines and all the men who served on them during the war; and

Whereas the *Flasher* Memorial, to be located in Groton, the hub of the Nation's submarine activity, will be such a dramatic reminder that what we have, what we presently enjoy, was purchased and guaranteed and passed on to us because many were convinced that America, the living America, which survived them, was indeed worth dying for; and

Whereas the *Flasher* Memorial will be so fashioned that it will provide the heraldry, the shrine to honor the submarine dead for valor and to alert the living to loyalty and gratitude: Now, therefore, be it

Resolved, That the members of this general assembly join in commending the U.S. submarine veterans of World War II for their dedication in establishing the *Flasher* Memorial; and be it further

Resolved, That the members of this general assembly join in urging the citizens of these United States of America to volunteer their fullest financial and spiritual support

to build this shrine incorporating the U.S.S. *Flasher* in a permanent memorial to those men of the U.S. submarine force who made the supreme sacrifice in World War II; and be it further

Resolved, That the clerks of the house and senate shall send copies of this resolution to all U.S. legislators from Connecticut and also to the President of the United States, and to Thomas M. Dykes, rear admiral, U.S. Navy (retired).

Hon. Leroy Johnson

SPEECH
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 28, 1961

Mr. PHILBIN. Mr. Speaker, I was greatly shocked and most profoundly grieved to learn of the untimely passing of my dear, esteemed and beloved friend, former Congressman Leroy Johnson of California.

I served with Roy Johnson for many years on the House Military Affairs Committee and later on the House Armed Services Committee, and he was my devoted, and valued colleague and friend.

Never in my public service, or in my lifetime, have I known a finer, more dedicated American, a more amiable, humane human being, or a more loyal friend.

Roy Johnson was a man of superb intellectual powers, possessed of a keen, penetrating, legal mind, endowed with complete awareness of the critical public problems with which he had occasion to deal.

There was a broadness and a depth to his searching mind, a comprehending sweep to his training and his interests that made him an exceptionally valuable member of our military committees and a truly outstanding Member of the House.

His lofty character, his exhalted idealism, his profound sense of humanity and justice and his unalterable fidelity to country, to duty and to every worthy, inspiring value of our national life, brought this noble son of the great State of California the respect, admiration, and affection of all those who knew him, especially of those of us who had the great privilege and honor of his friendship and of sharing with him public service in this great historic and world-renowned body.

Courageous, strong of conviction, independent minded and animated always by a rugged sense of justice and deep, abiding faith in American institutions, Roy Johnson exemplified the noblest attributes of a dedicated public servant and a noble Christian gentleman.

Great war hero, highly decorated and lauded for his loyal, magnificent service to the Nation in time of grave peril, honored in many ways and raised by his admiring fellow citizens to high public office, Roy Johnson nevertheless retained his basic sense of true values and his innate humility and simplicity of heart and manner that endeared him to all.

A great American has passed to the Great Beyond. A very dear friend has departed from this life. But his spirit, his devotion, his dedication, and the stirring example of his good life and splendid public service will long remain with us.

With a heavy heart, I join his lovely wife, his family, and many friends in mourning his loss and tender my most heartfelt sympathy to them.

May our beloved friend, Roy, find rest and peace in his eternal, heavenly home.

Activities of Allegany County League on Behalf of Crippled Children

EXTENSION OF REMARKS
OF
HON. J. GLENN BEALL
OF MARYLAND
IN THE SENATE OF THE UNITED STATES
Wednesday, March 29, 1961

Mr. BEALL. Mr. President, on April 17 and 18, Cumberland Lodge 63, BPO Elks will present the musical comedy, "Annie, Get Your Gun." The proceeds from this entertainment will go to the Allegany County League for Crippled Children.

Cumberland Lodge 63 sponsored its first theatrical performance in 1891 and through this medium has made great contributions to the charitable needs of the county. This year's presentation comes at a time when the Cumberland lodge will be celebrating its 75th or diamond jubilee.

Mr. William Hunt, in his column "Across the Desk," published in the Cumberland Times, describes the activities of Cumberland Lodge 63 as well as the wonderful efforts of the Allegany County League for Crippled Children.

I ask unanimous consent that this article may be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BIG BROADWAY STAGE HIT, "ANNIE GET YOUR GUN," AT MARYLAND NEXT MONTH MARKS START OF DIAMOND JUBILEE OF CUMBERLAND LODGE BPOE—TRIBUTE TO MISS SCHWARZENBACH, AID TO CRIPPLED CHILDREN AND ENTERTAINMENT WITH EVERY TICKET

Back in 1949 while he was directing that year's Elks' benefit show for the crippled children of Allegany County, Leo H. Ley reminded those who bought tickets that each stub represented not only a seat for an entertaining performance but also a share in the happiness that the proceeds of the show would provide for hundreds of handicapped youngsters.

Through the years under two other outstanding directors (French Sensabaugh and now Harold C. Wickard) Cumberland Lodge 63, BPO Elks, has continued to provide area people an opportunity to enjoy superb stage entertainment while helping the Allegany County League to care for the large number of little ones who have been crippled by polio, cerebral palsy, rheumatic fever, birth defects, and numerous other ailments that require long and expensive treatment.

Last year Cumberland Lodge changed the theatrical format from minstrels and revues to the production of Broadway musical comedy hits. "Oklahoma" was an overwhelming popular success, and this year's big stage offering will be "Annie Get Your Gun," a New York hit that will be a rousing musical presentation at the Maryland Theater April 17 and 18.

This year a great personality will be missing at the annual Elks benefit performance.

From the time of the incorporation of the Allegany County League for Crippled Children 27 years ago until her death last October, Miss Henrietta Schwarzenbach was president and the real moving spirit in promoting and keeping up the best local organization in the United States for aiding handicapped youngsters. On the day she died she insisted on going out to see the first station wagon purchased for league purposes. Her constant thought was for the hundreds of area children who needed physical therapy, body braces, clinical examination, hospital treatment, home care, corrective shoes, medicines, and checkup diagnoses.

The league was a volunteer and dedicated agency with particular goals when it was set up a generation ago. And it is the same today. It is not a part of any community fund raising group. As frequently expressed by Miss Schwarzenbach, the league has no criticism of any agencies that join with others in seeking public support. But the league is not permitted by the National Foundation and the National Easter Seal Society to merge its identity with other groups. It has provided its manifold services for over 27 years to thousands of crippled children without aid from community chest or United Fund, and continues in its consistent course with respect for all other charitable and service organizations. But it does make its own appeal for your aid to crippled children.

Approximately half of the needed annual income is provided by funds from the sale of Easter seals and from the proceeds derived from the Elks benefit shows. This year's souvenir program will be a memorial issue in honor of the founder and first president of the Allegany County League for Crippled Children, and hundreds of friends and admirers of Miss Schwarzenbach are making donations for which they will be listed in the beautiful program. Business firms, industry, labor unions, and other organizations are taking advertising space in the realization that the 1961 program will be kept for years to come, and that the crippled children of this county will be aided, Miss Schwarzenbach's life of service will be recognized, and incalculable good will is certain to accrue to the advertisers.

Aiding the league in the first of two lily parades, Cumberland Aerie 245, Fraternal Order of Eagles, yesterday held the first parade assisted by bunny-garbed Tri-Hi-Y girls from Allegany and Fort Hill high schools. Next Saturday the second parade will be sponsored by Cumberland Lodge 271, Loyal Order of Moose. Frostburg Moose will also conduct a parade, and in Lonaconing a street sale will be conducted by the Alvin C. Neat Post 5280, Veterans of Foreign Wars. Paper lilies will be offered on the streets and any donation will be accepted with a smile on behalf of the county's crippled children.

In previous years there have been benefits sponsored by other organizations—including the Red Men, Knights of Columbus, the Owls, American Legion, and Lions.

It is appropriate that this year's benefit show be presented in April, because Cumberland lodge begins its 75th, or diamond jubilee year, next month.

Cumberland lodge, the 63d organized in Elkdom, was instituted on April 24, 1887.

First theatrical performance sponsored by "Old 63" was, as is this year's show, a musical hit of bigtime caliber, "Erminie," produced in 1891. Gilbert and Sullivan's "Pinafore" was presented in 1893, both of these light operas at the Academy of Music (burned in 1910).

A participant in those Elks shows of 70 years ago is still active in Cumberland business, Charles G. Holzshu. He played in the orchestra of the first stage productions ever sponsored by the local Elks.

Early rehearsals of "Annie Get Your Gun" point to a lively fast-moving metropolitan production at the Maryland on opening night, 3 weeks from tomorrow.

Director Wickard, never prone to optimism in the preliminary stages of producing a show, is already convinced that he has a winner for April 17 and 18. Several of the principals in the cast are finds of the first rank, and the singing-dancing choruses are the best assembled in recent years.

For Broadway entertainment as a boost in aid to crippled children, and as a tribute to Henrietta Schwarzenbach—all that and a deep down satisfaction of participating in a good cause—all yours for the tickets you buy to "Annie Get Your Gun."

There are few occasions these days for people to get together in the stimulating and social atmosphere associated with live entertainment. There is something stirring and exciting about stage show audiences, and this feature alone should be a stimulus to more than enough people to assure two capacity reserved seat audiences at the historic Maryland Theater April 17 and 18, just a week before Cumberland Lodge 63 begins its diamond jubilee in Elkdom.

Kansas Helps Self

EXTENSION OF REMARKS
OF
HON. ROBERT F. ELLSWORTH
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 29, 1961

Mr. ELLSWORTH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from the executive vice president of the Kansas State Chamber of Commerce, Mr. C. C. Kilker. It is an interesting letter, and I call it to the attention of my colleagues to illustrate that—in the area of "distressed areas"—Kansas helps herself, and there is considerable opposition in my district and State to the present proposed Federal intervention in the area.

The letter follows:

KANSAS STATE CHAMBER OF COMMERCE,
Topeka, Kans., March 27, 1961.

The Honorable ROBERT F. ELLSWORTH,
House Office Building,
Washington, D.C.

DEAR BOB: Just a brief reminder of our opposition to proposals to grant Federal aid to depressed areas—H.R. 4569 and S. 1. We feel that Federal intervention in this field cannot be justified on any practical grounds.

We cannot recall a session of the Kansas Legislature in which industrial development programs have received the serious and favorable consideration that has been given to them this year. Add to this the many active and vigorous community and area programs within the State, and we can only conclude that Kansas has the interest, the desire, and the capacity to solve its own problems in this area.

We sincerely hope that you will vote against this proposed new Federal spending program of, at best, highly questionable value.

Sincerely yours,

C. C. KILKER,
Executive Vice President.

Nationwide Support Is Growing for Legislation To Preserve the Historic Buildings on Lafayette Square in the Nation's Capital, Introduced by President Kennedy Last Year and by Senators John Sherman Cooper, Wayne Morse, and Carroll D. Kearns This Year

EXTENSION OF REMARKS
OF
HON. CARROLL D. KEARNS
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 29, 1961

Mr. KEARNS. Mr. Speaker, the able and distinguished president of the General Federation of Women's Clubs, Mrs. E. Lee Ozbirn, has written a letter to me in which she outlines the views of the 5 million American women of that great organization, which the Congress itself chartered in 1901, on the important subject of the preservation of the historic buildings on Lafayette Square.

Mrs. Ozbirn begins by saying:

I wish to commend you and your colleagues in the 87th Congress for your continued effort to try to preserve the Lafayette Square area.

Then, on behalf of the members of the General Federation of Women's Clubs, Mrs. Ozbirn declares that—

We all know that this square and the buildings surrounding it has a unique importance because it is the view from the front door of the President's home—the White House. Certainly all Americans who are students of history know of the famous historic houses which include the Dolly Madison House, the Tayloe House, and the Belasco Theater. These buildings depict a very important era of American history and are in keeping with the structure of the White House and should be preserved not just as a monument but they could be used for historic or cultural purposes which would perpetuate the heritage for future generations.

This is an extremely interesting proposal, and it is in line with one which I have received from Joseph Watterson, editor, the Journal of the American Institute of Architects. In a letter under date of February 29, 1961, to me, Mr. Watterson wrote in part as follows:

The American Institute of Architects deplores the apparently impending destruction of certain buildings fronting on Lafayette Square and the construction of large Federal buildings in their place. Although by now many of the buildings on the square may be of a nondescript architectural character the flavor and charm of the square have not been destroyed. It is still a fitting forecourt to the White House—which it must always be. This fitness would be lost with marble monumentality flanking the square—east and west.

Since the Decatur House, on the northwest corner of the square, and the Blair and Lee houses on Pennsylvania Avenue, are to be preserved, and the new executive office building designed to surround them with low wings and courts, it would seem that the same approach could be taken on the east side of the square. The Madison house, on the northeast corner, and the Tayloe house in the middle of the block, are worthy of preservation and restoration, both historically and architecturally. Rather than preserve them purely as monuments, suitable uses can be found for these buildings, as is done in so many of the old cities of Europe. It is a brash generation indeed which will destroy all physical evidences of its great heritage.

The General Federation of Women's Clubs and the American Institute of Architects do not stand alone in their concern for preserving the historic flavor and charm of Lafayette Square. Many other organizations and individuals are deeply interested in preserving the Dolly Madison house, the Benjamin Tayloe house, and the Belasco Theater for historic and cultural purposes, as proposed in a bill, S. 3280, which President John F. Kennedy himself, when a Senator, introduced on March 24, 1960. Members of the Senate and House from both parties have introduced legislation for this very same purpose in the 85th, 86th and 87th Congresses.

Mrs. C. Arthur Bullock, president of the National Federation of Music Clubs, and a citizen of the great State of Pennsylvania, has written me in support of my own bill to save the Lafayette Square buildings, and she has included a letter which she has written to President Kennedy.

In her letter to the President, Mrs. Bullock declares that—

Personally and on behalf of the approximately 600,000 members of the National Federation of Music Clubs, this is to express commendation and appreciation to you for your vital interest and support of the arts in our national life. It is with substantiation by even many specific acts including the introduction of your outstanding bill, S. 3280, in the spring of 1960; and a telegram placing importance on music for use in our 1961 National Music Week brochure in conjunction with our annual sponsorship.

May we go on record in support of these bills, introduced in the 1st session of the 87th Congress; and urge your support of their immediate enactment:

H.R. 3982, introduced by Representative CARROLL D. KEARNS and S. 1020, introduced by Senator JOHN S. COOPER and WAYNE MORSE—for establishing a Commission on the Cultural Resources in the Nation's Capital—these including the preservation of the historic buildings on Lafayette Square and the Belasco Theater.

We feel that these historic buildings on Lafayette Square in our Nation's Capital should remain protected as historic monuments to our culture; and for the sake of economy as well.

The General Federation of Women's Clubs, the National Federation of Music Clubs, and the American Institute of Architects will surely be able to mobilize the grassroots support needed to save the historic buildings on Lafayette Square, for most people would agree that the destruction of these buildings for the stated reasons is unwise and totally unnecessary.

Someone has suggested, facetiously, that the way to save Lafayette Square as well as its historic buildings would be to lease everything to Harvard University. By way of explanation it was pointed out that Harvard Yard was recently rescued from a similar plan for a great office building, but, then, Harvard Yard had the President of the United States on its side.

I include the New York Times account of the saving of Harvard Yard at this point in my remarks.

HARVARD, AGAIN

Another item the White House has said nothing about is how, in the midst of questions of national and international import, the President took up a cause with Harvard.

It was proposed that Cambridge, Mass., sell a piece of the Common as the site for a 15-story office building. The land is near Harvard Yard.

The President thought he had better stay out of the fight. But when the legislature's Democratic majorities pushed through a bill authorizing the sale, he quietly let his views be known in the right places.

Kenneth P. O'Donnell, class of 1949, and special assistant to the President, phoned leading State Democrats urging them not to make the project a party issue.

McGeorge Bundy, Yale 1940 and a Republican, former dean of the Harvard faculty, and now special Presidential assistant for national security affairs, passed the word to some Republicans.

Also active was Mr. Kennedy's one-time Senate colleague from the Bay State, LEVERETT SALTONSTALL, a Republican.

Last week, Republican Gov. John A. Volpe vetoed the bill. The State senate, with some Democratic support, upheld the veto.

What would extremely be helpful, too would be an observable determination on the part of the leading newspaper publishers of Washington, D.C., and throughout the Nation, to wage an unremitting campaign to save the historic buildings on Lafayette Square. The New York Herald Tribune is currently engaged in a campaign to save the Metropolitan Opera House in New York City from destruction. Carnegie Hall in New York City was saved from destruction some months ago, so it would be instructive for such newspapers as the Washington (D.C.) Post, and the Washington (D.C.) Star to study the techniques used by New York City's great newspapers in mobilizing the support needed to successfully save buildings and sites of which possess historic and cultural values.

I include as part of my remarks the letter I received from Mrs. E. Lee Ozbirn, president of the General Federation of Women's Clubs, as well as an editorial from the New York Herald Tribune urging that the Metropolitan Opera House be saved:

GENERAL FEDERATION OF WOMEN'S CLUBS,
Washington, D.C., March 15, 1961.

Hon. CARROLL D. KEARNS,
House of Representatives,
Washington, D.C.

DEAR MR. KEARNS: I wish to commend you and your colleagues in the 87th Congress for your continued effort to try to preserve the Lafayette Square area.

We all know that this square and the buildings surrounding it has a unique importance because it is the view from the front door of the President's home—the White House. Certainly all Americans who are students of history know of the famous historic houses which include the Dolly Madison House, the Tayloe House, and the Belasco Theater. These buildings depict a very important era of American history and are in keeping with the structure of the White House and should be preserved not just as a monument but they could be used for historic or cultural purposes which would perpetuate the heritage for future generations.

The General Federation of Women's Clubs continuously works for the preservation of the early cultural and historic influences for future generations. We know that there are those who think progress is measured by a new and changing pattern but we would remind them that in a few decades the structures of today will be old and obsolete and will be torn down but let us remember that buildings of today are not symbolic of our early history. Only the authentic buildings of the early days of our national development depict our progress and our heritage.

We do not want to see our generation destroy things that have long been accepted as historic. We believe that the beautiful surroundings of the President's home should be preserved and the White House should not be situated in the shadow of high, modern stone buildings.

We appreciate what Senator ELLENDER has said about the preservation of the Lafayette Park area and we think his leadership will surely be worthy of sincere consideration. We commend Senator ELLENDER for his attitude and his willingness to devote much effort to a cause that some feel is lost.

I should like to urge that action taken by the 86th Congress to have the buildings on the east side of Lafayette Square demolished be rescinded. I have great hopes that this will be done because President Kennedy, when a Senator in the 86th Congress, presented a bill to preserve them and because both the President and our lovely First Lady have the wisdom and the desire to restore the White House to its original charm, it surely would be a grave mistake, at the very time they are making every possible effort in restoring the White House, to destroy the historical surroundings. Surely it is more pleasant for the occupants of the White House to look out upon the lovely surroundings than to look out upon cold stone structure that over shadow their home.

Again I wish to commend those who would preserve the beautiful Lafayette Square area in our Nation's Capital, and I trust your efforts will be fully rewarded.

Most sincerely,

MRS. E. LEE OZBIRN, *President.*

[From the New York Herald Tribune, Mar. 26, 1961]

MORE ABOUT SAVING THE METROPOLITAN

Judging by readers' letters to the editor of the Herald Tribune, there is considerable public interest in the future of the present Metropolitan Opera House.

The question, to state it once again, is not whether the old house should continue to serve as the home of the Metropolitan Opera Co. after 1964. That is when the Met will move to its new home at Lincoln Center and no one has any thought that it should try to remain at its old stand a moment longer than it has to.

The question is what will happen to the old opera house once the present company pulls out? Should it be torn down and replaced by an office building, as the Met management desires? Or should an attempt be made to preserve it as an auditorium that still can play a useful part in New York's entertainment and cultural activities?

Several correspondents have pointed out the deficiencies of the present Met building from the standpoint of audiences and performers alike. Shortcomings it has in abundance, and some of these may have to be corrected if the building is preserved.

But even when allowances are made for the side seats with no view of the stage, the inadequate storage facilities, the cramped quarters and outdated equipment, the fact remains that foreign ballet companies and other visitors have been able to play at a profit in the old theater on 39th Street. And it seems reasonable to expect that there would be impresarios ready to book such attractions into the old Met once its present company vacates it.

If New York had a superabundance of capacious theaters suitable for use in the international cultural exchange era we are just entering, there might be no impulses to save the Met except nostalgia and sentimentality. But in point of fact, New York has a lack of such theaters. At present, largescale foreign companies must play either in the present Metropolitan Opera House during the Met's off-season, or at the City Center. If both of these buildings are gone when Lincoln Center is operating, only the new Metropolitan Opera House will offer a 3,000-plus seat capacity, and this will be preempted by the Met itself most of the year.

So it's entirely possible that the old opera house, with all its flaws, still might have some servicable years ahead of it. In any case, we believe the pros and cons should be carefully weighed—and not merely by the directors of the Metropolitan, who own the building, but by the citizens of New York, whose future pattern of cultural growth may be deeply influenced by the decision.

Death of Former Congressman J. Leroy Johnson

SPEECH
OF
HON. J. ARTHUR YOUNGER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 28, 1961

Mr. YOUNGER. Mr. Speaker, we are all saddened to learn of the death of former Congressman J. Leroy Johnson, of Stockton, Calif.

For 14 years he ably represented the Stockton area in the House. Because of his excellent record in the 104th Aero Squadron, American Expeditionary Force of World War I, he was assigned to the committee that later became the House Armed Services Committee. He was a strong and effective advocate of the universal military training program.

It can truly be said that Leroy Johnson devoted all of his adult life to the service of his district and the Nation, because shortly after he returned from his service in World War I he became deputy district attorney of San Joaquin County in California and later was city attorney for Stockton, Calif. He came to Congress in 1942 and served until 1956.

Mrs. Younger and I extend our deepest sympathy to Mrs. Johnson, their daughter, Mary E. Parr, and son, William, in their loss, which is a loss to the community, the State, and the Nation.

Pat Thomas Helps Build Glen Canyon Dam

EXTENSION OF REMARKS
OF
HON. ROBERT F. ELLSWORTH
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 29, 1961

Mr. ELLSWORTH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following story from the Fort Scott Tribune of March 25, 1961.

The story is about a remarkable and enterprising constituent of mine, Pat Thomas, who is helping to build the giant Glen Canyon Dam in Arizona:

FORT SCOTT CEMENT MANUFACTURER HELPS BUILD GIANT ARIZONA DAM

The Fort Scott Hydraulic Cement Co. is a small plant as cement companies go, but today its equipment and its owner have an important part in constructing one of the largest dams in the country.

This giant concrete dam is going up in the spectacular Glen Canyon of the Colorado River in Arizona. It is above the noted Hoover Dam that helps regulate the same turbulent river, but when finished in about 3 years from now will contain 50 percent more concrete than the Hoover Dam, a total of 5 million cubic yards.

How Pat Thomas and his cement plant got into the big Glen Canyon Dam project as an associate with one of four prime contractors building the dam sounds like a Horatio Alger story. It started from a chance remark by a friend in Texas and developed through quick action and enterprise on the part of the young cement manufacturer.

A plane trip to Arizona brought Thomas into contact with the contractor, a Texas landowner, with whom he is now associated on the Glen Canyon dam. The contractor needed help in the form of equipment and technical abilities. Thomas had both in substantial quantities, and he soon found himself cut in on the contract with the U.S. Reclamation Bureau.

Fort Scott cement has gone into a number of other sizable dams. The new Table Rock Dam in Missouri is one of them. But strangely enough, Thomas is not furnishing cement for the great Arizona dam. His contract involves another ingredient, a mineral called pozzolan, which is a volcanic pumice. This material he is mining and processing near Flagstaff, more than 100 miles from the dam site.

The pumice material, ground to a fine powder, is used to give the cement certain qualities needed in the dam. Cement for the dam is also being produced in Arizona and hauled to the site in huge bulk trucks, one every 40 minutes, day and night.

Fort Scott equipment for mining the pozzolan was moved to the Flagstaff site. For several weeks Thomas was flying home from Flagstaff for weekends. Since the project there will continue for another 2 or 3 years, the Thomas family have moved to Flagstaff taking some household goods with them. They left this week.

Thomas said his Glen Canyon venture will not affect the Fort Scott Cement Co. operation. It will continue producing cement just as it has for the past 90 years, he said. The plant here is Fort Scott's oldest manufacturing industry. "We're not about to close it down, as some rumors have had it," Thomas said.

There has been a change in the market for Fort Scott cement Thomas admits. Until recently the hydraulic or natural cement was in demand for mixing with Portland cement in dams, giving desirable qualities of slow setting and density. Then it was discovered that carbon black did the same thing for the cement mixture at far less cost.

Fort Scott cement probably will not be used in any more dams, but it will continue to be in demand as a mortar cement, Thomas said, which has been the steady market for the product from the time it was first produced here.

Understanding Small Business

EXTENSION OF REMARKS
OF
HON. STEVEN B. DEROUNIAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 29, 1961

Mr. DEROUNIAN. Mr. Speaker, the following article by Arthur Krock, which appeared in the March 28 issue of the New York Times, indicates how difficult it is for one who has never met a payroll in his life to understand the effects of a sudden increase in the wage rate on a small businessman.

The article follows:

A SMALL BUSINESS AND THE MINIMUM WAGE BILL

(By Arthur Krock)

WASHINGTON, March 27.—In his advocacy of a gradual rise of the minimum wage from $1 to $1.25, and the addition of millions of workers to its beneficiaries, the President has stressed two arguments outside the economic area. One is humanitarian—that it would provide a decent living wage-standard for large groups of unskilled and semiskilled workers. The other is ethical—his long-standing pledge and that of the Democratic platform of 1960.

"I find it difficult to know," said the President at his last news conference, "why anyone would oppose seeing somebody, by 1963, paid $1.25 (an hour) who works in a business (entering interstate commerce) which makes over $1 million a year. I think anyone who is paid less than that ($50 a week) must find it extremely difficult to maintain themselves and their family. I consider it to be a very minimum wage so that I'm hopeful that the House will pass legislation as close to the bill that came out of the committee as possible * * * because * * * I must say we are talking about a standard for fellow Americans and millions of them * * *."

The premise is that the proposed rise in the scale would relieve this difficulty for such employees and that in general the bill, as the President also said, would serve "the national interest." Since it is indisputable that neither of these results would occur if an increased cost-of-living scale, small business failures and additional unemployment were the consequences, it follows that the President rejects all judgments that they would. This supports an estimate of his Secretary of Labor that the administration's bill would provide an increase of hundreds of millions in purchasing power and many more jobs.

The resistance to this bill in Congress, where the House already has lowered the proposed minimum wage and the scope of the workers' coverage, reflects strong disbelief in such expectations among the small business establishments principally affected by the legislation. These are private enterprises which gross—not, as the President said, "make," which is fundamentally different—$1 million a year and touch, though often remotely, the stream of interstate commerce.

A good example of their contention that the administration measure will have effects opposite from those the President has in view was supplied by the head of a company which manufactures mechanical pens and pencils. In a letter to President Kennedy from this small business manager, Remmie L. Arnold, the following statistics, and conclusions drawn from them, were offered:

1. At $1.25 an hour an employee who at $1 now earns $40 for a 40-hour week would get $50. After the legal subtraction of taxes his week's net would increase from $31.50 to $39.40. The employer's payroll and tax outlay per employee would rise from $42.44, of which the Government gets $10.94, to $53.05, of which the Government would get $13.65.

2. But, said this small manufacturer, "when we increase the minimum wage we will be forced to increase upward the higher-paid," which means more additional expense of doing business. "I will have to add the additional increase and taxes to my products; the people who sell me raw materials will raise their prices to me; the chainstores to which my products mostly are sold will increase their retail prices for them."

AS TO PURCHASING POWER

3. "You cannot take more money from a small business * * * and give more to Government and more to employees and increase our buying power * * *. And the increased minimum wage and coverage will not help the unemployed because * * * they reduce our buying power and cut back money that could be used for capital outlay." Also, the inevitable price-level stimulation will absorb the employees' extra take-home pay, and send many retailers into the foreign market.

His particular factory, Arnold wrote the President, has made no profit since the imposition of the Korean war 10-percent excise tax on such products (still in force); and some of its labor force already has been replaced by automatic machinery as a matter of necessity.

The administration makes the strong point that one example like this does not create an average. But it is sufficiently typical of protests sent to the Capitol from small businessmen to explain the resistance in Congress. And that is fortified by long experience that rising production and consumer living costs, like Floyd Patterson's knockout combination, usually one, two.

Postal Note

EXTENSION OF REMARKS
OF
HON. WILLIAM H. AVERY
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 29, 1961

Mr. AVERY. Mr. Speaker, I am in complete accord with the philosophy that party workers should be rewarded for their effort if their candidate is successful in his campaign for any public office. The civil service system has removed many Government jobs from the conventional patronage role, but generally speaking the policy-making posi-

tions are subject to political appointment, as they should be. Under unanimous consent, I include an excerpt from a recent column in the Washington Evening Star that is an example of an appropriate recognition for campaign services rendered:

POSTAL NOTE

Tyler Abell, 28, has been appointed assistant to the executive assistant to Postmaster General Day. Mr. Abell, who is the stepson of Columnist Drew Pearson, will get a salary of $13,730 a year.

Address by Ambassador Phelps Phelps at Byelorussian Independence Anniversary

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 29, 1961

Mr. ANFUSO. Mr. Speaker, under leave to extend my remarks, I wish to insert into the RECORD the text of an address delivered by former Ambassador Phelps Phelps before the Byelorussian-American Association on the occasion of the 43d anniversary of the declaration of independence of Byelorussia, at the Biltmore Hotel in New York on March 26, 1961.

Ambassador Phelps has some thought-provoking views regarding the Communist drive to dominate the world, which I commend to the attention of my colleagues. His address is as follows:

ADDRESS BY AMBASSADOR PHELPS PHELPS AT BYELORUSSIAN INDEPENDENCE ANNIVERSARY

The 43d anniversary of Byelorussia's independence day finds the world face-to-face with an intensification of communism's insatiable drive to dominate the world. Whether we look to the North, the East, the South or the West, the signs of Communist activity are evident—in some areas, more evident than in others. The influence of communism has spread greatly, even since you last marked the anniversary of that day—43 years ago—when the Rada in Miensk declared the Byelorussian Democratic Republic. It is anchored in Cuba. It is about to force itself upon the people of Laos. It is threatening to achieve a foothold in South America—in fact, communism may indeed have established a beachhead in Brazil, where our President's personal envoy was recently snubbed openly, and where steps are being taken to resume diplomatic negotiations with Soviet satellite countries, such as Romania, Hungary, and Bulgaria. In itself, a resumption of such relations may be a good thing; it could provide a ray of light for people on the dark side of the Iron Curtain. But if the step is taken to spite the United States, it is not a good sign—and there are more than a few who believe that Brazilian intentions are to eventually resume diplomatic relations with Russia, in an attempt to play the Soviet Union against the United States—a dangerous game.

There was another bit of unsettling news recently—the action of the Indonesian President, Soekarno, in seizing Netherlands and Belgian properties. The free world has obviously, lost the Indonesian people, who are now existing under a totalitarian form of government, whether Soekarno calls it guided democracy or by it true name, dictatorship.

Then too, there is the attempt of the Soviets to maintain an atmosphere of tension and unrest in Africa, despite warnings from the Western Powers to the contrary.

I saw one of those documentaries last week on television, which was very well done, and which showed the extent to which Fidel Castro has captured the imagination of the people and to what extent he has stirred their hopes for a change—a change in the drudgery and the hopelessness that accompanies continual poverty. This documentary concentrated on the country of Guatemala, where only U.S. intervention prevented a Communist coup from succeeding last year. According to this documentary, the active Guatemalans—the students and the businessmen to a large extent have become disillusioned with Castro and his Communist antics—the nationalization of industries, suppression of the press and so on. But neither are they anxious to become any more closely associated with the United States. Some nations will have nothing to do with us or our assistance, because they have previously been requested to involve themselves militarily in return for such aid. The Guatemalans want as little to do with us as possible to reduce the amount of our interference in their political and other domestic affairs.

This is true not only of the people in Guatemala, but with the people in other countries. When they are fortunate to discern or to suspect the grave disadvantages of communism, and when they are fortunate enough to be able to reject it in time, they have only the free world, led by the United States, or nothing. As a result, a cautious neutralism is beginning to take root—already has taken root in some countries.

Whether this neutralism will grow, its component parts unite and become strong enough to deal with both the Communist and the free world, and not succumb to either, is moot. But history, from which we never seem to learn, will demonstrate one important point—that Russia will accept this neutralism as a half-open door policy, taking advantage of every opportunity to undermine, infiltrate, and finally pry each component part loose from the whole. In every instance, history shows, where communism has been allowed to even see the light through a door, it has taken over at least half of the house. More often, it has taken over the whole house.

But even were this not so—even if neutralism were to prosper and to flourish side by side with communism and the free world's brand of democracy—this would not be enough. More than that, it would not be right. It would be peace, perhaps, but peace without honor. It would mean the abandonment of all the previous victims of Communist tyranny. And the crown of peace bought at such a price is thorny, indeed.

I fear for the world and for all of mankind. I fear that it is human nature to struggle against something, or someone regardless of circumstances good or circumstances bad. At a certain moment, one issue transcends all others in importance, and the struggle will revolve around that. At other times, this issue may fade before the importance of another, and the struggle is redirected—even, perhaps, with new alliances.

Nevertheless, we have a solemn duty, and that is—not to make the world free—but to give every person in it the opportunity of deciding for himself—without the exertion of force or other pressures—to whom and to what shall be entrusted, the course of his life on earth.

There are, as I see it, three alternatives available for accomplishing this objective. There is force of arms from without, which would involve a terrible, allout nuclear war which no one might survive. There is force of arms from within, which involves much intricate planning, perfect timing, great danger and sacrifice against overwhelming odds. There is also, as the sorrowful example of Hungary showed, grave risk of ruthless interference from the outside. The third alternative is expressed beautifully and succinctly by Goldsworthy Dickinson, English philosopher-essayist, who died a comparatively short 30 years ago: the true way for one civilization to conquer another is for it to be so obviously superior in this or that point, that others desire to imitate it.

We have, for a long time, been obviously superior in this or that point, and so obviously, that others desire to imitate our way of life. But unfortunately, we have behaved in such a manner throughout the years, that the desire in some instances became less keen, and then when opposition developed, we became panicky and tried to force peoples and countries to accept our civilization.

The opposition, unfettered by any Christian principles, was quick to take advantage of this weakness in our armor, and to exploit it along with other methods—including false revolutions, murder, and brute force—to enlarge the sphere of its influence. And as each new victim is notched on communism's gun butt, the already weakened hopes of the old victims suffer another agonizing spasm.

But in these old victims lies a great source of anti-Communist material—in these old or initial victims we have eyewitnesses to the rape and the torture and the ruthless murder of men, women and children, and even whole countries, that mark the inception of communism anywhere.

In the various nations of the world, we have people exiled from their native hills, and farms and cities rather than live under the shadow of Communist domination. Most of you here tonight, or your families and friends are in this category—most of you here can attest to the merciless manner in which Soviet armed might stamped out the spark of Byelorussia's independence completely, 40 years ago, at the Baltic port of Riga. But there are other exiled people—from Georgia, and from Hungary, and Romania, and Bulgaria and Poland, from East Germany, Lithuania, China, Tibet and from Czechoslovakia and now from Cuba.

If we are to defeat communism, and restore these people to liberated homelands, we will need their help. Any realistic reappraisal of the present free world Communist situation must conclude that the free world is retrogressing, while communism is progressing. Such a reappraisal must conclude that whatever we have been doing, however we have been doing it, is not successful. It will conclude that while there exists a desire for our way of life, there is no desire to have it forced upon any one or any national economically, physically. There is a strong, urgent, undeniable desire within people to be free and to govern their own course of existence. For some it is too late—they have been conquered physically, or economically, and they have not the means or the strength to rid themselves of their burden. Others are about to fall into this category, unless they are assisted—not to arm and to make war, but to live and to grow.

Fortunately, the United States seems to have adopted a more realistic approach to foreign assistance. This was demonstrated in President Kennedy's multimillion-dollar plan for aiding Latin American countries—for the first time since implementation of the point 4 program, in the Truman administration, we are offering help with no strings attached—a program which does not seek any military ties at all with recipient nations. Our new approach also was demonstrated in President Kennedy's Peace

Corps program which shows his realization of the problems we face abroad.

But it takes more than a day, a week or a month for a leopard to change his spots—all the programs in the world aren't going to succeed, unless we can convince recipient peoples and nations of our integrity—of our sincere desire to help for help's sake—not because the Communists will get them and eventually us, if we don't watch out.

It is true that we must cease trying to get people to reject communism, and concentrate on trying to get them to accept free-world democracy. Nevertheless, the dangers that communism holds for the rights and the dignities of man must be emphasized, and this is where the people exiled from their homelands by communism, can help. They know and they can relate the horrors of Communist occupation—the criminal acts, the degradations, the programs of rehabilitation without regard to family ties; the attempts to break up whole races, their cultures and their lineage. They know, and they can relate, these exiled people, the merciless methods of Communist force, the trickery used to usurp power of governments.

Once we achieve our objective of increasing living standards for all free peoples, and of helping them attain economic and political freedom, the exiled people can pass on to the ones they have left behind the Iron Curtain, the accomplishments of the free people. While we may conquer by showing our obvious superiority in one point or another, the enemy must be ousted, somewhere along the line. This cannot, as has been pointed out, be accomplished by force of arms from the outside; it can be achieved from the inside. All revolutions must develop from within, or they will not succeed. But they must develop in such a way that the large majority—including the various forms of force such as the military and police—are desirous of change. Our task is to create the kind of world that will be desired; yours to see that the enslaved millions become aware of this world; they will do the rest. Together, working with integrity of purpose, and working diligently, we can achieve great things. But it will be hard work—as Henrik Ibsen put it—do not wear your best trousers when you go out to fight for truth and freedom.

Chamber Opposes Fences

EXTENSION OF REMARKS
OF
HON. JACK WESTLAND
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 29, 1961

Mr. WESTLAND. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a resolution presented by the Bellingham, Wash., Chamber of Commerce.

This resolution, passed March 13, 1961, concerns fencing in the International Peace Arch Park.

Mr. Speaker, I have the good fortune to announce that the Bureau of Public Roads has informed its regional office there will be no fences in the park. I wish to take this opportunity to thank the Secretary of Commerce and officials of the Bureau of Public Roads for the consideration they have given me in this matter.

The resolution follows:

Whereas it has come to the attention of the members of the Bellingham Chamber of Commerce that with the construction of the Blaine, Wash., section of the new freeway-style Highway 99 there will possibly be installed a fence extending through the area now established as the site of the Peace Arch Park, and

Whereas such a fence is not deemed essential or desirable from a public safety or aesthetic standpoint: Then, be it hereby

Resolved, That the Chamber of Commerce of Bellingham, Wash., does go on record as vigorously opposing the creation of such a fence, or any fence through or within the Blaine Peace Arch Park area.

Done the 13th day of March 1961.

BURTON KINGSBURY,
President, Bellingham Chamber of Commerce.

Just Whose Tax Money?

EXTENSION OF REMARKS
OF
HON. F. EDWARD HÉBERT
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 29, 1961

Mr. HÉBERT. Mr. Speaker, I do not think it necessary to make any comment on this exchange of correspondence. It speaks for itself.

How ridiculous can some people get? The correspondence follows:

MARCH 13, 1961.

Mr. JOHN E. HORNE,
Administrator, Small Business Administration, Washington, D.C.

DEAR MR. HORNE: I would like to know the reasoning, if indeed there be any, for the ruling of the Small Business Administration that precludes loans to small businessmen who derive half or more of their receipts from the sale of alcoholic beverages.

I consider this regulation arbitrary and highly discriminatory.

Worse, it is aimed at the hand that feeds, for one of the largest contributors of taxes to the public coffers at all levels—municipal, State and Federal—is the alcoholic beverages industry.

I am informed, for example, that in the year 1959 public revenues from alcoholic beverages totaled $4,298,465,834. Of this figure, the Federal Government received a slice coming to $3,154,556,000. Yet the small businessman dealing in alcoholic beverages is not permitted by administrative ruling to receive an SBA loan, even though his taxes are used in the broad sense for SBA loans and for the administration of the SBA itself.

As to the importance of the alcoholic beverage industry to the tax structure of the United States, it may interest the Small Business Administration to know that these particular tax receipts would almost support the entire Veterans' Administration; the same applies to the labor and welfare program; these tax receipts would support commerce, housing, and space and still have nearly $1 billion left over. Further, these taxes could support the entire operation of the General Government—including the Small Business Administration—and still have nearly $2 billion left over.

I protest most emphatically the discriminatory regulation of the SBA, and invite your comments.

Sincerely yours,

F. EDW. HÉBERT.

SMALL BUSINESS ADMINISTRATION,
OFFICE OF THE ADMINISTRATOR,
Washington D.C., March 24, 1961.

Hon. F. EDWARD HÉBERT,
House of Representatives, Washington, D.C.

DEAR CONGRESSMAN HÉBERT: Thank you for your letter of March 13, 1961, concerning our policy which prohibits the granting of financial assistance if a substantial portion of the gross income of the applicant is derived from the sale of alcoholic beverages.

The policy in question has been in effect since the beginning of the agency's lending functions in 1953. It is part of the loan policy statement promulgated by the Loan Policy Board and most recently published at page 8325 of the Federal Register dated October 14, 1959 (24 F.R. 8325).

The loan policy statement is the implementation of section 4(d) of the Small Business Act, as amended, which provides for a Loan Policy Board to establish general policies, particularly with reference to the public interest involved in the granting and denial of applications for financial assistance by the Small Business Administration. While it is true that it is the purpose of the Small Business Act, as expressed in the law itself by the Congress, that the Government should aid, counsel, assist, and protect insofar as possible the interests of small business concerns, it is also clear that Congress intended there should be some limitation. Otherwise, the provision establishing the Board would have little meaning.

In the discharge of its responsibility under the Small Business Act, the Board has repeatedly given consideration to the question of whether or not it is in the public interest to use taxpayers' funds to promote the sale of alcoholic beverages, and although many arguments have been presented, the Board has been unable to reach a conclusion favorable to the industry. I should like to make it clear that the Board has never taken the position that the alcoholic beverage business is not in the public interest. The Board's position relates only to the use of Government funds. The Board is of the opinion that the subject of alcoholic beverages presents a controversial issue with very strong differences of opinion, and even in those States where the sale of alcoholic beverages has been legalized there remains opposition thereto on the part of many taxpayers. This is evidenced by the fact that the industry is extensively regulated by Government, both State and Federal.

Since neither the Small Business Act, nor its legislative history, defines what is meant by "public interest," its determination must be the result of the judgment of the Board. However, it is significant to note that a similar Board, created for the same purpose in previous legislation, reached the same conclusion.

In addition, the policy in question was certainly not intended to cast any stigma on the alcoholic beverage industry, and there is no inference in the Board's decision that this industry has been singled out for discrimination. You will find that the loan policy statement includes other businesses which are not eligible for loans, for example, newspapers, magazines, radio and television broadcasting companies, and similar enterprises. Also prohibited are loans to enterprises primarily engaged in the business of lending or investments and this would include banks, insurance companies, finance companies, and similar businesses.

The Board has on several occasions, reconsidered this policy which concerns business loans to applicants engaged in the sale of alcoholic beverages, and decided to make no change in that policy.

Sincerely yours,

JOHN E. HORNE,
Administrator.

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D.C., March 29, 1961.

Mr. JOHN E. HORNE,
Administrator, Small Business Administration, Washington, D.C.

DEAR MR. HORNE: I want to thank you for you for your remarkable reply of March 24 concerning the policy of the Small Business Administration in refusing to make loans to those small businesses dealing in alcoholic beverages.

I say your reply is remarkable for these patent reasons:

You state, for example, that the Loan Policy Board "has repeatedly given consideration to the question of whether or not it is in the public interest to use taxpayers' funds to promote the sale of alcoholic beverages, and although many arguments have been presented, the Board has been unable to reach a conclusion favorable to the industry."

I am reassured to learn that I am not the first to request reconsideration of this policy. And I am further reassured to learn that many arguments have been advanced. I detect the possibility of understatement here.

If the Board applies the yardstick of whether such loans are in the public interest, and then decides not to make such loans, the logical deduction is that the Board decided it was not in the public interest. I trust the Board, through unable to reach a favorable conclusion, is able to follow the above reasoning.

I am touched by the Board's concern for the use of Government funds. As I pointed out in my initial letter, a good portion of these sacrosanct funds is provided by the alcoholic beverages industry. If the Government considers these funds to be sullied, then don't take them.

I acknowledge that the sale of alcohol was once controversial. I thought that had been ironed out in 1933, that the people had spoken when the 18th amendment was repealed. I thought the people themselves decided then what was in the public interest. Of course what your Board has done here is to elevate its opinion over that of the American electorate.

Inasmuch as you understandably elect to ignore the contributions made by the alcoholic beverages industry to the Federal Government, it might interest you to know that in 1959 my State alone contributed $28,332,000, a figure more than five times what was appropriated for the salaries and expenses of the Small Business Administration, and well better than half what was appropriated for your revolving fund. And that from just one State.

I wonder whether your Board is aware of that. Doubtlessly not because it appears the Board is under the impression we are still attempting to function under the Volstead Act. Please tell them it was repealed nearly 28 years ago.

Sincerely yours,

F. EDW. HÉBERT.

Byelorussian Independence Day

EXTENSION OF REMARKS
OF
HON. FRANK J. BECKER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 29, 1961

Mr. BECKER. Mr. Speaker, Byelorussians are one of the score of larger racial groups who have been suffering under the Soviet regime. As a matter of fact throughout their modern history they have been enslaved under Russian regimes, both czarist and Communist. Except for the very brief period of 3 years their history is one of subjection to Russian autocracy and tyranny.

In 1918, however, when the czarist regime in Russia was no more they asserted their freedom and proclaimed their independence on March 25. That was 43 years ago, and the event constituted a veritable landmark in Byelorussian modern history. Then the Byelorussian National Republic was set up and the people of Byelorussia, some 10 million of them in their historic homeland, worked hard to strengthen their country against its foes. Unfortunately they were faced with powerful and deadly enemies, who could be fatal to their independence. Early in 1921 the Red army attacked and overran the country, thus putting an end to independent Byelorussia. Then the country was incorporated into the Soviet Union and its people became submerged in the vast Soviet empire. Fortunately, however, in this submerged and enslaved state Byelorussians are not lost. They still retain their love for freedom and cherish their national independence. On March 25, their Independence Day, our good wishes go to her and let us hope they will once attain their goal of freedom.

Small Town No Handicap to Genius

EXTENSION OF REMARKS
OF
HON. GLENN CUNNINGHAM
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 29, 1961

Mr. CUNNINGHAM. Mr. Speaker, several days ago I suggested that the administration's proposed Department of Housing and Urban Affairs is unnecessary. I suggested that we might consider instead a Department of Small Towns and Rural Affairs.

I have enjoyed reading the comments I have received on this subject. I realize, of course, that there is more attention these days to urban areas and that this will probably continue. But I believe we owe it to the millions of people in our small towns to consider their situation too. Indeed, as I suggested, we may find that the small towns have found a way to dispose of the very same problems which—on a larger scale—trouble our urban areas.

In connection with this suggestion, I include an article which appeared in the Omaha World-Herald recently. Mr. Andre Maurois writes from Paris about the intellectual level in small towns under the heading "Small Town No Handicap to Genius."

I include this article and commend it to the attention of my colleagues:

SMALL TOWN NO HANDICAP TO GENIUS
(By Andre Maurois)

PARIS.—An unknown and second-rate composer, who lived in a small German town, once wrote to Beethoven and complained of the provincial circles where he led an aimless life. Ah—If fate had surrounded him with cultured people in a metropolis, what a different man he would have been.

Beethoven answered: "I do not propose myself as a model, but I can tell you this: For a long time I lived like yourself in an insignificant small town and it made no difference. Whatever I became there or here, I became by myself."

Beethoven was right. A brilliant mind, great character will develop anywhere. It is even more so nowadays, for the smallest town today has a good public library. Radio and TV help men and women anywhere to keep in touch with everything. A real talent will be recognized wherever it comes from.

One might even say that the small town suits the artist better. In a metropolis he finds too many opportunities to amuse himself. An attractive woman in a large town has so many engagements that she will have no more time left to read. You might say that in the large town she has a chance to attend lectures, concerts, plays. But there are now good lectures practically anywhere and moreover nothing prevents here from going to town from time to time.

As to the idea that intelligent men and women, in the provinces, will not find partners worthy of them, it is quite wrong. William Allen White, one of the most brilliant Americans I have known, lived in Emporia, Kans. You might say: "There were not many like him." Quite so, but do you think there are many in New York or Chicago?

Does one need many congenial friends to lead a happy life? Too many friends, no real friends.

The surroundings do not make a great man. If he is really an asset to his country, that will be known, sooner or later. Any artist of talent, any woman of genius makes his way. As to others their real happiness depends on quality, not on numbers.

Key Issues of the 1960's

EXTENSION OF REMARKS
OF
HON. GORDON H. SCHERER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 29, 1961

Mr. SCHERER. Mr. Speaker, Mr. Erwin D. Canham, editor of the Christian Sience Monitor, was one of the principal speakers at the 42d annual convention of the Associated General Contractors of America held in Boston recently.

All of those who heard Mr. Canham's excellent analysis of the key issues of 1960 were tremendously impressed. The Members of Congress, who are daily dealing with these issues, I feel, should have the opportunity to read this outstanding address:

KEY ISSUES OF THE 1960'S
(By Erwin D. Canham)

The key issue of the 1960's, after the primal problem of war or peace (and closely related to it) is the vigor of the American economy. Will the American economy recover the driving force necessary to forge ahead in national growth, providing jobs for the vast tide of young Americans coming of working age in the decade, and furnishing the resources with which to meet our social needs and fulfill our international responsibilities?

In the few brief weeks of the Kennedy administration, the President has been be-

ginning to fulfill some of the promises he and his party made at Los Angeles, and during the campaign. These pledges are not very helpful toward the goal of greater economic growth, though some of them may have some short-term economic relief value.

That is to say, some of the proposals for aid to distressed areas, for financial help to the health needs of the aged, for extension of unemployment compensation, and for raising of the minimum wage may be useful for temporary aid, but they are all to some degree contributory to inflation, they increase tax burdens, they tend to increase rather than cut down unemployment. They do nothing to stimulate the economy on a long-range basis.

Yet the strength and vigor of the economy is the central factor in our long-range well-being. We must create jobs. We must create at least 25,000 brandnew jobs a week if the American economy is to be healthy in this decade.

And how do you create jobs? How do you generate strength in the economy? Not just by stimulating consumption through additional benefit payments. Our great need is not consumption, which has stood up fairly well through the recession. Our need is long-range capital investment in new enterprise, in rebuilding of plant and equipment, in breaking through into new areas of economic growth and need.

The best way to stimulate the accumulation and risking of capital, to produce growth, is surely through tax revision and reform. There must be quicker depreciation allowances, so that our obsolescent plant and equipment can be replaced. There must be relief of the overburdened urban real estate taxpayer so that our cities can be rebuilt, as largely as possible through the investment of private capital. There must be recognition of the varying quality of investment, rewarding through tax advantages the kind of investment that contributes to economic growth. There must be relief of the penalty taxes which today inhibit the risking of capital.

There are, of course, other good reasons why tax reform is needed. Our present inconsistent, contradictory, jerry-built system has loopholes, it fosters evasion and immorality, it is unequal, it preserves slums, it destroys incentive. It has produced the expense-account economy.

When President Kennedy and his advisers began to see that the international imbalance of payments made a domestic lower interest rate policy dangerous, the business community was greatly relieved. When Douglas Dillon was made Secretary of Treasury there went up a sigh of respite among businessmen. But until business sees the outlines of a tax reform program (perhaps Secretary Hodges will give it to us this afternoon, though that is not his special bailiwick), it will not know whether it is out of the woods or not. The present legislative program makes business burdens heavier. When will a stimulus and a lightening come?

Meantime, new labor contracts are being signed which would push the inflationary spiral higher. Already, the biggest and most powerful union—the Teamsters'—has obtained approximately a 14 percent increase in wages. If such an increase becomes the pattern in the automobile industry and elsewhere, inflation will have won another battle and recovery will be doubly hard. The decision time for the administration will come before many more months are past. Will the decision be for economic growth, true growth, or for mere inflation—with all its hazards?

The world is knocking hard at the doors of the American businessman. No longer is it necesary to spend time in proving the interrelationship of the American to the world economy.

The policies which the Democratic Party drafted and adopted in Los Angeles last summer have already been considerably modified and will be altered still further by the pressure of world affairs—specifically by the international balance-of-payments situation.

In Los Angeles last summer, and for some months thereafter, the Democrats advocated lower interest rates as the magic device which would pay for the costly programs they were proposing. They also claimed lower interest rates would stimulate the American economy out of a recession and into a sturdier growth rate.

Frankly, I do not believe such a program would have worked. It was no panacea. But the administration has been spared the experience of trying it. It has now been seen that to drive interest rates down would drive more dollars and more gold out of the United States to greener interest-rate pastures. In the face of the international payments crisis, a lower interest rate program, at least on short-term funds, had become economic madness. It was dropped, although the latest Presidential proposal is to pay higher rates for foreign short-term funds and lower rates to Americans. Whether Congress will approve such discriminatory interest-paying on behalf of foreigners remains to be seen. With the abandonment of a general low interest-rate policy, and with growing awareness of the gravity of the payments crisis, the incoming administration's fiscal and monetary visage became increasingly orthodox. It became possible for a Douglas Dillon to be designated as Secretary of the Treasury, a New York Federal Reserve bank official to become Under-Secretary, and for the President to deny that he had any intention of trying to force the resignation of William McChesney Martin as Chairman of the Federal Reserve Board.

Of course, we are not out of the woods yet by any manner of means. The Kennedy administration still has to face the payments crisis, it—and all of us—have an economic recession at home to cope with—and the new administration has various planks in its platform to deal with and various pressure groups who will present their bills for collection.

These three areas of economic challenge are not altogether compatible. To help curb the outgoing dollars we must not only persuade our allies to pay a larger share of defense and aid costs. We must not only persuade them to lower remaining barriers against U.S. trade and keep their own interest rates as low as they can in comparison with ours. We must also—and here in my judgment is the vital point—become more effectively competitive in world markets. In a word, to the very best of our ability, we must stem the wage-cost-inflationary spiral in the United States. To keep costs down at home—to keep them level with productivity gains—will help us stay competitive in world markets, will reduce the gratuitous advantage we present to foreign imports, and will curb the drain of inflation on our own standard of living and the stability of savings and forward planning.

I also believe that a wage-price freeze would be a mighty contribution to recovery at home, to a healthier domestic economy and a healthier society. Thus the things the Kennedy administration might do to get us out of the international red ink can coincide with and support some of things that might be done to promote internal recovery. But those parts of the Kennedy program which would increase costs of production, which would enlarge tax burdens, which would stimulate the wage spiral, would both impede recovery and gravely worsen the balance of payments.

A good illustration is the proposal to increase the Federal minimum wage to $1.25 an hour. I do not defend paying lower wages than this figure and I suspect there are few employers in this room who do. But a Federal law setting a higher minimum is inevitably inflationary to some degree and perhaps to a serious degree. It would beyond a doubt increase costs of production and of services in the American economy without any compensating increase in productivity whatever. If the worst should happen, and the new minimum wage became a new base above which all age differentials were pushed upward by labor pressure—and labor traditionally seeks to maintain its set differentials—then the cost to the American economy in inflation would be very great. President Kennedy is personally committed to a higher minimum wage but he cannot be very comfortable about the consequences at home and abroad of such an inflationary step.

Some of the economists who advise the new administration, having quieted down about lower interest rates, have now turned in a much more promising direction. They are preaching the sounder doctrine of tax reform. Of course, their kind of tax reform may not be the kind that would satisfy most of us here today, but there is a surprising and growing concentration on the need for revision of taxation policies. And there is some agreement on what we should do, for the need of capital accumulation and of stimulating incentive within the economy is very great.

It is elementary that the American economy must move upward out of the present slump, and must grow healthily. The present unemployment figures are a grave challenge. We cannot go on long with over 6 percent of our labor force out of work. Moreover, unless our economy moves into a period of solid growth—say at a rate of at least 3 percent a year—the unemployment situation will get worse. We are moving ahead in a decade when the young people resulting from the birthrate explosion of the mid-1940's will be arriving at the doors of the labor market. In this decade we must create—must generate—new jobs in the American economy at the rate of 25,000 jobs a week or 13,500,000 for the decade. Moreover, millions already working will lose their old jobs through technological change. We must generate new jobs for them.

How do you generate jobs? Research helps. Risk taking helps. The bold, new ideas of American enterprise help. But there must be incentive. There must be capital. To create one new job in our industrial economy requires the accumulation and the investment of at least $12,000 and in some industries as much as $25,000. How do you provide for the accumulation of capital? Partly, at least, through tax policy. And there must be incentive and reward for risk. Our present tax rates are a brake on incentive.

There is plenty of work that needs doing in America—plenty of jobs to be created. Much of this work lies in the shadowy borderland where public and private operations intermesh and overlap. Take the problem of our cities. Many of them badly need rebuilding. Despite the magnificent building and growth to be seen in such fabulous megapolitan complexes as Los Angeles, it is clear that much remains to be done to make our cities livable or even tolerable. The central core of cities must be rescued from the slums and made attractive again, while the new slum rot of the suburbs must be arrested.

Unless the problems of urban, suburban, and exurban living are solved in American society, population growth will result in chaos. Now, just to set up a Federal Department of Urbanism, just to use the handy Federal taxing power to siphon local money to Washington and spray it back after a tidy evaporation or brokerage fee,

will not solve the problem. Acceptance of civic responsibility on the local level is the beginning of wisdom, coupled with the release of the full dynamics of enterprise and the profit motive. It is true that greed and selfishness have produced many of our past and present eyesores. I do not obscure any part of the sordid picture. But we can do better as we awaken to our civic responsibilities. In the first place, not a new Federal Department of Government in Washington but better regional metropolitan instruments of government, close to the people, are required. Citizens in our great metropolitan regions must see the need for coordinated planning and action at the wide community level.

It should be perfectly apparent that most of the problems of the many metropolitan complexes of America are entirely interrelated. They cannot be handled on the township or small-city basis. In Boston we suffer severely from the selfishness and not always unfounded suspicion of the towns and cities which make up the area. The only way to avoid excessive Federal intervention and control is effective cooperative action at the level of the local region.

Again taxation comes close to the heart of the problem. Excessive real estate taxes, such as we have in Boston, effectively prevent the inflow of capital which is ready and available for private investment in rebuilding to meet our manifest needs just as soon as investors can make a fair return on their money. Too heavy real estate tax burdens, on a dwindling base, prevent this healthy inflow of capital. Municipalities plainly need new sources of revenue. This is only one way to unleash the forces of private enterprise for the tasks which need to be done to make our cities and our society more worthy of a progressive people. This is one way to create the jobs we must have if the dry rot of unemployment is not to sap our strength and prevent us from fulfilling our responsibilities for stability and peace in the world.

So let us turn to the threats and challenges throughout the world which today menace the rights of businessmen to perform their essential tasks. We are grimly reminded off the coast of Florida that communism and chaos have come to our doorstep. No longer is Red revolution far away, no longer are satellites only in Eastern Europe. And the great danger of Castroism is that it may spread elsewhere in Latin America, where some of the elements that led to tragedy in Cuba are already present.

One thing is very clear in Cuba, in Laos, and in many another troubled spot: the mere outpouring of American dollars is not enough to solve problems. At the heart of our difficulties everywhere is something far more important: it is the integrity of the American dream or mission in the world—what we stand for—and the intelligence and character with which we implement our mission. Our need, in all realism and practicality, is for a kind of spiritual awakening and awareness. What do I mean? Simply this: The United States must stand for something in the world—something tangible and intangible, something real and important in the lives of people. We did once—more than once—and we can again for underneath the present turbulent surface there is still memory and respect for what we mean in world history, yesterday, today, and tomorrow.

We were once the great revolutionaries. Our Revolution lifted the hearts of oppressed men everywhere. For over a century we were the continent of opportunity, of refuge, of hopes and dreams unlimited, of human liberation on a scale previously unknown in history. The shrewd and wise idealists who put together the American frame or constitutional government attributed their liberties to an all-wise God and enshrined their hopes and plans in noble words which have never been forgotten. They were not only great political scientists, they were also (if you will forgive the expression) great propagandists and they emphasized the importance of "a decent respect to the opinions of mankind."

Other Americans also meant much to the world: Jefferson of course, Lincoln and also Lee, Emerson, and Thoreau, Theodore Roosevelt, Woodrow Wilson, a young man named Lindbergh in a disillusioning time, Franklin Roosevelt, and in our own time Dwight Eisenhower. In all these lives, and others—Edison, Henry Ford, and even the buccaneers of finance and industry—various aspects of the American role in history shone through. This image was particularly bright and shining when most of our problems were still unsolved, when we stood for hope and aspiration rather than satisfaction and satiety. Indeed, it would be far better for us in the world if we emphasized more our problems and our unfinished business rather than boasting of our wealth and accomplishments. We must never forget how it feels to be hungry and we must let the world know that we know. Indeed, I believe that a large part of our difficulty both at home and abroad is the result of how much we have achieved. A kind of smugness and apathy tends to replace the lean and hungry spirituality of an unsatisfied society.

There is much to be unsatisfied about in today's Nation and world.

There is off-shore communism.

There is a domestic slump.

There is rising unemployment.

There is the confrontation with Soviet Russia.

There is the grim portent of Communist China.

There is the danger of enlarging the club of nuclear nations, down to the most reckless dictator.

There is, of course, the international threat to the dollar.

There is the possibly continuing spiral of wages and prices beyond the pace of productivity.

There is the hectic confusion of the newborn nations.

There is the blindness of neutralism.

We can face up to these problems and take realistic action regarding most of them. Of course, we must preserve our retaliatory power in order to prevent a nuclear war. But we must also press harder for ways to bring nuclear weapons and other armaments under effective control. President Kennedy's selection of John J. McCloy to head this task is excellent.

But whatever tangible steps we must take to cope with all these problems will only be effective in the setting of a deeper awakening and action. Let us remind ourselves and others (as I began saying a moment ago) of our attiude toward and meaning to every one of God's men and women and children on this little planet. Our society with all its present problems of half-fulfillment, stands as the transitional result of the greatest revolutionary tide history has ever seen. This tide did not begin at Philadelphia in 1776 or Jamestown or Provincetown in 1620. It began with the dawning awareness on the hills of Judea of the central importance of one God and the Law—Monotheism and the Ten Commandments. This tide flowed on in the life, example, and teaching of the Christ Jesus with his proof of universal love and the brotherhood of all mankind. Into its mighty current came the streams of Grecian beauty and truth, and Roman order, law, and organization. The tide flowed on when an awakening Western Europe rediscovered the creative powers of men turning toward spiritual freedom. It swept out of the Old World and into the New as men sought new opportunities for universal progress. And in our happy, resourceful, unrestrained continent the tide of freedom reached its climax—so far—in a society in which the inherent rights of God's men received their fullest recognition and chance.

The inspiration which the American example gave the world has had fruit everywhere. The present surge toward freedom of the colonial peoples is in large part a direct result of the revolutionary tide which brought our own society into being.

But today much of the world regards—and has been deluded into regarding—the American example as a form of reaction. Again we must make clear to everyone that we are a part of the world liberating movement. In practice, therefore, we must be an example to the world instead of a benefactor. Our technological experience can help them. Some adaptation of our political and economic experience can help too. But in deepest realism, our place in the world must be that of friend of the rights of man. And in all humility we must make plain to others how much we realize we must improve in our own society. Respect is what we want and need in the world, not gratitude.

While keeping ever alert to the challenges which pour in upon us from every corner of the globe, perhaps the best thing American businessmen can do is to attend first and foremost to the unfinished business in our own society. We must get our own economy in high gear. We must rescue the dollar, for it is vital not only to our own stability but to the exchange systems of much of the world. We must maintain the deterrent vigor of our armaments, and we must strive to bring all armaments under effectively administered controls. We must stabilize our economy so that we are not increasingly barring ourselves from world markets. We must rebuild our cities, enlarge our educational facilities and make them better qualitatively and rigorously, get our agriculture back into economic viability—to put it all together—accept and manifest the duties of freemen in a society where acceptance of individual responsibility is the key to well-being.

Our capacities are great, once we awaken. Our spiritual heritage is potent. Our problems are grimly challenging: within the world, within the Nation, within ourselves. It is perhaps true that our Nation and its people, like every other free and great people, are always at their best in moments of challenge and seeming adversity. Nineteen hundred and sixty-one is in many ways one of those moments. Let our response be as vigorous as it has been in the past, and we can emerge from the darkness into light.

Policy of Appeasement

EXTENSION OF REMARKS

OF

HON. STEVEN B. DEROUNIAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 29, 1961

Mr. DEROUNIAN. Mr. Speaker, the following article by David Lawrence, which appeared in yesterday's New York Herald Tribune, is very disturbing. Are we to have another period of appeasement?

ANOTHER NEUTRAL COUNTRY IN ASIA SEEN WON BY REDS

(By David Lawrence)

WASHINGTON, March 27.—Peace in Laos is far off—and so is war. Despite all the outward display of firm diplomacy by the West, the Soviet Government will have its way in the end.

First there is to be a cease-fire, but it will come only after more conversations and propaganda interchanges. It will be hailed, of course, as a victory for the West. Then there will ensue a three-nation conference to work out a truce. Next will come a 14-nation conference to set up a neutral government in Laos. All this takes time—maybe months—but eventually the Communists will have obtained a substantial part of Laos, if not all of it. That's the defeat which lies ahead because the West will not unite to take decisive action to stop Communist penetration in Asia, Latin America, and Africa.

For the history of so-called neutral setups is that the Communists move in and take over from the inside. They resort to bribery, intimidation, and actual incitement to riots and demonstrations. The outward profession of interest in neutrality has resulted in Communist victories in several instances in the past—first in Poland, then in Czechoslovakia, next in China, as coalitions were formed of Communists and Nationalists. Then Indochina was carved up in 1954 by the same formula of a cease-fire followed by a true commission and the setting up of so-called independent states.

KENNEDY'S MOVES A GAIN?

What did President Kennedy gain, therefore, by the dramatic announcement at his press conference last week, by the dispatch of Secretary of State Rusk to Bangkok for the meeting of the Southeast Asia Treaty Organization, and by the sudden conference with Prime Minister Macmillan?

There is no evidence that the Communists have been impressed by these moves. Moscow knew all along that the United States was bargaining for a cease-fire, and that the threats of military intervention meant little. Spokesmen for the British Government notified the world that it was not getting ready to send British troops into Asia. The United States, of course, had said that it would not act alone, but only in cooperation with its allies.

Russia has known all along that it could halt any military moves of the West by agreeing at any moment to a cease-fire. With characteristic boldness when holding trump cards, the Kremlin decided first to get as many conditions as possible accepted before agreeing to a cease-fire in the local fighting in Laos. It's what comes after the truce that's really important. For the Communist plan is to take over from within after the "neutral" status of Laos is supposedly established.

SHOWDOWN TO COME

While a big war seems unlikely just because of Laos, sooner or later a showdown will be forced between the Communists and the free world. This is what happened in the 1930's after Munich. The Soviets now have rendered the United Nations helpless in the Congo, as Moscow continues to send arms and supplies to so-called neutral states in Africa while refusing, of course, to pay any of the expenses of the U.N. for the whole Congo operation. Yet the West doesn't do anything about this default.

British officials in London, moreover, are reported to be saying that it's too late now to save Laos, that the most the West can get from the Communists is another divided country, with northern Laos going to the Communists and southern Laos going to a so-called neutral regime.

REDS IN SOUTH VIETNAM

But what happens in a neutral country? From south Vietnam, for instance, which is next door to Laos, comes word that the military situation is almost as bad as it is in Laos. South Vietnam's army has been getting military help from the West, but the area is infiltrated by 10,000 disciplined and highly trained men from Communist-controlled north Vietnam. Almost half the 6,000 villages in south Vietnam have been taken over by Communist agents.

What is the answer? The United States and Britain and France, despite the talk of military intervention, reveal every day that they do not wish to take any such action because it might lead to a big war like the one in Korea. The Communists are betting that the Western allies are bluffing. So, as in the days of Hitler in the 1930's, the free world retreats step by step, hoping against hope that a dictator will be reasonable.

A cease-fire seems likely now only because the Russians know it will lead to a neutralized Laos. This is exactly what they want, but between now and the day the cease-fire actually takes effect, Communist forces will gobble up some more territory in Laos.

President Kennedy is earnestly grappling with the whole complicated situation. But "brinkmanship" that isn't well coordinated or backed up by allies who will fight if necessary—but who appear to be unprepared to go to the brink of war or to take the consequences of their firm statements—will have little effect on Khrushchev. That's why this year he may chalk up another conquest in Asia.

Mature Women Get Bad News on Jobs

EXTENSION OF REMARKS
OF
HON. MARTHA W. GRIFFITHS
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 29, 1961

Mrs. GRIFFITHS. Mr. Speaker, today, there are more women employed on a full- or part-time basis than ever before. Yet, there are indications that this encouraging news does not apply to all women jobseekers. The mature woman who desires employment is faced with discouraging reports on many fronts, ranging from age requirements to inability to receive specialized training. Recently, a conference was held in Detroit on this subject and the news item on it follows:

MATURE WOMEN GET BAD NEWS ON JOBS
(By Ruth Carlton)

A thousand women turned out for a self-help conference—"Employment and Training Opportunities for Women" yesterday afternoon at the Rackham Educational Memorial.

The three topics of the day were titled: "The Mature Woman as a Jobseeker," "The Job Itself," and "Sources of Training."

The need for a definition of mature was evident. Only one speaker defined it:

"In our organization we consider the mature women to be 30 to 35," he said.

The majority of the audience were over 50.

The first question from the audience pointed up this same lack of definition. It was aimed at Mrs. Helen Biehl, director, Detroit Practical Nursing Center.

"I tried to enroll in a school for practical nursing and they told me I'm too old. I'm 54 and strong and healthy," said the woman on the third row.

"The rules allow us to accept students 18 to 50," Mrs. Biehl replied. "We are advising women to prepare early for the jobs they may want in later years."

"But I've been busy with my family," persisted the woman from the audience. "Now I have time and want to become a practical nurse."

The answer remained—she can't.

Most of the word the audience received during the afternoon was equally discouraging.

"The Mature Woman as a Jobseeker" was Mary K. Guiney's subject. Mrs. Guiney is planning consultant for United Community Services.

"Women surely work for the same reasons men do," she said. "Many present hiring policies, related both to sex and to age, need to be reviewed.

"The homemaker who decides to get a job must be ready to give up the authority she has had in her home.

"She must be willing to take orders and to take criticism," Mrs. Guiney said.

PREPARE, IS ADVICE

Speaking on "The Job Itself," Frederick Mitchell, director of employment service division, Michigan Employment Security Commission, advised women to prepare for jobs for the better days ahead.

"To be brutally frank, there is not much of anything available in the Detroit area today," he said.

He stressed the drastic changes in the employment pattern in recent years toward increased demands for experience and training.

"There was a day when if the body was warm and could stand we could refer it for a job," he said. "Today the job goes to the 'fustest with the mostest.'"

He advised the jobseeker to study job classifications and prepare for a specific job.

"One guaranteed way to stay unemployed is to say 'I can do anything.'" he said.

EYES CIVIL SERVICE

He read the official list of job classifications, stopping to comment on a few which normally have openings. These included cooks and chefs, group workers and other social workers, dietitians and nurses.

"Investigate the Government field," he advised. "Civil service jobs cover every classification from sweepers on up. It's a growing field, not so concerned about your age, and offers security."

A panel which discussed sources of training was made up of Mrs. Biehl, Mrs. Opal Cunningham, training director, Crowley's; Arthur Greiner, training director, National Bank of Detroit; and Dale Curtiss, executive administrative assistant, adult education, Detroit Public Schools.

"Age is no barrier to continuing training in practically any field you can name in Detroit's educational institutions," Curtiss said.

Polish Primate to Clergy: Prepare for the Worst

EXTENSION OF REMARKS
OF
HON. WILLIAM W. SCRANTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 29, 1961

Mr. SCRANTON. Mr. Speaker, all Americans, regardless of their religious affiliations, cannot help but be concerned with the struggle still continuing in Communist Poland by Stefan Cardinal Wyszynski and the Red regime.

Communism, wherever it has appeared in the world, has recognized Christianity as one of its prime opponents. Consequently, the Communists continue to spare no effort in their attempts to crush religion.

The following article, which appeared in the March 21, 1961, issue of the Polish-American Journal, describes the current status of the church-state struggle in Poland:

DEFENDS WESTERN BORDERS: POLISH PRIMATE TO CLERGY: PREPARE FOR THE WORST

WARSAW.—Stefan Cardinal Wyszynski has called upon the clergy to close ranks and "prepare for the worst" in a deepening struggle for survival of the church in Poland.

The primate of Poland warned 15,000 priests to be ready for any sacrifice in defense of the faith—even "punishment, exile, loss of freedom."

The cardinal directed his severest admonitions to priests tempted by self-love and excessive ambition to collaborate with Poland's Communist regime. The number of such priests is increasing and this problem is among the most acute facing the primate.

NEUTRAL IN POLITICS

In his private letter to the clergy, Cardinal Wyszynski laid down explicit rules for the attitude of the clergy toward politics, telling them to keep out of politics.

The cardinal's stand means that the church will remain neutral in the next month's national elections—neither urging Catholics to go to the polls to vote for the single national front list—as the government wishes—nor will it advocate a boycott of the election.

BACKS REGIME ON BORDERS

The primate alined the church with the Communist government on only one subject—the preservation of the western territories, recovered from Germany after World War II.

He also acknowledged the reality of Poland's firm membership in the Communist bloc under Soviet leadership.

PRESSURE ON CHURCH

Since last summer, government pressure has been applied quietly but relentlessly to curtail church privileges and freedom of action. The church has seen religious instruction eliminated from almost all Polish schools. Priests and parishes have been subjected to tax increases. Seminaries have been placed under stricter government control, including censorship of their libraries.

Some seminary students have been drafted into the armed forces. Building permits for churches and parish houses have become difficult to obtain and the church's title to certain properties has been made uncertain.

Under these difficult conditions, the cardinal commanded the parish priests to carry on regular religious instruction in churches, private homes, or elsewhere, regardless of any obstacles raised by "atheism" and at the cost of any sacrifice.

The Choice We Face

EXTENSION OF REMARKS
OF
HON. CHARLES S. JOELSON
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 29, 1961

Mr. JOELSON. Mr. Speaker, a storm of controversy is fiercely raging in Washington and throughout our land between those who hurl the label "liberal" or "conservative" as an epithet against their ideological opponents. It would be well, therefore, for us to reexamine these terms to learn what, if anything, they mean and to determine whether the so-called liberal or conservative course will best serve our national interest.

The question is not merely which path will lead us to prosperity. The stakes are greater than prosperity. The stakes are survival itself. The collegiate debate as to whether we can best be prosperous via Franklin D. Roosevelt or Calvin Coolidge is so limited as to be outmoded within the frame of reference of the 1960's. The question is which path will enable us to win the battle of democracy against communism for the minds of men. For unless we win that conflict, our survival as a free Nation is impossible.

Traditionally, the liberal has been regarded as the person who would, by experimentation and innovation, change basic patterns and structures. The conservative, on the other hand, has been looked upon as the one who would preserve and maintain these patterns and structures. It may well be, however, that if the conservative were to be successful in 1961, our way of life would become radically changed by 1970. Conversely, it may be the liberal who will ultimately be responsible for the conservation and continuation of much of our fabric of Government as we now know it.

In the struggle for the minds and the loyalties of mankind both at home and throughout the world, only that doctrine which can reasonably bring the hope and expectation of improvement in the economic and social status of the vast number of the have-nots can prevail. Improvement, of course, means change. Thus, the conservative may unwittingly be the radical because by his desire to change little, he may forfeit much by a loss of the competition for the fealty and commitment of the uncommitted peoples of the world. The liberal may truly be the one who "conserves" because by his desire to change much, he may forfeit less.

Let us first consider whether the liberal or conservative approach to our dometic problems will best serve to stave off the onslaught of the Communists, not only at home where they are presently weak, but also abroad where they strongly stalk. In the field of domestic civil rights, it is not an exaggeration to state that no single factor is greater in turning the people of Africa and Asia against us than our unfortunate refusal to act to insure social justice for our Negro citizens in the United States.

I happen to regard the guarantee of civil rights to all Americans to be a moral obligation of all Americans. However, even if we are to disregard the moral issue involved, do we dare to overlook the political impact of the civil rights issue on the world stage? Can we expect to gain the friendship of the millions of nonwhites who make up the majority of the world's population so long as the opponents of civil rights for all Americans refuse to relinquish their prejudice in the national interest?

We sparked a revolution on our shores in 1776 by the electric declaration that taxation without representation is tyranny. Yet two centuries later, a sizable segment of American political thought would tax our Negro citizens while at the same time denying them the right to vote. Indeed these "conservators" would even ask, and have asked, American Negroes to fight our country's wars and shed their blood to protect a political system in which they are refused a voice. We delude ourselves if we believe that the rest of the world is blind to this cruel inconsistency, and that the Communists are not making political hay out of it.

In the field of social legislation generally, the liberal approach is and has proven to be the best answer to and protection against communism. The Communist movement was never stronger in the United States than in the early 1930's when we were floundering in a heartless depression during which the unemployed, the homeless, the ill, and the aged felt that their Government simply did not care. It was not until Franklin D. Roosevelt began to remember "the forgotten man" with broad social programs such as the WPA, unemployment compensation, social security, fair labor standards, and housing that the rising tide of homegrown communism in America was stemmed.

Yet in spite of this lesson of recent history, a strong body of conservative opinion in our country continues to revile Franklin D. Roosevelt, and to oppose the initiation of new social programs and the expansion of existing social programs championed by John F. Kennedy as the path for the 1960's. Although it is almost axiomatic that the Communist virus thrives on despair and want, the conservative spokesmen oppose programs designed to alleviate these twin menaces. These political physicians to the body politic eschew the preventive medicine which would eliminate the germ of communism by positive programs, preferring to snipe only at the symptoms.

We hear it argued, however, that if we adopt and expand these broad social programs, the result is not to conserve our basic way of life, but to install a system alien to our fundamental concept of America. Such an argument cannot sustain analysis. The thing that is really fundamental about democracy is freedom. Freedom is essentially what democracy is all about. It is guaranteed by the Bill of Rights of our Constitution.

Who would argue that the vast social programs enacted since 1932 have deprived us of the really basic freedoms safeguarded by the Bill of Rights? Freedom of religion in America is unabridged. Freedom of speech, freedom of the press, and freedom of assemblage are all happily a part of our daily existence. They are not threatened. They would indeed be threatened and snuffed out under the very communistic movement which has been rendered weak and impotent in the United States by the social legislation opposed by the conservatives. Furthermore, if the rest of the world can be made to see that the people in our country are decently housed, are decently treated socially,

and are generally "cared about" by their Government, we shall have made a giant step in the contest for the minds of the uncommitted millions on our planet.

There are those Americans who say that these great social programs are too costly financially. However, if it is true that these programs have rendered communism weak at home, and may through propaganda combat the appeal of communism abroad, they are worth their cost a thousandfold. One never hears the argument that we should abandon the search for more explosive bombs or more far-probing missiles because we cannot "afford" them. There are some things we must afford. First among them is our democratic free system of government.

Turning to the problem as to the approach to follow on the international level, we have only to consider communistic propaganda techniques in order to arrive at our best course. The Communists have not changed their propaganda tune since Karl Marx wrote his Manifesto in 1848. Exhorting the workers of the world to arise, he told them they had nothing to lose but their chains. To the starving and tattered of Asia and Africa today, this exhortation can be as effective as it was to the Russian masses in 1917 unless the free nations of the world come up with something more positive of their own.

The bewildered and hungry peasant of Asia and Africa can be wooed and perhaps won by the blandishments of the siren songs from Moscow and Peiping promising him his acre of land. Without possessions and bereft of human dignity itself, he has, in fact, nothing to lose. And what have we offered him for the future? Which of his local leaders have we supported to lead him toward tomorrow?

Although sending him aid for the present, we have recommended to him the status quo of conservatism for the future. While the Communists hold out to him the hope of the acre of land, we tell him of the blessings of democracy, forgetting that a man must first be fed and clothed and housed before the aspiration for freedom can be strong within him.

We have also by our essentially conservative approach given over by default to the Communists those surging movements of protest and revolt which will not be denied, and which have caught the imagination and support of many of the people of the world. Unmindful that the United States itself burst forth through revolution in the 18th century, we have tended to assume that revolution is always the product of the Communists in the 20th century.

Our Nation, which still remembers with gratitude the help given the struggling American Revolution by Kosciusko and Pulaski from Poland and by Lafayette from France, has discouraged any such aid or comfort to foreign vehicles of protest by Americans in our modern day. Yet there is real doubt whether all these movements of protest and rebellion which have shaken the last several decades were Communist-inspired in their origins. There is no doubt, however, that through the indifference and with the hostility of the free world to these eruptions, these movements have turned out to be Communist-dominated in their conclusions.

The conservative approach of the status quo has led us to a total lack of communication with those voices of protest which now lead, or which ultimately will lead, to their people. Into this vacuum moved the Communists who, like nature, abhor a vacuum.

It is not unusual for Congressmen to receive mail from constituents protesting against liberal programs as not being faithful to the America we grew up in. The question we face, however, does not require us to decide whether the unwitting twenties were wise, or whether the gay nineties were really gay. Those eras have passed from the American scene forever. There may be those among us who grow nostalgic for them, but the fact is that they simply will not come back again.

Times have changed, and changed times present changed problems which require changed solutions. The first question which destiny poses is whether now, in the 1960's, we can refuse to follow the course of social progress at home and to support it abroad. The ultimate question is whether, if we fail to follow such a course, we can remain free.

This is the choice we face.

Days Ahead Seen Crucial for Exporter Finance

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 29, 1961

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following article by Francis X. Scafuro, of the National Coordinating Committee for Export Credit Guaranties. Mr. Scafuro is also vice president of the Bank of America. The article appeared in the Journal of Commerce, March 21, 1961:

DAYS AHEAD SEEN CRUCIAL FOR EXPORTER FINANCE

(By Francis X. Scafuro)

In an article which appeared in the Journal of Commerce, November 11, 1960, I pointed to some of the deficiencies in our existing export credit guarantee facilities with those of other countries.

In his February 6 balance-of-payments message, President Kennedy confirmed that our export credit facilities "are not yet adequate, nor or they comparable to those offered by foreign countries." Accordingly, he directed the president of Export-Import Bank to prepare and submit by April 1 a new program to place our exporters on a basis of full equality with their competitors in other countries. The President also asked the Secretary of the Treasury to initiate and submit by the same date a study of the methods through which private financial institutions can participate more broadly in providing export credit facilities.

International traders are gratified by this top-level recognition of their long-felt need for more comprehensive credit and financing facilities to help them meet the foreign competition. Especially are they hopeful that the program adopted to meet this need will make the fullest possible use of private insurance and financing institutions, with Government participation held to the irreducible minimum.

As the experience of other countries clearly demonstrates, this export credit problem requires a double-headed instrument for its solution: (1) an export credit guarantee system which protects against all unavoidable hazards involved in granting short- and medium-term payment facilities to customers abroad; and (2) a financing system, based upon and broadened by reason of these guaranties, that will enable commercial banks and other private lending institutions to provide the funds needed by individual exporters to sell on payment terms equivalent to those granted by suppliers of other industrial countries. Obviously, it is always prerequisite that the customer and the destination country be creditworthy at the time of sale.

Our international trade financing mechanisms cannot work efficiently unless all parts are supplied and functioning. Without any one part, the machine cannot operate at full power.

So far as the credit guarantee portion of the problem is concerned, the proposal which has been carefully developed by the National Coordinating Committee for Export Credit Guaranties offers a sound and practical program. In brief, this calls for the passage by the Congress of legislation to federally charter an American Export Guaranty Corp. Privately owned and administered, this corporation would insure U.S. exporters against unforeseen credit losses which might be encountered in their sales of goods and services of all types to responsible and creditworthy customers abroad. Commercial risks (insolvency and protracted default) would be insured to 85 percent; noncommercial risks (including prolonged exchange transfer delays) to 95 percent of invoice value.

The corporation—in effect a pool or syndicate of commercial insurance companies—would bear the entire burden of commercial loss. It would, however, require standby financial backing from the U.S. Treasury for losses resulting from political and catastrophic risks, but only to the extent that such noncommercial losses exceeded the corporation's specially earmarked political risk loss reserves. These reserves would represent an accumulation of all political risk premium income, less a small allowance for its management expense.

U.S. REPRESENTATION

The U.S. Government would be represented on the guarantees corporation's board of directors, and this Government director would have the final say as to global and country exposure limits and other elements involved in the corporation's underwriting of political risks only.

In short, though the proposed corporation would be privately owned and would operate on commercial insurance lines, with limited Government participation, it would provide the same degree of comprehensive cover, and the same speed and general efficiency of operation as the credit-insuring organizations of other principal trading nations now do.

It must be emphasized, however, that any export credit insurance system, no matter how comprehensive or efficient, will provide the basic foundation, the cornerstone, upon which to build an export financing mechanism. Credit insurance, by itself, does not provide the funds necessary to finance oversea transactions. As the experience of other

countries demonstrates, however, once a truly comprehensive export credit guarantee system is functioning, relieving the exporter and his banker of a substantial part of their contingent liability on discounted receivables, the financing problem is greatly simplified.

ECONOMY OF RESOURCE

Essentially, credit insurance by separating the risk bearing from the lending function, paves the way for an economy of resources. In the management of $100, for example, one must have $100, but, working on the law of averages, a $100 account can be safely insured with resources of $5 or even less. Thus, on an insurance basis, $1 can do the work of $20 or more. Having his account insured, the exporter can safely be granted more liberal accommodation by his banker, often at a saving in the financing cost which largely offsets his risk insurance premium charge.

In Canada, the United Kingdom, Germany, France, and many other countries, export trade financing, especially for medium term credits, is conditioned upon the financed transaction being guaranteed.

A most interesting illustration of this is to be found in the latest development in the Canadian export credit insurance and financing structure. All nine of the Canadian chartered banks have now combined to take over the Export Finance Corp. of Canada, Ltd., which was set up by the Canadian Government in June 1959, but never actually got into operation. This Export Finance Corp. of Canada, Ltd., has an authorized capital of $50 million and can borrow up to 10 times that amount. So effectively it could have an available ceiling for financing of $550 million. The nine commercial banks have paid into this Export Finance Corp. an initial capital of $10 million, so they can borrow 10 times that amount which gives them a total financing capacity of $110 million, to be expanded as need arises.

CANADA EXPORT FINANCE

The Export Finance Corp. will finance sales of capital goods with terms of payment that do not extend beyond 5 years, always provided that such export transactions are insured by Canada's Export Credits Insurance Corp. Under this arrangement, Canada's exporters will continue to deal with their own commercial bankers, and these private bankers will make all the other arrangements for the Export Finance Corp. to take over the actual financing.

The Canadian chartered banks and the Canadian Government have agreed that, if the bankers will make financing readily available on all export transactions up to 5 years, then the Canadian Government will provide financing for export transactions extending beyond 5 years. However, these project loans beyond 5 years will be handled by the Government without export credit insurance, as Canada's Export Credit Insurance Corp. adheres to its firm policy, also followed by credit insurers of other countries, not to insure capital goods beyond a maximum of a 5-year credit period.

In the United States, under a like arrangement, commercial banks and other private lending institutions could safely finance insured transactions up to 5 years, leaving the longer term projects to Export-Import Bank of Washington.

SPECIFIC SUGGESTIONS

The following are some other specific suggestions which I would like to offer at this time as the steps which should be taken to broaden existing U.S. finance facilities once an effective and comprehensive export credit guarantee system is established:

Commercial banks should be permitted to accept drafts (i.e. create bankers' acceptances) for tenors or periods up to 5 years from date of shipment to correspond with prevailing market credit terms for our manufactured goods. Sound regulations would have to be put into effect governing the length of credit extended by means of such bankers' acceptances for specified groups of goods. This broadening of the bankers' acceptance base would go a long way toward resolving the medium term money shortage. There is always an investment market for prime bankers' acceptances.

JOINT BANK VENTURE

A system of private funding of export financing must be created. Just as the German commercial banks have banded together to create both a credit insurance organization (Hermes) and a medium term financing institution (Ausfuhrkredit); just as the nine Canadian charted banks have now followed suit with the formation of the Export Finance Corp. of Canada, Ltd., so might the leading American international banking institutions combine in a joint venture to create a new (Edge Act) financing corporation to provide a common rediscount pool for international trade finance paper. Such a new finance corporation would make no direct loans to exporters but would only rediscount for its stockholder member banks with recourse to them. A well sponsored and adequately capitalized corporation of this sort should be able to float sizable bond issues (at reasonably low interest rates) with which to raise funds to purchase insured, or guaranteed, export paper from member (stockholder) banks.

To round out our modernized national system of international trade credit, there is also a need for Federal central rediscounting facilities for international trade finance paper. Our commercial banks (as well as the new financing corporation suggested in the preceding paragraph) should have access to central rediscounting facilities for medium term paper, just as such rediscounting facilities are available to practically all European commercial banks engaged in international finance.

UNITED KINGDOM REDISCOUNT FACILITY

The Bank of England recently announced the establishment of rediscount facilities enabling the commercial banks to sell to the Bank of England foreign trade finance paper which is insured by Export Credits Guarantee Department and which at time of discount would mature within 18 months. Thus what was medium term paper becomes an almost cash reserve item.

The days immediately ahead will determine whether the financial community and the Government will respond adequately to the need for the credit and financing machinery vital to the growth and maintenance of our international trade.

Plight of the Truckers—Alaska

EXTENSION OF REMARKS

OF

HON. RALPH J. RIVERS

OF ALASKA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 29, 1961

Mr. RIVERS of Alaska. Mr. Speaker, I believe my colleagues will be interested in the anomoly which exists with regard to Alaska in relation to the Federal Interstate Highway System. Although Alaska participates in the regular A–B–C system of primary, secondary and rural roads, it is not yet ready to build any extensive amount of four-lane highways so is not included in the Federal interstate highway construction program. Nevertheless, the people of Alaska are subjected to the tax on motor fuel and tires from which the revenue is derived to carry out said program. Thus, on its face, this situation indicates that Alaska should be exempted from that portion of the Federal tax on motor fuel and tires which is applied to the interstate highway construction program. A second look, however, makes clear that since all the proceeds of such tax flow into the highway trust fund from which both the regular A–B–C Federal aid program and the Interstate System are funded, there is no exact portion of the tax collected specifically for the Interstate System which can be translated into an ascertainable exemption for Alaskans. Furthermore, the trust fund first meets the needs of the A–B–C program and the Interstate System gets only what is left. Thus it apears that the constitutional requirement of uniformity in tax laws binds Alaskans to pay the full Federal tax on motor fuel and tires even though Alaska is not included in the interstate highway construction program. It is on this basis that I contend Alaska is building up an equity in a future equalization road program to enhance the equity it already possesses by virtue of its noninclusion under the Federal aid highway program during all its years as an incorporated Territory up to 1956, which fact has resulted in many of its towns not being interconnected by means of roads.

May I now speak in behalf of the trucking industry in Alaska in regard to the President's proposal which calls for retaining the present Federal gas tax of 4 cents a gallon and greatly increasing the tax on diesel fuel, trucks over 26,000 pounds, and highway tires, inner trubes and tread rubber.

Notwithstanding the fact that the Alaska Carriers Association, Inc., is made up of member firms operating in a State without interstate expressways and without prospects of getting same, this association, in an official release which I received recently, expresses a broad national view in the following language:

> This association, representing those trucking firms and associate members (shown on its membership list) is completely in favor of the earliest possible competition of the Interstate Highway System and thinks that it should be accomplished with all practical speed.

However, complete opposition is expressed by the association to the proposed increase on diesel fuel, large trucks and tires, in the following language:

> Every member of this association is utterly and completely opposed to any further increases in taxes leveled solely at the trucking industry. The industry is not financially able to bear such a burden at this time and feels strongly that it would definitely not be in the best interest of the Nation to impose such a staggering burden on an industry that operates on such a marginal profit level but who nevertheless provides direct employment to millions of people. To im-

pose this burden, at least at this time, would have disastrous results on the economy of the individual trucking companies and would very seriously endanger their ability to continue operations.

To cease their operations to any extent would decrease employment in direct ratio. To decrease employment would eliminate or decrease the trucking industry's ability to provide the transportation service that is an absolute necessity to our way of life, our national defense, and which is the one thing that ties our Nation together and makes it strong. The trucking industry must prosper and grow stronger if the best interests of the Nation are best served. This cannot be done if the Federal Government takes from it more than a reasonable amount of its lifeblood.

The industry has never been lacking in its support of our Government and the functions and performance of necessary services by our Government. It does hold with the common feeling, however, that equitable treatment should be accorded all of the people—including the trucking industry. Therefore, it is our feeling that any further increases in taxes that are necessary to support the interstate highway construction program should be equitably spread across the broadest base possible. Let every user of the highways pay the small amount, according to amount of usage, necessary to obtain the needed funds.

The President has indicated that an additional one-half cent per gallon, assessed against all users, would provide the increased amount neeeded. It is suggested that this or some other equitable and fair method be used.

The trucking industry in Alaska is even more hard pressed because of the Federal Government-owned Alaska Railroad competition. It operates on a so-called out of revenues basis, but its expenses do not include the payment of taxes on the items discussed herein, or on its properties or revenues to either the Federal Government or State government. This is wrong. It is not even regulated as to ratemaking by the Federal Government or State. This is wrong also, and lessens the ability of the Alaska trucking industry to pay even the present heavy taxes.

All, to whom this letter is addressed, are respectfully urged to exert their every effort to insure that the proposed new taxes not be enacted and, instead, find a more fair and just method of obtaining and/or allocating the funds necessary to move ahead with the interstate highway program properly.

Mr. Speaker, in addition to the handicap entailed in competing with the Alaska Railroad, which, under operation of the Department of the Interior, is not, as are the truckers, under the ratemaking and regulatory power of the ICC, the truckers must traverse rugged terrain on narrow roads in weather which in the winter is severe and very hard on equipment, entailing high costs in regard to maintenance and replacement of equipment. Thus, the need for a small margin of profit and indeed survival is a constant struggle. Accordingly, I believe that the proposed high tax on truck fuel, large trucks and tires would hit the members of the Alaska Carriers Association, Inc., in Alaska with greater impact than anywhere under the American flag, and I plead their cause, as most effectively stated in their own words.

SS "Hope"

EXTENSION OF REMARKS
OF
HON. FRANK T. BOW
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 29, 1961

Mr. BOW. Mr. Speaker, the SS *Hope* is proving to be one of the most successful humanitarian ventures ever undertaken by the people of the United States. Reports of achievements come to us from the *Hope*'s every port of call.

I think it is proper to call attention to the fact that one of the principal contributors to the *Hope* project has been the American President Lines which not only assisted in the acquisition and conversion of the ship, a period of nearly a year before it sailed, but also agreed to operate the vessel on a nonprofit nonremunerative basis.

When Mr. George Killion, president of American President Lines, was first apprized of this project, he immediately offered his company's services. He was convinced that the SS *Hope* would offer tangible evidence that the people of the United States do care about the condition of less fortunate people throughout the world, and are eager to extend firsthand personal aid as proof of their concern.

To speed the project on its way, Mr. Killion directed that various departments of his company begin work immediately to determine the overall requirements for operating the ship. After a comprehensive study of the ship's design, the company participated in the arrangements required for the conversion of the ship to conform with U.S. Coast Guard standards of merchant marine operation, and to provide adequate medical facilities. Subsequently, the Navy awarded a conversion contract to the Puget Sound Drydock & Shipbuilding Co.

The effort by American President Lines had only started. Two men were assigned from its engineering department to represent the company in Seattle, and a former ship's captain was named project officer to prepare the ship for its mission of mercy.

Almost every department in American President Lines assisted. The steward's department spent weeks compiling commissary lists for the first voyage. The legal department reviewed the many complex contractual arrangements required to establish the program. The finance department set up a cost-accounting system and developed financial data to permit People-to-People Health Foundation to plan the financing of the project. The industrial relations department worked out the involved bargaining contracts with the seamen. The insurance department developed an insurance program for the project. The service and supply department handled the inventory, the purchasing, and the organization of the storing program. The operating department had the responsibility of consolidating all data pertinent to getting this "city" of 200 officers, crew, and medical staff ready for a voyage to foreign ports thousands of miles distant. And the public relations department assisted in planning the publicity needed to gain support for the project, and in the raising of funds to finance it.

Not least in the contributions made by American President Lines was the assignment of Capt. J. M. Windas as master of the SS *Hope*. A 43-year-old graduate of the Merchant Marine Academy, with 22 years' experience with American President Lines, Captain Windas had been serving on American President Lines' SS *President Polk* when he undertook his new assignment.

In the words of Mr. Killion:

American President Lines is proud to have been a part in organizing and carrying forth this humanitarian project, and to be linked with the many others whose contributions have made its success possible.

National Choir Recognition Day

EXTENSION OF REMARKS
OF
HON. THADDEUS J. DULSKI
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 29, 1961

Mr. DULSKI. Mr. Speaker, I am today introducing a resolution which would designate the first Sunday of October in every year as National Choir Recognition Day.

Singing in the choir always has been in our country a recognized and highly approved form of musical self-expression. Until recent times, it has been almost the only one. Mass instrumental musical culture has begun to approach the ubiquity of choral music only within the past few decades. It is impossible to estimate the number of choirs with which this country is blessed—certainly one would guess that there is at least one in each village large enough to have a church or a synagogue, and the urban centers have hundreds, ranging in size and skill from the most meager to the most awesome. Schools such as the Westminster Choir College in Princeton, N.J., and many others, are completely devoted to the training of choir leaders. There must be tens of thousands of choirs in the United States—perhaps they might be numbered in six figures.

At first in church and synagogue, everybody sang. Except for the chanting of the cantor, music was congregational. Then, as a means of supporting and leading the congregation, instruments were introduced for accompaniment—as the Old Testament tells us—and some of the better singers of those

particularly interested in music began to have extra practice sessions and to sit together in the place of meeting. Thus choirs came into existence and this, in essence, is the early history of the development of choirs in our country.

When the Pilgrim Fathers arrived on our shores in 1620, many of them were skilled in singing music, and when the Puritans landed in Massachusetts Bay some years later, the singing of psalms was one of the ordinances of their faith. Indeed, the first book printed on the soil of what is now the United States was one intended as a singing book—the so-called "Bay Psalm Book"—from the Massachusetts Bay Colony where it was intended to be used—of 1640. Although it contained no musical notation, there were included specific directions to the colonists who used it as to tunes they were to sing to the psalms, tunes which must have been familiar and beloved of the founders.

But as life was hard in the wilderness, there was little time for singing, and the skills of the fathers were lost by the songs. By the end of the 17th century, the ability to read music from the printed page had virtually disappeared, and the remembrance of the old tunes, passed down from generation to generation, had become dim. In fact, congregational singing had become so poor that the clergy, who had to listen to it weekly were impelled to do something about it. By the second decade of the 18th century, a reform based on teaching people to read music so that they could sing together in an orderly fashion was well underway.

The instrument in this reform was the singing school, a social institution which flourished in this country for considerably more than a century. From the singing schools, the first choirs—that is, organized groups of skilled singers sitting in a specified place—developed some decades before the Declaration of Independence. Although there was a certain amount of opposition to the development of choirs on the part of those who felt that the prerogatives of the congregation in praising the name of the Lord in song were being usurped, by the end of the 18th century choir singing was firmly established as a normal American musical pursuit, and choirs and singing schools began to proliferate rapidly.

The choir is and always has been peculiarly the musical home of the amateur, and because American singing schools—one of the earliest manifestations of the democratic philosophy in action on this side of the Atlantic—imparted vocal and choral skills to vast numbers of ordinary citizens, the early American musical tradition is basically a choral tradition. In our country it is a great tradition. Beginning with the establishment at Boston in 1815 of the Handel and Haydn Society, large choral organizations fully equivalent in quality to those developing in Europe began to appear, among them such representative groups as the New York Sacred Music Society, established in 1824; the Apollo Club of Chicago, established in 1872; the Oratorio Society of New York, established in 1873; the Bethlehem Bach Choir, established in 1900. There were countless others.

These groups represented the flower of the art of performance of choral music in America—they could not have been possible had there not been in existence a countless number of humble church choirs scattered throughout the length and breadth of our land. These we take too much for granted—they inculcated in our people a deep love for and understanding of choral music, and they provided the basic knowledge, skill, and enthusiasm without which the performances of the towering masterpieces by the great choral societies would have been impossible.

The choir and its singing members, in education for peace, in energizing for work, in liberating man's spirit from the immediate into the infinite, and in uniting worshipers into a spiritual brotherhood, has an endless mission. Petty triviality has no more place in music sung by the choir than does ostentatious virtuosity. Sincerity and directness are its essentials.

All these benefits and many more have accrued to us through the instrumentality of the choir, an institution with a long and honorable history in this country. Surely it is fitting that we as a Nation formally recognize the progressive role it has played in the development of our musical heritage.

To that end, I urge my colleagues to support this resolution which designates a National Choir Recognition Day and authorizes the President to issue annually a proclamation inviting the people of the United States to observe such day in churches and other suitable places with appropriate ceremonies and activities.

Resolution Concerning Restrictions on Imports

EXTENSION OF REMARKS
OF
HON. JACK WESTLAND
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 29, 1961

Mr. WESTLAND. Mr. Speaker, in a resolution passed by the Bellingham, Wash., Chamber of Commerce, March 13, 1961, this organization opposes legislation which would decrease the amount of duty-free imports which American citizens can bring into the United States from the Dominion of Canada and the Republic of Mexico.

Under leave to extend my remarks in the RECORD, I include this resolution which follows:

Whereas it has come to the attention of the Bellingham Chamber of Commerce that certain restrictions on the value of imports that may be returned to the United States by American tourists have been proposed for congressional action; and

Whereas such restrictions will undoubtedly effect the amount of American moneys flowing to other countries, with a resultant deterioration in the local economies of those countries; and

Whereas such deterioration would have a repercussive effect on the relations between those countries and the United States which would probably take the nature of a reciprocal action; and

Whereas the United States of America, the Dominion of Canada, and the Republic of Mexico now enjoy a tourist relationship tremendous in mutual benefits, which relationship would undoubtedly be strained or destroyed by the passage of such proposed legislation: Then be it hereby

Resolved, That the Chamber of Commerce of Bellingham, Wash., goes on record as opposing such legislation decreasing import of purchases by tourists insofar as the Dominion of Canada and the Republic of Mexico are concerned; and does strongly urge that Canada and Mexico be exempted from any such legislation in the future.

Professional Engineering-Scientific Classification Act

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 29, 1961

Mr. ANFUSO. Mr. Speaker, on March 14, 1961, I introduced a bill, H.R. 5563, to establish a classification and compensation system for professional engineering, physical science, and related positions in the Federal Government. This bill has aroused a good deal of interest among engineers and scientists.

I have had many requests for information about the bill. Consequently, I have prepared a section-by-section analysis which explains the measure. It is as follows:

SECTION-BY-SECTION ANALYSIS OF H.R. 5563

To establish a system for the classification and compensation of professional engineering, physical science, and related positions in the Federal Government, and for other purposes.

It is a generally recognized fact, based on numerous studies and reports prepared under the direction of both the executive and legislative branches of the Government, as well as by nongovernmental organizations concerned with the problem, that the Federal Government has been experiencing considerable difficulty within recent years in attracting and retaining high-quality engineering and scientific personnel in sufficient number for the continued implementation of necessary programs requiring such talent and capabilities. Federal agencies and departments have not only been unable to recruit the number and quality of engineering and physical science graduates due to the generally unfavorable position of the Government with respect to starting salaries, but perhaps more importantly, the increasing rate of attrition due to resignations among higher level engineers and scientists is a matter which has caused considerable concern.

Basically, the Government's problem is twofold: (1) A salary system which, in general, does not compare competitively with current rates for similar personnel in private areas of employment; and (2) the present lack of an effective program which will recognize and encourage the professional status and development of engineers and scientists.

As for the first, this problem area was succinctly pinpointed when the Eisenhower administration arrived late last year at a number of conclusions resulting from the Bureau of Labor Statistics "National Survey of Pro-

fessional, Administrative, Technical, and Clerical Pay: Winter 1959–60." One of these conclusions was that, "Unless future salary action is in the direction indicated by the survey; namely, less emphasis on lower level pay and more competitive salaries at the higher levels—the Federal Government will be forced to rely at best on mediocre management and professional talent, particularly in the scientific and engineering fields."

The second is a more complex problem which involves several aspects and which requires a number of approaches toward a proper solution. One approach which is strongly supported by the engineering and scientific community is to establish a separate classification system for these key personnel. Such a system would serve to acknowledge their professional status and would provide that degree of identification which is necessary for their continued professional growth. Further, it would show that the Federal Government appreciates the unique contributions of these people and by so doing, serve to improve the desirability of Federal employment.

This bill seeks a positive solution to these two problem areas through the establishment of competitive salary rates and by affording engineering and physical science personnel the professional status and recognition that is so imperative in these critical times.

SECTION 1—PURPOSE

This section explains the purpose of the bill which is primarily to improve the Government's competitive position in the recruitment and retention of engineering and scientific personnel through a system which accures adequate salaries and professional prestige.

SECTION 2—PROFESSIONAL ENGINEERING-SCIENTIFIC SCHEDULE; CONVERSION

This section establishes a compensation and classification system for professional engineering, physical science and mathematics positions. The professional engineering-scientific schedule is divided into 10 grades which are designed PES–1 through PES–10. The salary levels assigned to each of the grades are comparable to current rates for similar classes of employees in non-Government employment. The Bureau of Labor Statistics survey, referred to above, served as the basic guide for the salary levels for each grade. There are seven in-grade salary steps in each of the first nine grades generally following the present arrangement under the Classification Act of 1949, as amended. For purposes of uniformity, each step increment amounts to $200. For grades PES–1 through PES–5, there is a $400 increase between the top step of the grade and the minimum rate of the next higher grade. For grades PES–6 through PES–9, there is a $200 increase between the top step of the grade and the minimum rate of the next higher grade.

The professional engineering-scientific schedule does not provide for longevity pay.

Initial conversion from the present general schedule for those positions placed in the new professional engineering-scientific schedule would be as shown in the bill. Engineers, physical scientists and mathematicians currently at the GS–5 grade level, as well as those at the GS–7 level, would be converted to PES–1 on the new schedule. This reflects the professional nature of these positions and would permit individuals in these fields, who are recent college graduates, to be hired at salary rate which is competitive with what they could expect in nongovernmental employment.

During initial conversion, the salary of each employee on the general schedule who is transferred to the new schedule would be adjusted to a comparable rate on the new schedule which does not result in a decrease.

SECTION 3—COVERAGE

This section authorizes and directs the Civil Service Commisison to place in the new schedule all positions in the engineering, physical sciences, and mathematics occupational groups which require professional qualifications. This would include all such positions for which rates of compensation are fixed by the Classification Act of 1949, as well as the so-called Public Law 313 positions.

In order to guide the Commission in making the necessary detreminations, the bill contains definitions of "engineering," "physical sciences," and "mathematics" groups in terms of the type of work performed and the qualifications required.

Provision is made for the Commission to periodically review all positions placed in the professional engineering-scientific schedule and to make any studies which may be necessary to determine whether and to what extent additional positions should be placed in the new schedule. Additionally, the head of each department or agency may recommend to the Commission the addition or removal of positions under his jurisdiction.

SECTION 4—STEP INCREASES

The professional engineering-scientific schedule provides for a uniform within-grade increment of $200. These increments may be earned by employees performing satisfactory service after each 52 weeks of service if in grades PES–1 through 4; after each 78 weeks if in grades PES–5 through 8; and after each 104 weeks if in grade PES–9. The term "satisfactory" as used in this bill has the same meaning as when used in existing efficiency rating systems.

SECTION 5—PROMOTIONS, APPOINTMENTS, TRANSFERS

Unless otherwise authorized by law, new appointees to the professional engineering scientific schedule will, after initial conversion has been completed, start at the minimum rate of the appropriate grade. The Civil Service Commission is authorized to issue appropriate regulations governing the rate of basic compensation for persons transferred to the new schedule from a position to which the bill does not apply, when there is a transfer from one position to another position in the new schedule, when a person is demoted to a lower grade in the schedule, when his type of appointment is changed, when his employment status is changed, or when the position in which he is employed is changed from one grade to another grade in the schedule.

This section further provides that no person can be promoted or transferred to a position in a higher grade in the new schedule unless he has completed at least 12 months in the next lower grade if the position from which promoted or transferred is in grade PES–1 through 3; 18 months if promoted or transferred from grade PES–4 through 6; and 24 months if promoted or transferred from grade PES–7 through 9.

SECTION 6—OVERTIME

Under this section, employees in grades PES–1 through 5 can earn either overtime pay or compensatory time off for authorized work in excess of 40 hours in any administrative workweek. Overtime pay is computed at 1½ times the actual hourly rate for employees whose basic compensation does not exceed the minimum scheduled rate for grade PES–2, and 1½ times the hourly rate of the minimum of PES–2 if the employee's basic compensation exceeds the minimum rate of PES–2. This conforms to current procedures under the Classification Act of 1949, as amended.

However, the bill authorized the head of any department or agency to grant employees in grades PES–1 through 5 compensatory time off in lieu of overtime payment, for an equal amount of time spent in overtime work or holiday work.

Employees in grades PES–6 through 10 will not be entitled to either overtime pay for compensatory time off for any work performed in excess of 40 hours in any administrative workweek. This reflects the philosophy that employees in these grades exercise considerable independent judgment and discretion in performing their duties and that a certain degree of flexibility may be required in the time spent to complete assignments or projects. Such an arrangement is in accord with accepted practices involving engineering and scientific personnel in higher level positions in private areas of employment.

SECTION 7—GENERAL PROVISIONS

This section explains the general coverage of the bill among Federal departments and agencies and lists three specific exemptions.

This section also provides that after 2 years from the effective date of the act, no person may be appointed, promoted or transferred to the new schedule unless he is a holder of a bachelor's degree signifying graduation from an accredited engineering, physical science or mathematics curriculum, or is licensed or certified as an engineer-in-training or professional engineer under the engineering registration law of any State, territory, or the District of Columbia. This will serve to raise the standards for the new schedule and assure continued professional qualifications among individual engineers, physical scientists and mathematicians placed in the professional engineering-scientific schedule.

SECTION 8—APPEALS

This section grants appeal rights to any employee for Civil Service Commission review of any action placing or refusing to place him in the new schedule, or the assignment of his position to a grade or per annum salary rate, in order to determine whether such action has been taken in accordance with the act.

SECTION 9—SAVINGS CLAUSE

This section provides that all statutes, regulations, orders, standards, and procedures applicable generally to Federal employees will apply in like manner to employees placed in the professional engineering-scientific schedule unless they are either expressly, or by necessary implication, made inapplicable to such positions.

SECTION 10—EFFECTIVE DATE

This section provides for an effective date as of the first day of the first month after the month in which the act is approved.

Textiles, Fashions, and Tax Reform

EXTENSION OF REMARKS
OF
HON. JACKSON E. BETTS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 29, 1961

Mr. BETTS. Mr. Speaker, in a recent speech before the American Cotton Manufacturers Association, the distinguished gentleman from Tennessee, [Mr. BAKER], made some timely remarks which are discussed in the following editorial from the Press-Chronicle of Johnson City, Tenn. Mr. Baker's interest in the domestic textile industry goes back many years and represents much study and firsthand experience. For that reason, his views and his proposal for relief to

the industry should be given special consideration.

The editorial also discusses a tax-reduction program cosponsored by Mr. BAKER and the distinguished gentleman from Florida [Mr. HERLONG]. These two highly respected colleagues have identified themselves with a proposal that is not only sound but is meeting increasing popularity.

I suggest the editorial as required reading:

TEXTILES, FASHIONS AND TAX REFORM

Representative HOWARD BAKER, of Tennessee's Second District, offers a sensible suggestion that would help this country's textile industry.

Why, he asks, do we not stop thinking it is fashionable to wear imported clothes? Why do we not encourage the idea that it is smart to wear the made-in-America garment?

We suppose the Congressman is talking primarily to women, although there are some men who also go for the foreign label just because it is foreign.

Mr. BAKER believes there must be some changes in economic trends and governmental policies if the American textile industry is to be healthy.

Addressing a tax symposium of the American Cotton Manufacturers Association in Charlotte, he pointed to figures showing that textile imports had risen to $932 million in 1960 from $368 million in 1947. While this surge has been occurring, he said, the American industry has been "literally on the ropes."

Making it more fashionable to wear domestic clothing is only one step the Congressman has in mind to shore up sagging textile fortunes. He has offered a bill requiring the labeling of all imported textiles with the name of the country in which the goods originated. And, along with Representative A. S. HERLONG of Florida, he is sponsoring a measure for reform of the entire individual Federal tax structure.

The Baker-Herlong tax bill, which has been introduced in previous sessions of Congress and is being offered again now, calls for a 5-year plan for bringing taxes down. Eventually, the top rate would be cut from 91 percent to 47 percent, and the rate of persons in the 20-percent category would be cut to 15 percent.

BAKER and HERLONG tie their plan to an increasing gross national product. One percent gross increase in production brings an estimated $1 billion in additional revenue.

Increased revenue from the gross national product is being absorbed at present in steadily increasing Federal budgets, the Congressmen maintain. Their bill would hold the budget at its current level and reduce income taxes by the amount of the increased revenue.

This measure, or one of similar effect, deserves the earnest consideration of Congress. It would help the textile industry and the industrial climate in general. It would also be a boom to the individual.

A Policy of Truthfulness

EXTENSION OF REMARKS
OF
HON. STEVEN B. DEROUNIAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 29, 1961

Mr. DEROUNIAN. Mr. Speaker, the following editorial, which appeared in the March 28 issue of the Washington Evening Star, points to the possibility of our allies being misled. I hope our policy will be forceful.

LAO OUTLOOK

Thailand is one of the neighboring countries which would be endangered by a Communist takeover, total or partial, in Laos. This is a fact of life which has its bearing on the statement by Thailand's Prime Minister Sarit Thanarat to the SEATO conference.

Recalling that southeast Asia has lost about 200,000 square kilometers of land and some 10 million people to the Communists, the Prime Minister said that further territory, meaning Laos, may be lost or partitioned in the near future. "History," he added, "is going to repeat itself unless we can change its course. Now is the time to test the ability and usefulness of our organization."

If this language means anything, it is a call for forcible opposition to the Commmunist effort in Laos. The real outlook, however, is for a negotiated settlement there, not a settlement imposed by force of arms. In the former case, given the prevailing military situation in the country, there can be no doubt that concessions to the Communists would have to be made, including possibly the partition feared by Mr. Thanarat.

The alternative presumably is war, and while there has been much tough talk on the Western side there is no real evidence that President Kennedy or any other Western leader believes the Lao crisis can be satisfactorily resolved through an appeal to arms. If this is the case, if our hope, not to mention our intention, is to seek a settlement through negotiation with the Russians, then we should guard our tongues. American spokesmen, official or volunteer, should not be saying things calculated to lead such men as Mr. Thanarat to believe that we intend to safeguard the independence and territorial integrity of Laos at all costs. This can only lead, if there is to be a compromise settlement, to disillusionment with the United States and even a sense of betrayal.

The St. Louis Globe-Democrat Comments on Efforts To Discredit the Un-American Activities Committee

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 29, 1961

Mr. CURTIS of Missouri. Mr. Speaker, in the St. Louis Globe-Democrat of March 24, there appeared an editorial which I believe makes a very valid point about the efforts which are now in process to discredit the House Un-American Activities Committee. I am especially distressed to see that groups which have as their express purpose the preservation of civil liberties are making use of the very tactics which are employed by those who would undermine civil liberties. There is a wide range of opportunity for civil libertarians to pursue their very commendable goals without their having to turn to the tactics of deceit.

ACLU'S SMEAR CAMPAIGN

Once more, the American Civil Liberties Union, a misleading label if there ever was one, is waging a smear campaign against the House Committee on Un-American Activities.

This outfit could teach Adolf Hitler tricks in propaganda and molding public opinion.

Its latest assault on the committee takes the form of a petition. It was signed by 250 college professors, and its asks Congress to do away with the committee.

This is apparently an effort to convince the public that the Nation's educators oppose the committee—and that the committee oppresses them.

News stories and headlines refer to the educators' petition. Actually, it was drafted by the ACLU. Its local chapters simply persuaded 250 educators to sign—among them 6 members of the Washington University faculty.

Thus, the petition is really the ACLU masquerading in educators' clothing.

This document accuses the House committee of creating fearfulness within the academic world and, perhaps even more dangerous, public distrust of teachers and the institutions in which they serve.

This is a large order, even for a House committee.

How did the committee perform this Herculean task of destroying the public's confidence in the teaching profession and in its schools? It did it, says the ACLU, by getting two college professors sent up for contempt of Congress when they refused to testify.

"A much larger number" have lost their jobs, it adds, because they were named by the committee or refused to testify before it.

To put the facts more accurately, very few teachers have fallen afoul of the Committee, and only two were sentenced for contempt. This is hardly surprising.

The Committee's objective is not to discredit the teaching profession, nor the schools. On the contrary, it has worked hard and fairly to probe the extent of Communist subversion, propaganda and espionage in this country.

Naturally, few teachers have come up in its net, because very few help the Communist cause knowingly, or through ignorance.

This latest campaign was undertaken, the ACLU admits, because the U.S. Supreme Court has twice recently upheld the right of this Committee to conduct its valuable investigations. It is, of course, a phony campaign. It hasn't a chance in the world of persuading Congress to do away with the Committee.

Congress backed the committee to the hilt only a few days ago, when it voted 412 to 6 to appropriate funds to continue the Committee's work.

This is an ACLU campaign to influence the public, not Congress; to destroy the Committee's good name, not its congressional support. To describe it with the right, ugly word, it's a form of character assassination.

That's the noble goal of a group that parades its "Americanism," and goes about as a self-anointed champion of "civil liberties."

Against All of It

EXTENSION OF REMARKS
OF
HON. FRANCES P. BOLTON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 29, 1961

Mrs. BOLTON. Mr. Speaker, a group of my constituents has asked me to insert the following editorial from the Cleveland Plain Dealer, of March 3, 1961, so that it may be read by many, and also to include a letter from Mrs. Mary Kinnaird and others in the group.

The letter and editorial follow:

MARCH 8, 1961.

Hon. FRANCES P. BOLTON,
In the House of Congress,
Washington, D.C.

DEAR MRS. BOLTON: We the undersigned, are anxious to express our disapproval of the proposed program of the Federal aid to education.

We endorse the article printed in the CONGRESSIONAL RECORD Appendix on March 1, 1961, entitled "Federal Aid to Education," by Hon. WILLIAM B. WIDNALL, of New Jersey, and the enclosed editorial printed in the Cleveland Plain Dealer March 3, 1961, entitled "Against All of It."

Only harm can come from a program where the Government would be in the position to control the curriculum.

Our system of running all branches of our Government has proven to be far superior to all other nations, so much more effective that we have helped many other countries with fabulous sums of moneys. Why then should we change our methods or accept the minority group's plan for Federal aid intervention, when such methods have proven a failure in other countries. At any rate, it would seem that those wishing to change any proven system, would first send an investigating committee to those nations which have such a method or plan to see if it would be more profitable.

We believe it can be said that the majority of the people of this country showed their disapproval of the vast spending programs when they voted against them November 8, 1960, of which the Federal aid to education was a part.

We would like to see our views, including the article, "Against All of It," printed in the CONGRESSIONAL RECORD Appendix.

Sincerely yours,

Mrs. Mary Kinnaird; Dale A. Thomas, Richmond Heights, Ohio; C. E. Cutler, Lakewood, Ohio; R. J. Wilson, South Euclid, Ohio; George C. Muchi, Cleveland, Ohio; Charles E. Hoover, Bay Village, Ohio; Cameron P. Young, Westlake, Ohio; David F. Gottschab, Bratenchl, Ohio; Elmer E. Cameron, Jr., Maple Heights, Ohio; Leonard J. Keller, Independence, Ohio; Leonard Benko, Lakewood, Ohio; Lee Kinnaird, Richmond Heights, Ohio; Ellis M. Haughton, Albert G. Boros, Cleveland, Ohio; Pauline S. King, Richmond Heights, Ohio; Mrs. Blanche Wilkie, Cleveland, Ohio; Mrs. John Fuscoe, Cleveland, Ohio; Mr. John M. Fuscoe, Cleveland, Ohio; Mrs. Hazel Keidd, Cleveland, Ohio; Mr. K. V. Keidel, Cleveland, Ohio.

AGAINST ALL OF IT

A reader sends a copy of an out-of-this-city editorial criticizing Cardinal Spellman's statement that parochial schools should be included if a vast Federal aid for education program is adopted by Congress. The sender wants to know why we don't comment on that situation.

Our position over the years has been consistently this: We oppose widespread Federal aid for parochial schools. We oppose widespread Federal aid for public schools.

In the past we've occasionally warned that passage of multibillion-dollar aid for public schools would work a hardship for Catholics and others supporting their own schools, since more of their Federal taxes would go to pay for the public schools' bills or the interest on the national debt incurred on those bills. They thus would wind up with less cash of their own to make their voluntary contributions to maintain their parochial schools. It's no wonder that some of the church leaders are fearful of a big aid program unless their schools share in it—they are making dollars stretch as far as they can now.

We've been repeating our opposition to Federal aid for public schools each year since the National Education Association and other interests have whipped up enthusiasm for it as a panacea.

We don't believe widespread Federal aid is needed for construction; in those areas which have taxed themselves to the limit and still don't have enough classrooms, State grants should be forthcoming.

We don't believe widespread Federal aid should be used for paying public school teachers—once that would start, why not tap Uncle Sam for paying police, firemen, councilmen, rubbish collectors?

We don't believe widespread Federal aid should go to States insisting on keeping their schools segregated—why federally support a system which the Supreme Court says must be terminated?

We believe the traditional way of supporting and controlling public schools locally and within the State is sound and right. Economically it's sound, too: You have to pay off State and local bond indebtedness within a specified time, whereas Uncle Sam's debt gives promise of going on and up interminably, with higher and higher costs for interest.

Don't forget 11 percent of all the income, excise and corporation taxes you pay and everyone else pays goes just for interest on the Federal debt. It'll be worse if billions more of new types of debt are saddled on the Federal Treasury.

Project "Hope"

EXTENSION OF REMARKS
OF
HON. STEVEN B. DEROUNIAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 29, 1961

Mr. DEROUNIAN. Mr. Speaker, the people-to-people program was initiated at the suggestion of President Eisenhower to promote world peace through increased understanding between the people of the United States and the peoples of other nations.

The value and effectiveness of this program is strengthened by the fact that it is not a Federal Government project but is, instead, supported directly by the American people—individually and in groups.

The Project *Hope* is a part of this people-to-people program and this example of individual American initiative, this activity of free enterprise in the field of medicine and health, has been tremendously effective. I am very proud of the fact that one of my constituents, Miss Lois Virginia Fernbach, of New Hyde Park, is a member of the medical team on this great floating hospital center.

The following is an article that appeared recently in the Long Island Daily Press:

NURSE SETS SAIL—FINDS NEW FRONTIER ON HOSPITAL SHIP

A Long Island nurse has discovered the New Frontier in the steamy islands of Indonesia.

She's Lois Virginia Fernbach of New Hyde Park, 1 of the 60 medical staffers on the floating hospital ship *Hope*, recently given a pat on the back by President Kennedy.

The Chief Executive wrote to the ship's crew: "*Hope* is a project that demonstrates to the people of the world the strong desire of this Nation to share our technological advances in medicine with the rest of the world."

Miss Fernbach, the assistant chief nurse on the *Hope*, is 1 of 28 American girls putting in long hours under difficult conditions on the ship that sails from port to port in Indonesia.

But like the rest of them, the Long Islander isn't complaining about the assignment, according to her father, Jules Fernbach, of 96 Aspen Street.

"The girls work 12 hours a day sometimes, but they love it," he says.

The main purpose of the *Hope* is to train Indonesian personnel in medical science so the girls do double duty as teachers and nurses.

"Lois says there are plenty of nurses in Indonesia, both male and female, but they haven't sufficient training," Mr. Fernbach reports. "But they're anxious to learn. They appreciate anything they're shown. There are 22 nurses from the University of Bandung on the ship now."

The ship's crew often finds that ideas of sanitation in parts of the country are backward by American standards. "They permit people in street clothes to walk through operating rooms and nurseries," he notes.

The good ship *Hope* creates good will for the United States as it goes on its island-hopping journey, advancing medical technology.

"They have had quite a bit of opposition from the Communists," Mr. Fernbach says. "They set up a trade fair to try to distract the people's attention from the ship, but people were more impressed by the *Hope*."

Miss Fernbach, a graduate of Roosevelt Hospital School of Nursing and a former Nassau County Health Department staffer, set her sights on a position on the ship 3 years ago. She read in a national magazine that the People-to-People Health Foundation, a volunteer group, was outlining plans for project *Hope*.

"That's the best public relations we could have in a foreign country," she decided, and sent in her application.

It took 2 years to process it; more than 1,500 girls were screened, tested, and scrutinized by the FBI. Finally, the ship's complement was chosen, and the *Hope* set sail from the west coast in September.

"City Council of Maywood, Los Angeles County, in the Great 23d Congressional District, California, Unanimously Adopts Resolution Supporting House Un-American Activities Committee"

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 15, 1961

Mr. DOYLE. Mr. Speaker, by reason of unanimous consent heretofore granted me so to do, I present to the attention of this great legislative body the text of a resolution adopted by the city council of the city of Maywood, Calif., which is in my great 23d Congressional District, in support of the work of the Un-American Activities Committee of which I am a member. I also call your attention to the letter accompanying same and my reply thereto.

CITY OF MAYWOOD, CALIF.,
March 13, 1961.

Congressman CLYDE DOYLE,
New House Office Building,
Washington, D.C.

DEAR CONGRESSMAN CLYDE DOYLE: At the last regular meeting of the Maywood City Council February 28, 1961, the enclosed resolution was adopted.

The city council instructed that you be mailed a copy which is self explanatory.

Yours very truly,

ISABEL L. DEDMORE,
City Clerk.

RESOLUTION 1784

(A resolution of the City Council of the City of Maywood urging that the House Un-American Activities Committee be preserved by Congress as an effective deterrent against the enemies of internal security and the American way of life as developed under the Constitution of the United States)

Whereas it is fundamental that self preservation is the first law of nature; and

Whereas it is the inherent right of the Government of the United States to preserve itself from destruction by enemies from within as well as from without; and

Whereas it is generally well established that Communist subversives working secretly within the United States have delivered important military and atomic secrets to foreign powers to the detriment of the United States; and

Whereas the Communist conspiracy is, among other things, the overthrowing of the American system of government by force and violence; and

Whereas constant vigilance is required to observe and expose the enemies of the United States; and

Whereas the House Un-American Activities Committee has in the past been most successful in exposing to public light the enemies of the internal security of the United States and this committee should be preserved for the self defense of this Nation so that those persons intent upon destroying the Smith Act, the Internal Security Act and the Communist Control Act can be revealed for what they represent: now, therefore, be it

Resolved, That the House Un-American Activities Committee be preserved by Congress as an effective deterrent against the enemies of internal security and the American way of life as developed under the Constitution of the United States.

Passed, approved and adopted this 28th day of February 1961.

GEORGE G. GLENN,
Mayor.

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D.C., March 27, 1961.

Hon. MAYOR AND CITY COUNCIL,
City Hall, Maywood, Calif.

MY DEAR FRIENDS: I acknowledge receipt of your letter of recent date with your very worthy resolution 1784 enclosed, said resolution being entitled as follows: "A resolution of the city council of the city of Maywood urging that the House Un-American Activities Committee be preserved by Congress as an effective deterrent against the enemies of internal security and the American way of life as developed under the Constitution of the United States."

I thank you for sending me this after having taken the time and trouble to adopt the same by unanimous vote.

Because of the very important city of Maywood which you gentlemen have the privilege of representing by due election of the citizens thereof being in the great 23d Congressional District which I represent in this, my 15th year in the U.S. Congress, and, furthermore, because I have already been a member of the House Un-American Activities Committee for about 14 years and am now a member thereof; and also, Mr. Mayor and councilmen, because this resolution is unusually timely and pertinent in view of the unfounded and unwarranted attacks upon the committee, I—with great appreciation to you—say that I shall promptly ask unanimous consent to insert same, and your letter to me conveying same, into the next issue of the daily CONGRESSIONAL RECORD. I am sure that no Member of the great Congress of the National House of Representatives will make any objection to the inclusion thereof.

If you have not already learned the fact which I now relate, I wish to say that when the effort was made by Congressman ROOSEVELT of California to have the budget of the House Un-American Activities Committee reduced a short time ago on a rollcall vote, the House membership voted for and in support of the committee's budget as asked for by an aye vote of 412 and a nay vote of 6. I, of course, voted "aye." I herewith enclose a copy of my short speech in the House of Representatives on the 1st day of March 1961, in support of the House Un-American Activities Committee and against the Roosevelt resolution.

Our beloved Nation deserves the best of whatever we are.

Cordially, your Congressman,

CLYDE DOYLE.

A Community Studies Red Tactics

EXTENSION OF REMARKS
OF
HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 29, 1961

Mr. PELLY. Mr. Speaker, it is generally accepted that congressional mail is an excellent yardstick of public opinion. On this premise, I am encouraged by my own mail which reflects a revival of interest in our American heritage and a growing awareness of the Communist conspiracy and its despicable tactics.

The American giant is stirring and once aroused will remove the threat to our Republic of the danger of international communism and its godless ideology.

I have long advocated an organized constructive program to teach the meaning and purposes of Marxist communism, believing with George Washington that if the people have the facts they will always do the right thing.

In line with this philosophy, a patriotic and enlightened newspaper in my district, the Bothell Citizen, has published the following editorial which I am proud to include in this RECORD. In line with this editorial I am including also a news item from the same edition of this newspaper, which emphasizes that Bothell citizens have a program to inform themselves as to the nature of the Communist conspiracy and the tactics which it employs in carrying out its announced purpose of worldwide domination.

THE THREAT OF COMMUNISM

Recent weeks have seen considerable controversy over two films dealing with communism and its threat to the United States. The films in question are "Communism on the Map" and "Operation Abolition," scheduled for showing in Bothell this week.

The crux of the controversy centers around whether the films present a true picture of the Communist threat to our country or, as one University of Washington professor maintains, they are simply incorrect in placing the Communists in such a bad light.

The first point which must be stated in unequivocal terms is that communism has never altered its original and most fundamental goal; that is the complete and lasting victory over capitalism. The Communist leopard may change his tactics but never his spots. Our destruction is his ultimate goal, despite all his pious protestations for coexistence and economic competition.

It is therefore somewhat dismaying to hear Americans such as the group of University of Washington professors, label these films as propaganda. Unfortunately, in the last few years there has been entirely too much talk which tells us not to call these ruthless aggressors by their true names. All too often there is an insidious conspiracy among a few of our citizens which tries to prevent the American people from knowing the truth about communism.

The policy of this newspaper is that all Americans should be made to realize the threat to our security as posed by the Communist menace. This menace is in the overt form of Communist aggression and deliberately instigated internal revolutions. It is also present in a more subtle and dangerous form, the constant effort to make Americans believe that their efforts to defend themselves from Communist infiltration are morally wrong. This approach would have us believe that there is nothing dangerous or menacing about Communists.

It is this latter method which attempts to prevent us from showing communism in its true light. It is the method which tells us not to stand up to the Russians, but instead to give in repeatedly until we are a an untenable disadvantage. It is the method which tells us that coexistence is possible while at the same time the Communists are using every means at their disposal to bring us under their control.

There is nothing wrong, morally or otherwise, in defending ourselves against a government who has boasted that they will bury us. People who maintain that communism is not a threat to the United States are either dupes of the Communists or they are fellow travelers.

It is time for all of us to wake up. It is time that all our citizens, be they adults or children, learn of the danger to our very way of life. If these films are a step in that direction, then by all means they should be shown to the largest number of people possible. One thing must be remembered; it is you the Communists have said they are going to conquer, do not make it any easier for them by believing those who say it is not true.

RED TACTICS TO BE AIRED AT MEETING

A daylong seminar, designed to acquaint local residents with Communist activities in the United States and to help them find methods of combating Red influence, will be held Saturday beginning at 9 a.m., in the auditorium annex of Anderson Junior High School. The program is sponsored by the Christian Anti-Communist Crusade and is open to the public.

Director of the seminar is Charles E. Sarvis, Kenmore businessman, who has conducted similar sessions throughout the Northwest since he became interested in the anti-Communist movement 2 years ago. Featured speaker will be Dr. Joost Sluis, California surgeon, director of the northern California chapter of the crusade. Dr. Joost has just

completed a tour of South America. He will speak on four topics during the program, "Marxist Philosophy," "Communism in Latin America," "Communism in Economics," and "You Can Trust the Communists."

Sarvis will discuss "Lenin's Program for World Conquest" and "Communist Fronts and Captive Organizations," and conduct a closing session titled "What Can We Do?", when possible courses of action will be outlined. A question period will follow.

Two widely publicized films, "Operation Abolition" and the film strip, "Communism on the Map" will be shown, as well as two U.S. Army films explaining Communist methods of gaining sympathizers and seizing power.

The seminar will run in three sessions starting at 9 a.m., 2 p.m., and 7:30 p.m.

Petition by Anti-Communist Action Committee of Western New York

EXTENSION OF REMARKS
OF
HON. JOHN R. PILLION
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 29, 1961

Mr. PILLION. Mr. Speaker, it was a distinct honor today to present a petition signed by 10,000 residents of western New York State to Representative FRANCIS E. WALTER, chairman, and Representative GORDON H. SCHERER, of the House Un-American Activities Committee. It is also being presented to the Senate Internal Security Subcommittee.

The petition praises and supports the patriotic efforts of the House and Senate subcommittees. The language of the petition is:

We, the undersigned, recognize the serious nature of the Communist conspiracy, which aims to overthrow our constitutional government and establish Communist dictatorship. We praise the House Committee on Un-American Activities and the Senate Internal Security Subcommittee for their diligent and patriotic efforts to expose, analyze, and publicize the true nature of the Communist conspiracy, and to recommend legislation to protect us against communism. We reaffirm our support of these committees in their valuable and necessary work of exposing Communist treason and subversion, and proposing remedial legislation.

The petition submitted today is being compiled by the United Anti-Communist Action Committee of Western New York. It is only a portion of the number of citizens who are expressing their support of these congressional committees.

The committee's executives are: Francis M. Kindel, chairman; Albert J. Weinert, the committee's speakers' bureau director; Walter V. Chopyk, secretary of the Erie County Planning Board; Almond E. Fisher, contact officer of the Veterans' Administration in Buffalo; Joseph P. McNamara, an attorney, and formerly the Americanism chairman of the Erie County American Legion; and Andrew Diakun, an attorney. This committee and its executives are performing a distinct public service in alerting our citizens to the menace of communism.

The petitions are being compiled in coordination with the showing of the film "Operation Abolition." This film is being presented to audiences consisting of school pupils and citizens in all walks of life.

The American people must be kept realistically aware of the continuing dangers of communism. We must never forget for a moment the evils of the communistic antigod philosophy, it is criminal tactics, it is socialist economy, it is totalitarian government, it is immorality and it is contempt for the individual citizen.

The United Anti-Communist Committee of Western New York and the individual citizens who signed this petition are to be commended for their patriotism and their sincere interest in the welfare and safety of this Nation and the free world.

CAB's Program in Safety

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 16, 1961

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a very interesting article by Joseph O. Fluet, Chief, Operations Division, Bureau of Safety, Civil Aeronautics Board:

CAB'S PROGRAM IN SAFETY
(By Joseph O. Fluet)

The main objective of the Bureau of Safety of the Civil Aeronautics Board is accident prevention. Cause determination also is, of course, a major concern, since it is considered a logical step in the foundation for preventive action.

In this light we have, for instance, recommended the use of a very important tool of investigation, the flight recorder. One type of flight recorder is an instrument which is shock- and fire-proof and which now provides five kinds of operational information for its interpreter. The information is recorded on a metal foil tape by a stylus and gives the aircraft compass heading, the altitude, G-forces on the structure, speed, and time.

I need not point out how important this information would be to a CAB investigator.

For several years the Board recognized its value and encouraged its development for practical use. Today, it is installed in all pure jet air carrier aircraft operating above 25,000 feet and is being installed in other transport aircraft. This device should not only assist in cause-determination efforts but will produce information which should be invaluable in preventing accidents or other costly incidents.

Our concern with prevention parallels the cause-determination efforts, and during the course of factfinding we initiate studies and recommendations which serve prevention. Our group technical system of investigation affords all interested parties the same opportunity in these areas, since our teams, each headed by an expert CAB investigator, are composed of representatives of the operator of the aircraft involved, the Federal Aviation Agency, the manufacturer of the airframe and engines and certain other aircraft products, the Air Line Pilots Association, Flight Engineers International Association, and the Air Line Dispatchers Association. The development of this system, where technicians obtain firsthand information for timely preventive action, has provided much assistance to the Board and enhances our prevention activities.

We attract considerable attention in the cause phase of investigation, but the public and the Congress always pose the most logical question after the cause is cited: "What have you done to prevent the repetition of such accidents?" So now we know the cause, but what real good does it do except remove the mystery of the crash?

The individual who pays the fare is much more interested in the steps taken to prevent him from becoming a statistic, and rightly so. This is accident prevention, an area which you all know is not exclusive to any one agency or person, and all represented here have accomplished a great deal in this direction.

There is an area of concern in our investigations which has often drawn criticism. It is the time consumed from the date of the accident to the issuance of the final public report of the cause by the Board. May we emphasize, without the tinge of excuse, that factfinding is one of the most time-consuming aspects of our job, made even more so now as we probe more deeply into the many complex technical factors surrounding a major aircraft disaster. In this process we cannot afford conjecture or guess, since accuracy of fact and soundness of analysis are prerequisites to establishing cause and making practical recommendations for prevention. If exhaustive investigation is deficient, the end products which are of great concern to the victims, survivors, and the public can be seriously affected.

Another phase of aircraft accident investigation unknown to those outside our agency is the intense study and analytical process which takes place after a public record has been assembled. This, coupled with investigative assignments requiring further research, flight tests, special studies, and laboratory analyses, requires weeks and months of additional work. Each of the bureau's divisions participates in the report preparation. In several major accidents, more than 1 year of concerted effort was required before accurate causes were established. When released, however, they withstood the shock of public exposure, since they were well founded. Generally, those who are prone to criticize this process are not usually placed in the unenviable position of defending the end product should it be challenged, as sometimes happens. We feel certain that the public interest is best served by a sound report of cause, and the time required to achieve such results is of secondary importance.

We are presently planning a new method that we hope will expedite reports without sacrificing quality, by applying the task-force concept to the problem. This, if the workload permits, involves keeping all Board investigators assigned to one investigation until the report is completed.

Let us briefly outline the bureau structure, and its basic functions of accident cause determination and prevention. But, first, let me emphasize that the Civil Aeronautics Board is an independent agency of our Federal Government. It has no connection with any other department or agency. And one of its major functions, bestowed upon it by Congress, is sole responsibility for the investigation and cause determination of U.S. civil aircraft accidents.

Upon being notified of an accident, the field investigator immediately requests all available information to classify the accident or incident. He determines the status of the wreckage and issues strict instructions for its protection against disturbance, looting, and souvenir hunting. This is very

important and cannot be overemphasized, since past history has proven that valuable information necessary for the investigation has been unnecessarily disturbed. This made the investigation much more difficult and our findings less secure. There have been several occasions in major disasters when it was necessary to appeal to the public, through the press, radio, and TV, for the return of missing parts which had been picked up as souvenirs or for other purposes.

There have even been occasions when looting of the dead has occurred; items such as billfolds, rings, and other jewelry were physically removed from the bodies and in some instances buried in the vicinity for later recovery. As shocking as this may sound, it is still a problem to be reckoned with today. Therefore, we seek all possible aid from all news media to impress upon the public the importance of security at the scene of an accident. I have stressed this point to you in order to enlist your aid in coping with this problem.

Last year the bureau formalized its procedures for authorizing and obtaining autopsies of crew members involved in fatal accidents and of other occupants of the aircraft. These procedures are, of course, completely consistent with State and local statutes governing the legal authorization for autopsies. In addition, we have added a new group to CAB investigating teams, known as the "human factors group" headed by a CAB investigator from the Engineering Division. This group is composed of pathologists, physicians, and aeronautical engineers, whose objective is to conduct a complete medical and engineering study of a crash.

Medically, they examine occupants of the wrecked aircraft and assess how the fatal or nonfatal injuries occurred. They perform a similar engineering analysis of damage to seats, structure, emergency equipment and exits, and other items of safety equipment necessary to determine what failures, human or mechanical, may have occurred, and how such failures can be prevented.

In the Analysis Division of the Bureau are contained the world's most complete statistical record of aviation safety. We plan to use this vast record more fully and directly than heretofore. It is our hope to be able to translate these statistics into meaningful studies, bulletins, and posters, which will be made available to the entire aviation community, so that it may profit from the experiences and mistakes of its fellow operators.

Approximately 30 percent of all fatal accidents in small aircraft occur in adverse weather conditions. The Board's meteorological staff has therefore initiated a more intensive investigation of these accidents probing such areas as preflight and inflight operational planning, and the establishment, operation, and maintenance of meteorological facilities and services.

Wasteful and Undesirable

EXTENSION OF REMARKS
OF
HON. RALPH HARVEY
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 29, 1961

Mr. HARVEY of Indiana. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article:

WASTEFUL AND UNDESIRABLE

The depressed areas bill (S. 1) is a wasteful and undesirable means of attempting to relieve economically distressed areas.

Why this is so was pointed out this week by the Council of State Chambers of Commerce in an analysis prepared by Eugene F. Rinta, the council's director of research.

The legislation in question was passed last week by the Senate and is pending in the House.

Rinta outlined the following reasons for opposition to the bill:

(1) The bill does not get at the source of the problem, (2) is discriminatory in several respects, (3) opens doors to political pressures and favoritism, and (4) is costly, though little more than a pilot program.

What it will produce, in Mr. Rinta's opinion, is disillusionment and disappointment for the unemployed in many depressed areas. He said:

"It will lead them to believe that the Federal Government is about to help create jobs for them, although, at best, it can help only a few."

He cited surveys to show that the financial resources that the bill would make available are not the major factor in attracting an industry to an area. The more important factors are proximity to markets, availability of raw materials, good transportation, low fuel and power costs, favorable business climate, fair tax structure, etc.

As to its discriminatory features, Mr. Rinta pointed out that it would make funds from general tax revenues available for the sole benefit of certain favored areas which would be made eligible on the basis of arbitrary criteria. And the fate of individuals under the bill would be decided on the accident of residence.

Because the bill can meet more than a fraction of the needs of eligible areas, he declared it opens the possibilities of political influence and favoritism in connection with public facility loans and grants as well as with loans for industrial facilities.

According to latest data, total unemployment in these eligible areas was 648,400 a few months ago, although it is probably higher now. Of the 648,400 total, the aggregate number of unemployed which exceeded 6 percent unemployment in each area was 257,900.

"Now let's see," says the researcher, "what the $100 million loan fund might do toward eliminating this 257,900 unemployment total and bringing unemployment in the eligible areas down to 6 percent. If the Federal loans were used for the full 65 percent of all new industrial plants, the $100 million loan fund would make possible a total investment of $154 million. If the average Federal share is only 50 percent, the total investment would be $200 million; and even if the Federal share average only 25 percent, there would only be $400 million available for creating new jobs.

"There has been considerable testimony in the hearings on depressed areas legislation over the past few years that the average investment needed to create 1 industrial job is about $15,000. If Federal loans were to cover the full 65 pecent of project costs, the $154 million investment would create only 10,266 jobs. A 50-percent average Federal financial would create 13,333 jobs. Even if the Federal share were only 25 percent, which is hardly likely, the total $400 million investment would only provide 26,666 jobs.

"Thus, on this most favorable basis, the $100 million urban loan program would cover only one-tenth of the need merely to reduce unemployment in eligible areas to 6 percent of the labor force in these areas. On the more probable basis of 50 percent Federal financing, the program would do only 5 percent of the job—assuming, of course, that the program were successful. Accomplishment of the bill's objective for urban areas alone would require at least $2 billion of Federal funds."

Michael J. Wargovich

EXTENSION OF REMARKS
OF
HON. WILLIAM W. SCRANTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 29, 1961

Mr. SCRANTON. Mr. Speaker, I join all the American Slovaks in their grief over the loss of one who devoted his entire life to the cause of the American Slovaks here in America. I speak of Michael J. Wargovich, who died in McKeesport, Pa., on January 17, 1961. My heartfelt sympathy goes to Mrs. Wargovich and the family in their great personal loss.

Under leave to extend my remarks in the RECORD, I include the following article on the life of Michael J. Wargovich, written by John C. Scéranka and appearing in the Good Shepherd, the official publication of the Slovak Catholic Federation of America:

MICHAEL J. WARGOVICH: NOTED AMERICAN SLOVAK FRATERNALIST

(By John C. Sciranka)

On Tuesday, January 17, 1961, the American Slovaks lost a noted fraternalist and a leader—Michael J. Wargovich, who died in McKeesport, Pa., after a brief illness at the age of 65.

The name Wargovich is known throughout the world, where the Slovak people live. He was born in Slovakia and brought to this country as a mere child. His parents after a brief stay in Brooklyn, N.Y., settled in Pennsylvania. McKeesport was the city where the late fraternalist learned his ABC in fraternalism. And since McKeesport has the distinction of being also the domicile of the first American Slovak newspapermen and organizers of a fraternal society—Ján Slovenský and Julius Wolf, who settled there in 1879, Big Mike, as he was widely known, followed in their footsteps. But his inspiration came from the late pastor of the Holy Trinity Slovak Catholic Church, Father Panuska. Here Mike served as an altar boy 55 years ago to a noted priest during the national convention of the First Catholic Slovak Union of United States and Canada, which is the largest Slovak organization in the world and which the late Michael J. Wargovich headed as supreme president for 20 years. Praiseworthy is the fact the Junior Order of the Union was established then. The priest, to whom Mike served was the Reverend Stephen Furdek, known as Father of American Slovaks. This meeting with the famous priest inspired the late Michael J. Wargovich to the dedication of his life to the American Slovak fraternalism.

The writer had the pleasure to attend the first national convention of this the largest Slovak fraternal organization in the summer of 1922 in Bethlehem, Pa., with late Wargovich. It was the first national convention for both of us. Shortly after this convention, the writer became assistant editor of "Jednota" (Union), published in Middletown, Pa. Michael waited for his chance until 1926, when he was elected supreme auditor at the national convention in Scranton, Pa. This was followed by chairmanship of the board of auditors. Then in 1940 during the Pittsburgh national convention he was elected supreme president and reelected at every national convention, which grew steadily under his leadership. The organization's headquarters are in Cleveland, Ohio, where it was founded in 1890 but it maintains a printery, orphanage and an old folks home at Middletown, Pa., on a

large farm near Harrisburg. Pennsylvania has over 60 percent of the organization's membership.

OFFICER OF NATIONAL FRATERNAL CONGRESS

During the past 20 years, Mr. Wargovich attended all the conventions of the National Fraternal Congress of America in which he served on various important committes and also as member of its executive committee. He was also president of the Pennsylvania Fraternal Congress and treasurer of the Slovak Catholic Religious Association, which raised a quarter million dollars under the auspices of the Slovak Catholic Federation of America and the National Catholic Welfare Conference during World War II for the war-torn Slovakia.

He attended and served on the important committees of the Slovak League of America and the Slovak Catholic Federation of America. During that period he visited every State in the Union and all the principal cities of the United States and Canada at various celebrations and functions of his organization.

SERVED UNDER FIVE GOVERNORS

Mr. Wargovich was a stanch Republican and took active part in all Republican activities from the time he started to vote. He served on local and county, as well as State committees. The Republican National Committee recognized his services and he served on its advisory board. He was also national chairman of the Slovak division of the Republican Party for several years and took part in various campaigns, visiting many States as a speaker. His voice was heard over the air during the last presidential campaign in English and Slovak languages. During the 1960 Republican National Convention in Chicago, Ill., he had the honor to serve as one of the assistant secretaries of this historical conclave, which he considered one of the highest honors. Mr. Wargovich served as district representative of the Pennsylvania State Workmen's Insurance Fund under five Governors. He also served as the treasurer of the Pittsburgh Fraternal Societies.

He was active in civic affairs and served as officer of the local branch 60, of the First Catholic Slovak Union, also was member of the National Slovak Society Assembly 31, which is one of the oldest Slovak societies in America. Also the Knights of Columbus, Council 955, the Slovak Gymnastic Union Sokol, Assembly 46 and the Serra Club.

Under his leadership the organization had youth conferences in the principal cities of the United States and Canada and the last such conference was in August 1960 in Washington, D.C., with a solemn mass at the National Shrine of the Immaculate Conception. He arranged the programs for these conferences and the national conventions of the organization which he headed. The writer had the privilege to be temporary chairman of two such national conventions in New York City, the first one in 1928, when the late Patrick Cardinal Hayes greeted the convention and second in 1952, when Francis J. Cardinal Spellman presided at the pontifical mass in St. Patrick's Cathedral. Similar conventions with solemn pontifical masses were held during his tenure of office in Chicago, Ill. Youngstown, Ohio, Milwaukee, Wis., New York City, Reading, Pa., and Detroit, Mich., with Cardinals Stritch, Mooney and McQuigan pontificating and preaching.

The most impressive celebration under Wargovich's presidency was held on Labor Day 1955 in Cleveland Public Auditorium in honor of the centennial birthday of Father Furdek, founder of the union. The late Cardinal Stritch preached the sermon and some 30 American archbishops and bishops took part in the picturesque celebration with many monsignori, priests and all American Slovak fraternal leaders present.

He was in midst of gigantic preparations for the national convention to be held in August 1961 in Pittsburgh, Pa., when death put an end to his prolific fraternal career. He is survived by his widow, Mrs. Mary Lucanish Wargovich; two sons: Dr. Raymond Wargovich of McKeesport, Pa., active fraternalist and Matthew Wargovich of Bel Air, Md., also two daughters, Miss Dolores Wargovich at home and Mrs. Mildred Coffman of Akron, Ohio; two brothers, Joseph and Andrew of McKeesport and a sister, Mrs. Anna Evans of Munhall and seven grandchildren.

In spite of inclement weather, all American Slovak fraternal organizations were represented at his funeral on Saturday, January 21. Rt. Rev. Msgr. Clement J. Hrtanek preached the eulogy and represented Most Reverand John J. Wright, bishop of Pittsburgh diocese and Rt. Rev. Abbot Theodore G. Kojis, O.S.B., celebrated pontifical mass of requiem, assisted by local pastor, Father Edward J. Duwell, who officiated at the Calvary Cemetery, Port Vue, Pa.

Msgr. Andrew Biros, supreme chaplain; Msgr. Michael Shuba, organization's supreme chaplain for Canada; Very Rev. Canon Joseph S. Atlany, L.L.D., editor of Slovak Catholic Federation; Rev. Martin B. Rubicky, former supreme president of the Slovak Catholic Federation; Rev. Louis P. Hohos, supreme chaplain of the Slovak Catholic Sokol and many priests attended funeral. The fraternal leaders were led by John A. Sabol, supreme executive vice president of the organization and the successor of late Michael J. Wargovich from Phoenixville, Pa.

Mr. Wargovich was a lifelong resident of Allegheny County and a great citizen of Pennsylvania, who preached and lived as a true American Slovak fraternalist, aiding his fellow men for a better tomorrow.

He will always be remembered by his countrymen as a typical American Slovak fraternalist.

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U.S. Code, title 44, sec. 150, p. 1939).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U.S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U.S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D.C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U.S. Code, title 44, sec. 72a, Supp. 2).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD, with Mr. Raymond F. Noyes in charge, is located in Statuary Hall, House wing, where orders will be received for subscriptions to the RECORD at $1.50 per month or for single copies at 1 cent for eight pages (minimum charge of 3 cents). Also, orders from Members of Congress to purchase reprints from the RECORD should be processed through this office.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U.S. Code, title 44, sec. 185, p. 1942).

Appendix

Secretary of the Interior Stewart Udall Announces Administration Support for Legislation Proposing National Fuels Study During Significant Address

EXTENSION OF REMARKS
OF

HON. JENNINGS RANDOLPH

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Thursday, March 30, 1961

Mr. RANDOLPH. Mr. President, it was my privilege, along with a substantial number of colleagues in the Congress and other citizens who attended the annual dinner meeting of the National Coal Policy Conference at the Statler-Hilton Hotel in Washington last night, to have heard the distinguished Secretary of the Interior, the Honorable Stewart Udall, deliver a significant address.

Secretary Udall spoke of reasons why the new administration and the producers of fuels can no longer allow our energy production "to grow like Topsy," pointing out that "the primary concern of the Department of the Interior—under explicit instructions from the President—is with the conservation and development of our natural resources."

The Secretary further stated that "under the Kennedy administration, the Interior Department will always favor long-range resource planning—and the wisest possible use of the God-given bounties of nature," following which he declared support, in the following words, for pending legislation which would set up a study in the Congress of the Nation's fuels and energy resources:

"I can state to you this evening the position of the President of this administration with regard to a national fuels study. The administration wants what is good for the Nation. The administration wants a type of long-range study, a balanced study, that will look into this subject very thoroughly and will use the yardstick and the only test that I think your industry wants, and that is what is good in the long run for the country. This is what the President wants. This is what the Department of the Interior wants. We cannot, in something as important as fuels and energy, let policy be set by drift or by default, because we need a policy which will take into account considerations—paramount considerations—of national security and of the health of our economy. And, therefore, we shall support before the Congress the legislation which is pending for a national fuels study because this is in the interest of all of us, in the interest of the national defense, in the interest of our national security, and in the interest of the growth of our economy."

Mr. President, there is pending in the Senate Committee on Interior and Insular Affairs a resolution (S. Res. 105) which I introduced for myself and 62 colleagues, "to create a Senate Special Committee on a National Fuels Study." A modified version of this resolution is pending in the House of Representatives.

It is most gratifying to have the forthright assurance of the esteemed Secretary of the Interior that the administration, appropriately responsive to the prior position statements by President Kennedy, supports this legislation for a national fuels study. I know I bespeak the sentiment of the 62 Senators cosponsoring the resolution which I introduced when I express the hope that this measure will have expeditious attention by appropriate committees, and that it will be adopted by the Senate at an early date in order that the important and necessary study of the Nation's fuels and energy resources may be undertaken soon and completed during the life of this Congress.

I ask unanimous consent, Mr. President, that the following excerpts from the text of Secretary Udall's forthright speech be printed in the Appendix of the RECORD.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

EXCERPTS FROM ADDRESS BY SECRETARY OF THE INTERIOR STEWART L. UDALL AT NATIONAL COAL POLICY CONFERENCE DINNER MEETING, WASHINGTON, D.C., MARCH 29, 1961.

Thank you very much, George Love, John L. Lewis, my former colleagues in the Congress, and friends. Let me say that my training in Washington is on the 5-minute speech and not the Senate variety, so I won't detain you too long.

It is a real honor for me to represent President John F. Kennedy here this evening. As you know, about a year ago, this time, the President got out in the coal country, got some of the coal dust in his system, and his interest in the problems of the coal industry and the people affected by the coal industry has been very deeply and sincerely felt since that time. I am going myself next week to the coalfields of West Virigina. The two Senators from West Virginia have invited me to go and to get out and get my shoes and hands a bit dirty and find out some of the things I don't know about the coal industry.

I believe all Americans admire the underdog. They admire a fighter, and I know more about this from what I have seen in the past 2 months. I have come to admire those of you who formed this conference and other of your spokesmen because there are fighters among them. Not so long ago everyone was ready to count coal out, but as Mark Twain put it, your death, or the reports of your death would seem this evening, George and John, to be grossly exaggerated; the corpse has a lot of kick, as they say. But, of course, there has always been a lot of fight in the coal industry. It has always been a turbulent industry.

But we admire, all of us, the statemanship that has brought you all together. The fact is refreshing that you who were formerly antagonists sit here this evening as partners and allies in an attempt to revive and keep going and strengthen one of the great industries of this country. I have learned much in the last 60 days about a lot of things, about coal and about oil, and I know you gentlemen in these industries are stern teachers. I have taken my lumps but, of course, I take this physical fitness business seriously. I move in fast company and when I haven't been wrestling with oil or coal, I go out and take on professional football players, so you see I'm really staying in good shape.

One fact already has made a deep impression on me as far as your industry is concerned. I do not think you have done a complete job of selling the public on it, namely, that coal is a modern industry. Mr. Lewis mentioned it, Mr. Love mentioned it, and that is that coal is not an outmoded, dirty industry but today one of the most modern industries. In fact, you should take a leaf from one of the statements, again I am sorry, Mr. Lewis, but you seem to be adding spice to my speech, another of the famous statements of John L. Lewis in the 30's at the time when he was speaking up loudly and, some say, vociferously for the men he represented. At one time he was upbraided by someone for speaking too long and too loudly in behalf of his people, but, indulging in a Biblical paraphrase, said that "he who tooted not his own horn, the same shall not be tooted for him." And so toot your horn a little louder. I think you have a story to tell.

I was surprised after assuming my office when I learned of the coal industry's remarkable achievement in production effort. The increase in productivity is in itself a fine tribute to your industry. Today a coal miner produces 13 tons of coal each working day—more than double the individual production of 1947 and about 10 times the output per worker in Western Europe and Great Britain.

I am even more impressed by the fact that, in these years of inflation, the mine price of commercial coal has been reduced 15 percent in the past 12 years.

In fact, you people, in terms of stability and resisting the inroads of inflation, probably deserve one of the biggest medals which could be rewarded.

This remarkable achievement is a tribute to all segments of your industry—to Mr. John L. Lewis and the United Mine Workers, who were clearheaded enough to see that the efficiencies of automation were absolutely essential if coal was to survive; it is a tribute also to the mine operators, to the railroads, and to the utility people who invested millions in plant improvements in a time of adversity; and to the manufacturers of mining equipment, whose fantastic automatic machines have wrought a revolution in mining technology.

Your aggressive determination to expand existing markets and create new ones deserves our commendation. It is no happenstance that the use of coal by electric utilities has increased in almost direct proportion to the reduction in the amount of coal required to produce one kilowatt hour of electricity.

Your efforts to regain a part of the home heating market through electric home heating; through the transmission of high voltage over long-distance lines; the use of pipelines for moving coal—all of these strike me as signs of an alert and vigorous industry.

My remarks would be wide of the mark this evening if I did not discuss with you the vital subject of America's future energy potential—the question of a sound fuels policy for our country.

When we speak of natural fuels it is the end product, the energy, in which we ultimately are interested. It is this energy, be it heat or light, which is of ultimate significance to an expanding society in a turbulent world.

I know President Kennedy shares with me the conviction that our energy capacity is the index of our national strength and growth potential. It tells far more than carloadings, housing starts, or bank deposits. It is the one authentic utterance of how big a punch we pack, of our vitality, our maneuverability, of our ability to sustain a rate of growth that will vouchsafe our national strength in the years ahead.

During this decade of the sixties we must consciously plan our energy production and use requirements so that we will have a stable and sensible fuels picture in the troubled decades ahead.

There are three obvious reasons why the new administration—and the producers of fuels—can no longer allow our energy production to grow like Topsy:

First, and obviously, there is the exploding population. By 1967, it is estimated that the population of the United States will be 235 million. And these Americans will be using more energy in daily living, doing more traveling, consuming more than we do today.

In the second place, the gross national product will increase to $1 trillion—doubling the figure for 1960. This means at least twice as much energy will be consumed industrially.

And, thirdly, we are in an across-the-board competition with the Communist world. We must be in a position to meet our energy needs at all times.

Our energy supply is like a bank balance. Every check drawn against that balance is good, except the last one which overdraws the account. We will undoubtedly have to cash some big checks against our energy balance in the years ahead—and we cannot afford to have any of them bounce.

This is probably as good a point as any for me to refresh your memories with the fact that I am not, as Secretary of the Interior, a czar of prices, or franchises, or economic intricacies. The primary concern of the Department of the Interior—under explicit instructions from the President—is with the conservation and development of our natural resources. We are concerned with their intelligent use today, and their exploration and development for tomorrow.

Under the Kennedy administration this Department will always favor long-range resource planning—and the wisest possible use of the God-given bounties of nature.

And I can state to you this evening the position of the President, of this administration, with regard to a national fuels study. The administration wants what is good for the Nation. The administration wants a type of long-range study, a balanced study, that will look into this subject very thoroughly and will use the only yardstick and the only test that I think your industry wants, and that is what is good in the long run for the country. This is what the President wants. This is what the Department of the Interior wants. We cannot, in something as important as fuels and energy, let policy be set by drift, or by default, because we need a policy which will take into account considerations, paramount considerations, of national security and of the health of our economy. And, therefore, we shall support before the Congress the legislation which is pending for a national fuels study because this is in the national interests (applause); it is in the interests of all of us, in the interest of our national defense, in the interest of our national security, and in the interest of the growth of our economy.

I assure you that we in the administration will go just as far as we can in helping the coal industry to achieve its proper goals. Over the past 2 months I have been tremendously pleased at the cooperation and advice I have received from the leaders of the coal industry.

Of course, we've looked each other in the eye a time or two and disagreed, but that is part of the game, too. And in the process we've learned understanding as well.

I sat within the past month with many of you in the room. You were spokesmen for all segments of the coal industry, and I threw a challenge at you. I said I wanted for the Office of Coal Research a Director who would be one of the top men in the country in this field, and I am happy to say, although I am not quite in a position yet to announce his name, that he is an outstanding figure and one who will serve in this Office not simply to direct the research program but as one of my advisers on fuels policy, on natural resources, and as my special adviser on all coal matters. So we look forward to his services with us, and we know he is going to strengthen our Department and the administration in this important field.

We are also fortunate in the outstanding members of the Resources Advisory Council we have whose advice and guidance we seek on broad policy matters on coal and fuels.

And now a final word about how the Kennedy administration hopes the Office of Coal Research will function: The industry itself—you who hear my voice here—will bear a heavy responsibility for the success or failure of your Government's attempt to help the industry help itself. You know where work needs to be done to strengthen coal in the marketplace. You know better than anyone else where extra effort will produce results.

In our research work we want to explore new ideas. We want to broaden the scale of the research now underway and we want research that will encompass the entire industry—utilization, transportation and the technology of mining itself. The Laboratory will be industry itself. We are not talking about abstract research in laboratories. We are talking, in the main, about research that will be conducted in the industry itself. For our part I can promise you we will move energetically to implement the projects approved.

I am already on notice from the President himself that he is deeply interested in this program, and I know he will give it the support and muscle we need to do a strong job in this field.

We must boldly face the tremendous demands that our Nation will make on the suppliers of basic fuels in the years immediately ahead. You must bear a heavy part of the load in this task. There is work for all of us to do, in the words of President Kennedy, "Let us begin."

Underwood Sardine Fleet Uses Radar, Sonar Devices

EXTENSION OF REMARKS
OF
HON. CLIFFORD G. McINTIRE
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 30, 1961

Mr. McINTIRE. Mr. Speaker, Maine is a State of many distinctions, one of these being that it has within its borders our Nation's oldest canning operation. This operation is associated with the William Underwood Co., a Massachusetts firm that produces a wide variety of canned delicacies and functions to harvest and pack sardines at various locations in Maine.

In this respect I submit to the RECORD an article from the February 28 issue of the Kennebeck Journal that highlights some of the interesting aspects associated with this company's operations in Maine.

UNDERWOOD SARDINE FLEET USES RADAR, SONAR DEVICES

YARMOUTH.—Boats of the "Underwood Fleet" use such jet-age trappings as radio telephones, radar and sonar devices to corral mouth-watering sardines.

At prearranged rendezvous, the boats of the William Underwood Co., packers of sardines at McKinley, Jonesport, and Yarmouth, meet fishermen offshore, transfer the fish into their holds where they are salted down and returned to respective plants.

At Yarmouth this task is performed by the *Royal*; at McKinley, the Underwood boat is the *Roamer*; and at West Jonesport, the *William Underwood* and *Henry Underwood*. The two latter boats are the newest and largest in the fleet.

Contributing in significant measure to the industrial progress of Maine is the company's America's oldest canner. Today one of the leading producers of sardines in the United States, the Red Devil firm can lay claim to being one of Maine's oldest industrial residents, having originally had an Eastport cannery pack lobsters in 1846, replaced a short time later by another at South Harpswell. There, the records show that the original William Underwood came up from Boston about 1848 with his son, William James, and joined others in boiling out the first lobsters in a large iron pot set up on a tripod on the beach. In 1853 Underwood pulled up stakes at South Harpswell, but opened two other locations—one on Mount Desert Island (Southwest Harbor) on the coast and the other a salmon canning plant at Bathurst in New Brunswick.

The Underwood plants today are implementing the most modern techniques in the purchase and packing of sardines. Much of the sardine catch today is obtained from seiners, although fish weirs are also still used.

During the packing season Underwood's three Maine plants employ an average of 350 persons, two-thirds of whom are women.

When a boat is on the way in to discharge its fish, the news is messaged ahead and crews start assembling to begin the necessary cutting and packing operation when the fish arrive.

The Yarmouth plant (formerly the Royal River Packing Co.) is managed by Ralph Stevens and packs sardines by the convention "steam pack" system. At McKinley, Underwood packs the "Mooseabec" sardine using the French deep fat frying process brought there half a century ago.

"We're the only plant on the coast of Maine to fry," says manager Rodney Latty. Clams were also packed at McKinley for many years. Latty's father, the late Vernon Latty, was also plant manager, having worked there for 35 years before his son took over the reins.

Jonesport, Underwood's oldest plant, still relies on fish weirs for about half its supply for sardines. V. P. McFadden, manager, reports the only real trouble any sardine packer has is fish. "When we're getting enough fish, I have no problems," he smiles.

Maintaining a program of rigid quality control, Underwood has also instituted

many research projects to improve the final canned product.

Underwood sardines from Maine, bearing the famous "Red Devil" label, are packed in oils, mustard, and tomato sauce, and are distributed nationally. Mooseabecs, considered by some to be of gourmet quality, are limited in quantity and practically the entire production is restricted to the New York, Miami and Philadelphia areas.

Today the company is a farflung operation, producing Underwood deviled ham, liver pate, and other items at its headquarters plant in Watertown, Mass. In addition the company operates as wholly owned subsidiaries, the Sell's Specialties Co., in New York and the Richardson and Robbins Co., packers of boned chicken, plum puddings, and other products, at Dover, Del. In January, 1961 the company opened its new Cagua, Venezuela plant to pack Underwood deviled ham for the Latin American market.

Address by Mayor Olgiati of Chattanooga Before Tennessee Valley Public Power Association

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Thursday, March 30, 1961

Mr. KEFAUVER. Mr. President, it has been more than 25 years since this Government embarked on the boldest resource development program ever undertaken by creating the Tennessee Valley Authority.

The success of this great project is written across the face of the valley and is apparent far beyond its boundaries. Yet there are many far-sighted leaders in the valley who are unwilling to say, "This is it—this is Utopia."

One such leader is the Honorable P. R. Olgiati, the Mayor of Chattanooga and president of the Tennessee River and Tributaries Association. In the latter role, Mayor Olgiati addressed the Tennessee Valley Public Power Association at Chattanooga on March 21.

His was more than a speech; it was a firm declaration that much remains to be done in the valley and that the successes of the past must not blind us to the challenges of the future.

I ask unanimous consent that Mayor Olgiati's address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY P. R. OLGIATI, MAYOR, CITY OF CHATTANOOGA, PRESIDENT, TENNESSEE RIVER AND TRIBUTARIES ASSOCIATION

For the past 13 months I have been taking the story and meaning of three words to the people of the Tennessee Valley. "Coordinated, Comprehensive development" has been the gospel I've carried. Those three words tell a story which is little understood by people here and elsewhere in this great country. The rest of the world seemingly understands and appreciates the changes that have been wrought in the valley of the Tennessee River better than do we who live here. This is unfortunate but not completely incomprehensible. Often those who are caught in the middle of a great event have the poorest perspective of the total happening. So it is with us, or at least too many of us.

It is rather ironic that the mayor of Chattanooga should head an organization devoted to promoting the concept and application of coordinated comprehensive development. A little over 3 decades ago another mayor of Chattanooga led a delegation of valley manufacturers, businessmen and utility executives to the U.S. Congress to protest some of the actions of the pioneering Senator, George Norris, actions which ultimately proved a significant contribution to the establishment of the Tennessee Valley authority.

The degree of economic and social change in the Tennessee Valley between that day and this is comparable to the vast change in attitudes between that mayor and this one. And this is not to say that my predecessor did not have every good intention. He wanted to get more industry to provide jobs for the people of his city and he figured private development of the river was the best way to accomplish this. How times have changed.

It was not many years ago that life in this valley was serene and peaceful. It was also very often short; many suffered from the aches and pains of malaria and illnesses brought on by poor diet. Nor was life in this area very rewarding either. The income was well below half of the national average; the farms men worked were washed away by flood in the winter and dried out by the hot sun in the summer; ugly erosion gashed the land; the great timberlands had been cut and left to the whims of a nature which shows little appreciation for man's neglect. There was no sizeable industrialization, and, consequently, too few jobs outside the farm. Except for a privileged few, life generally lacked the amenities which make it liveable.

All that is changed today. It is changed because a few far-sighted men saw the magnificent opportunities available in harnessing a mighty river and making it work for, rather than against, the people of this region and this Nation.

No longer is there a regionwide health problem stemming from malaria and poor diet. The land is firm and green and abundant. The forests boast strong new pines, black walnuts, black locust and other varieties; a valuable timber crop every year is now a reality. Industries line the river from Knoxville, to Paducah, Ky. I knew this valley when it was barren. I toured it again last spring and saw for myself the mighty industrial complex which has come into being since TVA. In dollars and cents this new industry represents nearly a billion dollars of investment. All of these things, of course, work to the economic benefit of the people here: The income that was less than half the national average has dramatically risen to more than two-thirds of that average.

It is hard for us to realize the enormity of the changes that have taken place in the Tennessee Valley in the last 25 years. To the motorist driving across our Market Street Bridge, the water of the Tennessee looks no different today than it did 25 years ago; but there is a great difference. This is working water today. From the time it falls as raindrops in this valley to the time it empties into the Ohio River, the water of the Tennessee works for man. It produces energy, provides irrigation, furnishes recreation, makes possible commercial navigation, nourishes giant industries, cities and people.

Think about it. The Tennessee is no spring branch. It is the fifth largest river on the North American Continent, one of the great streams of the world. Yet, in our lifetime, this mighty river has been tamed and harnessed. It used to be a wild river. But no more. Now, it reacts to the directions of men like a finely trained seal. From one room right here in Chattanooga it can be made to stop or move at Knoxville, or at Guntersville in Alabama, or at Iuka in Mississippi, or Paducah in Kentucky.

We are uncommonly lucky people to have had the Tennessee River to begin with. A river can't be built or acquired. Regions that have none to start with have none forever. Lucky for us, the Tennessee was here, and even when it was wild, it was always our greatest natural resource just waiting to be put to use.

At last we have begun to make real use of our river, to cash in on its manifold potentialities for navigation, electricity, recreation and all the agricultural, industrial and municipal possibilities it offers. But we have just begun; the best is yet to come if we apply our minds and energies to the task at hand. The situation is prepared, the basic facilities are at hand. This is where we stand. Much has been done; but there is still much more to do. We have reached a point of departure from which new works, which can accrue to the lasting benefit of the Nation and capture the imagination of the world, can and should be undertaken.

The act which created the TVA charges that agency with development of the "Tennessee River system." That word "system" is the key word now, and a very important reason for the formation of the Tennessee River and Tributaries Association.

TVA has virtually completed its development work on the main stem of the river, except to enlarge several locks to facilitate navigation. And that work is underway now. Wilson Dam lock has been enlarged to 110 by 600 feet. Joe Wheeler lock is being enlarged to that size now. From Joe Wheeler, TVA plans to move upstream to enlarge the locks at Guntersville and Hales Bar Dams. Tennessee River and Tributaries Association, I might say, has been active in pressing for this work.

Although development of the main stream has been virtually completed, little has been done on the tributaries. And the tributaries are a very important part of the Tennessee River system. This is no time for TVA to rest on its laurels. There is still much unfinished business at hand.

This association will work to the end that the Tennessee waterway be extended as rapidly as is feasible and possible by the control of all the tributaries of the Tennessee that have potentialities for multipurpose development. This is the next logical step. It offers the opportunity to become the "second great phase" of the Tennessee Valley development. People all across this valley sense this need and this unique chance. Already, development associations are organized on the Elk, the Duck and the Clinch-Powell rivers; and each is affiliated with the Tennessee River and Tributaries Association. There is also a wide community of interest along the Holston and French Broad Rivers and the organization of similar associations along these two rivers is probably not far off.

The President has charged TVA to continue and expand its work and be an example to this Nation and other nations in water resource development. When the President of the United States charges me to a job, as he did recently in connection with our urban renewal and housing programs, lights burn late at city hall. The starter's gun has sounded and already the baton has been passed to TVA. To my mind, there could be no better direction in which to run than up the tributaries. The Nation and the valley are watching and keeping time with great interest.

The enlargement of navigation locks on the main stem and the multipurpose development of streams tributary to the Tennessee, where feasible, are principal interests of

the Tennessee River and Tributaries Association, but they are not the only interests.

We feel one of the greatest economic uplifts this area could have would be the development of a direct link from the Tennessee River to the Gulf of Mexico. The Tennessee-Tombigbee seemed to our membership the most feasible way to accomplish such a link, and we went on record in support of it at our organizational meeting last June in Shelbyville. Since that time we have continued to work toward the end of making this onetime dream a reality.

We have and will continue to work closely with groups and individuals seeking more industry and jobs for our area. Our plans call for a concentrated drive to encourage municipalities and counties along the river to zone or otherwise set aside appropriate and adequate waterfront sites for industrial uses.

We have and will continue to support fully the TVA and States and local governments in the valley in their conservation and wildlife programs.

We have and will continue to lend our efforts to the support of worthwhile water resource development programs throughout the United States.

We have met with officials of the largest water resource development organizations in the Nation and are currently analyzing ways and means of cooperation which will be mutually beneficial to this valley and areas served by the other organizations.

We have contacted key members of the U.S. Congress and officials of State and local governments in the valley and got their pledges of support for the work of the Tennessee Rivers and Tributaries Association.

We have taken the story of resource development and the possibilities it offers for all of us from one end of this valley to the other. We often had bigger turnouts of people who wanted to know the story of coordinated, comprehensive development than did candidates in recent statewide elections. People filled banquet halls and auditoriums in every town and city we visited. Manifestation of such interest was indeed pleasing and inspiring.

In short, we have been laying the groundwork for the significant contributions this association can make to our region. We have been striving to instill an interest in and an appreciation of the mighty transformations that have been brought about in this valley, the needs that still exist, and what our region can become if we pool our efforts and work together as a united community. We have every reason to work together as a united community. For the Tennessee River is not only the unifying physical feature of our region; it is also the now-harnessed natural wealth from which all this fortunate valley—from the mountain tops to the Ohio—can draw a better life in the measure that we plan and pull with the unity of a common purpose.

What has already taken place dramatically illustrates the point that the whole valley ultimately prospers from developments in any part of it. We, in Chattanooga, want to see the economy of the tributary river basins upgraded. We know some of the increased wealth which will come from such a happening will find its way to our city. We can also see the potentials for trade which would be involved. But most of all we should—and I think most of us do—aspire to the economic improvement of these areas because it is needed, because the people are willing to work and sacrifice to bring it about, because they are our neighbors, because the natural resources so abundant in this valley ought to be developed, utilized, conserved and made to work for this generation and others which will follow.

The development program in this valley did not spring from pork barrel legislation. Men like George Norris who had no selfish interest in this area conceived the Tennessee Valley development, and the legislation which made it possible was initiated by President Roosevelt, who, also, had no selfish interest here. These men saw the Tennessee Valley Authority as a pilot project, a demonstration of what could be done if all the resources of an area were coordinated in a unified plan and made to work for the people and the Nation. This pilot project has exceeded even the fondest hopes of those who conceived it. It is looked upon today as a model for the whole world. Kings, queens, presidents, and premiers of many other nations come here to marvel at what has been done and to take back development ideas for their own lands. The term pilot project implies a beginning of something, which, if successful, will be followed by other projects of similar nature. That the TVA experiment has been successful is beyond doubt. Yet, the full impact of its success has been slow to be realized elsewhere in this country for reasons this group undoubtedly understands better than I.

Certainly, the TVA has demonstrated its ability to get more out of funds allocated to it than any other arm of the Federal Government engaged in similar work. All this is to say we have the ideal instrument to achieve the kind of additional development this valley needs to enable it to reach its full potential.

And, if we unite our efforts, the potential available in this region is staggering. Already, we are fast becoming the new Ruhr we were only dreaming of 30 years ago. In the past few years, the tonnage on the 640 miles of our navigable Tennessee waterway has been the fastest growing in the Nation. This past year it went over the 12-million-ton mark and General Vogel foresees it reaching the 25-million-ton mark by 1975. Chemical and allied industries are booming along the river. The growth in the feed grain industry has been staggering. Former TVA Director Brooks Hays said in a recent speech that this region has definite possibilities of becoming the feed grain center of the Nation. Our tourist industry keeps going up and up, and recreation, a side benefit that wasn't even considered 30 years ago, is constantly growing. Over $100 million is now invested in lakeside resorts and housing and close to 50,000 boats of every size and description are skittering on the river, the lakes and coves. And, of course, you know the electrical industry here is not doing badly either. In 1933, electrical use for all purposes in the area now served by TVA was less than one-half as large per capita as in the rest of the United States. Today, use of electricity in this same area is nearly twice as large per capita as the average for the rest of the Nation—even if you deduct the huge amounts of TVA power used by the Atomic Energy Commission.

To continue and expand this sort of growth, we in the Tennessee Valley need to reaffirm our sense of being of one valley, one united and interdependent community acting in concert for the good of our region and our Nation. The Tennessee River and Tributaries Association seems to me an ideal expression of such unity. Through this association we can join our interests and put our collective shoulder to the wheel and push for the progress that is certain to come our way if we but work together.

We need to put aside whatever timidity we may have been induced to entertain in the past about the development program in this valley and be bold in proclaiming the virtues of accomplishments in this region.

As eyewitnesses to the world's most effective and efficient resource development program, we owe it to ourselves and posterity to work for the application to the tributaries of those same techniques which have proved so successful on the main stream.

To accomplish these objectives, the Tennessee River and Tributaries Association will need the interest, support, and, not infrequently, the work of each of you and hundreds of other valley citizens, who, like you, are interested in the economic betterment of this region through resource development.

When business spends money to develop a new product, or build a new plant, or expand an old one, it is called an investment. When Government spends money to develop our resources, to conserve our resources, or to improve our environment, it is called spending.

The propagandists have been dismayingly effective in inculcating this sort of cloudy reasoning in the minds of a great number of our citizens. But I say to you there can be no more sound investment than one which is made in the interest of developing or conserving our resources or improving our environment. These are the foundation stones upon which rests the whole structure of our national life.

For these reasons, this association shall be forthright and bold in seeking funds for these purposes. We shall make no apologies to anyone for what has been done in the Tennessee Valley development program. Rather, we shall point with pride to a great Federal conservation program that pays its own way.

The time is at hand to begin work on all these possibilities for our valley. The opportunity is also at hand. We need only to be determined enough to grasp it.

The Justification for Civil Defense

EXTENSION OF REMARKS
OF
HON. GEORGE P. MILLER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 29, 1961

Mr. GEORGE P. MILLER. Mr. Speaker, the ever-present crisis of our times is the threat of nuclear war. Since this is a threat which challenges the very survival of humanity, we cannot afford to overlook any means of insuring lasting peace.

The new administration has moved rapidly to bolster our military strength. It has prepared a stronger foundation for conferences on nuclear testing and it has moved swiftly to lay the groundwork for progress in the field of disarmament.

There is one further area which I believe needs to be emphasized and this is the defense of our civilian population. Civil defense preparedness can be just as important to deterring the threat of war as military preparedness, because potential enemies consider the psychological factors of mass destruction and death of the civilian populace just as important in their military strategy, as the obliteration of military objectives.

Recently, Mr. Paul A. Reyff, under the auspices of the Civil & Industrial Research Corp., published a report entitled "A Study of Civil Defense." Mr. Reyff's technical background in radiological defense, public safety, and governmental operations well qualifies him for such a report.

Excerpts from his report are as follows:

THE JUSTIFICATION FOR CIVIL DEFENSE

To restore the proper balance to civil defense efforts and to obtain practical results of real benefit to the citizens of the United States, the justification for civil defense must be made clear and the appeals for civil defense effort must be realistic.

In the first place, civil defense should not be identified, as it has been in the past, as "a nonmilitary deterrent to war." Only a few aspects of civil defense realistically discourage an enemy from attacking; namely, our economic recovery potential and our stockpile of essential materials. And even here, the effects of nuclear war on both sides are so severe that considerations of economic recovery are low on the list of reasons for going or not going to war. Self-deception as to the rewards for civil defense tends to unbalance the legitimate achievements of civil defense, and distort the relative importance of negotiations for disarmament and of general preparedness of the military.

It should be recognized, starting at the highest levels of Government, that civil defense is not a hobby, not a self-help program, not a bargaining point to bluff with at the conference table; but, on the contrary, a responsibility for the protection of the general welfare conferred by the Constitution on the Federal Government. The promulgation of civil defense in October 1958 contains the simplest acknowledgement of this fact: "So long as direct or indirect aggression is used as an instrument of national policy by any nation, common prudence requires that every effort be made to protect the people of the United States."

THE RESPONSIBILITY FOR CIVIL DEFENSE

It is the stated policy of present civil defense authorities that the responsibility for civil defense rests on everyone. The practical result of this policy is that the responsibility has come to rest on no one very heavily, and on the Federal Government least of all.

Over and over we read the honeyed words "leadership, guidance, coordination, direction" as signifying the role of the Federal Government in civil defense. And yet the common complaint of 35 State and 66 local civil defense headquarters in a survey conducted in 1960 was that such leadership, guidance, coordination, and direction were virtually nonexistent. It is no wonder that civil defense has become something of a national disgrace, attached as it is to the Office of the President, and that the very concept of civil defense has been widely challenged on the basis of its very practicality. So far, at any rate, civil defense efforts have succeeded in demonstrating one fact: that it very likely won't work.

The so-called "National Plan for Civil Defense and Defense Mobilization" is largely a fiction, a fantastic compilation of empty headings, subheadings, and sub-subheadings which can be reduced, at best, to commonsense and at worst to the make-work of a bureaucrat.

For example, under annex 2 to the national plan, subheading XI. Maintenance of Government, law and order, is contained the following sentence, the entirety of this section: "Individuals must respect the law and cooperate with law enforcement officers."

It is common practice to point to natural economic or cultural developments as parts of the "plan." What is worse, there is no priority as between any two, not to say all 40, of the annexes to the plan and the aspects of civil defense which they represent. The course of action in attacking any problem is first to make a survey, then find a Federal agency for jurisdiction over the problem, then provide funds for that agency to secure outside help, which finally results in a public education program whereby the problem is ultimately dumped onto State and local authorities. If this may seem to be a frivolous description of the process, it is only because it reflects the frivolity of the process itself.

The responsibility for civil defense must be shouldered by the Federal Government, and until that happens we cannot speak realistically of leadership and direction. In the reorganization of 1958, when the OCDM was created in the executive office of the President, it was argued that civil defense required the direct and compelling leadership of the Presidency. In a sense, OCDM was given a status higher than that of a Department, to protect it from interdepartmental rivalry. And yet by official policy and by unofficial laxity the OCDM has become a mere provider of funds for other branches of the Government, and a nonentity as far as the broad public is concerned.

The bad effects of the current "self-help" policy are apparent on all hands. Citizens are asked to spend considerable sums of money for their own protection, variously estimated at from $25 to $4,000, for a shelter for a minimum family, without any real hope of a favorable response from the vast majority. The result is widespread skepticism on the part of the public. Industrial dispersal is "urged." The answer is "consultation" by industry, but no real program other than a purely economic one. OCDM has left the evaluation problem up to the personal initiative of the individual citizen, and yet almost every city of any size has elaborate rules merely to expedite rush-hour traffic. It is no wonder that the public is apathetic about the chances for survival, and that the next war is usually referred to as the "last war."

In the recommendations which follow, means are discussed whereby the Federal Government can assume the leadership of the civil defense program in a way that extends beyond the mere pronouncement of "leadership, guidance, direction, and coordination" in a national plan. More than words are needed.

A COMMON PLAN

Before any realistic action can be taken in civil defense, a common plan of the objectives and responsibilities for each project must be agreed upon. This will require a meeting of minds by those in actual charge, at the highest levels, of Government agencies connected with civil defense programs. This need not, and indeed should not, be a large-scale conference. It could be initiated by policy statements on the part of each agency, reinforced by a series of interagency meetings. OCDM must set the agenda, which would encompass warning systems, communications, shelters, training, industrial dispersal, public information, transportation, food stockpiling, storage of fuel, etc. Already there has been amassed a considerable body of knowledge on each of these subjects. The task now is to organize that knowledge into fundamentals, and derive methods of estimating the feasibility and cost of bringing each project to completion. Finally, the group must pass judgment on the relative importance and relative practicality of each program.

A fundamental principle in this study is that it is impossible, and indeed disastrous to try, to advance adequate programs on every single front. Definite priorities of progress must be established for each program. Specific time sequences must be established for checking progress and measuring success.

In the assembling and evaluation of the materials that go into the common plan, no one but the Director of OCDM must be responsible for getting the program underway. He must have the authority to call for a meeting of minds and a series of position-papers by the Government agencies working for OCDM or with OCDM funds. Indeed, there must be a completion date for even this first phase of the reorganization program.

PERSONNEL SELECTED ON MERIT AND SPECIALIZATION

Too often OCDM positions have been filled by unsuccessful political candidates, by the "castoffs" of defunct agencies, and in general by the prerogatives of a bureaucracy. Hand in hand with a strict policy of recruiting and discharging men on the basis of merit and specialization. This is in line with the general tenor of the Landis report, and it makes even more sense in the case of OCDM, where technology is often as important as broad policy.

Decision-making within OCDM must be placed in the hands of personnel with sufficient technical background to work intelligently with other agencies and achieve realistic progress.

MEANINGFUL PUBLIC INFORMATION PROGRAMS

A public information program for civil defense cannot be carried out in the same way as a campaign for a new product. The ordinary media and the ordinary approaches do not suffice, because civil defense in this age is an extraordinary matter. At present, civil defense campaigns are conducted along the lines of recruitment campaigns for the Armed Forces and other public service announcements. OCDM "commercials" are shunted into Sunday morning TV time periods, and stories about civil defense in the newspapers lack coordination because they emanate from various State and local authorities as well as from the national headquarters.

It is not enough to tell people to build shelters. They must be motivated for civil defense efforts of all kinds. And a single authority for public information must take charge of all public information campaigns. Such an authority now exists on paper within the OCDM. It should be made clear to all local and State groups that this authority is ethe clearinghouse for all policy decisions regarding public information. At present, this authority is connected with training as well. The two functions must be separated.

There are many aspects of civil defense over and above the building of shelters and the establishment of warning systems. The public should be kept abreast of developments in industrial recovery programs, in food stockpiling, in postattack housing, and the like. The civil defense plans for California were recently revealed to be contained in a book the size of the San Francisco telephone directory. Such information, if useful at all, must be available in readable form to all the citizens. Above all, the information publicity disseminated must not be bureaucratic puffing, but must have a meaningful, practical application for the public.

PUBLIC TRAINING

There exists, at the present time, a great opportunity to use many public and military organizations to train the Nation in civil defense. And civil defense training represents the fastest and most basic form of protection from the effects of a nuclear war. Training is in fact the sine qua non of a civil defense program. It is the basis for an adequate warning, shelter, and recovery program.

The present Reservist program is ideally suited for civil defense training. It would be a simple matter to require that one-half of all Reserve programs be devoted to civil defense to qualify for acceptance. Reservists would accept such a requirement as a practical, serious measure, for it affects their own lives and their families in a real way.

The director of the civil defense training program should consider it his first act to mobilize the Reserves, ROTC units, physical education classes, and similar groups, with appropriate legislation, under his direct authority for civil defense training.

LEGISLATIVE SUPPORT

There is no lobby for the general public and hence no lobby for civil defense. Legislators, nevertheless, must be educated to the goals of civil defense before any concrete action can be taken. At present, civil defense is devoted largely to warning systems and shelter programs. But there are many other, more important parts of civil defense: control of port areas, emergency transportation, fuel and food supplies, industrial capability and recovery. Each of these areas must receive immediate study, for presentation of a national plan to the Congress. With appropriate Congressional action, the President and the leaders of OCDM will be able to assume their rightful duties in conducting their part of the defense of the United States.

Profile of Red Economic Aggression

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Thursday, March 30, 1961

Mr. WILEY. Mr. President, today the East-West blocs are at a relative standoff militarily.

Under such a dark, ominous cloud of potential war, the Communists are concentrating more and more upon a nonmilitary offensive.

In Red strategy, economic aggression rates a high priority. Why? Because the Reds find it possible to use economic channels as inroads to planting the seeds of communism.

To more effectively combat the offensive, we need a better knowledge of, first, the scope of their economic penetration; and second, the techniques by which they utilize economic assistance to exert and extend their influence.

If war can be averted, then economic competition will be one of the major battlegrounds.

Recently, the March issue of Economic World published an informative article giving a profile of Red bloc activities. I ask unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FREE WORLD COOPERATION FACES INCREASING COMMUNIST BLOC PRESSURES

June 5, 1947: "Our policy is directed not against any country or doctrine but against hunger, poverty, desperation, and chaos. Its purpose should be the revival of a working economy in the world so as to permit the emergence of political and social conditions in which free institutions can exist."—George C. Marshall, Secretary of State.

Jan 20, 1961: "To those people in the huts and villages of half the globe struggling to break the bonds of mass misery, we pledge our best efforts to help them help themselves, for whatever period is required—not because the Communists may be doing it, not because we seek their votes, but because it is right."—John F. Kennedy, President.

At the time George C. Marshall made the above offer to help with the recovery of Europe, Stalin refused to let the Communist nations participate. Instead he organized the Communist countries into an economic bloc of their own, Comecon.

In the intervening years other nations have joined the United States in a task that has no precedent in history—a cooperative international effort to help one-third of the world's people achieve economic progress.

This time an initiative has come from the newly elected President of the United States. In January 1961, Premier Khrushchev bluntly told the world that the Communist bloc would go its own way and that development assistance was a tool of Communist conquest.

Starting in the early 1950's the Communist bloc has steadily increased its bilateral economic activities in the strategic areas of the world with only a token contribution to U.N. assistance agencies.

Analysts in the field of Soviet relations have termed the objectives of the Communist economic drive as: To expand Sino-Soviet political influence; to make the developing nations economically more dependent on the Communist bloc; to create a psychological climate which would make the developing nations more receptive to Communist solutions to their economic, social, and political problems.

Whatever the ultimate goal, the size and direction of the Soviet bloc economic tactics continue to hamper attempts to remove development assistance from the context of the cold war.

Following is a report on the devices and resources which the Communist bloc is employing on the international economic front.

COMMUNIST TOOLS

Technical assistance, closely integrated with Communist trade, barter and credit activities, is being stepped up. Some 8,000 Communist advisers and technicians worked in 22 developing countries during the last 6 months of 1960, an increase of 21 percent over the same period in 1959.

Increasing numbers of trainees from the developing nations went to Iron Curtain countries for study. In addition to paying for their transportation, upkeep, and tuition, the Communists are paying many of them a handsome salary. Since 1955, some 11,000 trainees and students have availed themselves of this opportunity.

Of these, 85 percent came from 9 countries: Argentina, Cuba, Ethiopia, Guinea, United Arab Republic, Iraq, Afghanistan, Indonesia, and India. The same countries accounted for 90 percent of all Communist grants and credits, and hosted 75 percent of all Communist advisers and technicians serving in the non-Communist world.

Grants, a small portion of Communist development assistance, concentrate on visible, prestige items not necessarily related to economic development. Typical are China's gift to Cambodia of a powerful new radio station, or the Soviet Union's delivery of jet aircraft to Morocco.

Credits, rather than grants, have dominated Soviet economic aid. This approach is based upon a policy of low interest rates and deferred, or long-range repayment. A recent Chinese loan to Guinea is illustrative of this policy. The equivalent of $25 million, the loan was interest free, repayment deferred for 10 years, and then stretched over an additional, 20-year period.

Commodity trade is an important Communist tool, because many developing nations depend upon select commodities for the bulk of their foreign exchange earnings and investment in economic development.

State-controlled purchasing policies have enabled the Communist nations to make purchases that helped the developing nations dispose of their surpluses, or were instrumental as an indirect price support.

Barter is closely tied to commodity trade. The Communists are willing to accept the developing nations' commodities in exchange for their exports of manufactured goods and services. This helps emerging nations which are short of foreign exchange and has the psychological advantage of establishing a trading relationship rather than one of donor and recipient.

Rice from Burma; fish from Iceland; cotton from Egypt; rubber from Ceylon are some of the prominent commodities and countries involved in bloc barter transactions.

Careful selection of projects and concentration of efforts in selected geographical areas have netted the Communist bloc a fairly high return on a relatively small investment. Since 1954, total Communist bloc aid to the developing nations amounted to $5 billion, of which the U.S.S.R. furnished about $3.2 billion. This compares to $8.8 billion nonmilitary development assistance of the United States alone.

CHANGING TRADE PATTERN

Skillful application of all economic and psychological tools at their disposal has not only had significant political impact in selected areas, it has also affected the traditional world trade patterns.

From 1954 to 1958, the last 4 years for which complete figures are available, Communist trade with the developing nations increased by 143 percent. Consequently, the Communist bloc now accounts for 10 percent of the total trade of such nations as Uruguay, Turkey, Syria, Greece, Iceland, and Afghanistan. Cuba has been added since. During the same period bloc nations increased their trade with Egypt from 23 percent to 38 percent.

By the end of 1960, Soviet bloc trade with free world nations reached $7 billion annually. Included in this figure are a 50 percent increase in exports to Latin America amounting to $88 million, and bloc imports from that area amounting to $177 million.

Expansion of trade and aid on one hand, was accompanied by Soviet moves to disrupt world markets on the other. Frequently this occurred at the expense of the developing nations. Oil exporting nations of the Middle East and Latin America were adversely affected by Soviet dumping of crude oil. Cuba found that her sugar purchased by the U.S.S.R. was being sold at bargain rates, spoiling traditional markets. Greek tobacco and raisins fared a similar fate.

A PROFILE OF BLOC ACTIVITIES

The intensity of the Communist economic activity around the world is indicated by the major public announcements which took place during a typical month, December, 1960.

December 1: Communist China and Burma negotiate an $84 million credit agreement.

December 5: U.S.S.R. and Indonesia work out details for extensive Soviet aid to Indonesia's armed forces.

December 6: U.S.S.R. works out with Ghana details for the implementation of a $40 million credit for hydro-electric projects, housing, and other projects.

December 8: Poland signed a contract to deliver to India a $5 million scooter and motorcycle plant.

December 12: Hungary announced the building of a glass factory in Conakry, Guinea, to start in 1962. Meanwhile the Guinean managerial staff will go to Hungary to study manufacturing methods.

December 13: Ghana's Minister of Industrial Development, Ayah Kumi, visits Hungary and makes preparation for a commercial treaty.

December 15: Poland signs second agreement with Cuba for delivery of construction machinery.

Somali's Minister of Education arrives in Czechoslovakia for talks on cooperation in the field of education, including teacher training, and curriculum development.

December 17: Poland announces completion of $1 million transaction with Cuba for design, delivery and asembly of two window and bottle glass factories. Representatives of Czechoslovak cooperatives return from trip to India, Ceylon, Indonesia, Burma and Japan made for the purpose of expanding trade between cooperatives.

East Germany and Cuba sign 5-year, $25 million trade agreement, calling for delivery of 17 light industrial plants to Cuba.

December 19: Syrian-Czechoslovak agreement on sale of Czechoslovak industrial equipment.

Egypt purchases Czechoslovak locomotives.

U.S.S.R. signs four agreements with Cuba, covering technical assistance—supply of Soviet technicians for Cuba, training of Cubans in U.S.S.R.—payments, cultural cooperation, and Soviet purchases of Cubar sugar.

December 21: Czechoslovak technicians leave for Ethiopia to serve as supervisors in industrial and agricultural projects.

Soviet parliamentary delegation visits Bolivia, discusses Soviet aid to help Bolivia process raw materials.

December 22: Ghana signs contract to export raw woods to Czechoslovakia, becoming its largest supplier of this commodity.

December 23: Polish-Cuban trade protocol signed.

December 24: Poland concludes agreement on scientific and technical cooperation with Iraq, Guinea, Cambodia, Afghanistan, Burma, Ceylon, Indonesia, India, Ghana and Cuba.

Hungary and United Arab Republic sign for Hungarian credits for Egyptian purchases of heavy industrial equipment, and preferential prices for Hungarian purchases of Egyptian cotton.

December 26: Romanian delegation leaves India after agreement to accept Indian iron ore in exchange for delivery of Romanian oil equipment.

Cambodia concludes aid agreements with U.S.S.R., Czechoslovakia and Communist China. Under these agreements China will make available $14 million for four unspecified factories, $26 million for a steel mill and a farm implements plant, and $1 million for technical assistance.

December 31: Czechoslovakia and Afghanistan negotiate scientific, technical cooperation programs.

James Francis Reilly, New Chairman of the District of Columbia Armory Board

EXTENSION OF REMARKS
OF
HON. JOHN L. McMILLAN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 30, 1961

Mr. McMILLAN. Mr. Speaker, as chairman of the House District Committee, it is my pleasure this date—March 29—to join my colleague, Senator ALAN BIBLE, chairman of the Senate District Committee, in nominating my friend of over 15 years, James Francis Reilly, as a member of the District of Columbia Armory Board to succeed Floyd D. Akers who recently resigned.

Mr. Reilly took the oath as a member of the Board in the Old Supreme Court room, and I assume that he will be elected chairman of the Board at its next meeting.

Mr. Reilly is one of the city's most prominant lawyers, and he has had a distinguished career in public service as well as in the private practice of the law. Mr. Reilly has been a resident of this city for almost 33 years. He has been very active in civic, political, and charitable affairs in the District of Columbia. Mr. Reilly has a unique competence in the legislative, judicial, and executive branches of both the local and Federal Governments.

So that my colleagues may be aware of Mr. Reilly's qualifications and background, I am inserting a biographical sketch of Mr. Reilly as part of my remarks today:

BIOGRAPHICAL SKETCH OF JAMES FRANCIS REILLY

Born: Pittsburgh, Pa., February 28, 1908; married December 23, 1935, to Mildred Patricia Ricciardi; children: Anthony (deceased), Peter, Patricia, Kathleen, Francesca, Ann Marie, and James Francis, Jr.

Schools: Mount St. Mary's College, Emmitsburg, Md., 1929–31; Columbus University (now Catholic University) Law School, Washington, D.C., LL.B. degree, June 1935. Mount St. Mary's College, Emmitsburg, Md., LL.D. (honorary), June 1959.

Courts admitted to practice: U.S. District Court, Washington, D.C.; U.S. Court of Appeals, District of Columbia Circuit; U.S. Supreme Court; and before various Federal and District of Columbia administrative agencies.

Law: Private practice 1937–38, and 1945 to present. Specializing in public utility, aeronautical, legislative, and administrative law. Counsel for United Air Lines in Washington, D.C., and counsel to Potomac Electric Power Co., Washington, D.C., among others.

Public service: Appointed by the chief judges of the various courts and president of the board of commissioners as one of seven original members of board of trustees of Legal Aid Agency established June 27, 1960 by Public Law 86–531. Appointed by President F. D. Roosevelt as a member of the Public Utilities Commission of the District of Columbia and confirmed by the U.S. Senate, assuming office in July 1944 and resigning in August 1945 to return to private practice of law; executive assistant to the Chairman, Civil Aeronautics Board, Washington, D.C., 1943–44; examiner, Civil Aeronautics Board, Washington, D.C., 1940–44; Assistant Corporation Counsel for the District of Columbia, 1938–40.

Professional associations: vice chairman, legislative committee, District of Columbia Bar Association, 1960; member, Judicial Conference Committee on Representation of Indigents, 1960; American Bar Association; Federal Bar Association; District of Columbia Bar Association; National Lawyers Club; Barristers; ICC Practitioners Association; and the Counsellors.

Teaching: instructor, Catholic University School of Law, Washington, D.C., 1946.

Clubs: University Club; Columbia Country Club.

Societies: the Society of the Friendly Sons of St. Patrick of Washington, D.C., president 1958–59.

Politics: Democrat. Member, District of Columbia Democratic Central Committee, 1945–55; delegate to 1948 and 1960 Democratic National Conventions; special assistant to National Chairman Frank McKinney, Democratic National Convention 1952.

Business affiliation: member, advisory board of the branches of the Riggs National Bank.

Problems of American Agriculture

EXTENSION OF REMARKS
OF
HON. HOMER E. CAPEHART
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Thursday, March 30, 1961

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial which appeared in the Indianapolis Star on March 22, 1961, entitled "Congress Must Decide."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

CONGRESS MUST DECIDE

In a country which functions through processes often called representative democracy, the Kennedy agricultural proposal to "let farmers decide for themselves" has considerable initial charm. Politically and philosophically an idea of this kind sounds awfully good. After all, who knows more about farming than farmers, and who can provide the most expert advice on agriculture, if not farmers?

Yet, a quick second look discovers the major, fatal flaw in this plan that sounds so good.

Would the farmers be really deciding for thmselves, or for millions of other Americans? Can American agriculture be isolated from the rest of the economy and from life in general? If farmers regulate prices for their crops, will they also decide the price of food for the housewife?

Even more critical than all these is whether Congress can delegate and abdicate its power to make laws for the nation. In essence, President Kennedy asks Congress to give away its power and authority when he proposes that farm committees be permitted to enact programs having the full force of Federal law. If Congress can give away its ability to legislate, then the very structure of constitutional Government is in danger.

Consider only a few of the major powers that President Kennedy asks Congress to donate cheerfully to some undefined farmer committees and the Secretary of Agriculture. These committees would have the power to levy taxes, because they could obligate the Government to pay subsidies or price supports if that's what the farmers decided upon. The money for these subsidies would not come solely from farmers, but from the general treasury and from citizens throughout the Nation.

The committees could regulate prices and interstate commerce. Farmer committees could decide to fix commodity prices, and thereby set food prices throughout the Nation. The same committees could act to prevent the dumping of agricultural products in any chosen spot. This is not a matter of conjecture. The Indiana General Assembly just got through defeating a milk-control bill which would have operated in exactly this fashion. Federal laws functioning in the same manner and intent already are in force in some instances.

The Kennedy farm program asks Congress to abdicate its responsibility to the farmers, and to the rest of the American people. Instead of asking Congress to take some constructive steps in agriculture, Mr. Kennedy suggests that the Congressmen wash their hands of the whole mess. This is worse than no farm program.

Members of Congress should realize just what the President is asking of them in his agricultural proposals. Certainly the Congress will not be so ill advised or so beguiled as to voluntarily give away its own power and authority for a vague proposal to "let the farmers decide."

Military and Civic Responsibilities

EXTENSION OF REMARKS
OF
HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 30, 1961

Mr. PELLY. Mr. Speaker, the military is frequently subject to criticism because of lack of community interest by individual officers and their failure to participate in civic affairs. This lack of responsibility on the part of military personnel is due largely to the transient nature of their assignments, as well as fear of inviting civilian resentment from one side or another on issues of a controversial nature.

My hat is off to one officer of the U.S. Navy in my congressional district. I refer to the commandant of the Sand Point Naval Air Station in Seattle, Wash., Capt. Kenneth J. Sanger.

Captain Sanger has endeared himself to a host of admiring friends and supporters in Seattle and the Puget Sound area, by his inspirational leadership in exposing the Communist conspiracy and its tactics and by his activities in establishing positive and constructive programs for the development of community leadership.

As evidence of Captain Sanger's outstanding accomplishment in his field of prime responsibility, the Department of the Navy awarded Captain Sanger and the Sand Point Naval Air Station the coveted CNATRA trophy and the Edward Francis Conway trophy. The latter trophy is awarded annually to the highest rated naval air station in the Nation.

But especially referring to his inspirational, active interest in good citizenship, under consent previously obtained, I include a recent speech by Captain Sanger which I believe illustrates the type of leadership and constructive thinking of this fine officer on a matter of vital interest to our Republic and to freedom-loving people of the world everywhere:

FREEDOM ON TRIAL

(By Capt. Kenneth J. Sanger, U.S. Navy, commanding officer, U.S. Naval Air Station, Seattle, Wash.)

From earliest recorded history, freedom has been on trial in a continuing conflict of ideas. As each alien idea is vanquished by the forces of freedom, a new tyranny arises to launch a new attack on liberty. Such is the case today in freedom's struggle against tyranny. The stakes are high, the minds and allegiances of mankind rest on the outcome. The trial is bitter, in nature a war—a war of ideas. This war, the adjective "cold" nothwithstanding, has all the attributes of war in its common meaning, including the ingredients of victory and defeat.

The total nature of this conflict can best be described by picturing a wheel of freedom, liberty, and human dignity. At the hub of this wheel is mankind. We move ahead only as the wheel of freedom revolves. Dr. Albert Schweitzer reasons that "civilization presupposes freemen, for only by freemen can it be thought out and brought to realization * * * [man] must be free in order * * * to launch his ideals out into the general life."

Mankind's wheel of freedom is supported by many spokes, representing institutions of culture, science, economics, politics, psychosocial, psychological, and military forces. Each spoke is under attack, is being nibbled away, and if enough spokes are severed the wheel will collapse and mankind's progress will be terminated. All the spokes are important. Whenever we concentrate in one area and become weak in another, these are the spokes that freedom's enemy will try to subvert, try to cut. What is this enemy and what are the ideas in this world conflict characterized primarily by a battle of books, not bullets.

It is Marxist communism. Yet as we consider communism, we must be certain that it is Marxist communism we are talking about. Communism in the classical sense prescribes the formula "from each according to his ability and to each according to his needs." You find this in the Bible in Acts 2 and 4 of the Apostles. This concept may be found practiced in family life. The mother works around the house, shops, plans and prepares food. The children go to school, that's their job, and sometimes they do odd jobs around the house. The husband works and bring his pay home. So it's from each according to his ability. The money taken in is then distributed to each according to his needs. This is classical communism and this is the type of communitarianism under which the Plymouth Colony operated for 3 years. At the end of this time, Governor Bradford said in effect, "if we don't stop this communitarianism, this communism, we're all going to starve to death." The system hasn't worked above the level of the family unit.

Marxist communism is quite a bit different. It is an idea of a perfect state, based on a foundation of materialism. It is interesting that Karl Marx used a Greek word, "utopia," meaning nowhere, to describe it. There are two types of materialism according to Marx, dialectical materialism and dialectical historical materialism. To understand the dialectic we must go back to the dialogues of Plato who used the dialectic to show differences in thought processes; e.g., differences in definitions so as to arrive at a better definition of something. Take the definition of friendship for example. Plato puts into one man's mouth, perhaps Thrasymachus, "here's what I think friendship is." This is a thesis, the definition of friendship. Then Socrates answers with an antithesis, or a contradiction of it. He asks, "how about acquaintance, how does this fit in your definition?" They reason this out by discussion in the dialogue, the thesis and antithesis, and reach a synthesis, which is a better definition of friendship.

Then some other Greek says, "Well, how about relationship?" and a new antithesis to the new thesis of friendship has been formulated. "How about relationship between father and son? Would you say the father is a friend of the son, or that a mother is friend of the daughter?" By reasoning still a new synthesis of meaning is attained and a new thesis is stated which is even a better definition of friendship. In the fourth century B.C. then, dialectics was strictly a method of attaining or deriving by a reasoning process something better in the way of ideas. In the 19th century A.D., Hegel, a German philosopher, took this dialectic reasoning of Plato and refined by Kant a step further. He though that throughout all history you have various shades of meaning and through the dialectical process men become more intelligent and obtain more wisdom. This started from the day of primitive man when he knew virtually nothing. Through this dialectical process of thesis and antithesis, always a contradiction to what is first thought, we have come in the 19th century to a period of great reasoning power and great knowledge. Hegel believed there are absolutes in the world and there is a difference between the unity of the one and the many. For example, each considers absolute truth and absolute beauty or absolute untruth and absolute ugliness, but people using reasoning power in this dialectical examination of many shades of opinion between, for example, ugliness and the absolute of beauty will always have contradictions until the absolute reasoning power, the absolute truth is achieved.

There was another man on the scene with Hegel, a renegade German theologian named Feuerbach, who believed that there is nothing in life except matter, actually atoms, material things and that this is the only thing that counts, the only thing there is. Man has no heart, man has no soul, and there is no God according to Feuerbach. Man is only what he actually is, he has no soul.

Marx read both Hegel and Feuerbach and decided to marry the two ideas together, to come up with dialectical materialism. Previously until Marx grabbed hold of it, this idea was nothing but an idea in the mind showing reasoning power and processes of reasoning, historical processes of reasoning. Dialectical materialism then, with its handmaiden of economic determinism, teaches that nature and progress always come about through matter in motion and the contradictions of matter in motion. Again this same dialectical reasoning is applied to matter, applied to material things as Plato and Hegel and Kant had applied it to ideas of the mind. Marx thought he had discovered that everything we are, everything we have, everything that is in nature, man's development included, happened by accident. They happened because of these conflicting forces in nature. These dialectical ideas applied to nature make man what he is and make man nothing more than, according to Marx, a highly elevated beast. Again he has no heart, he has no soul, he has no spiritual being or feeling whatsoever within him, and the reason he acts the way he does is because of his economic environment. Because of the method of production and distribution of goods, man becomes what he is.

Upon this basis Marx thought he had made a remarkable discovery. All of man's history and his social development could be scientifically explained. He took credit for discovering how history started, how history has progressed and where history is going. With absolute accuracy he felt he could predict man's ultimate development by means of his own dialectic process. In such process he perverted Plato's, Kant's and Hegel's teachings. He didn't pervert Feuerbach, he just applied Feuerbach. Marx considered that all history started out with man in the primitive state of development. He had no tools. He had nothing but his hands with which to work. How did this primitive society develop? Well, some men found out how to make hatchets, found out how to make shovels, how to make tools. The thesis of primitive man with nothing was met in the antithesis of man with a few tools. This synthesized into the next step, something better, slavery. This was now a new thesis now in society, the institution of

slavery. Slavery had its antithesis and its contradictions of master and slave. Marx says this synthesized into something better than slavery, feudalism. A new thesis in history, in material history was derived.

Feudalism had its own contradictions the thesis and antithesis of landlord and serf and these contradictions synthesized into something better, capitalism. Capitalism in turn has its own contradiction of, as Marx puts it, bourgeoisie and proletariat. These contradictions will synthesize, according to Marx, into something better, Marxist socialism. But, at this stage of development, of Marxist socialism, society will become so productive and so wonderful that the contradictions of this new thesis of socialism will actually disappear. When we get Marxist socialism throughout the entire world, not just socialism, for again its a definition of terms that we have to watch out for and not every socialist is a Marxist, then the government can wither away. There will be no reason for any institutions whatsoever. Then and only then can mankind achieve universal communism and the ultimate Utopia, a homo marxian utopia. This is dialectic historical materialism.

We wonder many times how Marxist communism, with its military atheistic system, could have made such progress. The answer is that it is a secular religion. Marxist communism is secularism on the march. It denies God, natural law and moral law. There is no theology to it. As a secular religion the original sin, according to Marx, occurred in that period of time when man devised tools, when man took a piece of property and said, "This piece of property is mine." This is what communism explains to be the source of all evil. Capitalism is evil because it has its original sin of property ownership and this can only be expiated at the last judgment in communism when the whole world abolishes capitalism and the whole world is Marxist socialist and nobody owns property. Nobody owns a thing. The shirt on your back, your eye glasses, your shoes, nothing is yours. Therefore, nobody can give anything and quite a few of the rewarding emotions that we have in life, such as giving, would certainly be lost if we could not own a thing.

Now, the Communists, according to Marx, are not just atheistic. If they were just atheistic this would not disturb us because we have religious freedom and we are religiously tolerant. In our society a man has a right to worship or not worship God according to his own convictions. Thank God, however, the great majority of us do believe in a Supreme Being. Marxist Communists, however, are not content to be atheists themselves, they want and militantly claim that everyone else must also be atheists. We can neither have a God nor have any belief in God. They even tell you how to think and you can't think about God if you are going to be living under marxist communism.

It is imperative to understanding of the ideas and practices of marxist Communists to assess their standards of morality. In this light we can no more understand their behavior using our own standards of morality and Christian ethics as a measure than we can measure the brightness of a lamp with a yardstick. Volume 30 of the Great Soviet Encyclopedia explains their morality in Lenin's words, "We say; that is moral which serves the destruction of the exploitative society and the uniting of all workers around the proletariat creating the new society of Communists. In our time the only scientific criterion of morality is the defense of the interests of the victory of communism." In short, their only standard is that the end justifies any means. By our standards then, Marxist Communists are amoral.

Now let's consider the dictatorship. Where does it fit into the picture? This is a pretty neat device in Marx but it bears remarkable resemblance to Plato's theory of the perfect state. In the Utopia of Plato we have to have guardians because the people don't know what's good for them. They can't possibly rule themselves or judge themselves. They have to have a group of dedicated, superior people to rule and protect them. That's exactly what the dictatorship of the proletariat is, nothing but the guardians in the Republic of Plato: A group of people who know what is best for all the rest.

There are only 4 percent in the Communist world who are ruling one-third of the people of the world. There are only 4 percent who are Communists. The rest of them are merely there because they can't do anything else or are held together by terror or they are getting some material gain by working for communism and, therefore, they submit to it. J. Edgar Hoover says that the Communists are the masters of deceit. Their system is readily apparent to world eyes as promising a utopia, a heaven on earth. Closer examination reveals that the structure of ideas is based on a shallow foundation of materialism, but deeply hidden are the two keys that hold the structure intact. The first is terror and oppression, but there is also dedication, willingness to sacrifice, and zealous belief in their cause. The only way we're going to achieve victory in this conflict of ideas is not to simply hate communism without understanding it, but to have at least an equal determination, an equal zeal and equal love for the ideals and principles embodied in the political philosophy upon which this country was built. Let's turn to an examination of the concepts embodied in our American heritage of freedom, liberty, and dignity of man.

A fundamental belief in God is the foundation of our American heritage and the beginning of our living American revolution. Successive generations retained this basic source of strength. It is evidenced today by the motto of our coins and new dollar bills, "In God We Trust." Our forebears had this fundamental faith, this fundamental belief in God. There was no question in their minds whatsoever of this creed but they wanted to be sure that people could worship God according to their own convictions and according to the form that they chose—freely. Not freedom from religion, but freedom of religion.

The American Revolution, representing a giant stride to freedom, was not a revolution likened to an explosive blast from which the dust has already long since settled. The American Revolution is a living revolution.

Now one of the reasons that I submit that our revolution has lasted and the French Revolution did not (12 years of liberté, equalité, fraternité, and the French were right back under the thumb of oppression, the dictatorship of Napoleon) is the completely unselfish basis for our Revolution. July 2, 1776 would be the selfish date for celebrating our independence because that is the date we declared ourselves free. That's the date the Lee resolution was adopted. It said, "That these United Colonies are, and of right ought to be free and independent States, that they are absolved from all allegiance to the British Crown, and that all political connection between them and the state of Great Britain is, and ought to be, totally dissolved." But our Founding Fathers did not choose to celebrate July 2, which would be the selfish date, the date we got something for ourselves. They chose to celebrate July 4 because July 4 was the date we set forth a declaration of principles available, and applicable to all mankind of all races, creeds, and color. They existed from the time of Aristotle, and the Greek city states and perhaps long before, but it was the first time in a new continent that these principles were put into action. The ideas are very eloquently and simply stated in the declaration of principles enunciated July 4, 1776: "That we hold these truths to be self evident that all men are created equal, that they are endowed by their Creator with certain unalienable rights such as life, liberty, and the pursuit of happiness." This phrase is not only eloquent and simple, but it very well articulates our entire political philosophy of freedom. The simple philosophy that all men are created with equal opportunity for success and failure. They are equal before the bar of justice. They are free to live their lives and pursue their objectives according to their own free wills. Furthermore, if these rights come from God, no mortal being, no dictator or tyrant can take them away. Of course, with every right we have a responsibility and obligation. As we have these rights from God, we have a responsibility to Him. That responsibility is also defined in our declaration of principles. Our obligation, "is to have a decent respect for all mankind." The declaration of principles further stated that "to secure these rights governments are instituted among men."

Governments are not instituted because governments just ought to exist for selfish reasons. Governments are instituted to secure and insure these basic rights of man to life, liberty, and the pursuit of happiness and, they further added, "they are instituted among men with the consent of the governed" in a form which to man seems most appropriate. Once having established this government, man has the responsibility to respect, support, and preserve it. The form of government that we later adopted was not considered in this Declaration of Independence. It could conceivably have taken the form of a monarchy, republic, Periclean democracy, platonic aristocracy, or others. The protection of the basic rights, however, lay in the guarantee that if government becomes destructive of his rights, then man has the duty and obligation to alter or abolish that form. This then gives our declaration of principles universal application. Freedom was thereby extended to all mankind regardless of what part of this earth he inhabited, so long as he aspired to freedom and the majority of his nation had a fundamental belief in a Supreme Being, in Divine Providence, in natural law, all of which are above the collective body of mankind—above the state. Then man could espouse the concept of political freedom so eloquently expressed through the courage and spiritual strength of the Founding Fathers of our great country.

Abraham Lincoln recognized this worldwide applicability of our American Revolution. On his way to Washington for his inauguration as President, he stopped by Philadelphia and gave a talk on liberty. This is in part what he said, "I have often inquired of myself," he said, "what great principle held the Confederation together * * * it was not mere separation of the Colonies from England, but that sentiment expressed in the Declaration of Independence which gave liberty not alone to the people of this country, but I hope, to all the people of the world for all future time."

The next step in the building of our American heritage comes in 1787 when the Constitution was adopted based on the principles declared in 1776. To show further the living aspects of the American Revolution, right after the Constitution was developed and adopted by the Thirteen Colonies our Revolution was perfecting itself or trying to make itself as perfect as possible by adopting 10 amendments to that Constitution, our Bill of Rights. The Constitution was developed on the great principles of the Decla-

ration of Independence, but still it wasn't perfect. We had to immediately come out with 10 amendments to it to make it better.

A little further in the development of our heritage we come to 1863 when Abraham Lincoln said, "As long as any of our people are living in slavery, none of us can be assured of our freedom." The institution of slavery was incompatible with our principles and ideals. The Emancipation Proclamation which freed the slaves was indispensable to our political maturity. Abraham Lincoln instinctively knew that our American Revolution is a living revolution. His Gettysburg Address, perhaps better than any other single event, expresses the true nature of our living revolution. "Let us be here dedicated to the unfinished task (of the American Revolution) so that this Nation under God might long endure."

As a living principle, demonstrated throughout our growth, the statement and documentation of principles and ideals, based upon natural or moral law, have always preceded the development of institutions compatible with these standards. Capitalism as an economic system falls into this institutional category. Its early philosophy stated by such political economists as Adam Smith, Malthus and Ricardo is simply amass great private wealth and power in the hands of the owners of capital goods through the incentive of profit. The use of capital, therefore, may be likened to use of a gun. It may be employed for good or evil. As long as a worker was considered only a hand, as Dickens called him, with no means of attaining a just share of the material abundance which the system of capitalism was capable of producing, capital was being used for evil. Inexorably the ideals and principles of the revolution permeated the structure of capitalism. The process would be expected to continue until the dignity of man, his right to share and enjoy material abundance was achieved.

As an example of this development, Henry Ford in 1914 reduced the hours of labor of his workers to 8 and doubled their pay. He recognized the mutuality of interests of labor and capital as partners in production with a goal of capital producing goods for the benefit of all, not for a few. Samuel Gompers similarly recognized this and pressed toward it in the labor union movement. The abundance and prosperity subsequently achieved belies Marx's theory that an abundant society could be attained only in a Marxist Socialist state.

In the light of our political principles we could not exist half enfranchised, and toward still greater freedom the Constitution was amended to provide franchise for all citizens of age, regardless of sex, and women were empowered to vote. And today, in further demonstration that each generation is building on the living heritage of the past, this generation has achieved educational freedom by Supreme Court decisions requiring that all public schools be open to any child, regardless of his race or color.

Like our Founding Fathers in "76," we must have the courage to stand by our principles uncompromisingly against evil and tyranny, neither palsied by fear nor duped by false words and promises. We must rededicate ourselves to the unfinished task of the American Revolution. We must practice as well as preach our basic American values of integrity, honesty, rugged individualism, courage and selflessly participate in government and civic affairs and problems. Know the issues, avoid "packaged" mentality. Form our own ideas based on knowledge, reason and experience.

Our ultimate weapon of ideas is the weapon system that will enable us to prevail in this period of unprecedented peril. We have to show the rest of the world by our action, by our example, that this weapon is not window dressing to which we only give lipservice. It's a living weapon, the basic principles of which have universal application to all mankind whether he be a Buddhist, Mohammedan, Native Tribesman, Jew or Christian as long as he has the basic fundamental belief in the supremacy of a Divine, a Supreme Being, moral law. It makes no difference what his form of government is as long as that government is not instituted to enslave mankind, but to serve it and that it is instituted with the consent of the people, not seized by criminal conspiracy. The form of government of the United States, a democratic republic is certainly not applicable to all mankind but the principles on which it stands can be a standard to which all those aspiring to freedom can repair. The principle of all rights stemming from God the Creator to man who institutes government in a form determined by him to be most likely to secure his inalienable rights and thereafter it's man's responsibility to support and obey his government and be willing, if necessary, to lay down his life for it.

This country will long endure providing we adhere to and go forward with one great source of strength that the atheistic Communist conspiracy ignores the motto of our great country, "In God We Trust." Then and only then will the prayerful ending of Lincoln's Gettysburg Address be realized, "Let us be here rededicated to the unfinished task so that this Nation under God might long endure, and that government of the people, by the people and for the people shall not perish from this earth."

Educational Television in New York State

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Thursday, March 30, 1961

Mr. KEATING. Mr. President, the Federal Communications Commission is undertaking a study to determine whether New York City should have a noncommercial educational television station. There has been a great deal of interest in this question. Many people in New York City have expressed the desire for educational television facilities that can be seen and enjoyed by a large number of viewers.

Commercial television has put on many outstanding programs in the New York area—more than are available in any other part of the country. But there is also an increasing need for educational television. S. 205 which passed the Senate last week will provide Federal funds to help set up the expensive equipment needed. Further investigation by the FCC may well turn up alternative possibilities and make possible a further growth of educational television.

I recently received from the New York State Commissioner of Education a letter indicating his support for S. 205 as amended and outlining the history to date of educational television in New York State. I ask unanimous consent to have printed this account in the RECORD at this point.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

APPENDIX A—BACKGROUND OF EDUCATIONAL TELEVISION IN NEW YORK STATE

The regents of the University of the State of New York took an early interest in the possibilities of television as a means of helping to meet the critical educational problems which were emphasized by the growing number of students, the continuing shortage of able teachers and the unparalleled expansion of knowledge.

Since 1950 the regents have supported the use of television for the improvement of education. Early in 1951 when the Federal Communications Commission announced the lifting of the "freeze" on the allocation of television channels the regents requested the allocation of a number of noncommercial channels to be used exclusively for education and cultural purposes. Soon thereafter the Commission allocated 10 UHF channels to the regents.

A plan was prepared and published under the title "The Use of Television for Educational Purposes," in 1952.

This report suggested that the role of the regents in a statewide system of noncommercial television could best be described as that of a working trustee for the benefiit of all educational and cultural interests of the State. The proposed plan of operation involved the following: (a) Capital construction: the State to pay the cost of constructing and equipping each of 10 local television stations; (b) the State to pay the cost of maintaining and operating each of the local stations (including the provision of a skeleton programing and production staff to work with participating educational and cultural agencies and to coordinate their programing activities); (c) the establishment of local control by the creation of television councils appointed by the regents to represent the educational and cultural interests of any given area; (d) the provision by the State education department of consultation and supervision through a specialized staff.

A temporary commission was appointed by the Governor in 1952 to determine the need for a State-owned station. The majority of the commission believed that commercial stations could furnish the time required by educational institutions.

During 1953–54 the regents granted charters to three educational television councils: the Metropolitan Educational Television Council, the Mohawk-Hudson Council on Educational Television, and the Western New York Educational Television Council. Subsequently, councils were chartered at Rochester and Watertown. The Metropolitan Educational Television Council has since been dissolved.

By 1955 enthusiasm for educational television had grown to a level where it seemed advisable on the regents to formulate a temporary study committee on educational television. After due deliberations this committee made the following recommendations to the Commissioner of Education in January 1956:

1. The appointment of a broadly representative advisory board.

2. Development of a limited form of State assistance for the purpose of stimulating greater television activity by local communities, including the building of "production centers."

3. Establishment of at least one State-owned noncommercial television station.

4. The installation of two closed-circuit television systems in one elementary and one secondary school.

5. The centering of responsibility in the State department of education for the growth and guidance of education by television by professional personnel.

6. Appropriation of $900,000.

7. Request that the Federal Communications Commission continue the reservation of educational channels.

Since 1956, the department has initiated several exploratory programs, each aimed at determining the potential role of television—both broadcast and closed-circuit—as an instrument for improving the quality of education. A primary focus of these experiments has been to multiply the effectiveness of able teachers through the use of television.

These exploratory programs have been financed by an appropriation from the legislature in the amount of approximately $500,000 annually.

During the fall semester of 1956, a junior high school and a senior high school at Levittown were each equipped with closed-circuit television facilities, as were State university teachers' colleges at Brockport and Albany.

During the summer of 1957 the equipment at Levittown was transferred to Cortland County where the project opened in the fall, using two studios and coaxial cable to join school buildings in the city of Cortland, and rural districts of Truxton and Virgil. In the fall of 1958 the regents educational television project over channel 11 in New York City marked the department's first experience in broadcast television. In 1959 the department transferred operational responsibilities for the two college closed-circuit systems to State university.

Currently, the department's emphasis has been placed on experimentation with improvement of education by broadcast television in New York City and by use of closed-circuit television in Cortland County. In order to achieve maximum return in money invested in the regents educational television project, an extensive experiment has been carried on by making kinescope reproductions of the best of the New York programs. These kinescope recordings have been used in upstate New York over both commercial broadcasting stations and in individual school systems. There is a steady increase in demand for these recordings for supplemental teacher training and for total teaching, as in the case of conversational Spanish for the elementary pupils.

Beyond the Call of Duty

EXTENSION OF REMARKS

OF

HON. HARRIS B. McDOWELL, JR.

OF DELAWARE

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 30, 1961

Mr. McDOWELL. Mr. Speaker, all of us know men and women in our congressional districts who have rendered services to their community above and beyond the call of duty.

Americans respond in a magnificent way in emergencies, but a few men and women are known for their long and devoted work on behalf of the people of their own community. They are pointed to by their neighbors as examples of the kind of person parents want their children to be when they grow up.

Wide approbation is all that most of these selfless citizens ever receive, but it is enough for they know that they are appreciated by their fellow men. This is, indeed, the ultimate accolade.

Such a person was Norris Clay Phillips of Middletown, Del.

A friend and neighbor, Mr. Phillips was chief of the local fire company for many years and he served in other positions as well during his 37 years of service in the fire department.

He contributed to and was a living embodiment of the spirit of neighborliness which has always characterized American life.

It is with a sense of personal loss that I record his passing here.

I include as part of my remarks a report from the Middletown Transcript of March 23, 1961.

NORRIS C. PHILLIPS

Norris Clay Phillips, 56, an electrical and general contractor of this town, died suddenly about 3 o'clock Tuesday afternoon, on West Lockwood Street here, where he was installing a supplemental siren for the Volunteer Hose Co. His death was a severe shock to his relatives and many friends throughout this entire community where he was held in high esteem. He was the son of the late H. Clay and Clara Insley Phillips, and was born in Bethel, Sussex County, Del.

Mr. Phillips, a former chief of the local fire company and active for many years in that organization, had held many posts including those of assistant chief and membership on the board of directors. He had been a member for 37 years.

He was a past president of the New Castle County Firemen's Association, served on the executive committee of the State association and has been associated with the DelMarVa Volunteer Firemen's Association.

Survivors include his wife, Mrs. Bertha Ratledge Phillips, one brother, Herbert L. Phillips, of this town, and four sisters, Mrs. Mallie Weaver, Miss Pauline Phillips and Miss Eva Phillips, all of Wilmington, and Mrs. Walter Kohl, Chevy Chase, Md.

Funeral services will be held tomorrow (Friday) afternoon, at 2 o'clock from the Mears Funeral Home, 215 North Cass Street, this town. Interment will be in Old Drawyers Cemetery, near Odessa.

Friends may call at the funeral home tonight after 7 o'clock.

Haiti Doesn't Fear Battleground Prospect

EXTENSION OF REMARKS

OF

HON. DENNIS CHAVEZ

OF NEW MEXICO

IN THE SENATE OF THE UNITED STATES

Thursday, March 30, 1961

Mr. CHAVEZ. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled, "Haiti Doesn't Fear Battleground Prospect," written by Clayton Willis and published in the Albuquerque (N. Mex.) Tribune of December 30, 1960, relating to the prospect of Haiti becoming a battleground between Cuba and the Dominican Republic.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HAITI DOESN'T FEAR BATTLEGROUND PROSPECT

(By Clayton Willis)

Haiti, a country sandwiched between dictatorships in Cuba and the Dominican Republic, has no fear of becoming a battleground between Fidel Castrol and Gen. Rafael Trujillo, a visiting Haitian said here today in an interview.

Fritzler C. Gaillard, one of 24 foreign teachers in Albuquerque today on a 3-day visit, tossed off recurrent talk of this possibility as rumor. Haiti at its most northwestern point is 60 miles from Cuba. It occupies the western third of the island of Hispaniola. The Dominican Republic has the eastern two-thirds of the tropical island.

DON'T AGREE

Mr. Gaillard said the Haitian Government of Dr. Francois Duvalier doesn't agree with the political system of Castro because the Duvalier government "doesn't practice any Communist ideas. [The Communist Party is outlawed in Haiti.] And it's really difficult for Haiti to have good diplomatic relations with Cuba," he commented.

He said Haiti still has diplomatic relations with the Dominican Republic, but "not as strong" as before the Organization of American States condemned the Trujillo regime last summer.

Gaillard, who is doing graduate study at the University of Michigan under the State Department teacher training program, said that the education problem is the biggest one the country faces. "Seventy-five percent of the population of 4½ million is illiterate," he said.

The 26-year-old resident of the capital city of Port-au-Prince said his country badly needs economic help. Foreign investment to develop Haiti's principal agricultural resources of sugar, coffee, and sisal is needed to overcome Haiti's primitive development of those resources, he said. More technical assistance is needed, too, Gaillard added.

He said that the former regime of Col. Paul F. Magloire (1950–56) did as many Latin American governments did in using much U.S. aid to consolidate its own power. "But the Duvalier government is much better and has more of a responsibility to the people," Gaillard declared.

COLOR QUESTION

Gaillard also had some comments on the touchy "color question" in Haiti.

He described the Duvalier government as a step in the social revolution in which the predominantly Nego society is getting more representation. The Magloire government only represented the minority group (mostly mulatto).

Historically speaking, he added the mulattos have controlled the financial and economic possibilities of the country. He said President Duvalier, an American-trained physician, is popular with the people.

The national art movement in Haiti has had a wide international following. Object of the movement, he said, is to make the people conscious of its real culture, which is still basically African.

The movement, he explained, is a translation in the painting and other art forms of Haitian folklore—largely representative of African culture. The voodoo culture which comes from Africa and provides much of the inspiration of Haitian art, is an example of this, Gaillard said.

The Haitian, who speaks English well, will return to Port-au-Prince late in February to teach at the College of St. Pierre (private school with grades 6–12) there.

Stella Pays Army

EXTENSION OF REMARKS

OF

HON. DURWARD G. HALL

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 30, 1961

Mr. HALL. Mr. Speaker, I request permission to revise and extend my remarks, including extraneous material in the Appendix of the RECORD of this date.

This material includes a story, dateline—Stella, Mo.—in one of the leading daily newspapers of my district—the Joplin Globe—of March 19. It is self-explanatory, but the particular attention of the Members is called to the fact that I am today submitting a private bill for the relief of the Stella Reorganized Schools R–1, at Stella, Mo., to provide for their reimbursement in full of the sum of $1,500 paid for rental of space in empty, unused buildings at Fort Crowder, Mo., following their disastrous fire.

We are daily voting huge sums for subsidies, foreign relations, and educational purposes within and without the boundaries of these United States. It seems utterly unsound to me that we should charge one of our own school districts for the use of unused buildings at an adjacent armed services base on a standby basis. This is sufficient and an adequate reason, Mr. Speaker, but further attention is called to the fact that while these distressing negotiations were going on, the school district has, in keeping with the traditions of a prideful, God-fearing segment of our Nation, rebuilt their school, and in order to pay what the law of the land decreed was a just debt, have forgone the use of sidewalks and a much needed library. The peoples of Stella think it is now all over, and they are still first-class citizens and proud of their children, community, and the Nation, but I submit that we should return this fee in accordance with equity, principle, and fairness to all concerned.

The story supporting this point of view follows:

STELLA PAYS ARMY

STELLA, MO.—It's all over at Stella. "We just didn't feel like fighting the whole government anymore," said Alvie Kinbrough, school board member.

The Army finally has been sent payment of $1,500 rent for the school district's 1-year occupancy of a Fort Crowder barracks as a temporary school, it was announuced Saturday.

As a result of paying the bill now Stella's school probably will have to do without a library and sidewalks for a while, according to Ivan Rowe, board secretary-treasurer.

Stella's school was destroyed by fire January 15, 1959, so school officials decided to hold classes in one of Fort Crowder's unused buildings.

The Army agreed Stella could use the building until a new school could be built, in return for a "nominal" rent. Two months later, the nominal rent turned out to be $6,200 a year.

School Superintendent Don Parsons described it as "a terrific shock." The board didn't have the money.

Missouri Senators STUART SYMINGTON and Thomas Hennings introduced a bill in the Senate to let Stella use the building rent-free. A similar proposal was introduced in the House by Seventh District Representative Charles Brown.

CIVIL RIGHTS

The Eisenhower administration's civil rights program was offered as an amendment to Stella's bill. Then came a 30-day filibuster on civil rights.

Finally a House civil rights bill was used and Stella's school officials thought the trouble was over. But, Senator WAYNE MORSE, Democrat, of Oregon, insisted that the school district pay a fair rental.

Army evaluators visited Fort Crowder and decided $3,000 would be enough rent. Under a proposal by Senator MORSE, the amount was trimmed to $1,500.

The Army again presented its bill. The school board received $18,700 this month from the State, as second payment of $32,000 aid to help finance the new high school, which cost $131,000. Part of this money went to pay the Army.

It is not likely construction of sidewalks and a library for the new school will be possible for some time, according to the board secretary, since it probably would require a levy increase to finance those things now.

Stella's present school levy is $2.55.

MORSE DISLIKED

Senator MORSE became a much disliked figure in Stella because of his insistence that Stella pay rental.

In April 1960, Stella's Mayor Orville Pogue said:

"The people involved in this situation are taxpayers who have built our Government through a system of taxation. They have been taxed almost to the point of destitution and now the Government, or at least a few persons in power who do not know the situation, refuse them the right to use an abandoned barracks building in which to educate their children—unless they pay a fantastic rental fee. It's disgraceful that Congress would have let this wrangle go on this long.

"We, as taxpayers, have supported our Government without question for many, many years and in this type of an emergency we don't feel that we are asking for charity—just assurance that the Government still has the good of the people in mind," Mayor Pogue continued.

"If the Senator from Oregon was in our shoes and the citizens of Stella in his," the mayor said, "you can rest assured we would not be thinking about preserving the principle of a 'formula,' we would free him of this unfair obligation."

The mayor said that Senator MORSE was "getting in their hair" and, said the mayor, "I'm fighting mad."

Senator J. WILLIAM FULBRIGHT of Arkansas also got into the squabble in February 1960. He sought to introduce a bill of his own to grant Stella use of the building rent-free.

FULBRIGHT suggested the Government was trying to "wring the last nickle out of the poor little school district down in the Ozarks."

"How can anyone be so picayunish," FULBRIGHT said, "Maybe it is because the cumulative vote of the entire population of the school district could not, by any stretch of the imagination, influence the outcome of a national election."

Senator DIRKSEN of Illinois also got into the Stella act in February, 1960.

After what he called a tearful Senate discussion of the measure DIRKSEN went home "full of compassion about the plight of the schoolchildren of Stella." He said a personal check with the Army indicated to him that there was no intention to push for the rent payment.

"Thus," he said, "there is no intention to turn these tender little children out into the snow, unshorn, into the wintry blasts."

VICE PRESIDENT

Vice President LYNDON B. JOHNSON (then Senate majority leader) compounded Stella's problems when he secretly and surprisingly used the Stella rent-relief bill in the Senate as the civil rights vehicle.

The Stella bill had nothing to do with civil rights and southern Senators said use of it was irregular.

JOHNSON took the Senate floor to protest that "It is untrue, unfair and unjust to say that I outfoxed the southern Senators in this matter."

He contended that he had followed an honorable course. Stella had no choice in the matter.

Stella rocketed into the Nation's headlines by becoming unwittingly involved in the civil rights fuss.

Said Stella School Superintendent Parsons:

"The people and school pupils of the district have been subjected to enough hardships since the school burned. We don't intend to harass them with additional problems."

The townfolk of Stella were stunned by the national publicity.

The little town was shaken when it found itself on the front pages of the Nation's newspapers. Life magazine called to say it was on the way if someone could tell its men how to get to Stella. Dave Garroway called from New York. NBC and CBS were sending camera crews, and newspapers from major cities were either sending correspondents or calling long distance for information.

Finally the Congress agreed with Senator MORSE's proposal and sent a bill, ordering rent payment of $1,500, to the White House. President Eisenhower signed it.

NEW SCHOOL

In the midst of all the fuss Stella's students got a new school on February 15, 1960. They left behind the brick barracks building at deactivated Fort Crowder, but the problems continued.

They recalled how the flash fire had raged through their old building leaving only the brick walls. Donations of books, paper and pencils came from throughout the four-State district. New furniture and books were purchased with insurance from the fire loss, and the use of the Army building seemed a fine solution about where to hold classes.

Stella approved an increased tax levy to help pay for the new building. The basketball team played on the courts of their opponents.

Now it is all over. Stella students are in their new building with a gymnasium, cafeteria and kitchen. Grades 6–12 attend there. Other grades are in buildings near the site of the burned school.

Money from the State helped pay for the new school, and now it has helped pay off the Army.

When the receipt arrives from the Army there probably will be a celebration in Stella. Then the agricultural community can settle back out of the national spotlight and concentrate on just rooting for its winning Stella Eagles.

The Menace of Weed Seed Imports

EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Thursday, March 30, 1961

Mr. MUNDT. Mr. President, last month, Roy F. Hendrickson, executive secretary of the National Federation of Grain Cooperatives, delivered a most significant and informative address in Denver, Colo., before the Weed Society of America. I ask that it be printed in the Appendix of the RECORD.

Importations of farm products in competition with our hard-pressed American producers is bad enough, Mr. President, but it surely adds insult to

injury when we also import weed seeds, since weeds do so much to curtail farm income on our American farms.

Mr. President, a number of us have introduced S. 1314 for the purpose of doing something effective to stop this importation of weed seeds. I sincerely hope that early hearings and prompt favorable action will take place on S. 1314 since this is one area of activity in which Congress should move with unanimous support in its desire to be helpful to American farmers.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE MENACE OF WEED SEED IMPORTS

(Remarks before the Weed Society of America at Denver, Colo., February 24, 1960, by Roy F. Hendrickson, executive secretary, National Federation of Grain Cooperatives, Washington, D.C.)

Farmers spend an immense amount of time and money to combat weeds. Detailed specific cost estimates are not available. In the U.S. Yearbook of Agriculture for 1948, cost for Iowa alone was estimated at $50 million. Estimates of costs running nationally into the billions of dollars each year have been made recently.

Many species are classed as noxious. L. W. Kephart some years ago said: "With the possible exception of the Canadian thistle, quackgrass is the most notorious of all weeds and probably causes a greater monetary loss than any other single species of plant." Many other weeds are candidates for the role of top villain.

Taking into account the time and cost weeds require, their serious effect on crop yields and quality, and their all-around nuisance defects for farmers, it is remarkable how tolerant we are as a Nation of their introduction from beyond our borders.

It is truly fantastic to see the ease with which they can be distributed to infest our farms and ranches. This apathy is not justified.

There is need for more uniformity in laws, regulations, and enforcement zeal at both State and Federal levels. Especially is there needed major change in the provisions of the Federal Seed Act of 1939 to cut down or eliminate entirely the flow of noxious weed seeds from other lands to reduce the great economic waste these weed seed imports represent.

The fight on weeds native to the United States is hard and costly enough without attracting these noxious invaders from beyond our borders.

The worst loophole at the present time is represented by imports of grain and flaxseed and screenings. These contain vast quantities of noxious weed seeds, and often rich in two of the worst—Canadian thistle and quackgrass.

Tests on imported screenings by inspectors at ports of entry show that weed seed content ranges from about 8 percent to 60 percent.

Over the years the average is 35 percent weed seed content. Most of this is viable seed. The average screenings imported include 4 or more—often 8 to 20—varieties of weed seed.

These find their way to farms and feedlots of many States, spreading the noxious effects over fields and pastures.

This is entirely unnecessary and can be stopped by changes in laws and regulations if farmers, their organizations, State and Federal officials with responsibilities in this area, will mobilize their knowledge and force for one swift assault on the problem.

Currently there is no economic need for the import of these screenings. There seldom, if ever, has been. Inded, their importation at any time represents exactly the reverse of satisfying an economic need. We have an abundant supply of cereal, feed grains, and oilseeds for milling, livestock feedings, and crushing for oil. No economic need for the screenings is evident. There are good and substantial reasons for counting these imports as uneconomic and undesirable.

The prices of feed grains and oilseeds are under steady, relentless pressure domestically and in world markets. The farmer is caught in the price-cost squeeze, and obviously he can use help to reduce his cost of production which includes a substantial annual outlay for combating weeds.

The provisions of the Federal Seed Act, enacted in 1939, prohibit the importation of seed containing noxious weed seeds in excess of specified rates of occurrence.

Specifically, section 301 of the Federal Seed Act prohibits the importation into the United States of "screenings of any seed subject to title III of this act"—but then note this exception wider than a barn door—"(except that this shall not apply to screenings of wheat, oats, rye, barley, buckwheat, field corn, sorghum, broomcorn, flax, millet, proso, soybeans, cowpeas, field peas, or field beans, which are not imported for seeding purposes and are declared for cleaning, processing, or manufacturing purposes, and not for seeding purposes); * * *"

Thus, the exceptions are more substantial than the prohibitions. Indeed, so far as weeds are concerned, the law is a welcome mat. It should be revised, brought up to date.

Screenings are defined under the act to include "chaff, sterile florets, immature seed, weed seed, inert matter, and any other materials removed in any way from any seeds in any kind of cleaning or processing and which contain less than 25 percent of live agricultural or vegetable seed."

It is evident that this is not a prohibition on weed seed imports but only a provision intended to minimize the use of screenings as an adulterant in seed. Only to that small extent was it addressed to weed seed. Of course, weed seed can be spread fast and over vast areas in feeds in which screenings are used. Usually screenings are used as a small percentage ingredient in feeds, and thus the imported weed seeds influence a vast tonnage distributed to farms and feedlots.

All of the major types of screenings are exempt. The biggest of all in the case of Canada are wheat screenings, and this type well pinpoints the problem.

That great, fertile area, the Prairie Provinces of Canada, produces large annual crops of wheat, barley, oats, rye, and flaxseed. Most is destined for export in competition with our grains and oilseeds.

In its energetic effort to expand markets for its wheat, Canada has adopted tighter policies to overcome one of its serious harvesttime quality problems, the presence in the grain of substantial weed seed and other dockage and foreign material.

At local and terminal elevators a standardized program of cleaning is carried on under government leadership in the reception and settlement for wheat with farmers on a quantity and quality basis. This results in the creation of a vast volume of screenings, as Canada now offers in world markets regularly wheat with maximums as low as one-half of 1 percent of dockage and foreign material combined. Such wheat, requiring low cleanout by mills abroad, finds strong market demand.

These screenings, in abundant supply in Canada, are usually available at prices representing little more than actual grain or oilseed content (under 25 percent to qualify as screenings) plus loading and freight cost at such large grain terminal centers as Vancouver, British Columbia, and Fort William-Port Arthur. The tariff on imports into the United States is low and on an ad valorem basis. Sometimes the screenings seem attractive because they narrowly clear the 25-percent maximum of live agriculture seed which keeps them barely within the screenings category. Thus their true grain content, often of high quality, sometimes induces a premium payment, in competition with U.S. feed grains in surplus supply seeking domestic outlets.

Under these conditions it would seem logical to see bills pending in the U.S. Congress to set up reasonable protection against the flood of weed seed crossing our borders.

But instead, the only bill pending in House and Senate is one pending to broaden the list of commodities whose screenings are exempted. S. 214, introduced (by request) by Senator MAGNUSON of Washington State, would insert after the word "buckwheat" the words "rapeseed, mustard seed."

If passed, which is not likely, you would witness an added flow of screenings consisting of up to 24 to 24½ percent rapeseed and mustard seed, with an average of 35 percent weed seed, and the rest inert matter. This would compete with our protein feeds as an ingredient, and these are in abundant supply. But this competition is not our concern here—rather it is the menace represented by the import and distribution of this vast volume of weed seed.

The Department of Agriculture has reported unfavorably on S. 214. I understand that of 35 States replying to a USDA questionnaire sent out in September 1959, 24 reported they favored Federal legislation restricting importation of screenings. I am surprised that the number was not higher. Who can justify this gaping loophole?

It is not only a problem in States along the border. I have seen the weed screenings from Canada frequently, in fact routinely, in dairy feeds sold within 10 miles of the Nation's capital.

What is the magnitude of the importation of screenings? In the last decade, in terms of tonnage, grain screenings except flaxseed range from 150,000 to nearly 300,000 tons a year. But the significant point is that on the average 35 percent of this is weed seed. That means from 50,000 to more than 100,000 tons of weed seed a year.

In value stated for purposes of determining duty, the group ranges from $2.5 million to $6 million.

In addition, flaxseed screenings alone, all from Canada, have ranged since 1954 from about 30 million pounds to 92 million pounds, with a value of about one-half million to well over a million dollars a year. They are filthy with weed seed content, many noxious under definitions used in most States.

Canada is the chief source, but shipments of Mexican, Brazilian, and Argentine origin are also shown. Last year Cuba was also a source.

In terms of volume, here is a picture of receipts in carload lots at one port of entry—Duluth—alone:

	Cars
January–March 1958	59
April–June 1958	50
July–September 1958	64
October–December 1958	69
January–March 1959	164
April–June 1959	96
July–September 1959	63

Briefly let us look at the content of typical shipments, as shown in the reports of inspectors.

Here is a car received at Duluth last October 20. It contained 33.658 percent of weed seed. There were 900 or more Canadian thistle seeds to the pound; 3,600 or more mustard seeds to the pound; 24,750 Frenchweed to the pound; and some 200 or more sowthistle to the pound.

Quackgrass seed is typically found in large numbers, a study of many samples shows.

The vast quantities of weed seed thus introduced is the important point. Few nations share our tolerant laws in this respect.

The impact of these imports in terms of harm tends to be great and usually is concentrated in areas of distribution dictated by transportation costs and available modes of transportation, including rail, trucks (within the United States), and lake vessels.

It is true that some States have stringent paper requirements with respect to grinding or heating the weed seeds, intended to render them nonviable. Such measures are seldom wholly satisfactory.

These rules vary, and a helpful movement toward greater uniformity is underway. Of course, such paper regulations are not self-enforcing. Faith to that effect would be misplaced. Often State enforcement personnel is limited. The primary need is to concentrate on halting the unneeded and undesirable imports rather than on expensive policing followup often required here.

It seems to me that, in view of the potential damage to the fields and pastures of the U.S. farmer, this whole area of weed seed distribution requires some further research, but actually more the application of what is known but not well undertsood. There is a need for education and the building of interest and understanding which will lead to prompt and effective action.

The first need is to attack effectively these wholly unneeded, unworthy, and unwelcome imports.

Certainly a vigorous self-defense effort in this respect could not be interpreted as an unfriendly act by any exporting nation—chiefly Canada in this case. No country, least of all Canada, would take pride in serving as the source of noxious weed invaders.

Canada does not permit truck shipments of such weedy screenings, to protect her farmers and roadsides. She treats her own weed seeds like smallpox, would hardly expect more neighborly treatment elsewhere. For example, in 1950, the Canadian Feed Law prohibited the sale of screenings in Canada containing over 1 percent of certain named ground seeds considered injurious to the health of animals. They included seeds in the mustard family. The Canadian law also limited the number of viable noxious weed seeds to 15 per ounce. Thus, the Canadian standard was and is higher than our standard.

How can we do less for Canada re its screenings than it does for its own farmers?

This society has an opportunity and a responsibility, in my opinion.

To you who are technically trained and competent, and capable of full awareness of the danger and damage of weed seed importation and migration, we must look for leadership.

I am sure that utilizing the information already at hand, and alerting all who have a genuine basis of interest in this serious matter, including Members of Congress, would soon achieve results.

I know that farmers who have formed and control grain cooperatives will actively support a program to meet this problem, not only those marketing grain but those manufacturing and supplying feed to their farmer members.

Personally, I served as a member of the original USDA committee which developed the Seed Act of 1939. I am now aware of many of its deficiencies, especially its grave defect on imports of weed seeds in screenings. I will volunteer to be of any possible assistance if you will assume leadership to obtain needed action in behalf of producers.

Imports Are Exporting Your Jobs

EXTENSION OF REMARKS
OF

HON. J. EDGAR CHENOWETH
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 30, 1961

Mr. CHENOWETH. Mr. Speaker, I wish to include in my remarks an excellent article by A. F. Franz, president of the Colorado Fuel & Iron Corp., which appeared in a recent issue of the Blast, the company publication printed at Pueblo, Colo. Mr. Franz calls attention to the fact that imports are taking the jobs of American steelworkers, and his observations deserve our serious consideration. The article follows:

IMPORTS ARE EXPORTING YOUR JOBS

The trend in steel import and export statistics for the past several years reveals disturbing evidence that foreign competition is seriously affecting the economy of America and particularly some of the smaller steel companies. Foreign competition is hitting hard at Colorado Fuel & Iron and you. Our sales people know how deeply imports have cut into Colorado Fuel & Iron sales and profits. They have learned firsthand that imports are a real threat to Colorado Fuel & Iron business, and promise to become even greater.

Colorado Fuel & Iron is not the only company affected. One source reports that since 1956 2 million Americans have lost their livelihood because of foreign trade changes. Metalworking managers are wondering where the boom promised for the 1960's has gone. Many suspect it has "gone abroad."

While American business limps along at a disappointing pace, steel mills, auto plants, and other metalworking establishments abroad are zooming ahead at almost full capacity with up-to-date mills. Foreign steel companies are supplying more goods to the world market; the United States is supplying relatively less. Our imports are high. Our exports are lagging. Our steel companies are losing business. Our workers are losing jobs. Our Government is losing tax revenues.

Never has competition been so dramatically obvious. Everywhere we look—we find steel, automobiles, machinery, hardware, appliances, housewares, toys, and other items with such bargain-promising stamps: "Made in West Germany," "Made in Japan," "Made in Belgium," or "Made in Hong Kong." These items often are made as well as ours and almost always sell for less.

WORLD STEEL PRODUCTION

Within the past 10 years the steel industry throughout the world has grown tremendously. Foreign countries have spent, and are spending, billions of dollars to expand and improve their steel production. During World War II, the European and Japanese steel industries were, in great part, destroyed, and have since been rebuilt with modern equipment, much of which was financed by the United States. Flat on their backs 15 years ago, many of their plants today are as good as our most modern installations and far superior to much of our older equipment. These foreign countries are now producing excellent products by means of efficient low-cost operations—which sell much cheaper than American-made steel products. They are becoming more competitive every day.

I pointed out the dangers of this situation in my address to the American Iron and Steel Institute on May 28, 1959, entitled "The Big Squeeze on Little Steel," when I said:

"We no longer have the superiority in facilities that for years permitted us to pay higher wages, and still produce cheaper and better steel. Moreover, foreign producers have wage rates much lower than those paid in the United States, and, because of modern equipment, their productivity and sales are increasing rapidly at our expense."

STEEL IMPORTS AND EXPORTS

We at Colorado Fuel & Iron have particularly felt the impact of imports.

In 1960 Japan, West Germany, and other foreign countries dumped into Colorado Fuel & Iron's backyard (and the backyards of other steel fabricating companies) tons of precisely those products we make—at prices far too low for us to compete on a satisfactory profit margin.

The increase in imports, and the decline in exports of steel mill products, including pig iron, did not occur overnight. It has been developing for a number of years, as shown in the following table:

[In tons]

Year	Exports	Imports
1957	6,074,163	1,388,752
1958	2,802,805	1,931,559
1959	1,697,313	5,137,349
1960	3,100,711	3,720,349

We hear much about "imports and exports" of steel balancing each other, which may be true for the industry as a whole. However, the following table clearly exhibits the impact of the unfavorable balance of total U.S. imports and exports on Colorado Fuel & Iron Product Mix:

Total U.S. imports and exports of C.F. & I.-type products for 1960

[Net tons]

Products	Imported to the United States	Exported from the United States
Wire rods	408,216	10,237
Concrete reinforcement bars	515,541	15,872
Hot rolled bars	127,787	43,833
Structural shapes	501,287	283,972
Steel pipe and tubing	480,091	195,197
Wire nails	231,759	4,661
Wire fencing	27,949	1,350
Barbed wire	52,973	565
Wire rope and strand	36,000	9,400
Round wire and steel wire	206,661	13,951
Galvanized and other coated wires	26,969	8,392
Pig iron	330,847	111,773
Total	2,946,080	699,203

Source: U.S. Department of Commerce.

WHAT ABOUT COLORADO FUEL & IRON?

As far as Colorado Fuel & Iron is concerned, foreign competition is no phony scarecrow. It is a startling reality. Imports from Japan and Europe of products made by Colorado Fuel & Iron are much greater than exports. This unfavorable balance is squeezing Colorado Fuel & Iron and Colorado Fuel & Iron employees. It means fewer jobs.

Other steel companies were also affected by the above import-export product-mix. However, the companies who operate sheet and strip mills had the advantage in 1960 of exporting more tonnage than was imported, as shown in the following table:

U.S. imports and exports of flat rolled products for 1950

[Net tons]

Products	Imported to the United States	Exported from the United States
Sheets and strip, hot and cold rolled	350,949	1,333,354
Tin and terne plate (including tin mill black plate)	39,264	685,753
Total	390,213	2,019,107

Source: U.S. Department of Commerce.

In making an appraisal of the unbalanced import-export situation, our State and Federal Governments must study the impact on unemployment in individual companies—rather than on industry as a whole. What happens on a national basis is of no help to the Colorado Fuel & Iron man who loses his job in California, Colorado, New Jersey, New York, or Massachusetts.

WHAT DOES FOREIGN COMPETITION MEAN?

Let's look at foreign competition in the steel industry. Why is it so threatening? What is its effect on you? The answer: fewer jobs—unless we halt the tide.

Foreign competition emphasizes that we are not alone in the marketplace. For every product we make there is a list of competitors turning out a similar product. The competition is not only foreign but American as well. And every competitor wants to sell his products just as much as we do ours. Competition has been the driving force behind American achievement and has made us the most progressive and the most envied people of the world. In America we have been champions of the right to compete. Our hard-working forefathers challenged world leaders in almost every market, and won.

Now we are being challenged.

Some are questioning whether the economic system which made America great should be continued or abandoned. Perhaps we have just awakened to the fact that we have always known: This is a competitive world. No laws, agreements or protective organizations are going to change that fact. If foreign competition jolts us out of our smugness and arouses us to the realities of competition, we must face the challenge. Meet the competition wherever it comes from, and we progress and grow. Fail to meet it, and we are out of business. That's the way the game is played. We have to contribute our best to earn the best.

WHAT IS COLORADO FUEL & IRON DOING?

In spite of the "impact of imports" on Colorado Fuel & Iron, we are not taking a backward step. We plan to move ahead.

1. Your management has appealed to the President of the United States through our Senators and Congressmen to reestablish the 25-percent differential on Government bids which was generally in effect from 1933 to 1954, and was changed to 6 percent by Executive order of the President in 1954. What does this mean? The Government now awards contracts to American firms over foreign companies so long as our bid does not exceed theirs by more than 6 percent. The present differential of 6 percent is too small. If the 25-percent spread was important from 1933 to 1954—it is imperative today.

Your management has also appealed to the governments of the various States to enact legislation protecting American industry against foreign competition.

2. Your management is striving for more favorable tax statutes on capital expenditures and depreciation rates to enable us to compete at home and abroad by rebuilding, modernizing, and expanding Colorado Fuel & Iron facilities.

Such a move would create a climate of business opportunity, a better sense economic stability and economic progress, and thus make jobs available to American workers.

3. Your management is continually searching for new ideas, new methods and techniques, new products and product development. Constant research and improvement is necessary if we are to keep abreast and move ahead of competition.

WHAT CAN YOU DO FOR COLORADO FUEL & IRON ON YOUR JOB?

If we ask that question seriously, we once again recognize a challenge which has always been around, and we are ready to stop kidding ourselves.

Just as we know the problem, we know the answer. Let's face it. We know what we have to do. This is not just a task for management. It's a battle every Colorado Fuel & Iron employee must fight.

1. We must maintain quality standards that assure a quality product which is second to none.

2. We must provide service which is the best.

3. We must give the customer what he wants when he wants it.

4. We must fight for the order, and work our heads off to keep it.

5. We must do an honest full day's work for a full day's pay.

6. We must handle machinery, equipment, and supplies with care and without waste.

7. We must constantly look for new ways to do a job better and more efficiently.

8. Each of us must consider that it is a personal obligation and responsibility to reduce costs and increase performance.

9. There must be complete cooperation between labor and management.

Manufacturers, labor unions and the public must unite in a common effort to keep the American steel industry competitive at home and abroad. Foreign competition and rising unemployment are the major problems confronting us. Now is the time to contact your representatives in Government. Tell them what imports are doing to Colorado Fuel & Iron and your job. They are interested in preserving American jobs.

Results of Questionnaire Mailed by Hon. John F. Baldwin of California, to Residents of the California Sixth District

EXTENSION OF REMARKS

OF

HON. JOHN F. BALDWIN, JR.

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 30, 1961

Mr. BALDWIN. Mr. Speaker, 6 weeks ago I mailed a questionnaire to every family of registered voters in the California Sixth Congressional District. The response to this questionnaire was so large that my office was swamped for weeks with returned completed questionnaires and accompanying correspondence. Many constituents not only answered the questionnaire, but wrote detailed comments on the back of the questionnaire, or attached supplementary letters. I have spent many hours personally reading all these comments, and they have been most helpful. I am firmly convinced that a Congressman can better represent his constituents if he knows the views of all of those constituents on important issues pending before Congress, than if he does not know them.

The tabulation of the questionnaire is summarized below:

1. A constitutional amendment has been introduced in Congress to eliminate the electoral college procedure for electing the President, and to provide for the election of the President and Vice President by direct popular vote. Would you favor or oppose this amendment? Favor, 82 percent; oppose, 13 percent; undecided, 5 percent.

2. If Premier Castro of Cuba demands that we give up our Naval Base at Guantanamo Bay, Cuba, do you believe that we should give it up, or that we should stand fast and defend the Base if necessary? Give it up, 6 percent; stand fast, 87 percent; undecided, 7 percent.

3. In view of present world conditions, do you believe that our defense expenditures should (a) be increased 56 percent; (b) remain the same 34 percent; or (c) be decreased 10 percent?

4. If Russia and the United States cannot agree within, say, 6 months, on a written agreement for the permanent cessation of nuclear tests, do you feel that the United States should resume underground testing of nuclear weapons? Yes, 80 percent; no, 9 percent; undecided, 11 percent.

5. Do you believe that the House Un-American Activities Committee should be continued or abolished? Continued, 70 percent; abolished, 18 percent; undecided, 12 percent.

6. In the past our major U.S. Embassies at London, Paris, Rome, etc., could only be filled by Ambassadors who were personally wealthy because Congress had never appropriated an adequate sum to operate these Embassies. Would you be in favor of having Congress increase the appropriations for operating these Embassies so that career diplomatic personnel could be assigned to them without personal financial sacrifice? Yes, 80 percent; No, 12 percent; undecided, 8 percent.

7. A proposal has been made that the United States should establish a "Foreign Service Academy" to train personnel properly for service in overseas posts, including foreign language training. Would you favor or oppose this proposal? (a) Favor, 85 percent; oppose, 9 percent; undecided, 6 percent.

8. The United States has been experiencing a serious outflow of gold to other countries. In view of this fact, would you favor a limitation on the expenditures of U.S. tourists in foreign countries? Yes, 73 percent; no, 19 percent; undecided, 8 percent.

9. Do you believe the President should, by legislation, be given the right to require compulsory arbitration of a strike where he determines that the safety or welfare of the Nation is adversely affected by the strike? Yes, 86 percent; no, 9 percent; undecided, 5 percent. Answers from union members: Yes, 87 percent; no, 10 percent; undecided, 3 percent. Answers from non-union members: Yes, 87 percent; no, 9 percent; undecided, 4 percent.

10. The Aid to Needy Children Program has been criticized because it requires one spouse to leave the home before a family can qualify for "Aid to Needy Children" payments. Would you favor a modification in the Law so that a family whose wage earner is unemployed or underemployed could qualify for "Aid to Needy Children" payments without one spouse being physically required to be absent from the home? Yes, 57 percent; no, 25 percent; undecided, 18 percent.

11. We have a serious postal deficit, which this year will exceed $800 million. Would

you favor increasing postal rates so that each class of mail pays its own way? Yes, 74 percent; no, 18 percent; undecided, 8 percent.

12. It has been proposed that the Federal Internal Revenue Laws be tightened up so that deductions for business entertainment expenses would be materially restricted in scope. Would you favor this proposed change? Yes, 80 percent; no, 13 percent; undecided, 7 percent.

Profit-Price Inflation

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Thursday, March 30, 1961

Mr. KEFAUVER. Mr. President, an editorial in the March 1 issue of Justice, published by the International Ladies' Garment Workers' Union, contains one of the clearest definitions of consumer dilemma that I have read in a long time.

It makes the excellent point that while free collective bargaining enables the worker to influence to some extent the amount of his earning power, he is virtually powerless as a consumer to influence the prices he must pay for what he buys.

The result is what I would call an inflation gap in which the only effective buffer between corporate giants who set prices and the consumer who must meet them is Government vigilance.

I am appreciative of the kind remarks accorded me in this editorial. As chairman of the Senate Antitrust and Monopoly Subcommittee, I am naturally proud of the contributions our group has made in the effort to keep prices down.

At the same time, I am delighted to note in the press that the President plans to create a Consumers' Council within the executive which will, among other things, represent consumer interests before regulatory bodies whose decisions affect a broad range of prices for goods and services.

From the information I have, many of the objectives in the President's plan are similar to those in a bill which several other Senators and I have introduced previously to create a Department of Consumers.

It has been my purpose to reintroduce this bill at this session. We are giving this matter further study and have discussed it with the administration.

I ask unanimous consent that the editorial from Justice which I referred to be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

PROFIT-PRICE INFLATION

More than a century ago a great New Englander noted that the mass of men lead lives of quiet desperation. Despite the progress made by the world since then, most Americans can vouch for the continuing truth of this judgment: Pay envelopes lag behind bills, high-pressure selling opens new desires beyond the reach of current income, indebtedness multiplies in variety and becomes increasingly heavy.

The worker has only his earning power to contend with these. Standing alone, this is not much of a weapon for the single worker. But joined together, that power mounts and must be dealt with. Collective bargaining through unions is the worker's answer to the bosses' monopoly control of money and jobs.

For the worker, bargaining is essential. But he cannot bargain for everything. He can, through his union, bargain for wages, for working conditions, for health and retirement safeguards. He can, as the expression goes, "give a little and take a little."

But there are other areas of life in which the ability to bargain is curtailed or even nonexistent. There is bargaining with the storekeeper if there are other stores in which to do comparison shopping. But there is no bargaining with a landlord when there are no other homes to be had.

Through the chain of bargaining, the worker as consumer is linked to storekeeper to supplier to manufacturer but he can bargain, if at all, only with the first of these. It is with the storekeeper that he must deal when he buys electric bulbs or canned goods and he never meets the great giants which supply the bulbs and the tins and, in their own mysterious way, set the unbargained prices for them.

There has been much wringing of the hands over the so-called inflationary impact of higher wages. But wages are the bargained ingredient of price while other ingredients are not bargained. Wages are always limited by the downward pressure exerted by employers. But there is no limit on the upward price pressure that results from the ability of corporations, out to maximize their profits, to set prices without bargaining with those to whom they sell and without competing with those who supposedly are their competitors.

Bargaining is the essence of the free market, the key to free enterprise. It is the free play of supply and demand until they come to rest at a crossing point labeled "price," we were taught in school.

Yet, where was free enterprise, where was the free market, where was free bargaining in the case of the giant electrical equipment corporations, 44 of whose second echelon true-blue American managers have been sentenced for rigging prices on products that go into every worker's home?

In their case freedom was the freedom of a handful of well-kept individuals to set prices with no regard for supply, demand, wages, inflation, farmers' welfare, national security, humanity or anything else—except how to get the highest possible profit without giving the game away.

Only the eagle eye of a shrewd and skilled investigator named ESTES KEFAUVER led to their exposure. The Senator from Tennessee, head of the Antitrust and Monopoly Subcommittee, caught on to their game when they submitted identical bids for the sale of equipment to the Tennessee Valley Authority.

No single consumer could have dealt with the electrical Goliath. That's why big business resents Government policing in such matters. But if inflation is paying for something that isn't there, that's exactly what the giants make Americans do.

We applaud the efforts of the Senator from Tennessee as he continues to track down other inflators of prices and deflators of American ideals.

Forty-third Anniversary of the Byelorussian Declaration of Independence

EXTENSION OF REMARKS
OF
HON. ROBERT N. GIAIMO
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 30, 1961

Mr. GIAIMO. Mr. Speaker, March 25 marked the 43d anniversary of the Byelorussian Democratic Republic's declaration of independence. It is fitting that we should pause at this moment in history to remember this day and to pay tribute to the brave people who must celebrate their anniversary of freedom in silence and amidst the cruelty of Soviet domination. For the record of the Byelorussian people dramatically gives lie to the Soviet pretentions of serving the cause of the world's oppressed.

Byelorussia is a culturally and historically independent nation. Situated at the crossroads of West and East, Byelorussia as an independent country held an important place in the medieval history of Eastern Europe. Late in the 18th century the country was forcefully absorbed into the Tzarist Empire. Since that day, the people of Byelorussia have continuously sought to regain their freedom and independence. The 19th century was marked by several courageous revolts against Russia domination.

The national aspirations of the Byelorussian people were finally realized on March 25, 1918. On that day the elected representatives of the people seized upon the opportunity created by the Russian Revolution and declared the independence of Byelorussia. The promise of freedom was realized only to be frustrated again by military force. Against overwhelming odds, Byelorussia could not long resist the pressure of Soviet imperialism, and the young nation fell victim to the Red Army.

Since that tragic day the people of Byelorussia have been constantly subject to the most ruthless of persecutions. Millions of these brave people have been deported and millions of others exterminated. The Kremlin's efforts have been heartless and they have been thorough, but they have not been successful. Despite decades of cruel oppression the spirit of freedom and the desire for independence continues to live in the hearts and minds of the Byelorussian people.

As we commemorate the anniversary of Byelorussian independence, let us hope that our sympathy for and our deep admiration of these courageous people will be of some comfort to them. We who are more fortunate pray and hope that the time will not be long before the Byelorussian's long nourished aspirations will be once again fulfilled and the people of this unfortunate nation can openly and joyously celebrate the anniversary of their independence as we in free nations celebrate ours.

Migrant Farm Labor: A Serious National Problem

EXTENSION OF REMARKS
OF
HON. JEFFERY COHELAN
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 30, 1961

Mr. COHELAN. Mr. Speaker, one of the truly significant domestic problems which we as a Nation face today is the plight of the migrant farm laborer.

On March 9, 1961, CBS Television presented a memorable debate entitled "The Migrant Farm Worker—Is Federal Legislation Necessary?" Arguing against Federal legisaltion was Charles Shuman, president of the American Farm Bureau Federation. Presenting the affirmative, and basing his discussion on his experience as chairman of the Senate Subcommittee on Migratory Labor, was Senator HARRISON WILLIAMS, of New Jersey.

Senator WILLIAMS and Mr. Shuman sharply defined many aspects of this serious problem and, under unanimous consent, I include the text of their debate in the RECORD.

While arguments are raised against enacting Federal legislation which would insure minimum standards of protection for these interstate workers and their families, I am acutely aware of the discouraging conditions under which our migrant farmers live. These conditions constitute a serious problem for all Americans, for they include homelessness, poverty, ignorance, hunger, and disease.

Senator WILLIAMS' arguments are forceful and to the point, and I believe that it is time for Federal action in this field of human need:

Mr. SMITH. Good evening.

Last November CBS Reports televised "The Harvest of Shame," a 1-hour examination of the conditions of the men and women who move from State to State harvesting our bounty of fruits and vegetables. "Harvest of Shame" was highly praised and criticized in editorials throughout the Nation, and praised and criticized on the floors of the Senate and the House here in Washington.

The program helped to bring national attention to the condition of the migrant farmworkers, about which subject 11 bills were introduced in the Senate just last week.

Tonight, for 30 minutes, two distinguished authorities on the issue will debate the question: "The Migrant Farmworker—Is Federal Legislation Necessary?"

For the affirmative, Senator HARRISON WILLIAMS, Democrat, New Jersey, chairman of the Senate Subcommittee on Migratory Labor, and author of the bills on the subject; opposed to Federal legislation, and representing most of the growers of the Nation, Mr. Charles Shuman, the president of the American Farm Bureau Federation.

Mr. Shuman feels that migrant workers should have the right to join unions and to strike, but not during harvest season.

First to speak, for Federal legislation, Senator WILLIAMS.

Senator WILLIAMS. Thank you, Mr. Smith—Mr. Shuman.

First let me say that I am very grateful for this opportunity to discuss one of the hardest problems we have yet before us in this country. As a citizen, I have been interested for many years in the problems of our migratory farmworkers. Recently, as chairman of the subcommittee, for 18 months I have been intimately associated with these problems.

When we started our work 18 months ago, we believed that we then knew certain problems of the migratory farmworker, we knew that there were up to 2 million Americans traveling this country, bringing in the harvest, leaving Florida, traveling up the east coast through the various States to New Jersey, New York, on into New England; leaving Texas, and traveling up through the interior to the northern States of Minnesota and Wisconsin; and on the west coast, leaving southern California and traveling on to Oregon and Wisconsin—Oregon and Washington.

And we knew, too, that the children of the migratory farmworker did not share in educational opportunities enjoyed by all other American children.

And we knew that the average income was a pathetic $900 a year.

We knew at that time, when we began our work, the sad facts of high infant deaths, of tragic highway accidents in vehicles that were dangerous.

We knew, too, that children spent all day in the fields with their parents, or perhaps even more tragically, were left back at the camp to shift for themselves while their parents were out planting or picking the crops.

These were cold statistics that we analyzed when we started our work, but that was not enough. We wanted to understand and feel these problems, and following our creation as a subcommittee, in order to understand the wretchedness that had been diescribed, the deprivation that had been described, we took our Committee all over this country, and there we saw the statistics come to life.

We saw families crowded into one room shacks. We saw the men and women working in the fields 12-hour days. We were there at the middle of the day at high noon, in hundred-degree temperatures, and we were there at the end of the day, when they got $6 for their day's work. We saw them at the end of the day, back in the camp, when literally there was nothing—nothing to do, no plans to make, no hopes to nourish.

Mr. SMITH. Senator, we are almost at the end of your time.

Senator WILLIAMS. I will say that we have seen these barren lives, we have seen youngsters whose only playground was a battered old car littered with glass, and there they played barefoot.

It seems to me that in this country where we have done so much for ourselves, where we have brought health care to all of our poor people, welfare to all of our poor people, we have excluded it from this group of people who are rootless and homeless, who have no State and no residence. We have protected ourselves in so many ways with minimum wages, child labor prohibition, short workweek of 40 hours, all the new deal has been excluded from the lives of our migrant farm families in this country.

I think the answer is yes, the time has come when our Nation must recognize that these people are entitled to the same protections that all other Americans enjoy.

Mr. SMITH. Senator, you will be able to come back to that.

Can we have the opening statement now from Mr. Shuman?

Mr. SHUMAN. Thank you, Mr. Smith, and Senator WILLIAMS.

I appreciate very much the opportunity to come here and first to compliment Senator WILLIAMS and his Subcommittee on Migrant Labor for the conscientious job that they did in examining the conditions, inquiring into it, and giving many people a chance to make statements as to what the conditions were in agriculture and in migrant work.

Now, we, representing farmers, frankly admit that we have problems. As far as migratory workers are concerned, these problems are more social than they are employer-employee relations problems. These problems are serious but they are not as serious, Senator, as you have described. They are not as serious as were described in "The Harvest of Shame," of November 25.

This was a very obvious propaganda piece. It was slanted, distorted, untruthful. For instance, "The Harvest of Shame" indicated, and I notice the Senator indicated, that 2 to 3 million migrants, "The Harvest of Shame" tried to make it appear that there was a dollar a day wages; you said six. At least we are $6—six times as well off as we were.

"The Harvest of Shame" tried to make it appear that these children had little or no schooling, said there's no record of a college graduate among the migrants. It pointed out that transportation was like cattle.

Now these are serious charges. It said that the housing was miserable, that these people had no chance to get out of the migrant stream.

What are the facts? I think that is the thing that the American people want to know, and I realize that I come here somewhat as an underdog. Farmers are one-tenth of the population, we are the lowest major segment on the totem pole, economically, our prices and our income are down. We have been regulated by the Federal Government and subsidized to the place where we are almost broke and much of our trouble is due to too much Government.

Now we come here with this distorted propagandized type of approach to justify Federal legislation.

What are the true facts?

Instead of 2 million to 3 million migrants, it's 400,000.

Instead of a dollar a day or $6 a day, many of these migrants make $15 to $20 to $35. The average pay is over a dollar an hour and not a dollar a day. They are transported under Federal interstate commerce regulations. If anybody transports them any size, any great distance in cattle trucks, they should be prosecuted.

The housing is not all the best that we would like, but it's improving a great deal.

And, Senator, I notice that in the hearing record that the folks who know about the migrant program and the problems best were the ones who were not enthusiastic for Federal regulation. For instance, a friend of mine, Martin P. Castlewood, Commissioner of New York State Department of Labor said "My own personal opinion is that any Federal legislation in the area of migratory farm labor should be on a basis which permits the States which are willing to accept the responsibility for reasonable standards, to continue to have the responsibility for the enactment and administration of such standards."

Then from your own State, Senator WILLIAMS, a friend of mine, Phil Lamphey, Secretary of the Department of Agriculture, he said "We have made tremendous progress over the past three decades in establishing suitable and adequate migratory labor camps."

Mr. SMITH. Excuse me, Mr. Shuman. I have allowed you 2 minutes beyond your time.

May I open up the discussion, but before I do, I wouldn't want my silence on your criticism of the program that we produced, the "Harvest of Shame," to be considered an agreement with what you said.

Since you did criticize the program, I would like to say to you that though I said there was praise and criticism, in fact there was much more praise than criticism

and we received the remark from the executive secretary of the President's Committee on Migratory Labor to this effect "CBS Reports is receiving the same treatment everyone receives who dares to question labor practices in agriculture. If your program had not been attacked by the growers, it would have been a meaningless one."

However, that's about that program.

I hope we can now go back to the subject, and you can debate, not me, but Senator WILLIAMS.

Senator, the floor is yours, now.

Senator WILLIAMS. Thank you again, Mr. SMITH.

I don't want to take all of my time here in rebuttal to general statements of Mr. Shuman. I gather when he was talking about the propaganda piece he was talking about the CBS program "Harvest of Shame." CBS certainly does not need me in its defense and I don't believe you meant to imply that any of the work that we were doing receives the Farm Bureau charge that we are propagandizing or using——

Mr. SHUMAN. No, no.

Senator WILLIAMS. Any unhappy devices.

I would say in answer to, first of all, an observation—I got the impression that you're feeling a bit sorry for yourself, Mr. Shuman, that the farmer is the underdog, he is only 10 percent of the population. We are dealing here with the problem of farmworkers and these farmworkers are excluded from every piece of social and economic legislation in our Nation, with the exception of social security. And, believe me, I've been through many States and I have yet to see social security withholding on the average migrant farmworker. So here, to, in fact as a practical matter he is excluded. So, as underdogs, and if you are opposed to legislation you have certainly had your way but I would like to deal first of all with some of the legislation that we propose and I think we should get your view on it.

One of the hardest problems we have seen is the failure of communities to—to make possible education for the youngster who is there for a few weeks or maybe a month or two. We know that the young people of migrant farmers are falling every year farther and farther behind their age groups.

We have a report from Time magazine that, in August, out of 8,000 youngsters only 600 had gotten an education while they were in Colorado.

In response to this, a real, real problem, we have legislation that would provide Federal assistance to communities that try to welcome these youngsters into their school systems while they are there—a 75-percent grant of the operating costs, that scales down to 50 percent.

We also, and perhaps even more importantly, provide grant money to communities who will—who will start summer schools for these youngsters. They are there, as I describe, they are either in the fields or they're shifting for themselves. The schoolhouses are empty. The teachers could be found at very modest cost. We provide $250,000 a year, only that for summer schools for the youngsters when they are traveling north in the areas where schools are not in session.

Now it seems to me that the Farm Bureau could be proud of itself if it would recognize this as a problem and support this. I know that they know, and that you do support better educational opportunities for migrant farm youngsters and I just can't understand the opposition to this measure.

Mr. SHUMAN. Well, Senator, we are not opposed to regulation, per se. We are not opposed to the idea of improvement. In fact we recognize that there has been a tremendous improvement in the way in which the migratory workers are treated, their living conditions, their educational opportunities and all the rest and I think the hearings of your subcommittee——

Senator WILLIAMS. Well, now——

Mr. SHUMAN. Recognizes this and I think that you, sir, certainly do after hearing the testimony of the folks who know best.

Senator WILLIAMS. Here and there there is a blue patch in a very dark sky, I will grant that, and I always recognize it and applaud those people who are showing improvement—but, across the country they are being left out of education, the youngsters. Can't we have a view here, of—an understanding of the problem, at least?

Mr. SHUMAN. Now, let's get it straight.

The proposed legislation is a subsidy from the Federal Government to the States for the education of the migrant workers.

Now, the point that I want to make is that educational subsidies from the Federal Government will not necessarily improve the educational opportunities of these people. They are subject to the same compulsory school attendance requirements that any other children are and——

Senator WILLIAMS. And they are not getting the education, because the school communities can't stand the operating cost burden that this would impose.

(Simultaneous voices.)

Mr. SHUMAN. I don't think——

Senator WILLIAMS. It seems to me——

Mr. SHUMAN. I don't think this is true, Senator, because there is absolutely no evidence, either in the hearing record or anywhere else, that we cannot afford a good educational system with the resources we have at State and local levels. The Federal Government is far more—far less able to take care of the additional needs of the people, based on the relationship of the Federal debt to the resources and the tax load, than is the local and State school system.

Senator WILLIAMS. That is a conclusion, of course, not shared in by a majority of the people in the country, and the President has asked us to give him a program of support to public education for permanent residents.

But let us move on to one other aspect of the legislative program that we propose.

You and I know that the average adult who travels as a migrant farm worker, he, too, has been left out in his early years of the fundamentals of education to the point where he or she doesn't even comprehend the rudiments of simple living, using the flush toilet or the shower or the running water.

Wherever we go the growers first complaint is: When I put a shower in, the nozzle is taken off, the facilities are abused. If I put screens on, they are kicked out.

Now, we have a bill that again provides a modest amount of money, again it's $250,000 annually for adult education in just the rudiments of simple, sanitary, decent living. If your folks, when they tell us that this is a problem that they feel concerned about, they, I would think, would see here an opportunity to do something about our adults, too.

Mr. SHUMAN. Senator, the folks on the farms, a million, 600,000 families in our organization, a pretty good chunk of them——

Senator WILLIAMS. They are (words lost).

Mr. SHUMAN. Are just as much concerned, were just as much concerned about the education and good treatment of these folks as any Member of Congress or anyone else, and we are the ones that are doing something about it.

Now, will this progress, this is the question, will this progress that we've been making, and you admit that there is considerable progress that has been made in the last several years——

Senator WILLIAMS. I can't use the adjective "considerable."

Mr. SHUMAN. All right, I can. But——

Senator WILLIAMS. Measured, very halting progress by a few enlightened people.

Mr. SHUMAN. All right.

Will this progress, then, be speeded up by Federal legislation? And we say no, simply because whenever you pass legislation to subsidize education, to subsidize anything else, when you pass legislation to assume the regulation and the regulatory responsibilities, immediately then local communities and States transfer this responsibility to the Federal Government. And that has been going on in the field of housing and many other areas where the Federal Government has stepped in. We think that the best place to solve the migratory problems, the social, educational, and other problems of migratory workers, is right back in the local communities where people know what the need is, where they can do something about it with the resources which they have. And this is where the economic benefit comes to us, back in the local community, and that is where the burden of the cost of the program should be——

Senator WILLIAMS. Well, I will say that not all of your colleagues who are growers, or associated with growers, agree with you.

Mr. Abney Cox(?), who is a grower of Princeton, Fla., perhaps you know him, and other growers, have supported our legislation.

But I wish you would perhaps talk to the farm bureau of my State. They came in last week, or a couple of weeks ago, to talk to me, they were negative on my program for migratory workers, this I knew before they came, and they—certainly testified again when they were here, and at the end of our discussion they told me about the problem they were having with blackbirds. Blackbirds are spoiling their fruit crops, their corn crops, and they asked us at the end of the breakfast, at the end of our meeting, if the Federal Congress wouldn't appropriate $250,000 to do something about the blackbirds that are plaguing the crops and the farms of this country.

Now, I just cite this——

Mr. SHUMAN. Well, don't misunderstand——

Senator WILLIAMS. It seems to me that the farmers, where the program goes to their economic betterment, very, very easily see the advantage of a national program, a Federal program; where it will come to the benefit of others, perhaps they are slower.

But let me please try to make one point: If we improve the housing, the education, the working conditions, the general lives of these folks who are desperately wretched, and I know you have conclusions that progress is being made, but I have seen the misery and it's—it's not the exception, it's the rule——

Mr. SHUMAN. Senator,——

Senator WILLIAMS. The exception is not misery. And you will have better workers.

Mr. SHUMAN. Senator, there is misery in the slums of Newark and Jersey City.

Senator WILLIAMS. And Federal legislation to deal with it.

(Mixed voices.)

Mr. SMITH. Let Mr. Shuman make his point.

Mr. SHUMAN. Federal legislation will not cure the slums of Jersey City or Newark any more than it will cure the slums in the migrant labor camps. It's got to be done by local initiative and local effort. And this is the trouble of the subsidy route, or the regulation route of the Federal Government.

Senator WILLIAMS. Well, of course, I must disagree. I know there are problems with some of our metropolitan programs, but we are persisting in them and they are cleaning slums and they are providing decent housing and they are doing a job in our cities, and a lot more must be done. But we have a problem in Congress on that score. We can get hundreds of thousands of dollars for metropolitan problems, while you and I know we spend billions of dollars on farm problems.

Mr. SHUMAN. Let me get this straight, though. Now the farmers in the United States, most of them, the majority of them that are in our organization, and for some 15 years we have been urging that the Congress turn around and reduce the—price fixing subsidy control programs in the United States for agriculture. We are consistent, we are saying that we don't want these programs, they have hurt us more than they've helped us.

Senator WILLIAMS. You are here speaking for one group of farmers.

Mr. SHUMAN. The biggest group.

Senator WILLIAMS. The Farm Bureau.

Mr. SHUMAN. Over 50 percent of the organized farmers.

Senator WILLIAMS. Other farmers disagree with you on that.

Mr. SHUMAN. They do.

Senator WILLIAMS. I might advise you and you know that other farmers disagree with you on the comprehensive program that we had for migratory farmworkers and their families. The Farmers Union supports most of the 11 point legislative program that I have introduced into the Congress——

Mr. SHUMAN. That's right.

Senator WILLIAMS. And with that support we are very grateful.

Let me deal with——

Mr. SMITH. Mr. Shuman, I don't think has had his full share of the time.

If there are some points you would like to make, Mr. Shuman——

Mr. SHUMAN. Yes, I would. I would like to make a very definite point that when you get Federal legislation, regulation, then you have to have administration; and in a country as large as the United States a federally administered program cannot take account of the extreme variation that there is from community to community and State to State. Furthermore you have the kind of thing, Senator, that we experienced with the former Secretary of Labor Mitchell who strained the interpretation I think of the legislation and certainly used rather dictatorial authorities to move into the farm labor field. I don't think that any of us believe that with increased Federal legislation we will have any more—any less of this approach to the solution to problems than we had with Secretary Mitchell.

We are going to have more of it because we'll have more administrators, more folks watching every community in the United States, huge cost to the Federal Government and slowing down progress to the rate of the slowest. That's what happens under Federal regulation, the minimum becomes the maximum. You transfer responsibilities from local people and local communities to the Federal Government and that's not a good direction to go.

Senator WILLIAMS. Is this what happened when almost 30 years ago we enacted a minimum wage, unemployment compensation, workmen's compensation——

Mr. SHUMAN. In my opinion——

Senator WILLIAMS. And limited workweek?

Mr. SHUMAN. It's my opinion that the laborers of the United States have been hurt more by the increased unemployment generated by the increase in minimum wages than they have been helped. I think the competitive way is the way to improve conditions for not only labor but agriculture and all the rest.

Senator WILLIAMS. Well, I would think that most of the people in this country recognize that with those built-in security measures that we have enjoyed for 20 to 30 years, has come the new opportunity for the average American to enjoy some of the good things of life.

But we're not asking anything extravagant for the farm worker, all we are asking for is education for—for his youngsters, an opportunity to have——

Mr. SMITH. Gentlemen——

Senator WILLIAMS. Health care and welfare care——

Mr. SMITH. I'm sorry to interrupt but we have to have the summaries now.

Can Mr. Shuman give his summary statement—2 minutes.

Mr. SHUMAN. Actually I think that we have seen the essential elements of the disagreement here. We on the farms of the United States are just as interested and just as—going to work just as hard to improve the conditions of these poor folks as anyone else. We have crops that still must be harvested by hand unfortunately, and we are—we're conscious of the fact that the way to solve the migrant labor problem is to do away with the kind of work that makes it possible. Federal legislation may in effect continue the migrant worker many, many years longer than he would be continued if we continue the way we have with research and emphasis on ways to eliminate the problem by eliminating the work.

Now, our basic belief is that the centralization of power in the central Government or Federal Government, power and authority, and encouragement of lack of responsibility by individual citizens is one of the greatest perils that we have to the future of our Republic and to our competitive enterprise system.

It has not been demonstrated that increased Federal responsibility improves the conditions for these people and this Federal legislation is an entering wedge to be broadened out, it's really a part of the campaign on the part of the monopoly powers in labor to organize and control the food industries just as they are commencing to control the transportation industry.

Mr. SMITH. Excuse me, Mr. Shuman, I'm sorry your time is up.

Could we have Senator WILLIAMS' concluding statement?

Senator WILLIAMS. Well I want to first of all give Mr. Shuman every credit for good will and a good heart, but the fact is, notwithstanding the good will expressed here, the average American migratory farmworker right now makes less than $900 a year. His youngsters are falling further and further behind in education. He does not receive any of the public health and welfare services that all other poor Americans receive. He has not had the opportunity to benefit from a floor for wages, there is no minimum wage that applies.

His youngsters are not protected, they are excluded from the provisions of the child labor law except for during school hours. Wherever you look for those legislative efforts to make the beginning of a better life, the American migrant farmer and his family have been left out. They are truly outcasts. Our legislative program deals with every, almost every item, those that we understand at least, the wages, economic conditions, the situation of the children, and opportunity to join in labor unions, yes, I thought we had grown up in this country to know that labor unions are a part of our way of life and that a working man or woman should have an opportunity to express himself and bargain collectively. And this we provide for, as well as looking into the future and providing for an advisory council to advise the President and the Congress on the continuing and the persistent problems of almost 2 million Americans who are desperately left out of the affluent society most of us enjoy.

Mr. SMITH. Gentlemen, I have done nothing but interrupt both of you and I apologize to you.

The time has been simply too brief for such a serious topic.

Thank you very much for coming here to debate this question.

Migrant Farm Labor Problems and "Harvest of Shame"

EXTENSION OF REMARKS
OF

HON. PAUL G. ROGERS

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 23, 1961

Mr. ROGERS of Florida. Mr. Speaker, recently, through a Columbia Broadcasting System television presentation entitled "Harvest of Shame," considerable attention has been called to the problems facing migrant farm labor forces in the United States.

The residents of Florida who had welcomed this program and its production crews into their towns and farms, had expected a fairminded program showing a true picture of the current problems and what is being done to resolve them. Unfortunately, they later saw a show edited for shock value that distorted many of the actual conditions and overlooked much of the work in progress to cure the ills affecting migrant labor. The efforts of thousands of individuals and groups who have worked countless hours trying to better the working and living conditions of the migrant laborer were overlooked. Needless to say, the one-sided picture presented by the film greatly disheartened those individuals and groups who are trying to meet the problem.

By presenting only one side of the migrant story and raising many questionable statements, the program created an erroneous impression in minds of thousands of Americans. Now an even graver matter has been created by the sale of the program to the British Broadcasting Co. for broadcast in Great Britain.

The showing of films such as this one in foreign countries may not be in the best interest of the United States.

Furthering complicating the showing of "Harvest of Shame" abroad is the fact that the U.S. Information Agency, the governmental department charged with creating a better picture of America abroad, now is headed by Edward R. Murrow, the commentator of the "Harvest of Shame" program.

While Mr. Murrow was an employee of CBS News at the time the television program was made, in his present position, the broadcasting of the program overseas now could only embarass Mr. Murrow, personally, and the U.S. Government.

In an effort to present a true picture of what is being done in Florida to improve the lot of migrant workers, the Palm Beach Post of West Palm Beach, Fla., printed a special supplement on February 8, 1961, discussing the issues as stated in the "Harvest of Shame." These articles clearly illustrate what is being done and what the television producers neglected to mention. Because of the new developments regarding the rebroadcast of the program, I believe these articles from the Palm Beach Post will

be of interest to every Member of Congress.

In bringing these points to public attention, the Palm Beach Post has performed a service to all interested in migrant labor problems, as well as to the migrants themselves. No effort is made to mislead or distort. The series is one of many that the Palm Beach Post has printed over the years, and is based on a genuine concern for the welfare of the migrant rather than on sensationalism. For this the Palm Beach Post deserves high praise.

The first of the series by the Palm Beach Post recognizing the problem, but presenting both sides, is printed here today. I shall present the others over the next few days. It is my hope that the Members of Congress will take a few moments to read these articles.

MIGRANTS: THE GLADES SIDE OF THE STORY

On the night of November 25, 1960, millions of people all over the United States watched a documentary film "Harvest of Shame," on the TV network facilities of Columbia Broadcasting System.

The film depicted the migrant agricultural worker as a modern-day slave—

Paid unbelievably low wages by farmers who could easily pay more.

Robbed of these wages by landlords charging high rentals for dirty shacks and by crew leaders who take advantage of their poverty to make thousands of dollars while the migrants starve.

Denied educational opportunity by school systems set up for permanent residents.

Welcomed only when there was work to be done, and then kicked out.

Caught in a hopeless, dreary routine from which there is no escape.

Unwanted, uncared for, forgotten by the civilization they feed, and in desperate need of Federal legislation which, according to the impression left by the film, was the only help for an otherwise hopeless situation.

Reaction to the film from all over the country, but particularly from the people of the city of Belle Glade, Fla., was immediate and strong.

Belle Glade had welcomed the TV caravan and accepted at face value the frequent assurance that the report would be fair and impartial and "show both sides of the story," a promise that was made in writing by CBS before the film was shown.

Privately, however, David Lowe, producer, told a staff member of the Florida Christian Ministry to the Migrants that he was only interested in getting shots showing the bad side.

The private admission proved far more accurate than the public protestation.

Interviews with persons like Ralph Moss, chief of the Farm Labor Division of the Florida State Employment Service, obviously an impartial source, were completely cut out of "Harvest of Shame." Other interviews were expertly trimmed, leaving only such information as reflected poverty and dejection.

Even in the first reactions to a film which they knew would damage the name of their town, perhaps irreparably, the citizens of Belle Glade were remarkably objective.

No one claimed, then or now, that the life of the migrant is a bed of roses, that his housing is palatial, that he is paid for his unskilled labor what factory technicians are paid, that the travels in jetliners or dines with kings.

Here in Florida, perhaps better than anywhere else in the Nation, the fact that there are serious unsolved problems in the field of migrant agricultural labor is realized and acted upon.

Certainly there has never been an inclination in Palm Beach County to hide the facts, or to view them through tinted glasses. For many years the bad facts of migrant labor have been squarely faced, investigated, and alleviated to an extent viewers of "Harvest of Shame" might find unbelievable.

It might come as a distinct shock to them to learn that in 2 hours the Post-Times obtained 18 names of graduates of college from migrant families, now living and working in the county. "Harvest of Shame" said there were no cases on record.

Viewers might be surprised to learn:

That a corporation started by migrants, currently with 49 migrant stockholders, just purchased a $50,000 property on which they plan an FHA housing project of 24 homes.

That migrants have been the subject of one of the most advanced and intensive social science projects ever devised for a subgroup of American culture..

That both of Belle Glade's two public swimming pools are used by migrants.

That Interstate Commerce Commission inspectors check vehicles used in interstate transportation of migrants every year.

That the correct number of workers in the migrant stream would be far closer to 400,000 than 3,000,000.

That Harvey Pool, a Negro leader in the Glades area, has listed the names of 100 migrants who own their own homes.

That the 1959 Florida Legislature passed laws which are being used to bring sanitation in migrant camps up to standard American levels.

That far from ignoring school dropouts among migrant children, Palm Beach County employs two special teachers to work with this problem in the Glades area, and has a special school for non-English-speaking migrants west of Delray Beach.

The good facts disclosed in this special section are in no way meant to say that there are no serious problems in the migrant labor field.

In 1957–58 these newspapers led a fundraising drive which collected $27,000 for migrant relief—a drive which resulted in the formation of a county-wide migrant committee which now has charge of a $15,000 fund for any future general emergency.

We could not have been so closely involved without knowing that there are many problems and much need for improvement.

The story as seen from here is one of definite, tangible progress toward the solution of one of the Nation's most difficult and perplexing social and economic problems.

It is a story of the lowest strata of American society, and all that this involves in terms of poverty of mind and spirit as well as of pocketbook.

It is also a story of men and women who have given themselves selflessly in attempts to understand and help this poverty, and of those who have risen above it, and now extend a helping hand to those who follow.

The facts presented here are largely from Palm Beach County, but could be duplicated to a large extent in Broward and Dade Counties, and throughout Florida.

The story we tell is by no means all there is to say on the other side. CBS used 9 months and a crew of cameramen and reporters. This section is the work of reporter-photographer Jack Thompson, executive editor Jonathan Koontz, and advertising saleswoman Helen Hulick, working an average of 2 to 3 weeks, with occasional assists from other staff members.

It is presented here in the belief that our readers will want to know that there is another side of the story, a side not presented in the "Harvest of Shame."

Revaluation of the German Mark

EXTENSION OF REMARKS
OF
HON. HOMER E. CAPEHART
OF INDIANA
IN THE SENATE OF THE UNITED STATES

Thursday, March 30, 1961

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement by Maj. Gen. Julius Klein, retired, on March 27, 1961, giving his personal observations on German reception of the American reaction to the recent revaluation of the German mark.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY MAJ. GEN. JULIUS KLEIN, RETIRED

During an intensive 5-week business trip in Europe, there was an opportunity to view at firsthand the effects of the revaluation of the German mark.

It was apparent that the Federal Republic of Germany found it necessary to restrain inflationary pressures. To tighten up the liquidity of the money market, the revaluation of the mark was a logical first step.

This posed some difficulties because Germany's high interest rates have attracted a flood of capital from abroad. The revaluation measure should make it possible to manage this problem more effectively.

The German move should be helpful to the United States because it will serve to reverse the outward flow of capital that has been going abroad, and it should improve our trade position vis-a-vis the Germans. It should also militate to the Federal Republic's advantage by slowing down the potential distortion of the Germany economy resulting from the influx of liquid foreign funds.

To bring the Federal Republic's economic picture into focus, it should be remembered that at the end of 1952, the German Central Bank's gold and foreign exchange reserve stood at 1.2 billion. This mounted to 5 billion at the end of 1959, and at the close of 1960, it had grown to 7.2 billion.

The German industrial recovery has been proceeding at a vigorous pace.

The Federal Republic has been able to increase its proportionate share of exports to most countries in which it competes with other nations. On top of this basic industrial strength, the Germans have been able to attract tremendous amounts of liquid capital from abroad, particularly in the last half of 1960 because of the relatively high interest rate structure in the Federal Republic. During most of last year, the German rate stood at 6 percent compared to our 3 percent, and now stands at 3½ percent. This provided both opportunity and incentive for money to go to Germany.

The revaluation of the mark increased the value of the German currency in relation to all other countries with the exception of the Dutch guilder. Instead of holding fast to the high interest rate structure, they have moved to correct the imbalance in world international transactions by making their currency more expensive. This has had two effects, one on the trade balance, and the other on international capital movements.

1. The move should reduce Germany's merchandise trade surplus because German exporters in some fields will have to raise their prices in terms of the currencies of their customers, while at the same time im-

ports into Germany will become cheaper for the German consumer.

2. At least some of the capital that flowed to Germany in the past year went there because it was expected that there would be a revaluation of the mark, one way or the other. Now that the move has been made, it can be anticipated that some of the foreign capital will go back home, and as a result tighten up the German economy.

I found considerable disappointment in the Federal Republic over the mild U.S. reaction to the revaluation move. This is understandable. The German citizen is carrying the heaviest tax burden anywhere in the Western community. Very heavy drains on the budget are being made by the necessity of absorbing and rehabilitating many thousands of refugees who continue to cross the Federal Republic's borders in their flight from Communist tyranny. The revaluation of the D-mark was a genuine sacrifice by the Germans and its motivation and effects deserved a much warmer reception in the United States than has been manifested until now.

A Comment on Antitrust Activities: The Bicks Case

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 30, 1961

Mr. CURTIS of Missouri. Mr. Speaker, the key feature of our private enterprise system is the competition of the marketplace, where our economic decisions are made. For sound decisions to be made, the competition must be free, for distortions which block free competition in the marketplace introduce influences into this give and take which prevent its proper functioning. One of the threats to free competition is monopoly and the regulatory efforts of the Antitrust Division of the Department of Justice are vital in preventing this imbalance from distorting the competition of the marketplace.

In the previous administration, the Antitrust Division was under the very capable leadership of Robert Bicks, an intelligent and energetic young man who compiled an enviable record for the Division. Bicks made a real contribution to the successful functioning of our free enterprise system in his work. It is sincerely to be hoped that the antitrust enforcement of the present administration will be similarly dedicated to the protection of private enterprise.

In the February 10 issue of the Baltimore Sun, Mr. Thomas O'Neill wrote on the work Bicks did in the field of antitrust. This was reprinted in substance in the Christian Science Monitor of March 21 and I would like at this time to introduce the Monitor reprint of Mr. O'Neill's article in the RECORD:

THE BICKS CASE: MIRROR OF WORLD OPINION
(By James O'Neal)

President Kennedy praises the trust-busting record of the Department of Justice in recent years and his brother, the Attorney General, drops from the Government service the man who made that record, a contradiction commending an improvement in communication within the administration, and perhaps within the family.

The Government's top trustbuster since early 1959 has been the youngest man who ever held the job, the 33-year-old Robert A. Bicks, who has also been the most successful. He was leaving office at the moment of his biggest triumph, the shock applied to the Nation's major electrical manufacturers who had been rooking the public by a conspiracy to fix prices.

The resignation he offered according to custom at the change of administration was accepted routinely, although other holdovers have been invited to stay on.

At his third press conference, expressing a hope that the Department of Justice would continue to stir itself about monopolistic practices, the President said with what appeared to be a touch of apology in his voice that the antitrust division had been "very ably led in recent months"—the period it was directed by Mr. Bicks."

The case of Mr. Bicks presents puzzling aspects leading to conjecture as to how deeply committeed are some important Democrats to prosecution of monopolistic practices in restraint of trade.

His nomination by President Eisenhower as Assistant Attorney General in charge of the antitrust division of the Department of Justice was ignored for months by the Democrats controlling the Senate Judiciary Committee in the last Congress, and when he finally acquired the title it was by recess appointment.

Unlike other nominations of the outgoing administration that were shelved in Congress, there was no concern that the incoming President would be saddled for a specified term of years with an unwanted holdover official. Appointments as Assistant Attorney General are at the President's pleasure, terminable at any time.

The disinterest of the Senate committee was unbroken by impressive support volunteered for Mr. Bicks.

Among those who spoke up for him was the Democratic chairman of the House antitrust subcommittee, EMANUEL CELLER.

A number of State law enforcement officers added their recommendations.

An interesting indorsement was filed by Whitney North Seymour, president of the American Bar Association, who as an attorney has been on the losing side when Mr. Bicks blocked a projected merger of Bethlehem Steel and Youngstown Sheet and Tube.

The record they supported is the brightest in the 70-year history of the antitrust laws.

Last year's 92 cases brought by Mr. Bicks was the highest number in any year.

When Judge J. Cullen Ganey in Philadelphia accepted guilty pleas from General Electric and other electrical giants prior to imposing jail sentences and staggering fines, he complimented Mr. Bicks upon "a splendid job."

Greek Independence Day

EXTENSION OF REMARKS
OF
HON. WILLIAM FITTS RYAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 29, 1961

Mr. RYAN. Mr. Speaker, the Greek war of independence, which began 140 years ago and culminated in the birth of modern Greece, was one of the major political events in 19th century Europe. That successful revolt also proved that regardless of the physical weakness of an oppressed people, and also regardless of the number of centuries they are held down by their overlords, stouthearted and gallant people will always try to free themselves from oppressive tyranny.

Greeks had enjoyed freedom and practiced it in their homeland centuries before any other people. In this as in many other social and political experiments they were pioneers, the real creators of our Western civilization. But even before the beginning of our era, the glory of Greece was gone, and the Greeks had lost their freedom. Thus for nearly 2,000 years they lived under alien regimes, first under the Romans, then under Frankish kings, and finally, from mid-15th century down to the time of their independence under the Ottoman Turks. During their long suffering they revolted more than once, but each time their attempt ended in failure because physically they could not cope with the powerful Ottoman forces. Their daring revolt in 1821 was successful because the awakened consciences of Europe and America were in wholehearted sympathy with their righteous cause, and the governments of Europe could help the Greeks in time to save them from almost total extermination. That is what certain European governments did in the fall of 1827. When gallant Greeks were almost down and out, public opinion in Europe practically forced Britain and France to action. In October of 1827 the navies of these two countries and that of Russia took part in the Greek war of independence and annihilated the Ottoman fleet, thus assuring the victory of the Greek cause.

March 25 was the 140th anniversary of Greek independence. We salute the gallant Greek people for their loyalty to our common ideals, freedom and independence.

The Superbomarc

EXTENSION OF REMARKS
OF
HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 29, 1961

Mr. PELLY. Mr. Speaker, the President has asked Congress to review the defense picture and has called for stepped up missile development.

In this connection, the following editorial from the Seattle Times points up the Superbomarc's proven capabilities which should not be overlooked:

SUPERBOMARC'S REMARKABLE RECORD

All of the public attention being focused on the progress of the Minuteman, the Polaris and other offensive missiles should not serve to obscure the remarkable test record that is being achieved by the Superbomarc defensive missile.

The Boeing-built interceptor set altitude and distance records yesterday in scoring its 19th successful flight out of 21 launchings over the Gulf of Mexico.

The weapon destroyed a simulated target more than 100,000 feet high and 446 miles distant from its Florida launching site, responding perfectly to radio signals from a control center far away in Alabama.

By means of repeated tests, the Superbomarc has demonstrated its capability to seek out and destroy attacking jet aircraft or air-breathing missiles hundreds of miles from their potential targets.

Despite Soviet ballistic-missile developments, it is the Russian strategic bomber force that would pose the greatest potential threat to the United States if war came in the near future. It is to be hoped that Congress and the administration will not lose sight of the Superbomarc's proven capabilities as they prepare the fiscal 1962 defense budget.

I Speak for Democracy

EXTENSION OF REMARKS
OF
HON. JOSEPH W. MARTIN, JR.
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 30, 1961

Mr. MARTIN of Massachusetts. Mr. Speaker, under leave to extend my remarks, I include an address given by a young constituent of mine, Joseph G. Quill, Jr., of Faynham, Mass., at the "Voice of Democracy" contest national awards luncheon in Washington, D.C., on February 22, 1961. I am proud of the fact that this young man represented the State of Massachusetts in the contest which was an inspiration to all who were privileged to observe it. Mr. Quill's address was so mature and enlightened, I am pleased to insert it in the RECORD:

I SPEAK FOR DEMOCRACY

(By Joseph G. Quill, Jr.)

Three thousand years ago there was formed a social system which was destined to change the lives of millions of people. In these primeval periods of social organization, among the Hellenic races gathered about the Aegean Sea, in the city-state of Athens, a unique form of government came into existence. It was the basic conception of rule by the ruled, government by the governed, and it was named accordingly. Democracy comes from the Greek, meaning a rule by the citizens, or demos. This democracy was of a primitive, simple, but pure form. Primitive in that it contained the barest essentials of good government; simple because the civilization was simple; and pure because the people directly indicated their mandates.

Since that time, democracy has existed in one of a dozen forms during each moment of time; and I believe that one of its strengths is that it was flexible enough to change its form to fit conditions, without altering its basic premise. The Romans had a type of democracy for a time, although imperialistic designs coupled with a pagan nationalism overshadowed it as the outward form of government. Rome was an empire in theory, but a democracy in practice. Public opinion was the mainspring of the political idealist.

However it was not until the 17th century that one could really justify democracy with the presentation of genuine philosophical evidence. The most important philosopher was John Locke who first stated authoritatively that man has the right to govern himself. This was heretofore an absurdity. But conditions were perfect to test out this idea. People were tired of the old feudal and class systems. They were looking for something new which would improve their lot. Finally, man produced his first formal declaration of a choice in favor of this democracy. It was the declaration of the independence of the American territories united to accomplish a separation from the British Empire.

It was a reiteration of what had been implied from the very beginning: that all men are created with certain inate rights; that all governments derive their power from the consent of the governed; and that man has the right to change his government to accomplish these ends. Voltaire contributed the idea of separation of church and state; and Montesquieu set down rules that a democracy should follow to function properly. These are the basic tenets of modern, representative democracy and as Americans, this is our heritage.

As I said, one of the strengths of democracy is that it may adapt to fit a wide variety of social and cultural circumstances. The American system of democracy does precisely this. But it does not only fit in with our modern technological civilization. It plays a far greater role in this new age. It is the fulfillment, the culmination of our civilization. The world in this era of progress and human advancement has become a complex place indeed, but democracy has become complex also. Not only has it served as an adequate form of government but it has, and still is promoting the best interests of our age. Democracy is the motive force behind the free enterprise system, not only economically, but intellectually as well. We owe the strides we have taken in science and philosophy to a system which draws out the creative energy in man and which creates an atmosphere of competition for otherwise complacent and therefore useless minds.

Democracy is the greatest social weapon that we have at our disposal to fight the menace of conformity that will stifle all our efforts if certain other systems are allowed to gain momentum. The responsibility is on you, and me, and all other citizens.

While democracy makes us free to accept or reject, we are free to accept or reject it. Keeping our proud heritage in mind, we are duty bound to uphold the very thing our fathers fought for—the crown and the glory of modern man, democracy.

Address by Edward C. First III, of Harrisburg, at National Bellamy Flag Award

EXTENSION OF REMARKS
OF
HON. HUGH SCOTT
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Thursday, March 30, 1961

Mr. SCOTT. Mr. President, the 19th National Bellamy Award in honor of the author of the Pledge of Allegiance—was presented to a high school in Maine at ceremonies in Augusta, Maine, last October. Among those participating in the ceremonies was Mr. Edward C. First III, student council president of John Harris High School in Harrisburg, Pa. Because of the importance of the ceremony and the fine things Mr. First had to say about our State, I ask unanimous consent that his remarks be printed in the Appendix of the RECORD.

There being no objection, the remarks were ordered to be printed in the RECORD, as follows:

To Maine with its rockbound coast I bring greetings and congratulations from the rock-bedded Susquehanna River where sits Harrisburg, the city beautiful—just a stone's throw from the home of the Pittsburgh Pirates.

Once, along the Susquehanna's banks, Indians trapped, hunted, fished, fought, and feuded. Then came the white man and his civilization. One such was John Harris from Yorkshire, England. He set up a trading post and ferry. Now, where Indian paths were, came roads, Conestoga wagons, canals, the iron horse—and Harris Ferry became a city celebrating its 100th birthday this year.

During last September we celebrated this 100th birthday with a spectacular weeklong centennial.

We have had a wonderful birthday party. Harrisburg never looked more beautiful but that is as it should be, for nowhere along its 441 miles of winding curves is the Susquehanna more lovely than at Harrisburg, Pa.

At the party we remembered the great events of an eventful life. The visits of George Washington, Lincoln, Dickens, the Lincoln funeral train that day it rained tears in Harrisburg.

But it is the present I would speak of—Harrisburg, beautiful, historical, cultural. Religions of all faiths lift their spires to heaven.

Our schools are a credit to the Nation. At a time when youth and learning are on the defensive, our entire school system has met the challenge and our product will give America tomorrow the best of citizens who, in turn, will bring about the decline of crime and corruption, lessening of divorce—a bigger, better, more beautiful Harrisburg. Yes, all America.

John Harris, one of three high schools in Harrisburg along with William Penn and Bishop McDevit, famous when it was built as a million dollar institution—indeed a staggering sum in those days when the dollar was triple its present value.

Spread out in present day ranch type style with long wings and flat roofs, the new visitor inevitably concluded that this is a postwar structure and so we are understandably proud of our school plant.

Dedicated to uphold and further the principles of education, in these 34 years John Harris has served well the thousands of graduates who have left its doors to use profitably the knowledge and experience gained at Harris.

During the flood of 1936, more severe to Harrisburg than the famous Johnstown flood, John Harris served as a refuge for hundreds of men, women and children.

The Susquehanna runs on like Tennyson's immortal brook. But I'm going to stop—for blessed is he who gives short speeches for he shall be invited again—and I love lobster.

Come to Harrisburg, the city beautiful, and feast on shoo-fly pie, scrapple, and pig's feet jelly.

Byelorussian Independence Day

EXTENSION OF REMARKS
OF
HON. SEYMOUR HALPERN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 30, 1961

Mr. HALPERN. Mr. Speaker, today about 10 million Byelorussians live in their historic homeland under the Soviet totalitarian regime, but the Soviet Government has always acted as though there is no such distinct ethnic group,

and has tried to obliterate all Byelorussian national traits. For that reason we in the West hear little of these people, and know very little of their history. Nonetheless, there they are, and they have persistently resisted all Soviet attempts to Russianize them.

These people lived under their own government in their historic land, between eastern Poland and western Russia, long before the formation of the modern Russian state, but in 16th century Russian czars overran and conquered the country, and since then, except for a period of 3 years, they have been living under czarist autocracy and under Communist Soviet tyranny.

The 3-year brief but unforgettably happy interlude between 1918 and 1921 was the only time these people were free in modern times. In 1918, on March 25, they had proclaimed their independence and had established the Byelorussian National Republic. Then until early 1921 the new state struggled against formidable odds for its very existence. In the end it was defeated, the country overrun by the Red Army in 1921, and then made part of the Soviet Union. Since then the fate of the Byelorussian people has been no different from that of other peoples suffering under the Kremlin's unbearable yoke. Fortunately these people have not lost their hope for freedom, and they still cling to their national ideals, their national independence. On the 43d anniversary of their Independence Day let us hope they will someday be restored to freedom and independence.

Woodland Gift

EXTENSION OF REMARKS
OF
HON. WILLIAM S. MOORHEAD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 30, 1961

Mr. MOORHEAD of Pennsylvania. Mr. Speaker, under leave to extend my remarks, I wish to insert into the RECORD the following commendation of Mrs. Albert Fraser Keister, for her most generous gift of land to the Western Pennsylvania Conservancy. This well-deserved praise appeared in the Pittsburgh Post-Gazette and Sun-Telegraph as an editorial on March 23, 1961.

As a member of the Western Pennsylvania Conservancy, I should like to suggest that it is a reflection of the feelings of this group toward Mrs. Keister, and citizens like her, who contribute in so many ways to their communities:

WOODLAND GIFT

Those who enjoy the loveliness of Cucumber Falls, at Ohiopyle in Fayette County, can forget any fear they may have had about the area's future.

Mrs. Albert Fraser Keister, of Sewickley, after working more than a year to acquire the property along this stretch of the Youghiogheny River gorge, has given her one-half interest in 589 acres to the Western Pennsylvania Conservancy as a preserve for public recreation and wildlife conservation.

The gift area will be called Keister Park—a memorial to the family long identified with the region's once active coal industry.

We agree with Maurice K. Goddard, secretary of the State department of forests and waters, who said:

"This is a thrilling challenge to conservation throughout Pennsylvania. Mrs. Keister's act is a heartening example of enlightened citizenship at its best."

The woodland gift is another shot in the arm for the conservancy in its quest to develop and improve the natural glories hereabout. The conservancy, true to its purpose, will now attempt to acquire more land in the Ohiopyle area. Mrs. Keister's gift makes a superb beginning.

Self-Service Plan

EXTENSION OF REMARKS
OF
HON. CATHERINE MAY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 30, 1961

Mrs. MAY. Mr. Speaker, since the Members of Congress have been studying President Kennedy's recent farm message with some puzzlement and mixed emotions I should like to call to their attention the following article which appeared in the March 24, 1961 issue of the Time magazine:

AGRICULTURE—SELF-SERVICE PLAN

In his farm message to Congress last week, President Kennedy sounded a bit like a doctor who, noting that the patient suffers from cramps and rashes after eating strawberries, advises him to eat plenty of strawberry jam.

Federal farm programs, said the President, are "drifting into a chaotic state, piling up surpluses, penalizing efficiency, rewarding inertia." Very true. But then the President went on to prescribe a big dose of the same kinds of programs: direct and indirect subsidies, plus entangling controls to cope with the surpluses that the subsidies help to create. If carried out, the Kennedy proposals would even extend subsidies and controls to farm products—most fruits, vegetables, and livestock—that are now normally outside the farm policy mess.

PLOWED UNDER

The kernel of the New Frontier proposals calls for establishment of a "national farmer advisory committee" for each farm commodity or group of related commodities. Each committee would draw up a "supply adjustment program" for its commodity, if it took a notion to do so. The turnip committee, say, would draft a turnip plan and submit it to the turnip growers. If two-thirds of them approved it, it would automatically become law, at the expense of consumers and taxpayers, unless Congress vetoed the program within 60 days—and what Congressman would vote against turnips if his onions might be in the scales next day?

In effect, the drafting of farm legislation would be lifted from Congress and given over to the particular farmers who would benefit from it—an approach not so very different from letting smugglers write the customs regulations. Texas' Democratic Congressman WILLIAM ROBERT POAGE put forward a similar plan last year, but the House plowed it under. The New Frontier version is likely to get plowed under, too.

The farm message stirred strong reactions. Holding aloft a copy, Minnesota's Democratic Senator HUBERT HORATIO HUMPHREY told a cheering convention of the National Farmers' Union, meeting in Washington, that "the President of the United States is on your side now. All I can say is, thank God—and with all reverence, thank you, Mr. President, for the farm message you sent us today." Some other remarks were less ecstatic. "Nebulous and rather complicated," sniffed Louisiana ALLEN ELLENDER, chairman of the Senate Agriculture Committee. "A do-it-yourself kit for every farm commodity," hooted Senate Minority Leader EVERETT MCKINLEY DIRKSEN of Illinois: the executive branch "could completely divest itself of all responsibility." Argued Vermont's Republican Senator GEORGE AIKEN: "If farm groups can write their own tickets, some will ask: Why not let labor or industrial groups do the same thing?"

MOVING AGAIN

The President's farm message was of a piece with other bits of farm policy that had slipped by all but unnoticed in the crowded early days of the New Frontier. Agriculture Secretary Orville Freeman's first major official act was to raise cotton subsidies, a move that drew jeers from just about everybody except cotton farmers. Pointing out that hefty U.S. cotton exports had been cutting down the cotton surplus, the Farm Bureau Federation's President Charles Shuman groaned that Freeman's decision would "reverse these favorable trends" by pricing U.S. cotton out of some overseas markets. Commerce Secretary Luther Hodges, his team loyalty strained beyond the breaking point, complained that Freeman's generosity would make it all the harder for U.S. cotton-textile mills to compete against foreign imports. Undaunted, Freeman went on to raise support prices on dairy products and promise increases for feed-grain crops.

In farm policy, in short, the new administration is getting things "moving again," but in the wrong direction, toward more rather than less Government involvement in agriculture. The record so far adds a special credibility to one sentence in the President's farm message: "We cannot expect to solve the farm problem in a day or in a year, or perhaps even in this administration."

And All Done Right at Home

EXTENSION OF REMARKS
OF
HON. ROBERT H. MICHEL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 30, 1961

Mr. MICHEL. Mr. Speaker, under unanimous consent, I include in the Appendix a recent editorial from the Detroit Free Press which makes a very good point relative to the need, or rather lack of need, for Federal aid to education:

AND ALL DONE RIGHT AT HOME

A survey of school construction completed in 1960, claimed by the maker to be the most accurate ever made, knocks down the claim of Federal aid proponents that local school districts lack ability to build classrooms.

School Management Magazines, Inc., in a detailed study of 10,547 of the Nation's 12,343 school districts that have more than 300 pupils, found that 1,819 new schools and 2,137 additions were built last year. They provided space for 1,465,635 new students.

Further indicating that local school districts are not desperate for classrooms was a breakdown of the special purpose areas included in the national totals. These included the following:

Gymnasiums	1,224
Cafeterias	1,625
Auditoriums	764
Science labs	966
Home economics	783
Shops	806
Language labs	82
Music rooms	240

If local citizens can provide such facilities, the shouted-about need for an infusion of the same taxpayers' money under Federal guise and control appears tremendously overplayed.

Finland and the Free World

EXTENSION OF REMARKS
OF
HON. JOHN B. BENNETT
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 30, 1961

Mr. BENNETT of Michigan. Mr. Speaker, as one who has long been interested in the development of increased trade with Finland, it was reassuring to learn that this democratic country will be the site of a giant U.S. Government-sponsored U.S. industries exhibition in May. I understand that it is to be one of the largest and most impressive foreign trade events staged by the Department of Commerce in the 6 years of its program to sell American industry abroad.

On February 21, the director of the Office of International Trade Fairs, Walter S. Shafer, told a luncheon meeting of the Finnish-American Chamber of Commerce in New York that more than 100 U.S. industrial firms will participate in the first American Trade Fair in Helsinki, from May 26 to June 11. The fair, created around the theme of "Industry in the Service of the Consumer," will occupy 130,000 square feet of area in the heart of Helsinki and will be presented in a department store setting.

The principal objective of this Department of Commerce project is a worthy and timely one. It is to be the encouragement of two-way trade, together with a demonstration of the friendliness of the American people for the people of Finland, and the presentation of quality products made under our system of free, competitive enterprise.

It is of interest that the exhibit at Helsinki will feature: "Circarama," a giant, circular-screen color travelog of America; two modern bowling alleys with automatic pinsetters; the "Levacar," which rides on a thin film of air a fraction of an inch above a rail; and a large display portraying the widespread use of Finnish newsprint in representative American newspapers. Other exhibits will include appliances, household wares, musical instruments, television sets, a model apartment, cameras, and scientific development in various fields.

This American Industries Fair in Helsinki will demonstrate to the Finnish people some of our latest industrial innovations and our desire for expanded reciprocal trade between our two freedom-loving countries. It is pertinent, in that it helped to advance this latter concept, to cite the fact that an excellent editorial appeared in one of the most highly esteemed newspapers in this country during the period of our congressional recess. The editorial stressed the Western orientation which underlines the course that this vigorous Scandinavian nation has been following, and under permission I include this significant editorial from the September 29, 1960, issue of the Christian Science Monitor, entitled "Finland and the Free World," in the CONGRESSIONAL RECORD.

[From the International Management Digest, October 1960]

LETTER FROM HELSINKI

Prior to World War I, Finland's famed distance runner, Hannes Kolehmainen, literally ran his country onto the map of the world. The map has changed considerably since then. But until recently, the Finns have not bothered much about telling their story to the world—and especially to the business world.

Now the Finns are coming out of their Nordic hibernation. They are excited about the growing diversification of their economy; they are proudly pointing to new export successes in Western markets. You could see a changed Finland at last month's Finnish Industries Fair, in Helsinki. One-third of the space was reserved—not for the traditional forest industries—but for the metalworking industries. (Finlands' wood, pulp, paper, and board still add up to nearly 80 percent of total exports, and when bad times hit the forests, the whole nation suffers.)

Look at the progress in metalworking. Capacity has been expanding at a healthy 7 percent annually, providing today 17 percent of total exports. Mining, too, is assuming greater importance (note the new undersea iron mine off the southern coast, to be producing 300,000 tons of ore by 1962; a joint Finnish-Swedish venture will process the ore). Nor is the forest industry standing still—it is in the midst of a $340 million expansion, to be completed in 1962.

Growing production—in a nation of only 4.4 million—is making the Finns export-hungry. And they are getting results by following two business principles and an unusual marketing effort.

The first principle lies in specialization. The Finnish metalworking industry concentrates on offering paper and sawmilling machines, cables, electric motors, transformers, icebreakers and refrigerator ships, and materials-handling and earth-moving equipment. (Finns believe their rugged terrain has inspired some especially well-engineered heavy equipment.)

How successful? Kone of Finland supplies 50 percent of Sweden's harbor cranes. Valmet is building a tractor works in Brazil.

The second principle is to concentrate on the potentially good markets, in the industrial and semi-industrial nations, not so much the underdeveloped lands (the Finns have real difficulty granting extended credit terms). In the process, Finland is breaking its trade dependence on the Russians. For one thing, the Finns are tired of the caprice of the "purchasing agents" in the Kremlin; for another, they are meeting much stiffer competition from other Westerners in the Communist market. One big Finnish company, which once sold 60 percent of its exports behind the Iron Curtain, now reports the total is only 7 percent. By 1965, Finns believe that 50 percent of their metalworking exports will go West, compared to 35 percent now.

To market its machinery exports, the Finns set up Metex Corp., a private company linking 42 member firms with 87 factories and an annual turnover of $250 million. The roving salesmen of Metex have made contacts in about 100 foreign markets, and won contracts to build factories or supply major machinery components in 23 nations, from India to South America.

The Finns also hope their European trade may improve, now that Mr. Khrushchev has given his tentative blessing to Finnish membership in the European Free Trade Association. The price: a guaranty providing the Russians with the same trade privileges that the Finns would grant to EFTA members. Next month, President Kekkonen will journey to Moscow to start negotiations.

[From the Christian Science Monitor, Sept. 29, 1960]

FINLAND AND THE FREE WORLD

As the struggle between East and West evolves, the battle continues to move further toward the realms of economics and ideology, and away from hot-war weapons.

But one historic military truism remains virtually unchanged: in the struggle between two great powers, the battlefield is often unwillingly provided by smaller nations caught helplessly in the middle.

One such nation today is Finland, whose role—unlike so many countries which have firmly fixed themselves in the world consciousness as "neutral" or "uncommitted"—is little understood by many in the West.

In a recent survey taken of some 270 United States businessmen, half of those queried felt that Finland is "too closely allied" with the U.S.S.R.; and about 60 percent felt that the Soviet Union is the primary consumer of Finnish exports.

The fact is that Finland (whose dependence on Soviet trade stems from crushing war reparations imposed at Yalta) has been gradually weaning its economy away from the Soviet Union. Today the Finns export more to Great Britain than to the Soviet Union, with West Germany coming up a close third. Exports to West Germany are expected to surpass those to the U.S.S.R. within 18 months.

All of this reflects a basic fact not yet generally understood in the United States—that Finland is a Western country with Western ideas, and Western orientation. While it is true the Communist Party is active there (made legal under the postwar peace treaty at Soviet insistence), the large majority of Finns have bitter memories of the Soviet invasion during the winter war of 1939.

These facts should help persuade Western businessmen that Finland, as a self-declared neutralist nation treading a delicate path between East and West because of geographic position, should be welcomed as an active participant in Western markets.

The Finns themselves are making a vigorous effort to bring this about.

The West should welcome trade with Finland, not only to help free that nation from dependence on politically motivated (and manipulated) Soviet whims, but also for the freshness and vigor which the Finns display in their design of everything from textiles to turbines.

House Committee Upheld

EXTENSION OF REMARKS
OF
HON. FRANCIS E. WALTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 30, 1961

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I submit a letter to the editor which

appeared in the New York Times of March 11, 1961.

The author of the letter, Roy M. Brewer, is extremely knowledgeable with respect to the operations and techniques of the Communist Party and he has engaged in a long and courageous struggle against the Communists' efforts to exert their subversive influence within America's motion picture and other entertainment media.

As leader of a union of motion picture technicians, Mr. Brewer foiled a very nearly successful Communist plot to capture his union in the late 1940's and he has since devoted untiring efforts to alert members of the entertainment field to the dangers of Communist infiltration as well as to assisting those in the media who have been innocently duped into serving Communist causes. The article follows:

HOUSE COMMITTEE UPHELD—UN-AMERICAN ACTIVITIES GROUP BACKED IN FIGHT ON COMMUNISM

To the EDITOR OF THE NEW YORK TIMES:

May I comment on your editorial of March 1 concerning the Supreme Court's decision upholding the right of the House Committee on Un-American Activities to demand answers from persons appearing before it.

I have worked closely with the House committee over the period of the last 15 years. Nothing in my experience would justify in any way your unsupported statement that this committee has been a disgrace to Congress. The extreme effort which the Communist Party is making to destroy and discredit the committee is evidence of the fear which the party has for the disclosures of the committee.

I doubt if there is any person in America who has spent a greater personal effort to hedp those persons who have been victimized by the deception of the Communist conspiracy than have I. No one has more fully recognized the necessity of separating the hard core, who are the perpetrators of the conspiratorial work, and the victims who make up the periphery of the apparatus, under the mistaken belief that they are working for civil rights and humanitarian causes.

PERIPHERY'S IMPORTANCE

But this should not blind us to the fact that the periphery is an important part of the Communist apparatus. Without it the Communist Party could not confuse and divide us as they now do. Therefore any disclosures which tend to break the line of communication between the hard core and the periphery group reduce the effectiveness of the overall operation to the degree that the real nature of the conspiracy is disclosed.

The usual cry against the committee is that it is maligning innocent people. Innocent in what respect? Innocent of membership in the party, perhaps, but not of being a part of the transmission belt that has sold much of the Communist line to America and the world. Such people are entitled to be treated as misguided persons, but they are not entitled to secrecy to the degree that the apparatus remains hidden and undetected in its operation. The people who are drawn unwittingly into this web should not be branded as traitors, nor should they be considered disloyal. But they should assume responsibility for their acts.

It is really the lack of understanding of the true nature of communism that has caused the greatest criticism of the committee. The public doesn't fully understand that one can really be a part of the Communist apparatus without intending to be; that one can serve the Communist purpose without being sympathetic to its aims.

ROLE OF LIBERALS

If the so-called liberals of America want to be worthy of the name, then they must assume the leadership against the most reactionary force in the history of the world—the world Communist conspiracy.

In the meantime it is our duty as citizens to help the American people understand the problem and to interpret the disclosures of the committee and other investigating groups rather than try to destroy them because we don't like the facts which they have disclosed.

ROY M. BREWER,
Vice Chairman, Council Against Communist Aggression.

Peace Corps: Sound Concept

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 30, 1961

Mr. BOGGS. Mr. Speaker, the proposal to establish a Peace Corps to aid the peoples of nations over the globe is a noble one which presents us with a great opportunity to promote the cause of freedom throughout the world. In order for this program to be most effective, we must exercise the greatest care in its organization and administration, and that I think, the new administration can do.

With these thoughts in mind, Mr. Speaker, I would like to include in the Appendix of the CONGRESSIONAL RECORD the following editorial from the Times Picayune, New Orleans, La., which appeared earlier this month:

PEACE CORPS: SOUND CONCEPT

There is something contagiously attractive about the currently faddish Peace Corps that can make of the admittedly visionary idea a vital instrument of national purpose.

Practically every gibe and plaudit aimed at the Peace Corps has substance. It was indeed born of a campaign slogan. It may be turned by some into a lark. It will attract a proportion of starry-eyed zealots.

It is, of course, absurd to think of the Peace Corps as a brigade of willing youngsters leading the world out of its morass of problems, or to believe that all the necessary skills can be attracted without a stronger incentive.

But in its concept, the Peace Corps is a rare combination of idealism and the practical which are the essence of the American spirit. Careful planning is going into its organization. Equal care must be given its administration. While young college graduates are expected to make up the bulk of its personnel, skilled technicians and semiskilled workers of all ages and backgrounds will be recruited.

Its program will be coordinated with efforts of native governments and with projects of universities, foundations, and other U.S. Government agencies engaged in providing technical assistance to underdeveloped countries. The Peace Corps' role, however, will not be so much advisory or fiscal as it will be to show, by example, how to carry out the projects.

A significant feature of the Peace Corps' work will be to teach, particularly to teach the English language which is becoming an increasingly important tool for economic progress everywhere.

Thus its motivation might be idealistic but its projects will be eminently practical. Schools and sewers, health programs and agricultural increase, roads and dams will be its end products.

To this country the Peace Corps is at once a challenge and an opportunity. It promises only sacrifices but holds out rich rewards of experience and achievement.

And while it is a secondary consideration, the corps efficiently administered in Washington and ably carried out can create a welcomed residue of good will for the United States abroad.

The Impact of the Civil War on Iron Ore Mining in Michigan

EXTENSION OF REMARKS
OF
HON. JOHN B. BENNETT
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 30, 1961

Mr. BENNETT of Michigan. Mr. Speaker, inasmuch as our Nation is now observing the Civil War Centennial, it seems to be fitting and proper for the Congressman from the 12th District of Michigan to call to the attention of the Congress of the United States, the impact of the Civil War on iron ore mining in Michigan. This impact had its origin within the district of the Upper Peninsula which I represent in the Congress. It so happens that the chairman of the Michigan Centennial Observance Commission, Prof. Floyd L. Haight of Dearborn, has appointed one of my constituents, Victor F. Lemmer of Ironwood, as the State chairman of the committee for the research on "The Impact of the Civil War on Mining in Michigan." Mr. Lemmer is a past president of the historical society of Michigan, and he is an industrial relations agent for a number of corporations interested in iron ore mining. Mr. Lemmer's article entitled, "The Impact of the Civil War on Iron Ore Mining in Michigan," was published in Skillings' Mining Review, October 8, 1960, and it has been said that the thesis is perhaps the first one of its kind that has ever been entirely devoted to the impact of the Civil War on iron ore mining. The following consists of excerpts from this historical document which is now in the collections of the Library of Congress:

THE IMPACT OF THE CIVIL WAR ON IRON ORE MINING IN MICHIGAN

(By Victor F. Lemmer)

"The Impact of the Civil War on Iron Ore Mining" may appear as a striking title for the story about a strategic mineral which, 100 years ago, was in its infancy as a potential product of tremendous commercial value to the welfare of our Nation. The Civil War was surely an era of striking impact. Prudent men were to strike it rich in enterprises resulting from staking iron ore claims, while others, too conservative to realize the future value of the nonglamorous mineral, found greater appeal in words like gold and silver, and in pioneers' stories of endless pine and masses of copper in the Upper Peninsula of Michigan. For example, the first two iron ore mining organizations, the Jackson Iron Co. and the Cleveland Iron

Co.) were originally set up to mine gold, silver, and copper.

A brief history of the discoveries of iron ore formations in the Upper Peninsula of Michigan helps to understand why the impact of the Civil War was the key timing factor in making a success of these mining ventures, which during the first stages of the war, appeared doomed to failure.

Thirty years before the Civil War, in 1831, Dr. Douglass Houghton, Michigan's earliest State geologist, began his systematic, scientific exploration of the Upper Peninsula. In 1840, Dr. Houghton wrote a report in which he stated: "Ores of zinc, iron, and manganese occur in the vicinity of the shore (south shore of Lake Superior) but I doubt whether either of these, unless it be zinc and iron, is in sufficient abundance to prove of much importance." Dr. Douglass Houghton had no special knowledge of the existence of iron ore in quantity, until 1844, when William A. Burt, a U.S. deputy surveyor, and his assistants, officially established the fact. The development of these huge mineral resources was largely due to the fact that the U.S. linear surveyors were required at that time to combine topographical and geological observations in their work.

Jacob Houghton tells the story of the remarkable variations in the magnetic compass observed by Burt's party on September 19, 1844, when the men were working in Marquette County about a mile south of Teal Lake—near the site of the present city of Negaunee. Burt's own invention, a solar compass, also carried on these trips, was unaffected. The surveyors looked for the cause of this magnetic disturbance and found chunks of glittering magnetite. On their map of this section William Ives, the compassman, printed the words "Iron Hills". Without the steady reliable solar compass the survey could not have continued, and Jacob Houghton said that "Old Man" Burt was far more elated over the dependable performance of his invention, than at the discovery of mountains of iron ore in that remote uninhabited wilderness.

The first location of iron lands was made in the summer of 1845, by means of a permit applied to the same lands on which the variations had been noted. The entry was obtained by men who had come to the area from Jackson, Mich. These men described the outcrop as bright and shiny, leading them to suspect that the metallic content would be gold or silver. Although the party from Jackson was in search of mineral, it was their hope that something would be found more valuable than iron ore. They ended up by forming the "Jackson Mining Co."

A few years after the beginning of iron ore mining operations on the Marquette Range, eastern financiers and "iron-works" owners from Pennsylvania bought sufficient stock in the Jackson mining operation to control the management of its affairs. These men decided that, as soon as practicable, the best policy for Lake Superior iron mines to follow would be to sell their ore to the furnaces of Ohio, and Pennsylvania, there to be made into pig iron. Although, in the early years ventures with forges and furnaces for the manufacture of metallic iron were moderately successful in the Lake Superior iron region, before long, it became easier and also cheaper to send the ore eastward. Shipping by lake is believed to have started in 1854. The ore was hauled to Marquette in wagons, shoveled on the decks of small schooners, unloaded at the St. Mary's River, hauled by wagons past the rapids, and then reloaded by hand into larger vessels and thus transported to Cleveland. There the ore was transferred to freight care and shipped by rail to the furnaces in Ohio and Pennsylvania. In these States the initial experiments with Michigan ore, in the blast furnaces and rolling mills, before 1860, served to prepare the new industry for the requirements of the Civil War. Furnace owners found the Lake Superior ores to be far better than local ores, and as a result the rolling mills were able to make fine quality boiler plate, bar iron, nails, spikes, suitable for the needs of the railroads, and for strategic war materials. In 1862 the American Railway Times made this comment: "Twenty years ago it was difficult to find a good American lathe, planer, or gear cutter. But all this is changed. American iron tools, as now manufactured, are of a very superior character." It was Michigan's iron ore that assured the economic and industrial success of the cities which manufactured iron and steel materials. Yet until the time of the Civil War, the history of all the Marquette Range mines was one of struggle and discouragement. However, the large requirements for iron brought about by the War, caused a demand for iron ore from the Upper Peninsula, which for the first time, made these mines successful financially, since they became a patriotic necessity.

The first regular shipments of iron ore totaling 12,442 tons were made by the Jackson Mine in 1857. These figures are taken from the official statistical table of gross tons of iron ore shipped, as prepared by Charles E. Wright, the Michigan Commissioner of Mineral Statistics. The report shows, however, that the Jackson mine had already previously shipped 25,000 tons during "years unknown." Accurate records were not kept in the early periods. The shipments by years before, during, and immediately after the Civil War, are of special interest. The history of the things that occurred "behind the scenes" is a story in itself of plank roads, railroads, successes, failures, organization, reorganization, management, mismanagement, intrigues, personalities, and eastern financiers, and their guests mingling with rough and tumble stalwart pioneers in the rock strewn wilderness of the Upper Peninsula.

In 1860, just before the beginning of the Civil War, three iron ore mines were in production in upper Michigan, namely, the Cleveland, the Jackson, and the Lake Superior. Gross tons shipped totaled 114,401 tons. The following year, which witnessed the outbreak of hostilities, the shipments dropped to 49,909 tons at these same three mines on the Marquette range. When in 1861 the immediate need of iron was greatest, production had dropped over 56 percent. This was no doubt due to the attitude of the people resulting from the feeling that the mines must close down to enable the men to fight to save the Union. However, in 1862, as need for implements of war, manufactured of iron and steel, became more and more apparent, the shipments of the same three mines totaled 124,169 tons.

Fortunately, the Bessemer converter, invented in 1856, proved to be vitally important; its success in the industry became a major factor in the upswing of an industrialism which had obtained its important spark or incentive during the Civil War. The first Bessemer steel plant in the United States was built in Michigan in 1864. Located near Detroit at Wyandotte, it produced steel for early railroads and steamships.

In the beginning our Nation was primarily engaged in agricultural pursuits. But now, as a result of industries brought into being by the Civil War, our material civilization took on new and far-reaching enterprises that were destined to create an American industrial revolution. Iron was king. Because of the war, need for ore was felt all over the Union. The Lake Superior district became very influential as this demand continued and increased in the years that followed. Abandoned mining enterprises were rejuvenated, and new ventures were undertaken. The ore was surprisingly rich and plentiful; the strength and tenacity of the iron and steel manufactured therefrom, surpassed all expectations. To the miner and the boss, big business extended a challenge to produce more and more. They accepted the task without question and the results appear in the glorious history of that particular era.

In 1873, just 8 years after the end of the Civil War, the annual shipments of iron ore from the Marquette Range totaled 1,195,234 gross tons. The shipments 20 years before, that is, in 1854, were only 3,000 tons. This shows very plainly that the impact of the Civil War and its aftermath on the use of iron and steel had been tremendous, and beyond the expectation of even the most optimistic industrialist. For instance, in 1854 only 1 mine was operating, but by 1873 on the Marquette Range alone there were 40 mines in operation. Even the panic of 1873 was merely a period of readjustment. Better years of prosperity were in the making.

The requirements of the Civil War brought about the realization that the movement of iron ore by hundreds of thousands of tons from the mines to the furnaces required steel railroad systems on a large scale. As far back as 1851 promoters broached a project to build a railroad from the mines to Marquette. This proving too difficult, the idea was abandoned, but immediately a plank road was built by the Jackson and Cleveland iron mining concerns with mules as motive power. In 1854 this road was replaced by an iron strap railroad. Finally, in 1857 an iron rail system was completed, where steampower replaced animalpower as a means of transportation. And so, already by the time of the Civil War, the iron horse had experienced a few years in the long haul to the furnaces and steel mills.

Added to the railroad improvements, in 1855 came the completion of the vitally important canal around the rapids of the St. Mary's River, the outlet to Lake Superior. In the years that immediately followed, during and also after the Civil War, the ship channels were widened and deepened through Lake George and the St. Clair Flats above Detroit. To carry the traffic, the Sault Locks were also widened, deepened and the capacity doubled.

As for the mines, it was not until 1862, during the Covil War, that the Jackson and Cleveland iron ore companies declared their first dividend. About the same time national banking laws went into force which tended to give stability to financial investments such as mining stocks. However, beginning with the panic of 1857, for about 15 years, the iron ore companies had difficulty in getting actual currency from the U.S. Treasury, due to the lack of banking facilities in the mining towns. During this period the companies issued iron money which was a medium of exchange in the form of engraved and printed paper drafts that looked like currency, but were made payable by the treasurer of the home offices of the companies. This ingenious idea enabled the operators of the mines to pay their workmen promptly. The local banks accepted the company drafts just as they accepted regulation Government currency.

During the critical war years, men became wealthy. Iron ore could be bought at $15 per ton at Marquette and sold for about $20 at lower lake ports like Detroit. The original sellers would often buy the ore back for $26 at the ports, and then travel to Cleveland and sell the same original ore for $42 a ton. Charcoal iron was being sold for as much as $95 per ton, and the clever "horse trader" was making fortunes out of an "iron horse." Tremendous price fluctuations resulted from heavy iron and steel

orders received from the National Government for railway equipment, as well as for cannons and ammunition.

An impressive list could be prepared of geologists, prospectors, "guiding lights," financiers, industrialists, and political figures, who should receive credit for their pioneering spirit and firm belief in iron ore mining ventures under the private enterprise system. These men, among many others, provided the leadership, the inspiration, and the "do or die" spirit, which have brought our Nation through many crises such as the Civil War. We must not fail to include a word of gratitude to the clergymen who as missionaries directed and administered the spiritual wants of the pioneers in the mining towns.

Where else in the annals of the Civil War was there a parallel impact for economic good and industrial development? The strategic part played by the iron ore miner is perhaps best expressed by a writer of that period, when he wrote in poetic fashion:

"The miner with his skill—
Nonglamorous his chore
Digs in with might and will
To get the iron ore.
The North and South can't kill
Near Lake Superior's shore
And ev'ry iron hill
Will win the Civil War."

The Procter & Gamble Program for Educational Leadership

EXTENSION OF REMARKS
OF
HON. KATHARINE ST. GEORGE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 30, 1961

Mrs. ST. GEORGE. Mr. Speaker, I received a very interesting letter from Mr. Bryce Harlow, telling of the truly great and important work being done in the field of education by the Procter & Gamble Manufacturing Co. I think this letter and the accompanying program are most worthy of the attention of the House of Representatives:

THE PROCTOR & GAMBLE MANUFACTURING CO.,
Washington, D.C., March 24, 1961.

Hon. KATHARINE ST. GEORGE,
House of Representatives,
Washington, D.C.:

In the light of current preoccupations with problems of education, it strikes me you will find the enclosure meaningful evidence of energetic business leadership in the same effort—surely, the kind of effort that ought not be lost sight of as attention rivets upon public participation in this field.

The support of graduate schools of education indicated in the enclosure is only the newest part of a Procter & Gamble program which also includes: 240 4-year scholarships; certain technical scholarships totaling about 30; payments to all of the 40 State and regional associations of colleges, including approximately 475 different colleges; $20,000 each year to each of 10 large universities, to be used as the universities may choose; certain special grants to such organizations as the National Fund for Medical Education and the United Negro College Fund.

The total being contributed has now reached $1,100,000 per year.

The thought occurs to me that this kind of voluntary, private support of education is about the finest aid to education our free system can produce. Many other business groups are similarly engaged, and a compilation of these efforts ought to be illuminating. Certainly, an accurate appreciation of such efforts ought to give perspective to those who contend that public instrumentalities alone have the ability and zeal to advance the cause of American education.

With warm regard,
Sincerely,

BRYCE N. HARLOW,
Director of Governmental Relations.

THE PROGRAM FOR EDUCATIONAL LEADERSHIP

The newest phase in our program of aid to higher education is grants to support graduate schools of education. Beginning in 1961, we are providing $15,000 per year to each of thhe following graduate schools. We hope to be able to continue this level of support for a total of at least 5 years: Graduate School of Education, University of Chicago; Teachers College, Columbia University; Graduate School of Education, Harvard University; Graduate School of George Peabody College for Teachers; Graduate School of Education, Stanford University.

These grants are in special recognition of the fact that the quality of education depends on the quality of teaching—on the knowledge held by the teacher, on his ability to impart this knowledge to others and on his capacity for stimulating thought. As these areas of teaching capability are expanded, education itself is moved forward. Advances here come principally as a result of research and of sharing the results of this research throughout the broad spectrum of the educational system.

There are relatively few graduate schools in the country which not only train teachers but which also, through research, advance the art of teaching. The institutions named above are among those which are providing outstanding leadership in advanced education. On a highly selective basis they train those who are to teach and those who are to teach others to teach. In addition they carry on broad programs of educational research, the results of which are available to all other educational institutions. Thus, in supporting these graduate schools, an important measure of support is provided to all education throughout the country.

These graduate schools have another claim to the name of "national" educational institutions. They select their students from all parts of the United States and from an impressive part of the rest of the free world, returning them after training to schools, colleges and universities throughout this country and abroad. For this reason also, it is appropriate that support of these graduate schools of education should come from organizations which are, themselves, national or international in character and outlook.

Finally, our support of these graduate schools is impelled by the absence of well-to-do alumni of schools of education. In some other fields, successful alumni are in a position to make substantial contributions to the institutions which provided their education. With only a few exceptions, this is not the case with those in the teaching profession, whose earning power is relatively restricted. Unfortunately, this is true not only for the alumni of these graduate schools but for teacher-training institutions throughout the country. This fact opens a special opportunity and justification for the exercise of corporate support.

As stated with respect to large universities in our university program, we do not suggest that only these five graduate schools of education are worthy of corporate support. Many others also make heavy contributions to teaching and to the improvement of learning methods. Many others, which do not do extensive educational research themselves but which translate the advances of others into better education of teachers, also deserve financial assistance. It is our hope that other organizations, believing as strongly as does our own in the essentiality of meeting the Nation's need for more and better teachers, will compile their own lists of deserving institutions and provide to them the support they richly deserve.

Amending the Reorganization Act of 1949

SPEECH
OF
HON. JOHN B. ANDERSON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 29, 1961

The House in Committee of the Whole House on the State of the Union had under consideration the bill (S. 153) to further amend the Reorganization Act of 1949, as amended, so that such act will apply to reorganization plans transmitted to the Congress at any time before June 1, 1963.

Mr. ANDERSON of Illinois. Mr. Chairman, I support the adoption of S. 153 to further amend the Reorganization Act of 1949 as amended. This law, when adopted will continue the same reorganization powers that were enjoyed by former President Eisenhower. As a member of the Committee on Government Operations and further as a member of the Subcommittee on Executive and Legislative Reorganization, I have made some study of the history of this legislation since its original adoption. The power to submit reorganization plans has been vested in every President since former President Hoover was given this authority in 1932. I am happy that S. 153 retains the provision that a simple majority of either House may disapprove a Presidential reorganizational plan. I think that any step beyond that point would represent an undesirable accretion of legislative authority in the President. Indeed there are those who would say that we have gone too far in even permitting the President to submit reorganization plans subject only to legislative disapproval by a simple majority of either House within 60 days. However, it seems to me that in view of the swollen and sprawling Federal bureaucracy that we have today that steps are urgently needed to streamline, simplify and reduce the many overlapping agencies, departments, and bureaus of the Federal Government. I was pleased to note the other day in the press that the President had by Executive order abolished a number of moribund interdepartmental and interagency committees. I sincerely hope that this is a harbinger of the type of action that the Chief Executive will take under the powers given him by this extension of the Reorganization Act. However, there has been likewise some talk in the press that the President may exercise his authority under this act to superimpose new agencies or new departments, even some of Cabinet level upon the unwieldy structure that we already have.

As a member of the subcommittee of the Government Operations Committee

that will have an opportunity to examine the reorganization plans submitted by the President I want to take this opportunity to express the hope that the President will concentrate his efforts on the elimination of agencies within the executive branch and not use this power to create new and unnecessary Federal bureaucracies. I would also hope, particularly in view of the comment that has been made on the floor of this House during the last few days, that the President would not attempt to use his authority under this act to in any way interfere with the independent operation of the various regulatory agencies. I agree that the wording of the act is quite clear; that Presidential authority is limited to those agencies which are located within the executive branch of the Federal Government. This clearly does not encompass the independent regulatory agencies which have traditionally been regarded as an arm of the Congress.

In conclusion, as one who is a new Member of this body and new to the Washington scene, I have been particularly appalled at the constant proliferation of new Government agencies and bodies of all kinds. We had an example of that today in the House when yet another new position, that of Area Redevelopment Administrator was created. Unless this trend is halted the day will soon come when there will be more chiefs than Indians in this country. The powers granted the President under S. 153 present him with an opportunity to reduce the size and cost of the Federal Government in order that we can give some much needed tax relief to the already overburdened taxpayers of this country. I sincerely hope that he will use this act for the purposes that I have indicated.

Kennedy Housing Bill To Cost in Excess of $7 Billion

EXTENSION OF REMARKS
OF
HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 29, 1961

Mr. PELLY. Mr. Speaker, on March 13, I presented to the House an itemized cost of President Kennedy's housing program based on his message submitted to the Congress on March 9.

At that time I noted that the total financial impact of the President's housing message involved an ultimate expenditure of $6.813 billion.

However, without touching on the merits of the specific proposals in the President's message I noted that only $50 million, or less than 1 percent of the $6.8 billion would be subject to the Appropriations Committee.

I would like to submit for the attention of the Members a revised statement of the administration's housing program based upon the legislation introduced in the House on March 29 as H.R. 6028.

The itemized cost is as follows:

Financial impact of S. 1478 (H.R. 6028), the Housing Act of 1961

[In millions]

Program	Grants	Loans
Urban renewal capital grants	[1] $2,500	
Planning grants	[2] 80	
Permanent open land acquisition	[1] [3] 100	
Open land for future development		[3] [4] $100
FNMA special assistance		[4] 750
Direct loans for elderly housing		[2] 50
Public housing	[1] [5] 1,943	
Additional subsidies for elderly tenants	[1] [6] 240	
Demonstration grants for public housing	[2] 10	
Community facilities		[4] 50
College housing		[4] [7] 1,350
Total	4,873	2,300
Total loans and grants	7,173	

[1] Authorizes contracts pledging faith of U.S. Government. Congress is legally bound to appropriate money in future years.
[2] Appropriation by Congress necessary before contractual obligation effective.
[3] Included in Kennedy housing message, but not in housing bill because of pendency of Williams bill, S. 858. HHFA will endorse Williams bill on this subject as part of housing bill.
[4] Not appropriated; Treasury withdrawals are noted as "public debt transactions."
[5] Based on HHFA estimates of subsidies to be actually disbursed with credit given for reducing contract subsidies through excess receipts at fiscal 1958 rate of 17½ percent ($3.16 billion would be maximum permissible authorization available under present statutory contract authority—$79 million per year for 40 years).
[6] Based on ½ of new public housing authorizations for elderly persons (Kennedy message).
[7] College housing loans have always been part of omnibus housing bills. It was requested in a separate message, although HHFA will still administer program

I note that we may now refer to the administration's housing program as a $7.17 billion program. This represents the total loans and grants, or the total moneys withdrawn from the Treasury should the bill be enacted. I note that of this $7.17 billion only $140 million, or less than 2 percent, would be subject to the Appropriations Committee. The other 98 percent would either involve loans from the Treasury or contractual obligations which will make it necessary in future years to appropriate the money, with no room for discretion or judgment by the Appropriatons Committee.

Mr. Speaker, I was most disappointed to read in the press that this bill has a price tag of approximately $3 billion. The reason is that the press accepts the Agency handout at face value. Yet, an inquisitive reporter, and I like to think that all reporters are inquisitive, would note that the administration was asking for an additional 100,000 units of public housing. Yet, the cost breakdown supplied by the administration contained no estimated dollar figure for the cost to the taxpayers of these 100,000 public housing units.

If any Member of the House believes that public housing costs nothing, let him look on page 323 of the Budget of the United States for the fiscal year ending June 30, 1962 and he will note a request for an appropriation of $169,300,000. This money will be paid during the fiscal year 1962 to service the debt on existing public housing. This is an outright subsidy because the rental income from public housing units pays only the operating costs. Now, when the Independent Offices Appropriations Subcommittee goes into session to ponder this request for $169,300,000, it will find that it has absolutely no discretion in eliminating the item or even reducing it. The United States is legally bound to appropriate and disburse this money on the basis of contracts which the Congress authorized in 1949 to be executed in the name of the United States.

This is a glaring example of the lack of control of the public purse, control which the Congress has relinquished to agencies of the executive branch.

It is therefore utterly fantastic for anyone to label this bill as a $3 billion or $4 billion measure by not including an estimate of cost for public housing.

It is to correct this glaring defect in pinning down the actual cost, current and ultimate, to the taxpayers of these programs that I introduced House Resolution 115 which would require that all legislation involving the expenditure of public money be subject to the Appropriations Committee. I regret that the House Rules Committee has refused to let the House work its will on House Resolution 115.

Soon the House will have an opportunity to work its will on this $7.173 billion measure. I hope that at that time we can raise a standard for fiscal responsibility to which all men might repair.

Water Pollution in the Past and in the Sixties

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 7, 1961

Mr. DINGELL. Mr. Speaker, pursuant to permission granted, I insert into the Appendix of the CONGRESSIONAL RECORD an article by Mr. Kenneth E. Biglane, appearing in the Louisiana Conservationist of February 1961, entitled "Water Pollution in the Past and in the Sixties."

This article, by one of the outstanding men in the field of water pollution control and the head of the agency charged with that responsibility in the State of Louisiana, makes some sobering points on pollution and the danger it poses to our people:

WATER POLLUTION IN THE PAST AND IN THE SIXTIES

(By Chief of WPC Kenneth E. Biglane)

The contamination of water by man's activities has been a problem as old as man himself.

The widespread sufferings of the human race caused by the defilement of his water supplies is recounted in every history book and it is doubtful that the historians recognized that along with the summation of all of the wars, all of the plagues, all of the events which were recorded to plot civilization, from the Dark Ages to the present, a story of water pollution was being depicted just about as detailed as if a trained ob-

server were on the spot. Man's habit of throwing refuse out of his dwelling to be digested by the world has provided archeologists with many "objects d'art" on which to base the development of civilization.

The remains of Neolithic villages in Switzerland, Italy, and Denmark showed them to be built on poles driven into the beds of lakes or ponds. These "dawn of civilization villages" were unearthed by the discovery of shell heaps, kitchen middens, and other trash which was merely tossed out of the openings of the crude twig huts. Certainly these lake dwellers must have obtained their drinking water from this same area of disposal. While it would only be of academic interest to know the prevalence of waterborne diseases among the inhabitants, it is doubtful that the incidents of these maladies were much higher then than now. Man's practice of refuse disposal into his water supply has not changed very much, just refined.

The mysteries of water were incorporated into the philosophies of the ancient Greeks. Thales, a displaced Phoenician and the pioneer of Greek natural philosophy, taught that water was the cause of all things. Later thinkers shifted to air (Anaximenes), then fire (Pythagoras), until finally Empedocles assumed all things arose from fire, air, water, and earth. Heracleitus recognized that "fire was the soul of man" and that "diseases arise mostly through water." A temperate man, he also made the observation that "the driest soul is the wisest."

The famous medical pioneer, Hypocrates, gave brilliant observations on climatical and geophysical conditions on mankind in his main treatise, "Airs, Waters, and Places."

History tells us that the builders of the Roman Empire constructed waterworks for domestic supplies and sewage disposal systems. History also tells us that the collapse of this great empire was probably hastened by the diseases and plagues which swept the populace who had carelessly allowed these sanitary systems to deteriorate.

Possibly because water is so commonplace, familiarity has bred neglect. Popular indifference toward safe and clean water prevailed well into the 19th century. Epidemics of waterborne diseases such as dysentery, typhoid fever, cholera, and parasitic infections were wheeled through Europe, Asia, and North America by the vehicle of water. These killers made no distinction between the rich or the poor. King Louis VIII, of France; Charles X, of Sweden; Prince Albert, of England; and Louis Pasteur's two daughters are said to have succumbed to waterborne diseases.

Aside from the silting of rivers from drainage arising from unwise farming practices, a new way to degrade water appeared on the horizon during the period known as the industrial revolution. Up to this point we have been discussing water contamination from a domestic sewage point of view; that is, refuse and excreta originating from man's domicile or home. Beginning with the industrial revolution and continuing to the present, industrial wastes from manufactured or refined products have created additional loads for the world to bear, particularly the world of water. Whitney's cotton gin, the stocking frame of the Lombe brothers, Hargreaves' spinning jenny, improved methods of dyeing, and the discovery of the bleaching properties of chlorine ushered in the textile industries with their great volume of wastes. The art of making paper has been known for over 1,800 years, but it was not until mid-19th century that man applied his full techniques of chemistry and machinery to mass produce this product. At the turn of the century there were over 800 pulp and paper mills in the United States, each using water and discharging wastes in tremendous volumes. In 1810, the pounds of paper consumed per capita was only 1; by 1947, it had risen to 344.

The chemical industry burst forward with the utilization of the Frasch process for mining sulphur. During the Civil War, an entire year's production of sulfur amounted to only 40,000 tons; that quantity is now the production for about one day. Sulfuric acid, the man-of-all-work was ready to go into the thousands of chemical processes, most of which require water and have a waste discharge.

The mass production of hydrochloric acid was discovered in an ironic manner. In the course of the manufacture of soda ash by the old LeBlanc process there was discharged into the atmosphere a steady stream of hydrogen chloride. On humid days, the neighborhood of such a plant was shrouded in a fog. Because of this air pollution, the English Parliament passed the Alkali Act in 1863 which forbade the discharge of such concentrated gases. It became necessary for manufacturers to erect absorbing towers, in which the gas was absorbed in water. The resulting solution was the first commercial hydrochloric acid and is probably the first example of a waste product which was saved and changed into a useful one.

What man discovered and learned to mass produce in the 19th century, he put to furious use in the 20th century.

Large-scale metal production and the utilization of Pasteur's food preservation techniques boomed the canning industry and more waste discharges.

Twentieth century United States was not yet a decade old when oil—black gold—was being pumped from the ground in ever-increasing volumes. Oil refineries immediately appeared on the scene, each using copious quantities of water for cooling, condensing, and process.

Without further citations, it should be obvious that the United States in the 19th and early 20th centuries was directing almost all of its entire civilized activities toward the production of finished goods and refined products. For all of his refinements, however, man had not much improved on the Neolithican method of waste disposal and all of his "objects d'art," domestic and industrial, were directed into the nearest waterway for future archaeologists to ponder.

Danger was ahead for the polluters, however, for in 1888 the Congress passed a law prohibiting the discharge of refuse in the New York Harbor. In 1899, Congress broadened its water pollution law to prohibit the discharge of refuse from ships and manufacturing establishments into navigable waters of the United States. It exempted liquid refuse flowing from streets and sewage lines, however. The Oil Pollution Act of 1924 was passed but referred only to shipping.

Prior to 1924 several States had passed laws for the protection of public water supplies and public health, but it was not until the early thirties that the hue and cry against industrial polluters brought torrents of regulations, rules, etc., into State legislature hoppers. It was at this time the tactics of industrial lobbying against all antipollution bills became an exact science. Some of these tactics are still used today in varying forms, but entirely recognizable.

In one State an antipollution bill was opposed on the ground that pollution was definitely a Federal and not a State matter. Just a few years later this same group opposed Federal legislation on the ground that it was an invasion of State rights. At about the same time, in a meeting of industrial representatives, a statement was made that "in a few years there would be no water pollution problems." Other arguments and reasons were advanced by industry, but always in opposition to whatever legislation was proposed unless it was regarded as harmless. In effect, water pollution became the subject of what could be regarded only as a controversy, with the general public, various sportsmen's clubs and commercial fishermen, nature, health, and similar associations on one side, and a large part of industry on the other.

The position of industry was set out in bolder relief between 1932 and 1942, for during this decade many sewage-treatment plants were installed and a great deal of pollution of surface waters by municipal sewage was eliminated. As a result, pollution by industrial wastes became as obvious as the dead fish in a stream.

Immediately after World War II, a majority of the States, and the Federal Government, revised, strengthened, or implemented many antipollution laws. However, the majority of these laws contain such vague terminology, complicated enforcement proceedings, and a tendency for broad interpretation so as to make most of them unenforcible by a water authority and, therefore, innocuous to industry.

Since 1956, the tempo of water pollution enforcement and abatement has been stepped up considerably. Public Law 660, passed by the 84th Congress, contained three important considerations. First, it provided for matching funds to bolster each State's water quality organization. Much needed equipment and valuable technical personnel were secured as a result of this section. Next, a provision to provide grants to municipalities to construct sewage treatment plants has resulted in a sharp national increase of these much needed facilities. Finally, stronger interstate pollution laws led to enforcement actions by the Public Health Service and began to clear streams that formed State boundaries or flowed in a polluted condition from one State to another. This latter provision has prompted many States to strengthen their entire water quality program so that they could better handle these problems without having to knuckle down under Federal enforcement actions.

Louisiana has materially benefited from the passage of this very important and highly successful act of Congress. The State has received and utilized moneys for bolstering the activities of the division of water pollution control and the Louisiana Stream Control Commission and for aiding municipalities in constructing sewage treatment plants. The first interstate enforcement action occurred between the States of Louisiana and Arkansas and led to the clearing up of Arkansas oil field brines from the Corney-D'Arbonne drainage basin.

Most authorities agree that those deeds accomplished in the water pollution control field during the 1960's will have far-reaching effects on the health and welfare of our country for the next 20 years. Because these are critical times and because water pollution is such a critical reality, it may well be that what we do or fail to do in the next 10 years will determine whether or not the United States starts the 21st century as the world's most powerful nation. A nation should do for her natural resources what her resources have done for her. Let not any summation contain the paraphase, "E tu pollute."

Chicago: Crossroads of the Nation

EXTENSION OF REMARKS
OF
HON. ROMAN C. PUCINSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 30, 1961

Mr. PUCINSKI. Mr. Speaker, following is an excellent article about the city of Chicago which appears in the 1960

Illinois Bell Telephone Co. annual report.

Although Chicago may have its critics, this article points out some of the reasons those of us who live in Chicago still believe it is the most wonderful city in the world.

The article follows:

CROSSROADS OF THE NATION—AND ONE OF THE 400 HOMETOWNS WE'RE PROUD TO SERVE

Ninety years ago Mrs. O'Leary's cow kicked over a lantern, so legend says, and within hours, one of America's boisterous and promising young cities was mostly ashes and rubble.

Then a city of less than 300,000, Chicago has come a long way since that fateful October night in 1871. Today it is the crossroads of the Nation's transportation, a top-ranking industrial center, the commercial and financial capital of the Midwest, and hometown to 3½ million people.

Illinois Bell is proud to count Chicago as one of the 400 hometowns that make up the territory it serves. Since the opening of the city's first telephone exchange just 7 years after the great fire, the telephone has played an important role in the building and development of the new Chicago.

Actually Chicago is not one big city, but an aggregation of hometowns. It is the Loop and Logan Square, near North Side and Norwood Park, Beverly Hills and Bridgeport, Lawndale and Lake View, Austin and Albany Park, and dozens of other neighborhoods, each with an identification and character of its own.

To the millions who live, work, shop, or play there, Chicago is State Street and Michigan Avenue's magnificent mile, steel mills and grain elevators, Merchandise Mart and McCormick Place, Comiskey Park and Oak Street Beach, food processing, metal fabricating, and printing plants, Navy pier and the old Water Tower, ocean ships and a river that runs backward.

Chicago ranks high in the country's commercial and industrial life. It rates first in the world as a grain trading, furniture marketing, mail order, convention and trade show center. Within the city and its metropolitan area, 14,000 factories employ a million people and turn out $24 billion in manufactured goods a year. The area is America's No. 1 producer of a great variety of items ranging from diesel engines to candy.

Chicago, in the words of poet Carl Sandburg, is the Nation's freight handler. No trains go through the city; 20 major railroad lines converge there. In or out of the city daily go thousands of motor freight trucks and hundreds of passenger buses. Its two major airports are among the world's busiest. And with the completion of the St. Lawrence Seaway, Chicago is becoming the world's greatest inland port.

Few cities rival Chicago as a cultural center; education is one of its biggest businesses. As a group, its 40 colleges, universities, and professional schools and its more than 500 private trade and career schools offer one of the most diversified curriculums available in any educational center in the world. Its art, science, industrial, and natural history museum attract millions of visitors annually.

Chicago's pioneering accomplishments in city planning and in the arts and sciences are world renowned. Here the skyscraper came into being. Here was born the atomic age in 1942 when scientists at the University of Chicago achieved the first nuclear chain reaction.

In tune with the times, Chicago today is moving ahead. A great network of expressways is taking shape; blighted areas are being cleared. Handsome new office structures and high-rise apartment buildings are springing up, and plans for others have been announced. Total construction volume in the city in 1960 for schools, churches, apartments, public housing, commercial and industrial and other buildings came to more than $400 million.

What does it take to serve the communications needs of a city such as this? First of all, it takes skilled telephone people. Some 22,000 Illinois Bell employees work in Chicago. Their main job is to see that the 8 million calls Chicagoans make daily over the city's nearly 2 million telephones go through smoothly.

And it takes complex equipment, including 26 central office buildings, 3 major long distance switching centers, and more than 8½ million miles of wire, most of it underground.

Beyond our company's carrying out of its responsibility to provide Chicago with telephone service of the highest quality and usefulness, there are other ways in which Illinois Bell and the Bell System contribute to that city's general well-being. They include the taxes we pay, our payroll, purchases we make from suppliers, payments to contractors, public telephone commissions, and dividends paid to Chicagoans owning shares in our business.

In 1960, Illinois Bell paid nearly $24 million in taxes and franchise fees to the city of Chicago. This money helps to support the city's more than 445 public schools, its 168 parks, and its fire, police, and other municipal services. The amount does not, of course, include the taxes we paid to State and Federal Governments and to local taxing bodies outside Chicago.

In the same year, telephone company wage payments in Chicago came to about $135 million. A large part of these wage payments to employees working in Chicago is poured back into the city's economy.

In a recent 12-month period, purchasers from Chicago firms, of materials, supplies, equipment and services by our company and Western Electric, the Bell System's manufacturing and supply unit, totaled $70 million. Western bought from 2,800 Chicago suppliers, and the items ranged from mechanical pencils to motor trucks. These purchases provide jobs and wages for thousands of people in hundreds of businesses and trades.

Along with their everyday job responsibilities, telephone people throughout Chicago give their active support—many of them in leadership roles—to a multitude of civic, welfare and other community endeavors aimed at making their city a better place in which to live and work. Their record of generosity in support of Chicago's annual Joint Appeal has time and again been cited as an outstanding example for other employee groups in the city to emulate.

Both as a corporate citizen and as members of the community, we of Illinois Bell consider it a privilege to be part of Chicago, and to contribute to its social and economic progress. The fact that nearly half of all the customers we serve are Chicago homes and businesses points up the importance of this city to the success and prosperity of our business.

Kremlin Canned Crab Will Cripple U.S. Fishermen

EXTENSION OF REMARKS

OF

HON. THOMAS M. PELLY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 29, 1961

Mr. PELLY. Mr. Speaker, on previous occasions I have pointedly criticized the administration's recent decision to lift the ban on importation of Russian crabmeat.

Ignoring the questionable political soundness of the decision and by way of reemphasizing my previous criticism relative to the crippling economic effect the removal of this embargo will have on a vital American industry, I am including a letter from Mr. George Johansen, Secretary-Treasurer of the Alaska Fishermen's Union.

Mr. Johansen enjoys the confidence and respect not only of the members of the Alaska Fishermen's Union, but also of the fishing industry as well. Furthermore, there is no one better qualified to testify as to the serious economic impact of this unfortunate policy decision.

The letter follows:

ALASKA FISHERMEN'S UNION,
Seattle, Wash., March 23, 1961.

Washington State Congressional Delegation.

DEAR CONGRESSMEN: Recent newspaper announcements would indicate that the United States has lifted the 10-year ban on importation of canned crabmeat from Soviet Russia. We are strongly opposed to the lifting of any restrictions which may be in existence on Russian fisheries products.

As you know, the Russians are rapidly expanding their fishing fleets all over the world, and while we do not have exact information available relative to their North Atlantic fisheries, we certainly know that on the Pacific coast they are expanding by leaps and bounds. In the past 2 years they have greatly extended their fishing efforts. We look for a further expansion in the North Pacific waters and in the Gulf of Alaska.

In my last letter to you, I pointed out that this extension of Russia's fishing will be very detrimental to American fishermen because the amounts of fish which they will take will probably exceed 1 billion pounds in 1961, and in our opinion, will have a definite influence on the coastal stocks of fish in Alaskan waters. While they do have a legal right to fish in international waters, such fishing on an ever-increasing scale is going to soon call for conservation measures or else these fisheries will become depleted.

I would also like to point out that Russia's fisheries are a state operation, financed entirely by the Government itself and they do not have to follow usual business procedure in showing a profit on their operations in order to stay in business. It looks from here as though the only thing we can gain by lifting trade restrictions on fishery products from the Soviet Union is to encourage and help them to further expand their fisheries by providing a market for their products in the United States. We can't compete against a state-owned operation—we can't even compete against a private fishing industry located in a foreign country, operating on its own—because they are more or less subsidized by their respective countries. On the one hand, we are trying to make a living within our U.S. fishing industry, and on the other hand we are trying to preserve a valuable food resource that may become vital to our Nation in the future. To do this, we must have some help from the U.S. Government, but the lifting of trade restrictions on fishery products, particularly as far as Russia is concerned, seems to us to produce the opposite results to those we had expected to get from our Government. For these reasons we strongly oppose the lifting of this trade restriction and ask that there be a reexamination of the whole problem.

In 1956 when we set up the office of under secretary of fisheries and commissioner, we thought that this would give us a voice on a policymaking level. It is beginning to appear that the overall policy on U.S. fisheries is not working out as we had anticipated.

It still looks as though decisions are made within various departments without close cooperation between the State Department and Department of the Interior and without evaluation of what effect actions taken by the Department of State would have on fisheries as a whole. All we can do is try to explain to our representatives in Congress what our problems are and, of a necessity, we must depend upon you to bring those problems to the attention of the proper departments and the administration. This we hope you will do.

As far as the crab industry in particular is concerned, it has been one of the few industries where we have had an opportunity to sell our product on the American market at a price whereby the industry could show a reasonable profit. Also, it has helped us to build up this industry in the State of Alaska to a point where it has alleviated some of the strain that formerly was put on the salmon resource in Alaskan waters.

To a great extent, the crab industry has proved a welcome addition to the economy of the resident fishermen of Alaska. Inasmuch as we do not have too many industries in that State, the crab industry has certainly been of vital economic importance.

We have many fisheries resources in Alaska and on the Pacific coast which would be highly beneficial to the economy of the West Coast States if we had a market for them. Let us not destroy the markets we have but let's try to build additional markets by a sensible import policy that would allow us to live and let live.

Sincerely yours,

ALASKA FISHERMEN'S UNION,
GEORGE JOHANSEN,
Secretary-Treasurer.

Remarks by Mr. John L. Lewis, National Coal Policy Conference, Inc., Annual Dinner, March 29, 1961

EXTENSION OF REMARKS
OF

HON. JOHN P. SAYLOR

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 30, 1961

Mr. SAYLOR. Mr. Speaker, I commend to the attention of my colleagues the speech made by Mr. John L. Lewis, president emeritus of the United Mine Workers of America, at the annual national dinner of the National Coal Policy Conference, Inc., on the evening of Wednesday, March 29, 1961.

It is, in my opinion, the most sincere and revealing exposition I have ever heard of the immense importance to our national life and economy represented in the coal industry of the United States of America:

REMARKS BY MR. JOHN L. LEWIS, NATIONAL COAL POLICY CONFERENCE, INC., ANNUAL DINNER, MARCH 29, 1961

Mr. Chairman, fellow Americans, I am going to be most considerate and not undertake to crowd the program with a speech from me tonight. I am waiting all agog like the rest of you to hear from the distinguished Secretary of the Interior, Mr. Udall; because as a public representative of great and far-reaching interests throughout our country, the Secretary of the Interior is going to be faced with many heavy responsibilities in the future. I am sure that throughout the Nation hundreds of thousands of our citizens are going to be waiting to read and appraise the views he may expound here tonight.

I only want to sustain and approve the factual things that have been said here tonight by our distinguished chairman, Mr. George Love. Mr. Love represents the largest coal-producing company in this or any other country, in the free enterprise list of nations. No other coal mining organization approximates the volume, or the magnitude of his interests unless we might say that the British Coal Board, might be a coal company. However, the British Coal Board functions by token of nationalization of the coal measures and the coal producing properties of the United Kingdom; whereas, here in America we are devoted to the principle and dedicated to the principle of free enterprise: investment for profit, reward for incentive, progress to permit the coming generations to participate in the bounties of nature and Providence in this great Nation of ours.

And coal is one of nature's greatest gifts to our Republic, our people, our institutions. It is the greatest of our national resources. Our coal measures contain all the values inherent in organic life, through the millions and millions of years it has taken for coal to form. Almost everything of organic nature may be found in coal. It only waits for us to develop formulas whereby we can extract and isolate those values and reap the reward in greater expansion of our economy, the greater advances toward the cultural objectives of our Nation and our people. It remains for the genius of man to make those values increasingly competitive and available for usage to the coming generations.

The problem of keeping our coal industry in adequate condition to meet the requirements of this Nation in the future is of tremendous public interest and of vast concern, not only to our generation, but also to the coming generations; because we have to demonstrate whether free enterprise as we know it, understand it, cherish it, can exist in a world facing the phenomenon of vast population increases in every land, with teeming millions and millions of people, heretofore oppressed, neglected, exploited, demanding a participation in the rewards of nature and the bounties of providence.

The question of coal runs to all the major considerations of policy now facing our Congress and our people and the present administration. It runs to the safety of this Nation in time of war. From day to day we may hope war will not come, but we must conclude that war at any time is a potential, is a possibility. It runs to the question of whether American coal, the greatest natural resource of America, can participate in the world markets based upon its ability to compete in those markets. That has been established now, in the past decade, by experience, because, as our chairman says, we have the greatest productivity per man employed in the industry of any civilized country in the world. And we can mine coal cheaper and lay it down in these countries for as high as $2 a ton cheaper than they can mine it in their own national measures in their own land.

It runs to the question not only of the balance of trade but it runs to the question of the stability of our gold reserves. And the gold outflow from this Nation has aroused the concern of many of our statesmen in recent months. It is solved not yet. Some years ago we pledged ourselves to peg the price of gold at $35 an ounce, an increase from the world standard of $20. The Commonwealths of the United Kingdom—the remnant of the British Empire—produces three-fourths of the gold produced per year. We have given grants and awards to various countries to increase their production of gold so that we could enjoy the privilege of taxing our people more heavily to provide the money to buy it.

And we have built them up through our aid to these foreign countries, as witness the flight of American capital to some of those countries now and in the erection of producing plants to compete in the world markets with our products at home. And we have added to and increased our national debt and the burden of it. The interest on our national debt today costs $17,000 per minute, according to a governmental report. And $10 billion or more must be expended in payment annually in interest charges on our outstanding Government paper before a dollar can be spent by the departments or the agencies of Government to serve the American people in their constitutional enterprises.

Yet we have reserves of coal for thousands of years to supply any conceivable demand of a greater and greater Nation during that period. The State of Wyoming alone has 121 billion tons of known deposits of lignite and sub-bituminous coal. And if necessity existed we could exist on our reserves in the State of Wyoming for hundreds and hundreds of years at our present rate of consumption.

This country is consuming oil and gas at a rate that some day may prove to be highly embarrassing. It is well-known to all that most of our refineries are located on the gulf coast and the Atlantic coast and are vulnerable to submarine attack with modern equipment—not the ultimate weapon. Our potential enemy has submarines vastly in excess of our own establishment and has been turning those submarines out in recent years—the conventional type—so fast that it has been a marvel to our technicians and our military men who study those problems. I hope we have not forgotten our experience with submarines during the last war. It was almost a miracle that we were able to devise a counterweapon that abated the submarine menace; because they were sinking our oil tankers in the gulf; they were sinking them along the Atlantic seaboard within sight of some of the luxury hotels bordering the Florida coast.

If that happens again, what will be our situation? We are geared to oil. Our transportation will be stopped. Our railroads could haul no coal to market even if we were able to mine it. Our economy would collapse. Our factories could not operate. Our available highways could not carry any traffic in trucks; because oil would not be available for the trucks, even if we barred all other traffic on the highways to make way for them.

These questions, gentlemen, of whether we are going to keep the coal industry stable, whether we are going to develop and exploit and utilize the great wealth stored in our coal measures; whether we are going to unlock, by research, more of the mystery of those components of coal, with all the organic values available, or whether we are going to let our coal industry dwindle to the point where it can no longer sustain or justify its investment of capital or pay reasonable returns on the vast investments—these are the questions that face our statesmen today; that face this administration today; that face every citizen of a thoughtful nature who has, at least, a small conception of our interdependent economy.

So we have formed this organization (NCPC) that the distinguished Secretary is going to address tonight. We formed it because of the recognition by every element that has to do with the coal industry of the stern, naked necessity of stopping the eternal caviling within our ranks and to use our collective energy with such knowledge as we may possess, in behalf, not alone of the coal industry but also of the future of this Republic of ours and its free institutions to which we are all dedicated.

My compliments to my colleagues in this organization, to its officers, to its boards and committees, to the participating organiza-

tions—to the 31 railroads that are represented here.

May I say this, just in passing, that in 1959 the railroads received for the transport of coal in excess of $1 billion. I do not know how much less that figure was in 1960. It was the greatest volume of revenue from a single commodity, greater perhaps than any other groups of products, aside from agricultural. The railroads are in desperate need of assistance to rebuild and modernize our rail transportation service.

There are those who are inclined to believe and think that the coal industry is obsolete. There could be no greater mistake. Coal is coming into its own again, through sheer, stark necessity on the part of the people and our integrated economy. Coal's troubles have been greatly magnified and increased by the depression that has existed progressively since 1958. Solve coal's problems and you have the answer to the distressed areas problem. There is no other answer. The Government can help; the Congress can help; the administration can help; the Secretary of the Interior can help; and the President of the United States, who is committed on this subject, can help greatly in his recommendations to the Congress and the public agencies having to do with this question.

It is idle to assume that we can entice into a State like West Virginia, or Pennsylvania, or Kentucky or any other State of magnitude in its coal production, enough consumer industries to provide employment for those distressed areas. And it would take so little coal at so litle cost to provide the character of employment for which the people are trained and upon which the industry and the social and economic life of the State is builded to provide for employment of those men trained in that vocation in the business of managing the mines and producing coal. And to the pride of the industry, let me say, that the coal industry has solved the question which comes up from time to time in discussion by economists: the question of whether or not a peacetime economy can expand sufficiently and provide enough jobs for each generation of young people who come from our preparatory and vocational schools and are asking for a participation in the future of this Republic by having a job available for them.

Next year, 1,300,000 young people are going to be available for jobs, on top of the millions now unemployed. We must solve the that question because increasingly our population, expanding as it is, is an urban population, quartered in the cities and the great centers of population and not on the land to the same degree that existed easily within the memory of all of us. And with this increasing population, this world phenomenon of increasing population, we cannot indefinitely hope to maintain public stability in our Nation if work is not available, if income cannot be had by teeming millions of the population, if these young people are deprived of participation in the bounties inherent in this country of ours. We will not be able to protect and preserve public order when children finally must eat or die.

If there is one lesson that Hitler taught the civilized world it is the lesson that food and shelter and participation are requirements that come before any other considerations, i.e., loyalty to the state, loyalty to the church. Hitler took the young people of Germany away from the German economists' theory. Hitler took the young people away from the church. And he created his mad device which has cursed the world since it was formed—bread, shelter, activity, and participation as an inherent and hereditary right of every daughter and every son of every citizen. So my fellow Americans, asking your pardon for wandering further afield than I had intended, I say that our citizens, our industrialists, our investors, our statesmen, our Federal administration will do well to see that this industry and all its values for the future are continually available as a constructive unit of the free enterprise system of our Republic.

Thank you.

The U.S. Treasury Is Losing Hundreds of Millions of Dollars

EXTENSION OF REMARKS
OF
HON. NOAH M. MASON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 30, 1961

Mr. MASON. Mr. Speaker, Mr. Will Clayton, of Houston, Tex., is a wise and thoughtful and very understanding businessman. He has served our Government well in numerous capacities. He is, I should say, an economist among other things—not of the theoretical, visionary, spendthrift school which is so much in evidence today, but of the hardfisted school of business, made up of men who have learned tne value of money by earning it and not merely by spending what others have made.

Mr. Clayton has been in the cotton business for a good many years. He has known cotton in good times and in bad times. Today he is uncomfortably aware of the fact that the taxpaying cotton business—his business—is being strangled and destroyed by tax-favored, cooperative competitors.

Along with my colleagues of the House Ways and Means Committee, I recently received a letter from Mr. Clayton, which I should like to insert in the RECORD. The letter says:

ANDERSON, CLAYTON & CO., INC.,
Houston, Tex.

DEAR CONGRESSMAN MASON: In looking for tax loopholes, please give attention to the tax-free status of cooperatives.

If a cooperative corporation wishes to use its profits for expansion of its business (as nearly all of them do), they can keep the tax-free dollars earned by the simple process of issuing to their patrons little pieces of paper indicating the amount placed to the credit of the patron.

Since this little slip of paper has no due date and, in most cases, bears no interest, the courts have held that they are not taxable because they have no market value.

Thus, the cooperative corporation and its members escape completely the payment of any income tax.

No business paying 52 percent of its profits in income tax can possibly compete with cooperatives paying no taxes, as outlined above.

In consequence, one sees in the newspapers regularly notices of sales of businesses to the cooperatives to be paid for over a period of years with tax-free dollars.

The U.S. Treasury is losing hundreds of millions of dollars in this way.

This thing will surely be corrected one of these days, but I am afraid not until most of us who are in activities highly competitive with cooperatives have been compelled to sell out to them.

Sincerely yours,

W. L. CLAYTON.

I have only to add, Mr. Speaker, that adoption of my bill, H.R. 3550, will correct the situation at once, before Mr. Clayton and many others—not only in the cotton business but in practically every other business in the United States—are compelled to sell out to the tax-favored cooperatives.

Massachusetts Needs Development and Expansion of Health, Recreation, and Resort Centers

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 30, 1961

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a letter which I received from Mr. Anthony W. Spadafora, assistant director of waterways for the Commonwealth of Massachusetts, and copy of his letter to the Secretary of the Interior Stewart Udall:

THE COMMONWEALTH OF MASSACHUSETTS, DEPARTMENT OF PUBLIC WORKS, DIVISION OF WATERWAYS,
Boston, Mass., March 14, 1961.

Hon. THOMAS LANE,
U.S. House of Representatives,
Washington, D.C.

DEAR CONGRESSMAN LANE: The need for the development and expansion of health, recreation and resort centers in our Commonwealth are undoubtedly well known to you. Therefore, I am taking the liberty of enclosing herewith a copy of a letter sent to Secretary of the Interior Udall, the contents of which are self-explanatory. The success of such a venture, needless to say, will depend on your unqualified support. We in the department earnestly solicit this, and assure you of our personal gratitude for anything you may do to further this program.

Respectfully submitted.

ANTHONY W. SPADAFORA,
Assistant Director of Waterways.

THE COMMONWEALTH
OF MASSACHUSETTS,
DEPARTMENT OF PUBLIC WORKS,
Boston, Mass., March 14, 1961.

STEWART UDALL,
Secretary of the Interior,
White House,
Washington, D.C.

DEAR MR. SECRETARY: Recently, the Boston newspapers carried a story from President Kennedy concerning the loss of billions of dollars in tourist trade throughout the Nation. As I recall, you also were quoted in relation to this matter. It is my understanding that these above referred to remarks of both the President and yourself were intended for the entire country.

In 1953, under former Gov. Christian Herter, all Massachusetts State beaches were placed in the division of beaches; subsequently, this division was assimilated into the division of waterways, a division under the jurisdiction of the Massachusetts Department of Public Works. Recently, I was placed in charge of the subdivision of beaches. It is the intention of my department to seek an appropriation from the Massachusetts Legislature for a study which would not only unify all public beaches under this department but consolidate beaches now under the control of the metro-

politan district commissions and the Massachusetts Department of Natural Resources, both separate and distinct agencies under separate and distinct heads with no affinity or identity with the division of waterways.

The intent of this study will be to coordinate all public beaches under one head not for only maximum efficiency but for a wide expansive development of many more miles of public beaches.

This is necessary in Massachusetts, because an expanded highway program without public beaches available to tourists is of little benefit to our resorts on the north and south shores, as well as to present and proposed State and National parks at or near the ocean's shore.

A further reason for an expanded beach program is to make available beaches now being absorbed by private developers, and thereby preventing public development for the benefit of all our citizens and tourists. From not only an economic standpoint, but in keeping with the new Federal policy of encouraging health and recreation, these encroachments on the public domain create an increasing danger.

It has come to my attention that the Department of the Interior, under your jurisdiction, is about to embark on a wide program of Federal financial assistance for the benefit of the several States along the line of our proposed study.

I have been authorized and directed by my supervisor to make formal application to you for participation in this program by the Commonwealth of Massachusetts through its division of waterways (beaches).

Naturally, outright Federal grants are the ideal and most desirable method of commencing such a program. Presently, the Massachusetts taxpayer is under a heavy financial burden. However, if such a program is not availbale from your Department, I can assure you of our desire to cooperate on some matching fund basis.

Since our legislative requirements must be acted upon within a very short period of time, I would appreciate an early reply to this request if possible.

If necessary, I can appear in Washington to confer with you or any of your aids and outline in person this program of expansion, and also, submit to you the results of documentary studies made of the tremendous possibilities for developments for health and recreation here in the Bay State. The favor of an early reply will be greatly appreciated.

Respectfully submitted.

ANTHONY W. SPADAFORA,
Assistant Director of Waterways.

A New School Aid Bill With No Strings

EXTENSION OF REMARKS
OF
HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 29, 1961

Mr. PELLY. Mr. Speaker, I wish to announce to the House that I have introduced a new school bill. It is H.R. 6074 and would provide direct aid to the States for educational purposes only.

In previous Congresses, I was the sponsor of the so-called Pelly bill which would have returned 2 percent of all Federal income taxes collected in the various States to them to be expended by each State in accordance with its own budget. Based on Federal income tax collections, this bill would have refunded $1.1 billion without any Federal controls. No cost of Federal administration would have been involved. The only procedure would have been 50 checks from the Treasurer to 50 State treasurers.

There was one flaw in this proposal; namely, the fact that corporation taxes are paid in one State but the profits which are taxed are often earned in several States. States such as Alaska or my own State of Washington would have suffered because many big corporations have their headquarters in cities like New York, Chicago, Boston, or San Francisco. As a result, income tax returns paid in some States reflect profits earned in other States.

To make a long story short, I admitted that weakness in the bill and since the 86th Congress have sought to come up with a new and more equitable basis of tax refund.

My new bill, H.R. 6074, removes the inequity. It would limit the refund to a percent of personal or individual taxes. In other words, my new proposal is to turn back 5 percent of the taxes on income paid by individuals. It excludes refunding of payroll taxes under social security and likewise does not include any part of the income taxes on corporation profits.

Based on a breakdown of such taxes furnished me by the Library of Congress, I have estimated the annual return of taxes for education under my bill as follows:

	Amount
Alabama	$13,705,000
Alaska	2,080,000
Arizona	8,615,000
Arkansas	5,890,000
California	207,285,000
Colorado	35,255,000
Connecticut	38,095,000
Delaware	12,735,000
District of Columbia	14,588,000
Florida	34,400,000
Georgia	22,265,000
Hawaii	5,695,000
Idaho	4,070,000
Illinois	160,855,000
Indiana	47,475,000
Iowa	17,635,000
Kansas	15,220,000
Kentucky	14,385,000
Louisiana	17,915,000
Maine	5,305,000
Maryland	43,215,000
Massachusetts	64,700,000
Michigan	106,765,000
Minnesota	32,420,000
Mississippi	5,350,000
Missouri	48,015,000
Montana	4,065,000
Nebraska	13,270,000
Nevada	3,910,000
New Hampshire	4,755,000
New Jersey	63,980,000
New Mexico	5,865,000
New York	335,435,000
North Carolina	20,990,000
North Dakota	2,775,000
Ohio	131,885,000
Oklahoma	16,775,000
Oregon	16,770,000
Pennsylvania	138,960,000
Rhode Island	9,255,000
South Carolina	7,590,000
South Dakota	2,985,000
Tennessee	18,375,000
Texas	72,695,000
Utah	6,325,000
Vermont	2,165,000
Virginia	$23,685,000
Washington	27,755,000
West Virginia	8,095,000
Wisconsin	36,100,000
Wyoming	2,420,000
Total	1,961,180,000

Address by Charles Nutter, Managing Director of International House in New Orleans

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 30, 1961

Mr. BOGGS. Mr. Speaker, under leave to extend my remarks I should like to include the following address made by Charles Nutter, managing director of International House in New Orleans, before the Houston World Trade Association, World Trade Committee of the Chamber of Commerce of Houston, and the Propeller Club of Houston, on January 9, 1961:

ADDRESS BY CHARLES NUTTER, MANAGING DIRECTOR OF INTERNATIONAL HOUSE IN NEW ORLEANS, BEFORE THE HOUSTON WORLD TRADE ASSOCIATION, WORLD TRADE COMMITTEE OF THE CHAMBER OF COMMERCE OF HOUSTON AND THE PROPELLER CLUB OF HOUSTON, IN THE GALLERY ROOM OF THE HOUSTON CLUB, HOUSTON, TEX., ON JANUARY 9, 1961

At yearend it is a time-honored American custom for newspapers, Government officials, and business authorities to review and summarize the departing year and gaze into the crystal ball for a portent of the future. We have just passed such a milestone and we have seen our experts agree that conditions in the United States are slow but face a brightening future. Within 6 months or a year we should recover a full head of steam.

The people who know about foreign affairs have told us, on the other hand, that conditions in vast areas and important but remote corners of the world are bad and that time is running out rapidly in the struggle of the so-called free world to hold the line against communism.

I believe that these two facts, so contradictory and disturbing, should warn us how far from reality we in the United States actually are living in today's world. Recently I attended a small dinner party where the guest was a world authority. The conversation ranged the world, touching on problems and crises in all continents.

At the conclusion of an enlightening if gloomy evening one lady remarked, in some confusion, that she did not simply understand it, she didn't see why things had to change.

Unfortunately I believe that this reflects the attitude of most of us today. We are satisfied with the status quo. We have the highest standard of living in the world. Business is excellent. Almost everyone is living well. We are relaxed, comfortable, happy. Why change? Let the rest of the world figure out its own problems; we should be allowed to enjoy the pleasant civilization which has been developed here for us by our forebears.

In another day and time our smug self-satisfaction might make sense. But unfortunately this is the year 1961. We are locked in a desperate economic-political

struggle for our existence, but many of us aren't even aware of that fact. The Pearl Harbor of this conflict, which we might as well call world war III, already is several years behind us. But as a nation we are not yet alarmed or ready to mobilize our energy and purpose for survival.

I accepted this invitation to come here today to speak on the communistic economic penetration of Latin America because I hope that something I say, and I say this as often as I can, might help a little to arouse us to reality and the brutal danger just around the corner.

The fact that we are so little aware or alarmed by the present conflict reflects the astonishing success of the enemy strategy and propaganda and the entirely unrealistic world which we, as a nation, have been living in for at least three decades. We have failed, despite many warning signs, to recognize the nature of the beast, the Communist enemy, which threatens our survival.

On the north shore of Colombia in South America there is a charming little city which once was the second most important city in the New World, next to Mexico City. Cartagena has some 40 forts, walls and moats surrounding it which now are nice museum pieces today. It was supposed to make Cartagena impregnable but it had the wrong defenses. Once it was taken from the land side by foot soldiers unmenaced by artillery aimed at sea.

We all remember the story of the Maginot line; it was easily turned and bypassed when the time came. I mention these facts to emphasize that attack doesn't necessarily come from the front or from the sea or from the obvious or expected quarter. It may come from behind as it did at Cartagena or it may come on an economic-political front as it is today in the world, thus making it difficult for people trained only to recognize military danger to understand the new problem of political or economic warfare.

The plain truth is that in our preoccupation with nuclear weapons, outer space, and material defenses and advances we have been lulled into a false and dangerous sense of security. We have neglected or failed to understand the twin dangers of economic and ideological subversion in our own vital areas.

I sincerely believe that the real Communist threat to the world is not a military threat at all. It is an economic struggle. We are vastly better equipped for this kind of warfare except that we do not understand it, and therefore are rapidly losing our superior advantages as Soviet economy develops and plans materialize.

I do not believe that history will forgive a nation and people which at the height of its civilization and economic advantages, prosperity and well being of its millions, allows or allowed an idea and ideology completely contrary to the best interests of humanity to sweep across the world to conquer and destroy the Christian teachings of 20 centuries.

Yet that is the position in which we find ourselves at the beginning of 1961. After more than four decades of steady advance international communism now has accelerated the pace of conquest and revised its timetable. I believe that the Communist architects of the Kremlin believe that much of Latin America can be won over to communism, as Cuba already has been won, within this decade or maybe even within this year or next.

I know that within the last fortnight trained writers and commentators have predicted that large areas of Latin America, as well as of the rest of the world, will be lost to communism this very year in the accelerated drive mobilized by the Kremlin. I believe that this not only is possible, but probable barring only one development—that the incoming Kennedy administration realizes that no problem, I repeat no problem in a world of problems, be allowed to take precedence over the redemption, salvation, and development of Latin America.

There is no question in my mind but that this is the No. 1 problem of the United States today either in foreign or domestic affairs. The loss of Latin America, already well advanced in Cuba, means the loss of our final offshore rampart against communism. We will have lost 200 million Christian people, vast wealth and economic opportunities, and the final hopes of free people everywhere.

This is not necessary but it is likely unless we adopt a crash program to redeem Cuba and close our American portals in whatever nation to the sinister and sinuous advances of communism. We can only hope that President-elect John F. Kennedy and the men around him in government do truly understand the nature of the foe, and do indeed realize that peaceful coexistence as preached by the Communists is a pious bit of Trojan horse propaganda, impossible in fact.

The truth is that we can no more live with present day international imperialistic communism bent on world domination than we can live with cancer. We must conquer it or die. The only alternative is to make Communist advance and conquest so costly and impossible that it will renounce world conquest and hold to present confines. This is impossible, of course, for should communism once be halted or driven back even a little it will disappear from the face of the earth far quicker than it appeared.

The idea born of Marx and nurtured by Lenin long since has been perverted by Stalin and Khrushchev into an imperialistic power grab based upon a false concept of human relations and values which if exposed and challenged would quickly wither and die. The trouble today is that, because we do not know what we want or how to preserve what we have, we allow a false but alluring concept in human relations to outmaneuver us and sell the idea, particularly in the vast poverty ridden and backward areas of the world, that communism is the wave of the future, the promise and hope of tomorrow.

What utter nonsense that becomes to any student of history or economics, to any traveler who visits the Communist regions, to any Christian, or to any enlightened human being. Yet we have seen this false doctrine grow and enslave a billion people, more than a third of all the people on earth and vast land areas of our globe.

The fact is that communism, wherever it exists, is not there by the will or consent of the people. It is there because the people are prisoners of brute force, power, and terror. It would change, overnight, even in Soviet Russia and in China if the majority of the people's will could prevail. This is the Achilles heel of the Communist conspiracy. We know it can be attacked and destroyed, probably with remarkable speed given the right set of circumstances.

Now I want to turn to Cuba, the danger and the opportunity it offers the free world and particularly the United States in these opening days of 1961. Cuba could become the graveyard of international communism in the Americas and the world; it could also become the capital and fortress of a Communist Latin America. What happens is almost entirely in our hands. We have a world of ready allies in Latin America crying for leadership and direction which we alone can supply.

Cuba today is a well developed Communist state and a glaring worldwide symbol of U.S. indecision, unpreparedness and lack of purpose. Castro's Cuba is a series of ghastly diplomatic, political and journalistic mistakes in the United States upon which we might reflect at length. But what is past is prologue and not my job to review here today. I know you are aware that there are in this country political leaders, diplomats, businessmen, editors and journalists whose judgment on Cuba was so bad that it could be treasonable if it was not so stupid but well intentioned.

So what do we have barely 100 miles from Florida's shores. We have a strong and growing Sino-Soviet fortress in the Americas—the Communist goal for a full four decades. We have a police state in which private property has all but disappeared, a state where 5 billions of Cuban and foreign investments have been confiscated without indemnity or hope of same, a reign of terror that has slaughtered thousands, imprisioned tens of thousands, and driven into exile a hundred thousand middle and upper class people who could escape.

U.S. investments in Cuba already seized and written off the books by American companies are 20 times greater than all the American investments expropriated and lost in Russia in 1917. The American investments lost in Russia when communism came were $59 million. Somewhere in the neighborhood of a $1½ billion of American investments already have been lost in Cuba, and a total of $5 billion of private property has been stolen from its owners in sugar and cattle holdings alone.

A traditionally happy and generous nation is torn by hatred and terror; its people living in misery and despair. Yet there are journalists and others in this country who today still doubt whether Castro is a Communist even after he has been taken over completely by the Communists who are mounting a military bastion in Cuba and who have fanned out to infiliterate and subvert all of Latin America from this ready, helpless, Red beachhead in our bosom.

Latin America is the prime objective today of the Russian and Chinese Communists in their plan for world domination. We know they have made remarkable progress in some areas through successful infiltration of the schools, colleges, labor unions and even the governments themselves. Their goal now is not a distant one; the Communists are in a hurry and they believe and plan to win now, even this year, rather than in some future decade. The acceleration of their new drive probably reflects their knowledge that a quick victory is essential. Time is not on their side now.

There is good reason for this. The Red tide is at the flood stage; the momentum is great. No one knows better than Peiping and Moscow that the forward impetus and power of this surging flow will not be recaptured if it is contained or lost. So the timetable has been advanced for the conquest in Latin America as soon as possible.

Russia now is spending a half billion dollars in Latin America in straight out-and-out ideological and educational propaganda. European-trained Spanish-speaking agents have fanned out all over this continent. The Cuban diplomatic missions have become the Communist general headquarters in every country. A daily hate America campaign is flooding newspapers and radio and television stations throughout the continent, and men's minds are being corrupted and inflamed everywhere down there.

This is true because of the very simple reason that economic conditions in Latin America are substandard and getting worse. The people in many areas are embittered and discouraged and are at the stage where change, any change, looks better than what they have. When people reach the "What have I got to lose" stage, they are ready for desperate adventures. They are grasping at any hope, even the false hope of communism. The personal per capita annual income of Latin America is $234 against almost $2,000 in the United States. In some

countries and areas there it is not even 10 percent of $234, it cannot be measured at all in money.

Much of Latin America is underdeveloped, it is poorly housed and too often poorly fed, transportation is virtually nonexistent in some areas and job opportunities are indeed nonexistent. Its economy usually is based on one or two products and export earnings hard to achieve. Adequate domestic industry too often is impossible because the markets are so small. All this in a really rich treasure house of natural resources.

Latin America desperately needs economic integration.

There are vast areas in Latin America where, despite the enormous natural but undeveloped wealth of the land, the living standards of millions ranges down to less than 5 percent of that in better developed areas. In a world where distances have shrunk through modern methods of communication, travel and infiltration, these great disparities are painfully obvious. Even primitive people now know there are better things in the world. And the great gap in living levels is widening. Despite all the bright new technological and economic progress of modern times there are more poverty-stricken people in Latin America today than at any time past. Economic progress has been slow or nonexistent in some areas while populations grow explosively.

Poverty and hunger, disease and lack of opportunity are not new conditions in the world. What is new is the consciousness of poverty, the realization that it is not the inevitable lot of man, the knowledge of better things elsewhere and the determination to do something about it, something drastic and unreasoned if necessary.

There is a vague but rising wave of resentment of man against his lot in two-thirds of the world, and all over Latin America. A ferment is at work that already has produced irresistible demands for a stepped-up economic and social change.

Political leaders, who aspire to popular support, must promise economic improvement. Failure to produce visible gains more and more is going to provoke unrest and bring extremists to power. Passivity, fatalism and renunciation are falling before radical new thinking and demands for change.

This revolution is happening now, instead of 50 or 100 years ago, largely because the miracles of 20th century communications, travel, the movies, the press, television and the radio have reduced the size of the globe and made people all over the world aware of the high economic developments of the Western world. What they see they want and this they will have; either in guided or misguided leadership.

Fired by a growing knowledge of conditions in better developed countries people are no longer content with the status of "the man with the hoe" and are not prepared to accept for long for themselves and their children a permanently inferior place in the world society.

All too often communism for desperate people in this explosive situation does not seem dangerous or faulty but rather a practical expedient by means of which a poor people can ruthlessly mobilize and attain economic and military strength and world esteem.

Is it, indeed, to be wondered at, that when such people are told the wonderful things that have been achieved in Soviet Russia and Communist China and are denied the facts that communism has not delivered the goods, they fall victim to our own failure to spread the truth and are won over by the transparently dishonest but well placed lies of the Communists? Our inability in projecting the real image of our country in contrast to the image the Communists spread is deplorable.

The Communist world is willing to promise anything toward fulfillment of all hopes. It will do this despite its enslaved people and their own low living standards. We know, of course, that such aid will be short lived or never given at all. But if it succeeds in extending Communist rule in Latin America the Kremlin will have won further victories in the battle for the world. Police power will hold the people once cornered under control as it has in Cuba.

Economic integration and development will come eventually in Latin America through our help and direction; or it will come through Communist rule. Cuba is the key. Our greatest mistake in Cuba thus far has been our failure to recognize that this Cuban revolution was not just another Latin American revolution in the traditional, classic pattern to which we have grown so accustomed and which ofttimes are not very important outside the country or area affected.

We failed to recognize that Castro's revolution meant that communism had come to Cuba in the guise of an economic revolution; that Castro was the American Lenin in sheep's clothing who stole the people's hopes and turned Cuba over to the international conspiracy. The revolutions that come after Cuba and which the Kremlin is plotting will follow this same pattern if we permit it; if we do not find the way to redeem Cuba and bring it back into the free world. Whatever the price for restoration of Cuban freedom, it must be paid.

This is by no means a simple or easy task. Indeed it seems almost a desperate problem because the Communists, Russian, and Chinese, have entrenched themselves in Cuba, politically and militarily. Tens of thousands of Communists have taken over in Cuba and now control. Castro is not going to fall because of broken diplomatic relations even by all the Latin American nations. He is not going to fall through economic sanctions because Cuba is worth a substantial Communist investment in men and money. And this will be made. Russia and China will not surrender Cuba except through force; it is too valuable and important to them.

It should be clear that Castro may go, as everyone predicts, but he will be followed by worse. The sheep's clothing will disappear in the transition and we will see raw communism in Cuba. A Spanish-type civil war or another Korea may eventually transpire if Cuba is to be saved; you may be sure it will be by force of arms either from within or without. And it will be a desperate struggle that could take months or years. Castro has already promised to reduce Cuba to ashes if he meets any opposition.

But nothing short of restoration of Cuban freedom will suffice. For so long as Cuba is Communist, Latin America will be endangered by communism.

I believe that if we ever turn the tide of communism in Cuba, as we should have done in Hungary nearly 5 years ago, the ebbtide of communistic disillusionment will sweep this menace back from Asia and Latin America, and Africa and Europe and may eventually liberate Russia itself where the Russians have endured but never embraced economic slavery as practiced by the Kremlin. Revolution will never come to Russia from within but it might sweep the Soviet Union from without. The Soviet Union is no true union of states at all; it is a union held intact by power and terror.

Communism is so patently specious, so brutally inhuman, so unsatisfactory economically, so junglelike in its concept and so antichrist in its practice that if we believe in Christ, in peace, in the brotherhood of man and a world of law, order and equal opportunity we must believe that communism will fail.

The road will be hard and long; the Communists have a tremendously productive machine and the slavelike labor of nearly a billion people to feed their expansion plans; they are resourceful, they know what they want; they are controlled by a small disciplined dictatorship and they will follow any means to an end.

But the weakness of communism is its falseness and its inability to deliver its promises, and its effort to uproot and change human nature.

The first great defeat of the Communists anywhere may be the last battle of this war, since communism cannot stand great reverses. The present victims of communism will become the shocktroops that will sweep this system from the earth, because it is hated and feared by its victims and prisoners.

Our weakness in dealing with communism is our division of opinion in the Western World, lack of authoritarian command, failure to grasp the real significance of communism or our evaluation of it in idealistic terms or principles instead of hard and harsh realism, and a general belief that somehow we can live with communism.

Too often our people appear panicked by Soviet purpose and resolve. They seem to be desperately anxious to take the Communists at their word whenever peaceful coexistence, disarmament, entente and trade are mentioned. The Soviet campaign against the free world is based primarily against the United States which it seeks to isolate, morally and physically.

The Communists hope to upset Latin American economy to the point that our investments and interest would decline and the countries there would fall into the Soviet orbit. The Soviets will support and bolster Cuba as an example and showcase for leftish elements elsewhere in Latin America, and the influence of these elements has always been obvious in the very gingerly manner in which most Latins have dealt with the Cuban problem.

This cautious approach and the time lost because of it has further benefited the Communists in fortifying the Cuban arsenal economically and using it as a base of supply to subvert Venezuela, Central American countries, Brazil, Ecuador, Bolivia, and many other areas in South America.

If democracy and so called free enterprise has the right to survive it also has a stern duty. And that duty is to turn back and destroy the international menace of imperialistic communism. Truth and determination are the weapons we need to use.

We all know that change is inevitable. Today we are the richest, most highly developed Nation on earth, and we are not even 200 years old. But we have no guarantee or contract of remaining so. Three centuries ago Spain was the richest, most powerful nation on earth; but it passed its zenith. Brittania once ruled the waves. Rome, France, and a dozen other nations and civilizations which come readily to mind have tasted great glory no longer enjoyed.

Already some people see in our civilization the seeds of destruction. We have no right to survive unless we can prove and defend our right. And you may be sure that we cannot long live on the lofty plateau of relaxed prosperity while billions flounder hopelessly in the jungle of economic chaos.

Turning communism back, and I believe this can be done much easier than it seems, is not enough. We must rescue Latin America from its economic entrapment. And this could be vastly profitable because the thing most needed in Latin America is capital to develop raw resources which the world needs.

In a sense Cuba went communistic because a vacuum was created there and we allowed the Communists to fill it; this must not happen elsewhere in Latin America.

I sincerely hope that our new administration in Washington will not repeat the mistakes of the past three administrations in thinking that the Unied States can deal with communism and survive.

The United States is the only strong threat and obstacle to Communist domination of the world. Therefore it is the principal target of communism. This battle cannot and never will be compromised; it will only be won or lost. This is a bitter, stern fact we must face.

True understanding of communism and action by our national leaders is our only hope for survival. Let us pray they will have this understanding.

Area Redevelopment Act

SPEECH
OF
HON. SAMUEL S. STRATTON
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 29, 1961

The House in Committee of the Whole House on the State of the Union had under consideration the bill (S. 1) to establish an effective program to alleviate conditions of substantial and persistent unemployment in certain economically distressed areas.

Mr. STRATTON. Mr. Chairman, I am grateful for the support which the distinguished gentleman from Texas [Mr. PATMAN], chairman of the subcommittee, has given to my amendment and also for the support of the distinguished chairman of my own Committee on Armed Services, the distinguished gentleman from Georgia [Mr. VINSON].

This is the amendment to which I referred in general debate a moment ago. It is an amendment designed to insure that on the basic issue of unemployment the right hand of our Government will know what the left hand is doing, and attempt to coordinate with it.

S. 1 is legislation designed to deal with the problem of unemployment. I am sure that the overwhelming majority of the Members of this House feel that there is an urgent need for us to do something to alleviate the suffering being caused around the Nation by unemployment, particularly in areas which are critically and chronically affected. In fact, action to relieve unemployment has been one of the central objectives of this administration, and it has also been one of the central objectives of this Congress, as is amply demonstrated by the No. 1 given to this legislation in the other body.

But Mr. Chairman, as was made abundantly clear only yesterday in the President's special message on the Defense Department budget, action has been taken or will soon be taken in many areas of our country by one important agency of this Government which will seriously aggravate the whole problem of unemployment we are trying to alleviate in this bill. Whether we like it or not, the Department of Defense is one of the major employers in the Nation, employing not only men and women in uniform but also vast numbers of civilian men and women as well. Any major reduction in defense operations is bound to have important consequences on local and national unemployment, particularly where these installations represent a major part of the overall employment in the area. Any serious reduction or disestablishment of a major defense installation in an area of serious unemployment, in other words, can turn this area into an unemployment disaster area or into a redevelopment area as defined by this bill virtually overnight. We ought to try not to let this happen.

On yesterday the President's message announced the fact that in the near future, perhaps within the next 24 hours, would come an announcement of the deactivation of some 73 military installations here and abroad. I have no way of knowing which installations are included on this list, of course, but I am sure that every Member of this House who represents a district in which some military installation is located recognizes what the drastic reduction or the complete closedown of the installation of his district could mean in terms of added unemployment in his area.

Does it make sense for us to pass a bill today authorizing the appropriation of hundreds of millions of dollars to aid unemployment, and at the same time say or do nothing about actions being taken by some other agency of Government which could seriously aggravate the unemployment problem?

There has been talk in the Air Force, for example, in my home State of New York, of closing down the Air Materiel Area at the Griffiss Air Force Base in Rome, commonly referred to as Roama, with a consequent loss of 6,200 jobs. Fortunately, in response to pleas of members of the New York State congressional delegation on both sides of the aisle, the Air Force has now agreed to defer any final decision on this projected closedown, as my distinguished colleague and friend, the gentleman from New York [Mr. PIRNIE], has already mentioned in the general debate, for at least 6 months. But it is already clear what the devastating economic impact of this decision, if it should eventually be taken by the Air Force, would be. The Utica-Rome area is already an area of major unemployment. The loss of 6,200 jobs, a very substantial percentage of the total employment of the whole area, would turn this community, which has been struggling for years to combat unemployment, overnight into a major disaster area.

Surely there is something which can and should be done to try to prevent this sort of a development. Surely the decisions of the Defense Department cannot be considered completely in a vacuum, without any regard for their impact on the civilian economy of the Nation we are addressing ourselves to here. Surely it is not asking too much to ask that the actions of one agency of Government should be considered in the light of policies and programs being followed by other agencies. Surely there must be some overall coordination even in a Government as huge and as unwieldy as our own.

Of course, Mr. Chairman, it would not be in order under the rules, in the case of a bill which deals with unemployment areas and places certain obligations and responsibilities upon the Secretary of Commerce, to offer an amendment which would direct certain actions on the part of the Department of Defense or the Secretary of Defense. Such an amendment would not be germane to the bill, although perhaps the most direct way to deal with this serious problem would be with legislation of that kind. But the amendment which I am offering is directed only to the Secretary of Commerce and to the subject with which this legislation specifically deals. It is, as a matter of fact, very similar to an amendment offered in the other body the other day by the distinguished junior Senator from Louisiana, Mr. Long, and which failed of adoption there, according to my information, by only a very narrow margin, and after it had been perfected and improved in its form as a result of rather general discussion in the other body over a period of 2 days.

Mr. Chairman, the present wording of section 27 of S. 1 is in my judgment not really adequate to meet the situation to which I have been referring. In particular, it deals to facilities or bases which have already been phased out or which are not now being fully utilized, whereas the big problem which will be facing most of our districts is the problem of preventing the increased impact on unemployment that will be caused by the closing of the 73 bases to which the President has referred, as well as other closings which may well be coming along in the future. For this reason, I am offering my amendment as a substitute to section 27.

Briefly, my amendment would call on the Secretary of Commerce, whenever the Defense Department announces plans to deactivate a military installation or whenever it is in the process of deactivating a military installation in an area which is suffering from serious unemployment, defined as 6-percent unemployment or more, to look into the overall economic consequences of this action. Under my amendment this study would not be made frivolously or even automatically, but only upon application by the governor or governors of the State or States directly affected by the closedown. The Secretary of Commerce would be authorized to look specifically into all of the costs to the Government involved in these deactivations, whether a full base or a major part of a base, as in the case of the Air Materiel Area at Rome, N.Y. The Secretary would examine, for example, what additional costs might be incurred by other branches of the Federal Government and by local governments, costs such as the relocation of families, defaulting on FHA mortgages, increased outflow of unemployment compensation, costs of moving equipment and families, and costs of retraining new workers. This study, with all of these economic facts set forth and with a full description of the impact on the local economy, and with appropriate recommendations, would then be made available to the Congress and also to the Secretary of Defense.

My amendment cannot properly go beyond that in this legislation, because in this bill we cannot of course direct the Secretary of Defense to do anything. But the economic information developed by the Secretary of Commerce under my amendment would, I am sure, have tremendous impact on the final decision reached in the Defense Department. Surely it would be difficult for the Department to proceed if the facts of a closedown motivated by economy proved to involve greater overall expenses, or if the impact on unemployment was tremendously severe. The spotlight of publicity in this case, in other words, would serve as a great moral if not a legal persuader.

Mr. Chairman, I believe my amendment represents the very least that we in this House can do to insure that whatever actions may be taken by the Defense Department in the next few months will, insofar as humanly possible, not be taken in such a way as to aggravate the total unemployment problem to which this very important legislation is addressed. Unless the jobs which we are attempting to create in this legislation through the front door are effectively prevented from slipping rapidly away out the back door, we will not have accomplished what we hope to accomplish in passing the committee bill.

Mr. Chairman, I urge the adoption of my amendment.

Confederate Flag Day

EXTENSION OF REMARKS
OF

HON. DALE ALFORD

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 30, 1961

Mr. ALFORD. Mr. Speaker, the General Assembly of the State of Arkansas, in its session in 1957, adopted, and the Governor signed, act No. 124, designating the Saturday before Easter of each year as Confederate Flag Day.

I have heartily commended this action in the past, and I now call national attention to the fact that this observance falls upon Saturday of this week. On that occasion, members of the United Daughters of the Confederacy in all parts of the State of Arkansas will not only make patriotic display of the glorious Stars and Bars of the Confederacy, but also plan to distribute miniature copies of the flag to the citizenry in general.

This exemplary action by a dedicated group of southern patriots is entitled to the applause of all those who cherish the memory and the ideals of the Confederacy. I am proud and happy to join in this salute.

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided,* That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided,* That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided,* That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further,* That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided,* That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

Appendix

The Crusade for Democracy in the Western Hemisphere

EXTENSION OF REMARKS
OF
HON. FRANK T. BOW
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 29, 1961

Mr. BOW. Mr. Speaker, Luis A. Ferre, business, political, and civic leader of Puerto Rico, has made a real contribution to current discussions of Latin American policy in a paper entitled "The Crusade for Democracy in the Western Hemisphere." Under leave granted, I include it with my remarks and urge its consideration by all who are interested in this most important problem:

THE CRUSADE FOR DEMOCRACY IN THE WESTERN HEMISPHERE

(A program for action by Luis A. Ferre, partner, Ferre Enterprises, Ponce, P.R.)

There are many contradictions in the U.S. relations with Latin America. The people of the United States are free and enjoy all the benefits of democratic government. And our country is rich, too. We have the greatest productive machine in the history of the world and we have bolstered our economic system by a whole complex of social safeguards, including minimum wages, social security benefits, FHA home construction loans, free education, and many others.

And yet we have complacently acquiesced while our sister republics south of the Rio Grande continue enmeshed in the old social system—exploitation and economic tyranny. What is worse, our own capital investments have many times unwittingly contributed to the perpetuation of that system. Thus, even though we condemn and punish governmental corruption where we find it in the United States, we have felt no compunctions in dealing with corrupt governments in Latin America. As a result we have seemed to condone the economic oligarchies and the military strongmen these regimes have represented.

This sort of inconsistency has provided a veneer of plausibility to communistic propaganda here in the Americas and facilitated the penetration of our hemisphere by Communist agents. There is no difficulty in finding an example; Castro's Cuba is only minutes away from both Florida and Puerto Rico.

Of course, some of the advantages that our tacit acceptance of social injustice provided the Communists have now been undone by Castro. The slogan "To the wall" epitomizes the violence and mob hysteria that has characterized the Cuban regime. The lesson is unmistakably sinking in with the people of this hemisphere.

And Fidelism has certainly helped to open the eyes of the people of the United States, too. We were not ignorant of Communist oppression before. We had read of the way in which Poland, Czechoslovakia, East Germany, Bulgaria, Rumania and, most poignantly, Hungary were crushed.

But that seemed remote, somehow. It did not fully register in our minds. Dictatorship is now right on our doorstep, however. Thus, once the haven for Europeans fleeing Old World despotism, our hemisphere now harbors the worst sort of Communist police state. Tyranny, we see, is not a phenomenon of time or geographic situation; unfortunately, it is contained in the very nature of man.

The feeling of isolation which gave all the Americas a sense of security has been shattered by Castro. The barbarians are literally at our gates. Our mission is like that of Charles Martel who fought off the Moors at Tours. This is no mere historical flourish; I deeply believe that the threat to the survival of Western civilization is now precisely as grave as it was in A.D. 732.

What can we do? As the first imperative, we must not any longer accept the defeatist notion that democratic institutions cannot be adapted for use by all peoples. That simply is not true.

Instead, we must convince the people of the world (and certainly of Latin America) that representative democracy is, as Winston Churchill put it, "the best form of government ever devised by man to guarantee his fundamental freedom and to insure his material progress." We must put it across that, given the proper training, any people can and will learn to thrive under democratic institutions. And, basic to all, we must win recognition for the fact that only government "of the people, by the people and for the people" can safeguard against the sort of authoritarianism that has made this a century of war and now threatens a new outbreak that might end civilization and literally vaporize mankind.

But how can we convert this general approach into a working program?

As a first step I urge that we combine with all our fellow members of the Organization of American States and establish a Pan American code.

The cornerstone upon which such a code should be founded would be a prohibition against the creation of any government in our hemisphere that is not some form of representative democracy. A basic requirement, therefore, would be regular—and absolutely free—elections. Possibly, the code would go as far as laying down some formula under which the OAS would supervise such elections.

Indispensably, the code would also commit the nations to economic progress for all classes. Necessary steps would include:

1. A Common Market, in which tariffs and other trade barriers are gradually reduced as wages are increased.

2. A Pan American Loan Fund to finance economic development (a great part of the capital would, of course, come from the United States, and we should insist upon the same sort of self-help system among the recipients that crowned the success of the Marshall plan).

3. Regional minimum wages, to be attained within a fixed period of time, say 10 years. This phase of the code program should be supervised by regional boards that would review the minimum standards periodically and raise them in line with the gains scored in productivity (which should be considerable thanks to the adoption of better production techniques and the economic stimulation of the Common Market).

4. A minimum standard of social protection, establishing the rights of unionization and collective bargaining; workman's compensation; maximum hours of work per week and per day; the employee's right to regular vacations with pay; unemployment insurance; social security and all other basic social benefits.

The encouragement of private investment (the U.S. Government should help in this by guaranteeing private investments by U.S. entrepreneurs against unlawful and willful expropriation or blocking of currency, provided these investors are willing to permit local participation in their Latin American ventures equaling at least 40 percent of total capital).

6. Special tax treatment by host countries (and by the United States) on profits returned to the United States where the entrepreneur has assumed leadership in the payment of higher wages and broader fringe benefits.

7. A progressive income tax—the foundation of an equitable tax policy—to be established in all countries. The code would prescribe minimum standards.

8. Standards on public education, sanitation and health, norms to be determined in terms of minimum percentages of national budgets to be appropriated to these purposes.

9. An FHA system for all those acceding to the code in order to spur homebuilding throughout the hemisphere.

10. Pan American cultural centers for the various nations, to be financed from a common fund, with the objective of stimulating the exchange of students throughout the Americas.

This is a practical plan. It would work. And, I am convinced, it can be attained. By it, we shall be able to strike a massive blow against poverty, tyranny, and prejudice.

But there is no value in merely spinning out 10-point programs. Instead, we must all go to work—energized by the huge need that exists and by our moral obligation to extend the frontiers of freedom to all the peoples of the world.

This is another hour of trial for the human spirit. We must recognize that either the whole world will be free, or it will inevitably be wholly slave. Establishing the Pan American code for a stronger Western Hemisphere can help us tip the world balance toward freedom.

Medical Care for the Aged

EXTENSION OF REMARKS
OF
HON. ANDREW F. SCHOEPPEL
OF KANSAS
IN THE SENATE OF THE UNITED STATES
Monday, April 3, 1961

Mr. SCHOEPPEL. Mr. President, on January 27, the distinguished Senator from Utah [Mr. BENNETT] delivered before the Harvard Medical Society, at Boston, Mass., a speech entitled "Medical Care for the Aged." Because of the importance of the speech and its interesting content, I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

MEDICAL CARE FOR THE AGED

(Speech by Senator BENNETT on January 27, 1961, Harvard Medical School, Boston, Mass.)

It is good to be with you today to discuss some of the problems pertaining to medical care for the aged. It is rather an unusual situation in 1961 for someone to be coming from Washington to Harvard. The trend in recent weeks has certainly been quite the reverse. However, I appreciate the invitation which was extended to me by Dr. Peterson to meet with you and give you some of my views on this important problem.

The problem of medical care for the aged has been with us for many years. However, the problem has only come to the forefront as a political issue during the past two Congresses. The length of the working life and the number of years an individual spends in retirement have increased tremendously since 1900. The average number of years an American male could expect to spend in the labor force increased by over 11 years between 1900 and 1961. At the same time, the number of years a male at age 20 could expect to spend in retirement increased by 3.6 years. In the year 1900 life expectancy in the United States was only 47.3 years, whereas today it is 69.7. Thus, we can see why this problem has grown to the extent where today we have almost 16 million persons over the age of 65.

Congress has not been unmindful of this problem as is evidenced by the enactment in 1936 of social security legislation which has been changed and added to by almost every Congress since that date. Last year, Congress passed a law setting up a program to supply medical and institutional care to meet the needs of people over 65 years of age. This legislation is referred to as the Mills-Kerr bill and is now Public Law 86–778. This law calls for cooperation between the Federal Government and the States and provides for Federal grants on the basis of local needs and efforts to meet the problems of the aged who are in need of medical attention. Several States have already passed legislation to implement the medical care bill passed by the last Congress and it is expected that most States will have this new program in operation before the end of this year.

Yet, even before this new law can become operative we are being asked to reconsider the problem and accept a different solution—a solution which was considered and rejected less than 6 months ago. At least seven bills have been introduced in the House and two in the Senate, all patterned after the Forand-McNamara-Kennedy bills of the last Congress which would institute a compulsory system of medical care for the aged under the social security system.

Why is there so much pressure being exercised for this new legislation? The answer is simple. There has been no change in the need for a law of this type, but there has been a change in the political administration in Washington. Last year, as a candidate, our new President supported the social security approach and used all the power he could exercise to get Congress to adopt such a plan. He failed. Now, with the greatly increased power he has as President, he is going to try again. Unfortunately, this time he may quite likely succeed.

ANALYSIS OF TWO APPROACHES OF MEDICAL CARE FOR THE AGED

Let's look at the situation, first as it existed last year, and secondly, as it exists now, and explore the two different approaches in trying to solve this problem.

1. Has there been, or is there now, any spontaneous public demand for any such program? The answer is no. During the months in which this legislation has been pending before Congress, I have received from my constituents only a handful of what I would consider personally written letters urging the adoption of a medical care program tied to social security. It is true, I have received several hundred identical form letters inspired by labor unions and other pressure groups urging approval of the social security formula for solving this problem. Generally, however, I have not received mail in sufficient volume to indicate that there is any great ground swell demanding enactment of a compulsory medical care program, such as that advocated by President Kennedy and his legislative leaders in the House and Senate. In fact, most of the mail received in my office has indicated just the opposite—that there is no emergency which would require a crash program in this area. Consequently, I am convinced that whatever pressure exists for this legislation has been politically generated. Last year medical care for the aged was a good campaign issue. Now it is a campaign promise to be kept.

2. Next we turn to the question of need—national and personal.

At the present time, the population of the United States is slightly in excess of 182 million people.

Of this number, approximately 16 million are 65 or over.

Only 4 million of the 16 million are not under social security.

Of the 16 million only half a million can be classified as suffering from chronic illness.

According to the Health Insurance Association of America, 49 percent of persons 65 or over are covered by health and medical insurance, and at the present rate of growth, this coverage is expected to reach 75 percent by 1965 and 90 percent by 1970.

According to a recent national study published last August by Dr. James W. Wiggins and Helmut Schoeck of Emory University, the medical needs of our aged have been greatly overexaggerated. Their survey indicated that:

Nine of every ten older persons report they have no unfilled medical needs.

Ninety percent of those 65 or over reported they enjoy good or fair health.

Sixty-eight percent said they could pay for a medical emergency out of their own means.

Half of the persons queried reported income in excess of $2,000 per year; 1 out of 20 had income in excess of $10,000.

Most of the aged reported net worth in excess of $10,000.

Sixty percent did not think a new Federal program could do anything for them personally.

Majority indicated life was much easier for them than for their aged parents.

Ninety percent could think of no medical needs that were not being taken care of.

Sixty percent are now covered by private voluntary health insurance.

Eighty percent are member of a church. If special care was needed for outside the family, twice as many elderly Americans would prefer to get such assistance from their church rather than from the Government.

Wiggins said much of what has been reported in the past about the health and welfare of older persons is based upon inaccurate data derived from the experiences of a generation ago or from the studies of the hospitalized or chronically dependent.

The Wiggins report indicates that the great majority of Americans over 65 are capably financing their own health care and prefer to do it without Federal Government intervention.

3. Based on the facts and statistics before us, Congress had to decide whether this record justified a Federal program—even in the face of the lack of public demand. But politics in a presidential election year creates its own demands and they were great enough to produce action. In the final debates in the House Ways and Means Committee and the Senate Finance Committee, and again on the floor of the House and Senate, the Forand and McNamara bills were soundly defeated. Likewise, the Kennedy-Anderson amendment, which preserved the social security approach, but which was more restricted as to benefits, was defeated 51 to 44. As I previously indicated, bills patterned after the Forand and McNamara approach have been reintroduced in this session.

4. Regardless of the details of any program selected to solve the medical care problem, we in the Congress are wrestling with a philosophical decision represented by three essentially different points of view. Briefly described they are the following:

1. Should the Federal Government recognize the value of the growing volume of private health insurance, and help to expand this protection by contributing part, or all, of the cost of premiums to those who could not provide these funds themselves?

2. Should these benefits be available to particular people as a matter of special right regardless of need, under a program added to the Social Security System?

3. Should we make actual need the basis of the distribution of benefits and thus reduce the cost by taking advantage of private funds available in each case? Under this approach, the States would share in the cost and administer the program, including the criteria for the determination of need.

The first-named program, introduced by Senator JAVITS, of New York, with the support of Vice President Nixon, was never really seriously considered. It got 28 votes on the Senate floor, and passed out of the controversy.

The social security approach, represented by the Forand bill in the House, and McNamara and Gore bills in the Senate had the support of AFL–CIO, as well as Candidate Kennedy, but was rejected by both Houses, even in such modified form as the Anderson amendment.

The "needs" approach had the approval and support of the AMA. It was worked out by the Ways and Means Committee of the House and adopted there. When it came to the Senate, the Finance Committee modified it further, but did not change its essential features, and it was passed on August 23 and became Public Law 86–778 on September 13, 1960.

RIGHTS AND NEEDS

The contest between the "rights" and the "needs" approach was bitterly fought, and is not settled yet. Each point of view has its strengths and its weaknesses, and these are worth cataloging.

A. Those who advocate medical care for the aged tied to the social security system, hope to benefit from the general public acceptance of that system. But as an opponent to this approach, I would like to point out the following weaknesses:

1. A medical care plan placed under social security would change the basic pattern of payments from one of cash benefits based on earnings to service benefits without regard to contributions.

2. Its added cost would overburden the social security system. Social security taxes, now at 6 percent, divided between employee and employer, are due to go to 9 percent by 1969. If medical care benefits are added this tax could conceivably rise to 20 percent in the not too distant future.

B. Cost estimates for the various medical care plans:

1. Forand-McNamara bills: Most conservative estimates place the initial cost between $3 and $4 billion with sharp increases ex-

pected as additional benefits and persons are added to the plan. In fact, if the same extensions are made to the medical care plan as has been our experience with other social security benefits, we could expect the cost of this program to soon be in excess of $8 billion per year.

2. Anderson amendment: Proponents of this bill estimated it would cost $700 million the first year and $1 billion each year thereafter. However, actuaries for the Health Insurance Association in reviewing this measure said the cost would be almost double the first year ($1,331 million) and would be in excess of $2 billion per year thereafter.

3. The Senate Finance Committee bill, which is now Public Law 86–778, is estimated to cost the Federal Government approximately $190 million per year.

Government security welfare programs incubate an overwhelming political demand for more welfare. Our own programs indicate this. But Sweden is much more of a welfare state. There, pensioners have become politically powerful, demanding even more from the rest of the people. During the past year, Sweden was forced to slap an additional 4 percent sales tax on top of all other taxes to help pay the ever-mounting costs of their cradle-to-the-grave welfare programs.

It is important to point out that all of these plans are now in their infancy and would undoubtedly grow in the future. Originally, the cost of social security when it was enacted in 1936 was to be 2 percent on the first $3,000 of each worker's income. The cost is now more than 450 percent higher. We are now paying 6 percent on the first $4,800 of income each year and the program is still underfinanced. Deductions will go up to 9 percent by 1969.

Six major changes (four in the last 6 years) have been made in the social security program since its birth. Retirement benefits have been increased 17 percent more than the increase in the cost of living. Coverage has been vastly extended. Survivor benefits have been enlarged. The age for eligibility for women has been lowered to 62 and bills are now pending which would grant earlier retirement to men.

4. Malingering would be rampant if care as a matter of right were extended to all. This system which would substitute entitlemetn by right in place of actual need would encourage widespread overuse and abuse of medical facilities.

I have always remembered a personal experience I had 25 or 30 years ago. A small company with which I was connected instituted a system to provide sick benefits for employees and entitled each worker to a limited number of days of sick leave each year. One employee near the end of the year suddenly became sick almost every other day. When the visiting committee went to call on him unexpectedly, they found him in bed with his clothes on, including his shoes. They chided him for it and asked him why. His answer has been ringing through my mind ever since. He said, "I means to have my share." I am certain there are many persons who will attempt to have their share on the basis of entitlement rather than need.

5. Under the Forand-McNamara approach, service will be supplied as a matter of right to many who don't need it and will be denied to some who do. For instance, there are more than 4 million persons over 65 who are not covered by social security who would not be entitled to any benefits. Likewise, retired railroad employees and also Federal employees would not be covered under the plan even though their medical needs are certainly as great. On the other hand, many veterans would be eligible for double entitlement and could pick and choose wherever they thought they could obtain more benefits.

6. It would put an unfair burden on the presently employed people contributing to social security. Nine million would get benefits for which they have made no contribution.

7. It concentrates on a narrow tax base—$4,800.

8. It has been called pay-as-you-go but social security is pay now, you get benefits later—maybe. (There is no relationship between payments and benefits.)

9. Contributions would be compulsory, just as is England's health scheme but this was carefully played down, and the idea of "rights" was stressed.

10. To the doctor it represents an unhappy intrusion of the state into his relationship with his patient. While under the Anderson bill, he could get no money from the program for his services, the money to pay the other bills would come directly from the Social Security System to the vendor—the person would not pay his own bills. This would involve a proliferation of local social security office and eventually a new health care agency—duplicating existing State and local ones.

ADVANTAGES OF THE VOLUNTARY APPROACH

We who supported the Mills-Kerr approach, based on need, made the following arguments:

1. Under the present old-age assistance program, we have an existing system professionally staffed to care for the needs of our elderly—including to a limited extent health needs. The Mills-Kerr approach will add responsibilities but will be no wrench to the system, and would not adopt any new method of handling payments.

2. The costs can be kept at a minimum.

a. State participation will help control it.

b. Costs would vary only with need—might actually be near their peak now. The proportion of the aged in our population is now 8.6 and it is expected to level off at 9 percent.

c. Less susceptible to political measures.

d. Full needed services available—no foot-in-the-door limitations.

3. Cost would be spread over broadest possible tax base—all Federal and State taxpayers. It is a true pay-as-you-go basis.

4. No compulsory contributions—no double burden for present wage earners.

5. Services of doctors included—no change in present patient relationship.

The chief argument against the Mills-Kerr bill was a bold falsehood—that the bill required a pauper's oath. No such thing is required. The basis for determining need is left to each State. If this is degrading then all service involving decisions by trained social service workers is degrading.

WHAT TO EXPECT

The Kerr-Mills bill is now Public Law 86–778. I sincerely doubt it will be repealed. Instead, some version of the original Forand bill will probably be superimposed on top of it, and require two parallel organizations. Eventually, under Gresham's law, the rights approach will drive the needs approach out, and we may end up with compulsory Federal health insurance, covering all needs for all people. At first, we can expect medical care just for the aged, but eventually the age limit will be gradually reduced, and finally eliminated. Simultaneously, the definition of "right" will become fuzzy and disappear. This will be the end of the present social security, and we will have federalized medicine, dentistry, hospitals, nursing homes, medical education, and drug production for all our population.

Can it be stopped? We won the battle last August, but it will be much harder this time, with the power of the Presidency behind it. I think it's worth the fight.

Federal Aid to Education

EXTENSION OF REMARKS
OF
HON. JOHN P. SAYLOR
OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 30, 1961

Mr. SAYLOR. Mr. Speaker, in the current controversy over whether private and parochial schools should be included as recipients of Federal largess in the proposed aid-to-education program, the basic issue is being shoved into the background. The question of whether Federal aid to education is necessary or desirable is being sidetracked.

It is time to get back into focus, for we must not let our citizenry lose sight of the fact that the big billion-dollar lollypop for the Nation's schools would be manufactured with taxpayers' contributions and then wrapped for distribution only after the Washington bureaucracy had taken a substantial bite out of it. With the passing of years, the share for the several States and local schools would become progressively slimmer, for big government has an insatiable appetite.

For the State of Pennsylvania, the stick of candy handed to us by the patronizing bureaucrats would from the start be much smaller than what we put into it. The Federal aid to education bills are nothing less than an insult to the intelligence of the people of our State, inasmuch as those bills brashly set forth a set of calculations which would require us to put millions of dollars more into the school kitty than we would get back for our own educational needs.

Pennsylvania, plagued with critical unemployment in scores of communities, would experience only additional hardship if the proposed legislation were to be enacted. Of course, some of our friends who have cooked up this expensive scheme are attempting to cover up the deficit that would be incurred by our State by indicating that the whole program can be carried merely by undertaking to put the Federal Government further into debt. Our people have had enough of these delusory promises. Our citizens recognize only too well that increases in the Federal debt are the direct cause of inflation, which cruelly reduces the buying power of wage earners, pensioners, and all others who look to savings and social security payments to see them through their twilight years.

Back in 1956 some Members of Congress began making headlines with the idea of setting up a $400 million fund annually for a total of 4 years to provide for construction of schoolhouses. At that time we were assured that $400 million was the maximum figure that proponents wanted, that 4 years would be the limit of the program, and that construction alone was the objective. Since then this balloon has been inflated out of all proportion, teachers' salaries have been thrown into the recipe as an added sweetner, and where it will all

end is too vague for conjecture. What will come in the next go-round would tax the most precocious imagination, but the history of the program could very well lead one to believe that the local school board member will be offered a sugar plum in hopes of promoting additional support for the Federal aid project.

Mr. Speaker, I suggest that Congress can better promote the general welfare and national defense by getting the Federal aid to education bills out of the way and moving on to the business that we have been sent to Washington to handle. I do not deny that many local school districts could find their burden much lighter and be able to provide well-deserved increases in teachers' salaries through congressional action. I stand ready to help in this worthy objective by any of a number of sound legislative possibilities.

For a number of years I have proposed a larger deduction in income tax rates for all individuals—men, women, and children. I know of no more convenient way to make more funds available for educational needs and for other local purposes. If our constituents prefer that some portion of Federal taxes now being channeled into Washington be earmarked specifically for school funds, then there is a variety of ways in which this mission can be accomplished.

Perhaps the simplest method is for us to pass a law ordering the Director of Internal Revenue to remit to each State a check for an amount equal to an agreed-upon percentage of the personal and corporate Federal income taxes collected for any 1 quarter, or any 1 year, with said sums to be used by each State for educational purposes only. Such a plan would enable the States, on a fair basis, to help themselves to solve their educational problems—whether they pertain to schools, equipment, or teachers—in their own way without any Federal control, intervention, supervision, regulation, or interference.

The matter should be settled promptly. I have read recently of isolated cases in which communities have rejected bond issues designed to provide the wherewithal to build new schools. Unless the Federal aid problem is disposed of once and for all, there is a serious danger that promises made in Washington will prompt more and more communities to hesitate in planning for new schoolhouses. If the Federal free-spenders are going to make funds available for obligations that have heretofore been our own responsibility, why should the local citizens bother to put up the money? Thus the promises being made by proponents of Federal aid to education become a detriment to local initiative and industry.

There is also the case of the failure of St. Louis voters to accept a bond issue to build new schools and modernize some of the old ones. As reported in the Johnstown Tribune-Democrat on March 24 by a staff writer for the Associated Press:

Apathy, ignorance, and resistance to taxes were major factors, but in St. Louis it was something more.

It was distrust of the St. Louis School Board, rocked by scandal and hint of scandal.

I have excerpted the crux of the article, Mr. Speaker. There were other reasons cited by the writer, but I believe that what I have quoted should give Congress reason to ponder.

If the citizens of a city are so distrustful of their own school board as to hesitate to approve a bond issue for new schools, can the Federal Government in conscience turn over Treasury funds to such groups? Does Congress have no more pride in its own stewardship? Furthermore, Federal grants would tend to destroy whatever interest a community has in cleaning up unsavory conditions, for when local funds are not involved the incentive for keeping a close watch on responsible parties would be lacking. I also point out that, according to proponents of Federal aid to education, the Federal Government could do nothing regardless of how dishonest a local school board happened to be, for no control from Washington is one of the assurances that perennially goes with the proposal.

I regret that interest in the basic premise—whether it is good or bad for the Federal Government to get involved in local school problems—is being diluted by the important but only collateral issue regarding private and parochial schools.

When we get back on track, let us hope that the bills will be defeated on principle—a principle laid down by our Founding Fathers and respected until the whole concept of government by the people became distorted through attempts to advance a people-for-the-government philosophy.

Mr. Speaker, under unanimous consent heretofore granted, I include the following article from the Johnstown Tribune-Democrat of March 24, 1961:

BOND ISSUE REJECTION ADDS TO ST. LOUIS WOE

(By G. K. Hodenfield)

(EDITOR'S NOTE.—"Somehow we have to get our messages across," says the superintendent of schools in St. Louis. The message: More money needed. But the city's voters turned thumbs down all last year. This is the last of three articles on school financing problems.)

ST. LOUIS, MO.—St. Louis has found an enormous rathole and is busy shoveling dollars into it.

In March, in May, and again in November last year, the voters turned down a $24.3-million bond issue to build new schools and modernize some of the old ones. They also rejected, three times, a $5.2-million bond issue for school fire protection.

Because the bonds weren't passed, and the schools can't be built, the school system this year is chartering 70 buses to transport 3,600 pupils from their home neighborhoods to schools up to 9 miles away.

BUSES COST $195,000

The buses are costing the city $195,000 this school year, plus $40,000 in overtime pay for teachers who supervise the bus rides. This is $233,000 for the 1960–61 school year.

No one seriously argues here that the new schools aren't needed: Six elementary schools are at double their normal capacity; 2,000 elementary school pupils are attending classes in high school buildings; 525 elementary pupils are being taught in rented church quarters; some classrooms have as many as 60 pupils.

Then why did the bond issues fail?

Apathy, ignorance, and resistance to taxes were major factors. But in St. Louis it was something more.

BOARD DISTRUSTED

It was distrust of the St. Louis School Board, rocked by scandal and hint of scandal. A racial problem apparently was involved also.

Perhaps most of all, it was a State law requiring that school bond issues must be approved by a two-thirds majority. "We can get 60 percent," one leading citizen declared, "but that last 6 percent comes mighty hard."

A school building commissioner, appointed by the school board, was removed from office by a circuit court on charges of gross misconduct in office. Several board members have resigned amidst charges they used school board labor and materials on their own homes.

The voters are well aware of this state of affairs. One board member himself said that, under the circumstances, the people of St. Louis would be justified in turning down the bond issues.

Said one homeowner: "Of course I voted against the school bonds. Why should I vote money into the hands of those people?"

POPULATION DOWN 100,000

St. Louis has a population of about 750,000, a drop of more than 100,000 since the 1950 census.

Much of the loss can be attributed to the flight to the suburbs, which many American cities are experiencing.

But in that same 1950–60 decade, the average daily attendance in the St. Louis public schools rose from 80,626 to 90,581. Much of this increase has been in Negro pupils, who now make up about 45 percent of the school population.

Many of St. Louis' problems can be traced directly to the slum clearance project in Mill Creek, a section in the near-downtown area. Negroes from Mill Creek moved en masse to North St. Louis, which had been a predominately white neighborhood. There weren't enough schools to handle the influx of pupils, and it is these children who now are being taken by buses to other parts of the city.

RACIAL FEELING

"It's up North where they need the schools," said a housewife in conservative South St. Louis. "We don't need them down here. And if those colored folks think we're going to carry them on our backs, they've got another think coming."

In all three St. Louis elections the school bond issues carried by what, in suburban Parma, Ohio, would have been a comfortable majority. In February the vote was 62,236 for and 35,772 against (63.5 percent approval); in May it was 35,826 for and 21,453 against (62.5 percent approval); in November it was 95,565 for and 64,755 against (59.6 percent approval).

But in St. Louis, where it takes 66.6 percent approval, these are recorded as just three consecutive defeats for the school bonds.

But apathy played a big part, too.

In March, the "No" votes of 11.1 percent of the registered voters were enough to defeat the bonds.

In May, it took only 6.7 percent of the registered voters to block the passage.

In November, the "No" votes of 18.6 of the registered voters were decisive.

NO ORGANIZED OPPOSITION

As in Parma, there was no organized opposition to the school bonds. Both metropolitan newspapers urged their passage, al-

though both papers had serious reservations about the school board. Catholic and Lutheran church officials supported the bond issues wholeheartedly. Parent-Teachers' Association groups worked hard for them.

It was stressed that the bond issues would not be expensive. The average cost to homeowners: About $5 to $6 a year in increased property taxes.

"I voted against them," a white-collar worker said. "I'll vote against them every time they come up. It means an increase in our taxes, and I can't afford it.

TAX BILLS COMPARED

"Look, here are my tax bills. In 1949 my property tax was $43.52, now it's $106.12. That's more than a 100 percent increase. How much do they want, anyway"?

A housewife said, "Our property tax is high enough right now. Those people at city hall are just trying to stuff something down our throats. I don't trust them."

On April 4, St. Louis will hold a school board election. Shortly after that, the school bonds will almost certainly be put up to the voters again.

MUST KEEP TRYING

"We have to keep trying," said Philip J. Hickey, superintendent of instruction for the St. Louis schools. "We just have to. Things are going to get worse as we go along.

"Our transportation costs will be much higher next year. We expect at least 2,000 new pupils, perhaps more, next fall. We can't keep those elementary pupils in high school buildings, the high schools themselves need the room.

"Nearly half our schools are more than 50 years old. Some of them go back almost to Civil War days. Some of them are fire traps.

"We'll just have to try again. Somehow, someway, we've got to get our message across."

Industrial Progress of Fort Smith, Ark., Through Voluntary Action

EXTENSION OF REMARKS
OF
HON. JOHN L. McCLELLAN
OF ARKANSAS

IN THE SENATE OF THE UNITED STATES

Monday, April 3, 1961

Mr. McCLELLAN. Mr. President, much concern is currently being expressed for the so-called depressed areas across the country. I am proud to point to a city in the State I represent that, despite adverse circumstances, has avoided this appellation through the effective efforts and unrelenting initiative of its resourceful citizenry.

I speak of the city of Fort Smith which is located on the Arkansas River, in the western part of the State. About 2 years ago, the Army's installation at Fort Chaffee, on the outskirts of the city, was deactivated. That came as a tremendous economic blow to the area, and caused an estimated population loss of some 6,000 persons, and erased over 1,000 civilian jobs at the Fort.

Since that time the city of Fort Smith has literally pulled itself up by its own bootstraps. Last year, alone, the city attracted enough new industry to more than make up for the jobs lost by the closing of the Fort; and today the area is among the most progressive in the Nation, in the matter of industrial expansion.

The amazing story of the accomplishments of the citizens of Fort Smith is very interestingly told in a current bulletin published by the U.S. Chamber of Commerce; and I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PROGRESS THROUGH VOLUNTARY ACTION

Business and community leaders in the city of Fort Smith, Ark., fretfully expected for a number of years eventual loss of one of the area's biggest payroll producers.

The day of reckoning came in 1959. That's when the U.S. Army closed down huge Fort Chaffee, sprawling infantry center on the outskirts of the city.

Almost overnight, free-spending GI's disappeared from the town's wide streets. Simultaneously, paychecks ceased for more than a thousand civilian employees on the shuttered post.

For sale and for rent signs dotted lawns in front of hundreds of vacant dwellings. Businessmen catering to Army personnel folded up.

Fort Smith and environs sustained an estimated population depletion of 6,000.

Under current criteria, Fort Smith should have qualified as a depressed area.

NO DISTRESS LABEL

Instead, 1960 saw the thriving little city on the eastern side of the Arkansas River acquiring a reputation as one of the best jobmaking, hottest industrial developments locations in the Nation.

That it didn't receive the depressed area appellation is a tribute to far-sighted business and civic leadership that revitalized itself more than 5 years ago.

Realizing that an inevitable economic shock would result when military planners in far-removed Washington, D.C., decided that Fort Chaffee's days of usefulness were over, these leaders went to work to put new lifeblood into the Fort Smith Chamber of Commerce.

GETTING INTO GEAR

Engaging a new, hard-driving executive manager of proven performance for the chamber, they were almost immediately confronted with his ultimatum that they fall to, give more of their time to the chamber's program and also kick in more dues money to make the overall effort move. They acceded.

One of the first steps was a complete overhaul and expansion of the chamber's industrial development program.

To begin, a 100-man industrial development committee was organized into minutemen teams to inventory the area's tangible assets.

The results substantiated facts the community of 60,000 persons had always known, but had never assembled in an accumulative package as a sales piece, plus some facts that were surprising even to knowledgeable natives.

When put together, their survey results asserted that Fort Smith could show prospective industry lower operating costs than in many other locations in the country; that there was no congestion; that adequate municipal services were available on a lower tax bill; that its school system rated high; that it had excellent transportation, recreation and hospital facilities, and that it was blessed with an abundance of natural resources, including an almost inexhaustible supply of fuel (natural gas and coal), power and water.

WEATHER PICTURE

Added to these tangibles were climatic conditions that permit year-round construction activities, favorable plant maintenance costs, plus low employee absenteeism.

The portfolio didn't neglect an explanation of Arkansas' State law on financing aid for new industries, a law that permits communities to vote tax-free revenue bonds to be retired through plant lease and lease-purchase arrangements.

Armed with this evidence, industrial location teams, summoned at a moment's notice by the Fort Smith chamber upon the faintest glimmering of interest indicated by a prospective new industry, have been darting out of town to the home offices of prospects.

ON THE GO TEAMS

On one hurry up occasion, five Fort Smith businessmen were alerted late on a Thursday. An hour or so later they were winging away from the airport to headquarters of a large company in the East.

They were laying their wares the following morning before the firm's executive officers. The effort loaded and tipped the scale in favor of their city as a location over several other areas under consideration.

In 5 years, 45 new industries have been brought to Fort Smith through the unity of purpose, business-civic effort that started as a precautionary movement and then became one of prime economic necessity after the Army post closed.

When the newest and largest plant, now under construction, is completed, Fort Smith will have 4,500 persons added to its manufacturing payrolls.

FILLING THE JOB GAP

Last year alone, the city added 1,188 new jobs. That erased the 1,053 jobs lost when Fort Chaffee went silent. Seven brandnew industries, and 22 industrial expansions in 1960 meant a total capital expenditure of $18,047,000.

The big new plant nearing completion is the Norge unit of Borg-Warner. This is a $10-million, 25-acre plant on a 104-acre site—largest single industrial start last year in the Nation by private industry.

Production started last month in the new $3 million Ohio Rubber Co. plant, fabricating auto floor mats, industrial tires, and other molded rubber products. Initial employment was 300.

The Dixie Cup Co., a post-World War II arrival, is undergoing its third expansion, which, when completed, will increase its employment total to around 1,200.

INTANGIBLE COUNT

Admittedly, the tangible assets have played a big role in Fort Smith's economic muscle building, but its prime assets are the intangibles generated by people.

Friendliness on the part of everybody in Fort Smith, plus a good supply of people ready to work, provided the reason, in the last analysis, for his company's decision to come to Fort Smith, said the manager of one of the newer plants.

The building superintendent on the big new Norge plant marvels at the "full day's work for a full day's fair pay" that he is getting from the construction workers. "And they aren't reluctant to tell me—the boss—how we can speed things up to make the job go faster," he declared.

Fort Smith's two lively newspapers and the chamber of commerce are hand-in-glove, reminding the people almost daily that every citizen is a salesman for Fort Smith.

EVERYBODY SELLS THE CITY

Taxicab drivers, waitresses, barbers along with businessmen and housewives are urged to speak up about Fort Smith's good points, to give all visitors the sincere impression

"that we all like and believe in the section we live in."

That visitor, the chamber tells the home folks, may be nosing around to discern the people's attitude, the business climate and other vital facts that might weigh strongly when it's time to decide whether Fort Smith gets another job-creating plant.

Beneficial offshoots from the perked-up economic situation in Fort Smith are numerous.

Last fall, the people voted $2,500,000 for additional school facilities, and just prior they endorsed a bond issue of $1,500,000 to apply on a new civic auditorium.

A new vocational training school is being established on the Fort Smith Junior College campus through business firm donations.

New street lights glow up and down the city's main thoroughfare, Garrison Avenue, so named for the early 1800 billet of Army men who established the original Fort Smith.

New shopping centers are springing up, new office buildings are abuilding and there's renewed interest in improving municipal facilities through an unusual family-type cooperation between the city administration and the chamber.

A building store front facelifting is further transforming the appearance of Garrison Avenue. One of the scheduled remodelers: the chamber of commerce.

When asked if they'd like to see Fort Chaffee reactivated, Fort Smith businessmen declare they'd rather not resume the frets they knew for such a long time, and that the better course might be for Uncle Sam to surrender the installation so in some way it could go back on the county tax rolls.

Disdaining any kind of Federal aid from Washington, Fort Smith's business leaders declare: "We're a city on the move. There's no limit where we can go."

Reports on Project Hope

EXTENSION OF REMARKS
OF

HON. THOMAS M. PELLY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Monday, March 6, 1961

Mr. PELLY. Mr. Speaker, in a world torn asunder by irreconcilable ideologies, and with the dread "four horsemen" on the prowl in various parts of the earth, it is appropriate at this Eastertide to gaze with hope at one bright spot on an otherwise drab horizion.

Project Hope is no longer an experiment. It has proved its worth by emphasizing America's faith in a lesson taught 2,000 years ago—peace on earth, good will toward men.

Hope is indeed an appropriate name for this humanitarian program which to the extent possible is bringing the miracle of modern medicine and sanitation to underdeveloped areas and emerging nations of the free world.

In connection with this effort, I am privileged to include two news articles from the Seattle Times, reporting on the activities of two Seattle physicians, Dr. John F. LeCocq and Dr. Bernard Goiney, who volunteered their medical skills for service aboard the SS *Hope I*. These two fine physicians have demonstrated in a very practical way their dedication to the Hippocratic oath and have earned the plaudits of their fellow countrymen:

[From the Seattle (Wash.) Times, Feb. 24, 1961]

ACCOMPLISHMENTS OF MERCY SHIP "HOPE" OFF INDONESIA LAUDED BY SEATTLE PHYSICIAN

(Dr. Bernard J. Goiney, of Seattle, is a volunteer aboard the hospital ship *Hope* off Indonesia. He describes his experiences for the Times.)

(By Bernard J. Goiney)

We had no sooner finished dinner on the day we arrived in Jakarta—several days before we boarded the *Hope*—than our houseboy came in with a note stating that there was a sick baby outside.

When you come right down to it, I was the only practicing physician present. There was a radiologist, a pathologist, an oral surgeon, a general surgeon, and me, just a plain old working doctor.

I saw the infant, 10 months old. It had been ill 7 days with fever and diarrhea. It was pitifully dehydrated and looked to be at the point of death. There were no phones so I sent a runner to get an ambulance to try to take the baby to a hospital for fluids.

The baby died before anything could be done. I really felt helpless.

We spent the next day seeing the hospitals and medical installations in Jakarta. Transportation is a big problem.

If you can imagine the traffic both foot and automobile after a football game, add thousands of bicycles and pedal-type rickshaws, then put all 3 million in Lake Forest Park, tear up the roads, add torrential rain and 90° heat—you might get a picture of what happens here.

The work that the ship *Hope* is doing medically and surgically is terrific, fantastic and unbelievable. There is so much medical work to be done in these areas that one could spend a lifetime of surgery and medicine in the United States—and accomplish the same thing here in 1 month.

These are not tropical diseases, but heart, kidney, lung and other systemic diseases. There is a surgical opportunity unparalleled here.

The other day I was part of a surgical team that did the first open-chest work in Makassar. We removed a large tumor. Everything went perfectly and the patient is doing well.

The people are friendly and constantly try to assure me that they love the Americans and do not like the Communists. Project Hope is probably the most wonderful thing that has come out of the States. For the small cost and the terrific impact on the people, this is a huge success.

I am convinced that I will benefit immensely from the short time I will be here. I only wish other doctors could see this. They, I am sure, would be eager to come here and participate.

But even more important than the experience available to doctors is the reaction of the Indonesians. I have met and talked to many. They tell me that up to now their impression was that the American thought only of himself. This project is changing their minds.

Our State Department could well take the time to evaluate and promote this project. Its value is greater than the hundreds of millions that have been spent on other projects in these areas.

(EDITOR'S NOTE.—Contributions to Project Hope, sponsor of the hospital ship, may be sent to Box 9808, Washington 15, D.C.)

[From the Seattle (Wash.) Times, Mar. 9, 1961]

DR. LECOCQ WINS INDONESIA'S THANKS

(By Carrie S. Midgley)

(An author in Jakarta sent the following account of honor paid Dr. John F. LeCocq, Seattle physician, who was a Hope Foundation volunteer in Indonesia.)

Every seat in the tile-roofed auditorium in central Java was filled and the crowd of doctors, nurses, technicians, and reporters fell silent as the guest of honor entered.

They were gathered to bid farewell to a skilled doctor and a good friend, Dr. John F. LeCocq, of Seattle.

Dr. Soeharso, director of a rehabilitation center at Solo, Indonesia, rose to address Dr. LeCocq, an orthopedic surgeon.

"We have learned more from you in 3 weeks than we could have learned in many years had you not come," Dr. Seharso told the physician. "We learned not only medical skills, but also the dedication and spirit that you brought with those skills.

"We thank you for your untiring efforts here in Solo and ask your permission to hang portraits of you and your nurse in our hospital center."

Dr. LeCocq was accompanied to Solo by Miss Marjorie McQuillan, another Seattle volunteer to Hope. She was a nurse at the Seattle Orthopedic and Fracture Clinic.

Solo, an ancient city hundreds of miles inland on the banks of a chocolate-colored river, is the nucleus of orthopedic rehabilitation in Java.

Dr. LeCocq wasted no time on arrival in Solo. He arranged to perform two operations a day for his 3 weeks. In addition to surgery, the first Hope doctor at Solo was responsible for guiding Indonesian technicians in converting American braces for the smaller Indonesian patients.

With the aid of an orthopedic-equipment catalog—where he pointed to pictures of items he needed—and a skilled mechanic, Dr. John built his own equipment.

The Asian custom is to start work early in the morning and quit at lunch time. The American doctor insisted on maintaining his normal work schedule.

"I've never stopped working in the middle of the day for more than 40 years," he said with a smile, "and I can't start now."

"It took a lot of energy just to keep up with him," Miss McQuillan said.

Dr. John is quick to praise the Indonesian physicians who work under handicaps of lack of equipment and trained personnel.

When the staff of the hospital learned of Dr. John's imminent departure, they quickly arranged the farewell testimonial.

Dr. LeCocq's portrait will hang in the small hospital in Solo, and his bust will stand in the nursing academy at Jakarta. As an Indonesian doctor said:

"We may forget many things in our lifetime, but we will never forget our teacher."

The John Birch Society

EXTENSION OF REMARKS
OF

HON. GALE W. McGEE

OF WYOMING

IN THE SENATE OF THE UNITED STATES

Monday, April 3, 1961

Mr. McGEE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Birching the Birchites," published in the Washington Post of April 2, 1961. The editorial deals with the activities of the John Birch Society.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

BIRCHING THE BIRCHITES

We can't think of two groups that more richly deserve each other than the John Birch Society and the House Un-American Activities Committee. Still, we are troubled by the demands that the committee in-

vestigate the ultra-right-wing society. The Birchites are indubitably American, as their incubus on American soil attests; and they also are patriotic within the somewhat narrow and twisted framework in which their views operate. They may be a nuisance, their methods may be reprehensible, and their attacks upon respected public figures may be disgusting, but they scarcely now constitute a threat to the security of the Republic.

For this reason we commend Chairman WALTER of the Un-American Activities Committee for his apparent reluctance to investigate the John Birch Society—even though a committee member, Representative GORDON SCHERER, says of the group: "I look with favor on it." Too often the justified complaint is that the Un-American Activities Committee can't keep its hands off those who utter unpopular views.

Under the Constitution members of the John Birch Society are free to propound their doctrines—however noxious—without being tried by congressional inquisitors. This does not and should not shield them from criticism and their views from scrutiny. We welcome the forthright condemnation of the society by Chairman DODD of the Senate Internal Security Subcommittee, whose previous denunciations have usually been directed toward the other side of the political spectrum.

In one sense there is a close analogy between the John Birch Society and the Communist Party, which the society professes to combat with every means at its command. In politics the shortest distance between left and right can be a circle in which the extremes intersect at a common point. Like the totalitarian left, the Birchites have patterned their organization on semisecret, authoritarian lines and use the tactic of infiltrating front groups. There is the same contempt for democracy, the same belief that conspiracy explains all history, the same conviction that dissent from the party line cannot be tolerated.

The society also has its cabalistic scriptures, the most notorious of which is "The Politician," a book written by the group's organizer, Robert Welch. Among solemn revelations in this volume is the assertion that Dwight D. Eisenhower is a part of the international Communist conspiracy along with his brother Milton and that the late John Foster Dulles was "a Communist agent."

This is such palpable nonsense that even the group's more respected fellow travelers have been defensive about Mr. Welch's extravagance, and now Mr. Welch has sought to divorce his views from those of the society. But the fact that people can be attracted to a society built on such doctrines is testimony not merely that the crackpot fringe is still around, but also that the urge to pounce on scapegoats for national frustrations, so avidly exploited by Joseph McCarthy, is by no means dispelled. The John Birch Society does not yet represent the new McCarthyism, but it could.

Still, we think that the best remedy is the commonsense of the American people in detecting spurious political prescriptions. It is true that groups like the John Birch Society could acquire a more sinister significance in the case of a major debacle in U.S. foreign policy. The country cannot be complacent when men of wealth and influence seriously contend that President Eisenhower was a traitor. But the proper offset is continued exposure. We do not think that Mr. Welch's doctrines can survive this examination—even in the balmy season.

Problems of Small Businesses in Smaller Labor Surplus Areas Are Acute; New Categories and Legal Changes Advocated To Spread Procurement

EXTENSION OF REMARKS
OF
HON. JENNINGS RANDOLPH
OF WEST VIRGINIA
IN THE SENATE OF THE UNITED STATES
Monday, April 3, 1961

Mr. RANDOLPH. Mr. President, the question of small business—especially small business in chronic labor surplus areas—participating to a greater degree in Government procurement is one about which literally millions of words have been spoken, written, and printed. Many ideas have been advanced; many proposals have been made; numerous legislative measures have been introduced and debated; riders have been attached to appropriations bills; and Executive orders have been issued by our country's Presidents, each supported by departmental and agency regulations—but the arguments continue and the evidence accumulates concerning the degree and the nature of small business and depressed area firms' participation in contract awards by the Federal Government.

In remarks made last Friday, I commended President Kennedy's and the Defense Secretary's efforts to improve the machinery by which Federal contracts can be channeled to firms located in labor surplus areas, and in that instance it was necessary for me to note that a ruling by the Comptroller General of the United States on March 3 had upset the President's and the Defense Secretary's plan to set aside some types of military requirements for bidding by firms in labor surplus areas only.

We are aware that the Comptroller General wrote in an opinion for the Secretary of Defense that a 100-percent set-aside of procurement of any item for bidding exclusively by firms in labor surplus areas is illegal because it would not "in the absence of free and unrestricted competition, assure the lowest obtainable price" to the Government, as required by law.

I expressed then, and I repeat the hope now that the President will not be permanently blocked in his praiseworthy efforts to have distributed on a more equitable basis the Federal contracts for military procurement.

Not only must appropriations act riders be made less stringent, but, indeed, other changes in law must be made if small businesses in general and those in the smaller labor surplus market communities are to participate in any effective and helpful manner and degree in contract awards and expenditures for Government-procured goods and services.

This fact is brought to attention again in an article which appeared in the Charleston (W. Va.) Sunday Gazette-Mail of April 2, 1961, under the headline "Small Business Not Helped, Burgess Says; Disgruntled Logan Manufacturer Wants Changes in U.S. Purchasing."

The article relates to experiences of a small businessman in a community situated in the depressed bituminous coal mining area of southern West Virginia who sought ways and means to participate in government procurement of items manufactured by his and his father's small industry. This gentleman, Jim Burgess, of Clothier, W. Va., related a story to Don Marsh, able staff writer for the Charleston Sunday Gazette-Mail, which is not unfamiliar to me because it is typical of many other similar recitations of experience by constituents who have brought their problems to my office.

I believe we in the Congress should do more than we have been doing about the problems of the Jim Burgesses, and I agree with an observation made by this gentleman that the area redevelopment legislation will be relatively ineffective for many communities and the businesses situated in them, or new industries hoped to be brought to them, unless and until substantial changes are made in laws and regulations having to do with government procurement policies and practices.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD excerpts from the article to which I have been referring.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

DISGRUNTLED LOGAN MANUFACTURER WANTS CHANGES IN U.S. PURCHASING

(By Don Marsh)

Jim Burgess, proprietor of a small business located in a depressed area, thought he had a sterling idea:

Why not, he asked himself, take advantage of special concessions made by procurement officers to small businesses and to depressed areas and obtain a Government contract?

Burgess, whose close cropped hair is turning gray at the temples, sometimes talks like a combat infantryman, which he once was.

Burgess and his father, James, Sr. own the Mine Ventilating System in Clothier. They make protective cloth used in coal mining.

They've also devised self contained barricading units for use by men who are trapped in gas filled mines. In the 3 years the company has been in business, it has grown steadily.

"The Government buys millions a year in protective covering which is the same kind of material we're utilizing," Burgess says. "They use it for all sorts of things—the Navy, the Army, the space program.

"We had our own financing and we had a building. The Bank of Danville had promised to help if we ran into any kind of money troubles. I thought there was every reason to believe we could get some Government work.

"I don't know how familiar you are with Government purchasing but they have what they call a 'set-aside' program which is supposed to benefit small businesses or depressed areas.

"On any Government procurement, they'll set aside approximately 50 percent for bids and restrict bidding to small businesses or to depressed areas. The set-aside isn't used for programs that call for research and development. But it covers millions of dollars of purchases.

"To get a set-aside, I wouldn't have to be the low bidder. I'd have to be within 20 percent of the higher bidder. Then I could get a part of the contract.

"That's fine. That's a good system of procurement if you want to help depressed areas and small business. I thought, 'Man, this is made for me.'

"So I got Representative JOHN SLACK to arrange some meetings. He scheduled them in Washington with all sorts of agencies—the Army, the Navy, the Post Office Department, the Space Agency, the Maritime Commission, and the Department of Agriculture.

"I saw right away after I got there that I wasn't going to get a contract. But I wanted to chase it out. So I went to Philadelphia and saw a couple of more offices.

"I'll say one thing: they were all nice. They all said they wanted to help me. They all talked to me. But they couldn't do anything."

The trouble, Burgess thinks, is that standards set by the Government are not realistic.

"Do you know what they call a small business?" he asks. "It's one employing 625 men or less. Now, how can I compete with them? That's a big business. How many businesses in West Virginia employ 625? You could count them almost on two hands.

"Then they say any area with 6 percent or more unemployed is a depressed area. Now what kind of a rule is that? Charleston is classed the same as Boone County or Huntington is the same as McDowell County.

"In Boone County and McDowell County we have 20 to 30 percent unemployed. My argument is that there should be a further breakdown because to me, conditions in Charleston or Huntington are nowhere like they are in Logan or Boone or Mingo or McDowell.

"And another thing. Suppose I got a contract. Now they would send an inspector out in 90 days. They would send him down here to see if I had the facilities to produce, plus a bond; so the question I asked the man was:

" 'Well, what are we supposed to do? Put up a plant and buy the equipment hoping we'll get a Government contract because we can't get a contract until we have the equipment?' "

Burgess said his experience convinced him that major changes would have to be made before industry would move into the depressed areas of West Virginia.

"I learned one thing," he said. "This hollering ain't going to help the people of West Virginia. These people are just living in false hopes because there's not much help they can get except 12 more weeks of unemployment and more mollygrub.

"You take these redevelopment companies they're setting up. They're speaking of getting large industries. There's no large industry that's going to come into Madison.

"Why should a man move a plant into one of the coal-mining counties when he can go over on the river and have all the advantages of water transportation, better roads and closeness to markets?

"In Madison, they've secured this land and they say they'll give it to industry that employs 250 people or more. Why, there's not an industry that's going to come in and support 250.

"It's not a question of capital, either, I say if a man has a sound business proposition, he wouldn't have any trouble raising $5 million right in Charleston.

"But if you say to a man, 'If you put up $10,000 in this company we might get a Government contract to use the equipment we'll buy with your $10,000.' Nobody but a fool would do it, see? That's my argument."

Burgess says he thinks the area's best hope for recovery is in attracting numerous small businesses, such as his.

"But the Government is going to have to change its standards. It's got to if really small businesses are going to compete."

He says he thinks two things should be, and could be done immediately. First, different ratings should be assigned companies, depending on their size; and depressed areas, depending on their unemployment rate.

"I think we could have four classes of companies," he says. "Class I could be from 1 to 50 workers; class II from 50 to 150 and so on.

"I also think we should have classes of depressed areas. Class I could be with 6 to 9 percent unemployed, as an idea. Class II could be 9 to 12 percent and so on.

"I think it's silly to expect a little business that hires a dozen men to compete against a company that hires 625. And I think it's silly to say that Charleston or Huntington are as depressed as Boone County or McDowell County."

He says he strongly endorses Governor Barron's crash program ("because we've got to do something for these people now, not next year") and he supports Barron's hiring of a liaison man to work with Federal authorities.

"You got to camp out there. These big companies do that. They know when a contract is going to be let. They get the information. Small companies can't do this."

Burgess says he is not seeking personal publicity. "One of my troubles is that I shoot off my mouth too much," he adds. "I don't want to get out on the string about this thing.

"But it burns me up for people to be living under the conditions they're living under with the hope they're going to be helped because they're not going to be helped. * * *

"These coal mines are never going to employ these men again. Those men laid off, think someday they're going to go back to work and they're wrong. Look at your tonnage records compared to men employed. We're right now producing more coal with 48,000 miners than we used to with 120,000. And they're not even working full time.

"Something's got to be done about the rules for determining a small business and a depressed area. All the procurement officers said it would take an Executive order by President Kennedy to do it.

"One of the procurement officers told me he'd give me a contract today if he could. He said honestly I'd like to help you. But I can't. It's against the law."

Light and Power Lines

EXTENSION OF REMARKS
OF
HON. FRANK T. BOW
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 29, 1961

Mr. BOW. Mr. Speaker, under leave to extend by remarks, I wish to include in the RECORD an excellent editorial entitled "Light and Power Lines," written by P. B. Garrett, publisher of Electric Light and Power magazine:

LIGHT AND POWER LINES

The enigma of the Government-business alliance: "Your success and ours are intertwined," said President Kennedy in sizing up the interrelationship between the Federal Government and American business enterprises, in his recent address before the National Industrial Conference Board. Last year's $6-billion drop in corporate profits, he pointed out, cost the Government more than enough tax money to pay for its whole health and education program in 1961.

Then along came President Kennedy's Interior Secretary, Stewart L. Udall, with the statement that "We are not out searching for ways to let private industry have access to major hydroelectric sites and to the falling water at some of the dams built with Federal funds." Making it plain that the Federal Government is back in the electric-power business in a big way, his pronouncement spells trouble for all investor-owned power companies. And so does the later indication by Mr. Kennedy, in his special message to Congress on natural resources, that his administration intends to meet what it considers a Federal utility responsibility.

Now a 5-State, all-Federal transmission system to carry to preference customers the 1.2-million kilowatts of power to come from hydro plants of the Colorado River storage project has been approved at the highest administration level. It is the key link in a federally-dominated giant power grid envisioned by the late Leland Olds in the 1930's and still the goal of a crusade by his disciples. As pointed out by Ralph Elliott, our Washington editor, in his "Washington Outlooks" comments in our March 1, 1961, issue, this giant power grid idea has long since passed the dream stage and is moving grimly close to reality.

The inconsistency of our Government's statements and actions in the entire field of Government-business relationship was stated in concise and arresting form in a recent letter from one of our readers. He reported a recent conversation with a Hollander who said: "I can't understand your Federal Government. Industry contributes so much to your welfare yet it seems that your Government consistently does everything in its power to destroy it. You charge the same price for your products as your competitors and you are charged with collusion. You lower your prices and you are charged with unfair competition. You raise your prices and you are liable to be accused of making an unfair profit. And after all this, if you do make a profit, the Government takes 52 percent of it. I just can't understand your Government's attitude toward business."

Our Electric Light and Power reader concluded his letter with the statement "And I thought to myself: 'I doubt if anyone else does'."

There is little that can be added to so apt a remark except to say that this whole situation has deadly serious implications for all of our American business enterprises—and particularly for our electric-power industry.

Address by Robert E. Lee, Federal Communications Commissioner

EXTENSION OF REMARKS
OF
HON. ANDREW F. SCHOEPPEL
OF KANSAS
IN THE SENATE OF THE UNITED STATES
Monday, April 3, 1961

Mr. SCHOEPPEL. Mr. President, on March 7 of this year, the distinguished Commissioner Robert E. Lee, of the Federal Communications Commission, addressed a legislative dinner of the New York State Broadcasters Association. The address was made before members

of the legislature and other dignitaries, including Governor Rockefeller and industry representatives. Because of my interest in educational television and because of the interest in that subject on the part of many of my colleagues in the Senate, I ask unanimous consent that the speech be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY COMMISSIONER ROBERT E. LEE, FEDERAL COMMUNICATIONS COMMISSION, NEW YORK STATE BROADCASTERS ASSOCIATION, LEGISLATIVE DINNER, ALBANY, N.Y., MARCH 7, 1961

In my opinion, most of the States of the Union look to New York State for leadership in common problems and from where I sit it appears to me that such leadership has been singularly lacking in the field of educational television. There are many reasons that I know contribute to this and probably many other reasons that I am unaware of and this is why I emphasize that this fact is apparent to me from where I sit.

In 1952, the Federal Communications Commission wisely reserved several hundred television channel assignments for noncommercial educational television broadcasting.

I have been impressed with the importance of this decision and have virtually stumped the country in an effort to encourage the implementation of these channel assignments by educational authorities.

There are over 50 educational stations now in operation and many more being planned throughout the United States. I consider this progress encouraging, yet I had hoped for more.

There have been several barriers to educational television but I think they are being overcome.

For a time it was new and there were, and perhaps still are, skeptics as to the effectiveness of classroom teaching by television since some professional educators considered that there was a plan afoot to substitute television teaching for the teacher himself. May I remind you that when the printing press was invented hundreds of years ago there was a great hue and cry from a significant part of the academic world to the effect that the printed word would obsolete the teacher. Funds for educational broadcasting were slow to be authorized. However, the biggest bugaboo appears to have been the fact that many important cities were not assigned VHF channels. While this proved in error, it may prove to be a blessing in disguise for now it appears that the educational use of the UHF band will save these frequencies for broadcasting since two-thirds of the educational assignments are in the UHF.

As you may be aware, commercial UHF broadcasting has done anything but flourish. There are about 70 commercial UHF stations presently on the air and I suspect the majority are not doing too well financially.

There are technical reasons for the inability of commercial UHF stations to compete with VHF stations in the same markets. I need not dwell at length on these reasons except insofar as they pertain to educational broadcasting. UHF stations do not produce usable signals as far as VHF stations and many areas do not have sets capable of receiving UHF signals.

It took many years for educators to recognize that the competitive problems that beset commercial broadcasters were not common to educational stations; that in-school television could be theirs by the expenditure of but a few more dollars for all-channel television receivers; and that the shorter range of UHF signals was not a serious handicap to their television plans. Now educators recognize that they must have more than one channel to perform the task before them. Pittsburgh, Milwaukee, and Oklahoma City are authorized two channels each and I confidently expect there will be many more—doing the job of filling in for missing teachers and unbuilt classrooms.

Many States are now, at this moment, busily reexamining their statewide requirements in this area and are finding that the allocations available are insufficient for a statewide integrated system. Petitions are and will be coming before us for additional allocations which are only available in the UHF portion of the spectrum. I believe I can say that the Commission is sympathetic to these requests but I caution that the problem becomes almost impossible if the request comes when these channels have been granted to other users.

Of course, there is the problem of money, for it costs hundreds of thousands to build and operate stations. Some of our great foundations have made significant contributions to the furtherance of educational television and there are several bills pending before Congress which would grant States funds to help in this endeavor. There is every expectancy that a bill will be signed into law.

I don't think I need tell New York or any other State how badly it needs more funds for education—for classrooms, for teachers and for the administrative personnel necessary. America spends $3½ billion annually for educational facilities and we are about 200,000 classrooms short. These classrooms cost from $25,000 to $50,000 each and require teachers which we do not have.

Mr. Paul L. Chamberlain, an official of General Electric, recently released some interesting figures with respect to educational needs in the Empire State. He advocates incidentally, four UHF television stations for each school district. To accommodate the increased birthrate in this State, 3,700 new classrooms will shortly be needed and you now have a shortage of 9,500 classrooms. New York will need 70,000 new teachers. Where will they come from? One-half of these will be needed to accommodate new enrollments. There will be a 100-percent increase in college and university enrollment by the year 1970. I know that New York will meet this grave responsibility and also retain its very high academic standards. I suggest that you utilize educational television to make a more effective use of the educational dollar.

There are economies that will flow from educational broadcasting that a prudent administration could scarcely afford to forego. It has been estimated that only one-third of school space is devoted to the classroom proper and the remaining two-thirds to such as gymnasiums, auditoriums, cafeterias, and offices. Were these large rooms equipped with large screen receivers or a number of normal screen receivers, as many as hundreds of students could learn their science and math with only a monitor to keep order.

Centralized school districts by broadcasting with four channels, as an example, and utilizing their auditoriums and other large rooms, when not otherwise in use, can cut education costs drastically.

There are fringe benefits too. Exceptionally gifted students, as well as slow students, could receive extra training which would not disrupt the curriculum of average students.

I have suggested that multichannel broadcasting will soon be universally recognized as the only economic means by which our teacher and facility shortages can be overcome. Since the VHF spectrum is virtually saturated with stations, largely commercial, it will become necessary to implement the UHF which is ready, available and adequate.

The only drawback to use of these channels is that in many areas, receivers are incapable of utilizing UHF signals because of scrimping by manufacturers in a highly competitive field. While this poses no problem for in-school education, it will deter adult education until overcome. We at the Commission have recommended to the Congress that we be empowered to require the manufacturer of all-channel sets. It is difficult to predict whether our proposal will be enacted into law. It is safe to say that if it were, the country would have such receivers in a few years to the extent that adult education would become effective.

Adult education will undoubtedly have a profound effect upon our lives. What is more, educational programing can be attractive, fascinating and not without entertainment value. There is no question that the whole fabric of commercial broadcasting could be enhanced. Commercial stations would find serious competition to their too frequently tasteless and unimaginative fare and would conceivably broadcast a greater portion of their programs to satisfy adult minds. These improvements will not come overnight and they won't come without cost and bold imagination. Certainly the public is cheated if they are never started.

Perhaps you have heard of the UHF tests which the Federal Communications Commission is to conduct starting this Fall. This project, which is partly to obtain technical data and partly demonstrative, will furnish valuable information with respect to the feasibility of UHF television operation in large cities which are difficult, even for VHF stations, to serve with good picture quality. This project has stirred much interest in government and industry and has prompted the city of New York to enter into discussions with us which we expect will lead to cooperation which will be mutually beneficial. At the completion of our tests, I am sure that a sale or gift of the equipment could be negotiated. This, of course, presumes that our tests will furnish satisfactory evidence that UHF broadcasting hitherto confined to much smaller cities will provide a satisfactory medium in New York City and its environs.

We expect to have this station on the air by October 1, 1961, broadcasting from the Empire State Building with about a megawatt of power. Observers will compare the signal quality with the existing services from several thousand observation points. At a later date, in the experiment, we very likely will install a second station to improve coverage and a scheme called multicasting.

Another valuable project which will have its impact on education and UHF broadcasting is that which is being pursued by the University of Purdue in cooperation with educational and civic leaders in six States, with a $4.5 million grant by the Ford Foundation. The experiment is designed to transmit simultaneously over six channels and thereby telecast 71 expertly taught programs per day. This will be a great boon to rural areas.

But education via television can take any form ranging from high-powered airborne transmitters to low-power stations and translators which pick up signals from the air, convert their frequencies, and rebroadcast to small communities. Or it can take the form of closed-circuit television. I note that New York City, in addition to educational programing over a commercial VHF station, has closed-circuit language programs to low-cost housing developments to overcome the language barrier between English- and Spanish-speaking peoples. This closed circuit broadcasting could, of course, be more economically achieved if New York City had their own station on the air.

However, regardless of the medium or techniques, educators must provide good equipment and assure dependable pictures or else there will be losses of instruction time, high maintenance costs, and losses of confidence in the system and the medium.

I mentioned earlier that the educators may someday save the UHF for broadcasting. As you perhaps know, the Commission licenses radio to many users. The television band is quite suitable to other uses and many licensees which are jammed into other bands have been seeking the use of the UHF band allocated to broadcasting. Their arguments are quite valid and difficult to resist. There are 12 VHF channels and 70 UHF channels. If the educators come forth with their plans for multichannel UHF operations at this time and act effectively to implement these channels, they can be saved for the needs of both educational and commercial broadcasting. Otherwise, it is difficult to say what the outcome will be.

I believe that television will ultimately be moved to UHF. There are very practical obstacles but the overall public interest dictates that this must be done. To make it as painless as possible, I have suggested that we permit a conversion period of perhaps 5 years during which interval the existing VHF operators would broadcast on two frequencies—the UHF and the VHF. This would minimize the cost to the public since the average television receiver is replaced within this period of time.

We have been hearing a great deal about the New Frontier these days. We are told that we are in a slack or a soft economy. I submit that the introduction of UHF broadcasting would stimulate the manufacturing industry in the expectation of building an estimated $30 billion of receiving sets over the next 5 years. I could not begin to calculate the stimulus to the economy (in dollars) that would flow from freeing the existing VHF broadcasting space for other users. This would provide new and remarkable tools for improving the American way of life.

We at the Commission have studied the plight of commercial UHF operation. We are firmly convinced that the UHF must become a viable medium for broadcasting. Through appropriate procedures we have made certain areas all UHF and are considering others.

Recently the Commission authorized pay television tests in Hartford, Conn., which operation will be in UHF. It is conjectural as to how the public will respond but it is apparent that if successful in this city, pay television may be authorized in others. It is principally the UHF portion of the spectrum which is feasible and available for this new use.

I emphasize the feasibility and desirability of UHF station operation with full knowledge that the board of regents of the State of New York was awarded construction permits in New York City, Binghamton, Buffalo, Ithaca, Albany, Rochester, and Syracuse and has an application on file for Utica. All of these contemplated operations are in UHF but to date there has not been great evidence of putting these valuable facilities to work. I know of only one educational station in operation in New York State and that was a gift from a defunct UHF operation.

I suggest that the Empire State has a great responsibility in the education of its children and that the contributions which these enlightened children will make to the Nation's welfare are far beyond my limited means to evaluate.

However, I can tell you with assurance that other States look to New York for leadership in many fields and I can assure you that Educational TV is on the march and I hope the Empire State joins this big parade.

Thank you.

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided,* That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p.m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p.m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided,* That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided,* That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further,* That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided,* That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

Appendix

Address by Daniel E. Lambert

EXTENSION OF REMARKS
OF
HON. MARGARET CHASE SMITH
OF MAINE
IN THE SENATE OF THE UNITED STATES
Thursday, April 6, 1961

Mrs. SMITH of Maine. Mr. President, I ask unanimous consent to place in the Appendix of the RECORD an address by Daniel E. Lambert, of Orrington, Maine, fifth district commander of the American Legion.

The address was held before the 42d anniversary banquet of the Daniel E. Geagan Post No. 98, the American Legion and Auxiliary of Brewer, Maine, on Monday, March 13, 1961, at the Brewer Auditorium, entitled "The American Legion Faces the Future." Commander Lambert's address is a sterling call to duty for all citizens of the Nation.

Commander Lambert is a four time wounded veteran of the famed "Darby's Rangers" of World War II and currently directs the Legion activity in the Penobscot, Hancock, and Piscataquis County areas of the Maine department. One of the Legion's key speakers, Commander Lambert gives over 175 talks and addresses during a year in the program to promote Americanism. He has maintained that record for 10 years.

A member of the Brewer American Legion, Commander Lambert serves as district chaplain for the district No. 4, VFW of Maine, is a past president of the St. Teresa's PTA unit of South Brewer, Maine, and is a member of the board of directors of the Eastern Maine Friends of Retarded Children, the Bangor-Brewer Catholic Social Service Bureau, and the American Legion District Service Board.

A member of the Maine Civil War Centennial Commission, Commander Lambert has a deep and abiding feeling in the American heritage of freedom. Commander Lambert comes from an all Legion family. His wife is the former Capt. Elise C. Pooler, ANC, who served in the Pacific area during World War II and belongs to the Brewer Legion and Auxiliary groups. The Lamberts have three daughters, Cynthia, Margaret, and Maureen who also belong to the Brewer Junior American Legion Auxiliary units.

In 1960, Commander Lambert was awarded the George Washington Honor Medal Award from Freedoms Foundation at Valley Forge for his addresses. On March 1, 1961, it was announced that Commander Lambert had been awarded the honor for a second year for his talks on freedom.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

My fellow Americans, we are assembled here to celebrate the 42d birthday of America's champion—the American Legion.

I refer to our organization as a "champion" because no other single word encompasses so aptly the principles and purposes of the American Legion.

Webster defines a champion as "one who acts or speaks in behalf of a person or a cause; a defender." For 42 years, the American Legion has spoken convincingly and acted boldly in behalf of the preservation of the American ideal. The American Legion has become a living symbol of the highest form of love of country, patriotism personified by millions of men and women serving their Nation in time of peace as well as during the crisis of war.

Today, the American Legion not only stands ready to refend the American way of life against all challengers, but also maintains a ceaseless vigil for possible threats by would be aggressors.

Ours is a unique organization. The American Legion first saw the light of day on foreign soil. The first AEF breathed life into the Legion at the historic Paris caucus on March 15 through 17, 1919, and sent it on its way to become the fighting organization it is today. Forty-two years and two wars later, membership in the American Legion signifies fulfillment of the highest obligation of citizenship—the bearing of arms in defense of America in time of war.

From its humble beginning 42 years ago, the American Legion has surpassed the fondest dreams of its founders. Born in the minds and hearts of valiant men—nurtured by leaders of great foresight—and dedicated to the most noble of causes, the American Legion today is a powerful bulwark against the forces of evil.

To reach such a prominent and respected position, the American Legion has had to accomplish mighty achievements. Our founders must have foreseen something of our destiny when they cemented the foundation of this organization with the immortal words of the American Legion preamble.

Upon that foundation have been built monuments to American Legion accomplishments, each one the answer to a great challenge.

We are here to close the 42d chapter of American Legion history. It is appropriate that we pause to reflect on American Legion accomplishments of the past in the light of the challenges of the present.

There is no greater monument to the Legion's endeavors than the Veterans' Administration, with its hospitals and domiciliary institutions. They have made the American war veteran the best cared for in the world. They symbolize the American Legion's success in keeping the Nation mindful of its obligation to the men and women who have sacrified much to keep America free.

The benefits of the VA program have not been confined to the Nation's veteran population. Progress attained through VA research and study has helped to raise health standards and alleviate suffering for all mankind.

There is scarcely a family in our Nation which has not been helped in some way by the American Legion's fight for economic readjustment of the wartime veteran.

The American Legion's GI bills of rights assured the veterans of World War II and the Korean war that they would be spared much of the heartbreak and neglect which faced those returning from World War I. These great legislative achievements by the American Legion did more to raise the educational level and promote homeownership in this country than all other laws combined.

Today, we are a great Nation—but tomorrow, we must be even greater. The American Legion is contributing much to the development of able leaders and enlightened citizens of the future. They are the youth of today who are learning the responsibilities of citizenship and discovering their leadership potential through positive programs of Americanism.

America's future is being built solidly today through such activities as Boys State and Boys Nation, the National High School Oratorical Contest, School Medal Awards, and Boy Scout sponsorship.

Because of the American Legion's active role in child welfare, many a youth will assume his citizenship responsibilities tomorrow with a sound body and a sound and intelligent mind. "A Square Deal for Every Child" has been more than a slogan to the American Legion. Dedicated to this ideal, we have successfully sponsored Federal and State laws streamlining the concepts of child care. These laws have established new legal safeguards for children, modernized juvenile courts, improved adoption and probation laws, and halted child labor exploitation.

Today, our Nation is in the midst of a cold war—a war of nerves. That this cold war hasn't erupted into a hot one can be attributed mainly to the military strength of the United States. A great measure of this strength stems from the American Legion and its continuing campaign for adequate military preparedness. It is obvious today that the great retaliatory power of our Nation is a major deterrent of would-be aggressors who seek world domination.

The pages of American Legion history are filled with great accomplishments which resulted when dedicated Legionnaires met head on the challenges facing them. We have shown ourselves to be able to withstand the verbal attacks of those who strive for a weakened America.

An article in a recent issue of a national magazine had this to say about the American Legion:

"The thing about the American Legion that impresses the objective historian is that on the big issues—the issues that have cut most deeply into our national character—it has had the disconcerting habit of being right.

"The two great issues on which it has made its stand, from the day of its conception, have been communism and disarmament. Any appraisal of the Legion's record in these critical areas shows that it was 100 percent—yes, 100 percent—right, and that its enemies, its detractors, and its mockers were tragically and almost fatally, wrong."

But, we cannot stop with a recounting of past achievements and say that our job is done. Far from it: The preservation of our

Appendix

Address by Daniel E. Lambert

EXTENSION OF REMARKS
OF
HON. MARGARET CHASE SMITH
OF MAINE
IN THE SENATE OF THE UNITED STATES
Thursday, April 6, 1961

Mrs. SMITH of Maine. Mr. President, I ask unanimous consent to place in the Appendix of the RECORD an address by Daniel E. Lambert, of Orrington, Maine, fifth district commander of the American Legion.

The address was held before the 42d anniversary banquet of the Daniel E. Geagan Post No. 98, the American Legion and Auxiliary of Brewer, Maine, on Monday, March 13, 1961, at the Brewer Auditorium, entitled "The American Legion Faces the Future." Commander Lambert's address is a sterling call to duty for all citizens of the Nation.

Commander Lambert is a four time wounded veteran of the famed "Darby's Rangers" of World War II and currently directs the Legion activity in the Penobscot, Hancock, and Piscataquis County areas of the Maine department. One of the Legion's key speakers, Commander Lambert gives over 175 talks and addresses during a year in the program to promote Americanism. He has maintained that record for 10 years.

A member of the Brewer American Legion, Commander Lambert serves as district chaplain for the district No. 4, VFW of Maine, is a past president of the St. Teresa's PTA unit of South Brewer, Maine, and is a member of the board of directors of the Eastern Maine Friends of Retarded Children, the Bangor-Brewer Catholic Social Service Bureau, and the American Legion District Service Board.

A member of the Maine Civil War Centennial Commission, Commander Lambert has a deep and abiding feeling in the American heritage of freedom. Commander Lambert comes from an all Legion family. His wife is the former Capt. Elise C. Pooler, ANC, who served in the Pacific area during World War II and belongs to the Brewer Legion and Auxiliary groups. The Lamberts have three daughters, Cynthia, Margaret, and Maureen who also belong to the Brewer Junior American Legion Auxiliary units.

In 1960, Commander Lambert was awarded the George Washington Honor Medal Award from Freedoms Foundation at Valley Forge for his addresses. On March 1, 1961, it was announced that Commander Lambert had been awarded the honor for a second year for his talks on freedom.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

My fellow Americans, we are assembled here to celebrate the 42d birthday of America's champion—the American Legion.

I refer to our organization as a "champion" because no other single word encompasses so aptly the principles and purposes of the American Legion.

Webster defines a champion as "one who acts or speaks in behalf of a person or a cause; a defender." For 42 years, the American Legion has spoken convincingly and acted boldly in behalf of the preservation of the American ideal. The American Legion has become a living symbol of the highest form of love of country, patriotism personified by millions of men and women serving their Nation in time of peace as well as during the crisis of war.

Today, the American Legion not only stands ready to refend the American way of life against all challengers, but also maintains a ceaseless vigil for possible threats by would be aggressors.

Ours is a unique organization. The American Legion first saw the light of day on foreign soil. The first AEF breathed life into the Legion at the historic Paris caucus on March 15 through 17, 1919, and sent it on its way to become the fighting organization it is today. Forty-two years and two wars later, membership in the American Legion signifies fulfillment of the highest obligation of citizenship—the bearing of arms in defense of America in time of war.

From its humble beginning 42 years ago, the American Legion has surpassed the fondest dreams of its founders. Born in the minds and hearts of valiant men—nurtured by leaders of great foresight—and dedicated to the most noble of causes, the American Legion today is a powerful bulwark against the forces of evil.

To reach such a prominent and respected position, the American Legion has had to accomplish mighty achievements. Our founders must have foreseen something of our destiny when they cemented the foundation of this organization with the immortal words of the American Legion preamble.

Upon that foundation have been built monuments to American Legion accomplishments, each one the answer to a great challenge.

We are here to close the 42d chapter of American Legion history. It is appropriate that we pause to reflect on American Legion accomplishments of the past in the light of the challenges of the present.

There is no greater monument to the Legion's endeavors than the Veterans' Administration, with its hospitals and domiciliary institutions. They have made the American war veteran the best cared for in the world. They symbolize the American Legion's success in keeping the Nation mindful of its obligation to the men and women who have sacrified much to keep America free.

The benefits of the VA program have not been confined to the Nation's veteran population. Progress attained through VA research and study has helped to raise health standards and alleviate suffering for all mankind.

There is scarcely a family in our Nation which has not been helped in some way by the American Legion's fight for economic readjustment of the wartime veteran.

The American Legion's GI bills of rights assured the veterans of World War II and the Korean war that they would be spared much of the heartbreak and neglect which faced those returning from World War I. These great legislative achievements by the American Legion did more to raise the educational level and promote homeownership in this country than all other laws combined.

Today, we are a great Nation—but tomorrow, we must be even greater. The American Legion is contributing much to the development of able leaders and enlightened citizens of the future. They are the youth of today who are learning the responsibilities of citizenship and discovering their leadership potential through positive programs of Americanism.

America's future is being built solidly today through such activities as Boys State and Boys Nation, the National High School Oratorical Contest, School Medal Awards, and Boy Scout sponsorship.

Because of the American Legion's active role in child welfare, many a youth will assume his citizenship responsibilities tomorrow with a sound body and a sound and intelligent mind. "A Square Deal for Every Child" has been more than a slogan to the American Legion. Dedicated to this ideal, we have successfully sponsored Federal and State laws streamlining the concepts of child care. These laws have established new legal safeguards for children, modernized juvenile courts, improved adoption and probation laws, and halted child labor exploitation.

Today, our Nation is in the midst of a cold war—a war of nerves. That this cold war hasn't erupted into a hot one can be attributed mainly to the military strength of the United States. A great measure of this strength stems from the American Legion and its continuing campaign for adequate military preparedness. It is obvious today that the great retaliatory power of our Nation is a major deterrent of would-be aggressors who seek world domination.

The pages of American Legion history are filled with great accomplishments which resulted when dedicated Legionnaires met head on the challenges facing them. We have shown ourselves to be able to withstand the verbal attacks of those who strive for a weakened America.

An article in a recent issue of a national magazine had this to say about the American Legion:

"The thing about the American Legion that impresses the objective historian is that on the big issues—the issues that have cut most deeply into our national character—it has had the disconcerting habit of being right.

"The two great issues on which it has made its stand, from the day of its conception, have been communism and disarmament. Any appraisal of the Legion's record in these critical areas shows that it was 100 percent—yes, 100 percent—right, and that its enemies, its detractors, and its mockers were tragically and almost fatally, wrong."

But, we cannot stop with a recounting of past achievements and say that our job is done. Far from it: The preservation of our

Nation faces the most crucial test in its history. America is being challenged by a force far more sinister than any which would lay waste our fair land through war.

We are living in perilous times. Our precious American heritage—our fundamental belief in the dignity of the individual—is threatened by the scourge of godless communism.

This is our challenge which America's champion must meet. For 42 years, the American Legion has been an enemy of communism. The Communist movement which the world is suffering today is just a few months older than our own organization. Yet this scourge which seeks to dominate our planet by the subjugation of individual dignity has engulfed two-thirds of the earth's population. Today, it is entrenced only 90 miles from our shores.

Recently, the leader of the Soviet Union declared that communism would gain world domination through "peaceful coexistence." He warned that any interference with Communists aims by capitalist powers would lead only to war.

This despotic butcher has dared to tell us that we must stand idly by and watch freedom-loving people subjected to the yoke of world communism—or else.

As America's champion, the American Legion must answer this challenge. Millions of dedicated Legionnaires have faced squarely the challenges of the past to contribute much to the greatness of America today. It is our duty to carry on in this tradition.

So, we are here on this occasion in a spirit of rededication. We are here to keep the faith of those who met 42 years ago in Paris. We are here to reaffirm our belief in the American way of life.

If America is to be preserved, the march of world communism must be halted. Our Nation's ability to retaliate against any military aggression has helped to stem the Red tide. But, if we are to bring this enemy's drive to a standstill, we must counter his offensive in another arena—the battle for the minds of men.

In this engagement, the exotic tools of warfare are of little use. In this theater of operations we must employ weapons which will build, rather than destroy. We must devote our talents and our energies to an America which will continue to set the shining example for freedom-loving men everywhere.

The challenge facing America today affords a golden opportunity to the American Legion to once again prove itself a champion. Our history has shown that we have been equal to the challenge of the past. Now, we must show ourselves to be equal to our tradition and worthy of the trust of our founders.

For such a difficult challenge, our battle plan is amazingly simple. The blueprint for victory is clearly outlined on the back of every membership card in the immortal phrases of the preamble to the Constitution of the American Legion. For 42 years, this declaration of principles has inspired countless Legionnaires to overcome the challenge of the hour.

We can muster the strength necessary to meet our enemy today. Armed with the knowledge that we are in the right, we can face this aggressor in the finest tradition of the American Legion. Dedicated to the high principles that have carried our organization over seemingly insurmountable challenges of the past, we will attain the victory.

For God and country, it shall be done.

A Push for the Port

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 30, 1961

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a very interesting article which appeared in the Boston Traveler on March 29, 1961:

A PUSH FOR THE PORT

Boston's long fight to win freight rate parity with competitive ports has scored a small but encouraging gain through this week's action of the Department of Justice.

The Justice Department has asked that a Federal court set aside a December ruling of the Interstate Commerce Commission which refused Boston's bid for port freight rates as low as those of Baltimore, Philadelphia, and Hampton Roads. The case is slated for argument July 18, on the Justice Department's contention that the ICC order was erroneous.

This is by no means a decisive victory for Boston, but at least it's a reprieve from defeat. And it keeps alive our protest against an unjust ICC attitude that has crippled our port activity and is costing us millions of dollars a year.

The ICC had some logic to its case back in 1905. In those days, Boston's comparative nearness to Europe made this city a booming center for export and import shipments. So in order to give a fair break to southern tier ports, the ICC decided that rail freight shipped through Baltimore should move at 3 cents less per 100 pounds than freight through Boston or New York. For Philadelphia, the rate was 2 cents less.

But times have changed since that ancient ruling. And for the past 40 years, Boston has been fighting for the removal of the obsolete rate differential.

The prize is worth the battle. If we had equal freight rates for the port of Boston, our cargo shipments would jump by 10 million tons a year. This would mean at least $140 million a year extra pumped into Boston's economy, and roughly $500 million a year for the economy of New England.

We're not asking for an edge over other ports. All we ask is a fair chance to compete. It's time we got it. And the Justice Department's action should help our struggle.

Gold Reserve and Unfavorable Balance of International Payments

EXTENSION OF REMARKS
OF
HON. HOMER E. CAPEHART
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Thursday, April 6, 1961

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Gold Is Good for It," which appeared in the Indianapolis Star, March 31, 1961.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

GOLD IS GOOD FOR IT

It is being quite seriously proposed that the present requirement of a 25 percent gold backing for the U.S. currency be abandoned. There have always been some who wanted to dispense with the gold backing, but the proposal comes up now as a supposed way out of the gold problem.

The problem is that a persistent unfavorable balance of international payments for more than 10 years has been causing an outflow of gold reserves which has now become quite serious. The reserves have dwindled to such a degree that it is now possible that the Treasury will soon have nothing left except the required gold reserve.

The practical means of stopping the outflow lie in reducing the Government's spending overseas—chiefly for military operations and foreign aid. The liberals and internationalists will not think of such a thing for a moment.

Hence the proposal to dispense with the required reserve. Then, the argument goes, it would no longer matter how much gold the Treasury had. It could go on paying out gold to foreign creditors, as long as it lasted, and not worry about it.

This is like amputating an arm to remedy a broken wrist. To be sure, that would get rid of the problem of the broken wrist. Furthermore, the problem wouldn't recur. But it could hardly be called a remedy.

Dropping the reserve requirement would get rid of the problem of having to keep gold in reserve. But when the gold was all gone, what would you use then to settle the balance of payments, if it was still unfavorable? Not dollars. For without gold to be paid out at a standard ratio on dollar claims, the dollar would not for long be worth anything in international exchange.

A startling sign of the nature of some of the thinking within the Government about the gold reserve is found in the memorandum on foreign aid and payments which in February went from the U.S. Government to the West German Government.

It implied that the last decade's sustained annual loss of gold is a laudable achievement on the part of the United States. It declared that the opposite, a sustained accumulation of gold and other international reserves by any one country, is "disruptive to the international community." In this context, the memorandum said that "we must learn to use our reserves on a communal basis, recognizing that one nation's gain can only be another nation's loss."

This approach dovetails with the proposal that the gold backing of currency be dropped.

There is here an abysmal lack of understanding of the nature of money. The detractors of gold—after all, you can't eat it—seem to think that the printed paper which the Government issues is real money, that it has been endowed with a self-sustaining value of its own. It is not so. Nor can it be so, unless all of the history of economics is wrong.

The dollar is kept "as good as gold" by two things. One is the discipline of the reserve requirement, which prevents the unbridled issue of printing press money. The other is the availability of gold in foreign exchange for dollars, at a fixed rate. If either were taken away, the dollar would become a shifting commodity, its value subject to the whim of the Government and the manipulation of speculators.

Dollar Will Still Shrink Under Kennedy Budgets

EXTENSION OF REMARKS
OF
HON. EDWARD J. DERWINSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 8, 1961

Mr. DERWINSKI. Mr. Speaker, the President's budget message which was delivered to the Congress was certainly a masterpiece in juggling the figures. Rather than take the face value of the statements emitted from the Budget Bureau, I feel that the following editorial entitled "Dollar Will Still Shrink Under Kennedy Budgets," which appeared on Monday, March 27, 1961, in the Chicago Daily News, deserves our serious consideration:

DOLLAR WILL STILL SHRINK UNDER KENNEDY BUDGETS

As a critic of Federal budgets, President Kennedy is superb. In his message to Congress on fiscal policy he tore to shreds the artifices and excessive optimism by which the Eisenhower budget submitted in January contrived to show a surplus.

It is regrettable that Mr. Kennedy is not sitting on the opposition side to dissect his own device of separating his budget into two doses. He thereby distracts attention from his proposition that no matter what we may have to pay for security, it should not interfere with spending on civilian and vote-getting welfare programs.

The bad news was that we are in for 2 years of red ink—a combined deficit for fiscal 1961 and 1962 of $5 billion. The national debt will climb to a new record high, even assuming that Mr. Kennedy does not find additional unmet needs requiring increased defense outlays.

The President was critical of the Eisenhower budget for its failure to provide for a number of inescapable commitments made by the last administration. In his own forecast for 1962, however, he budgets $843 million from a postal rate increase, which in fact he has hardly more hopes of getting from Congress than did Mr. Eisenhower.

The President said bravely that he intended to be "a prudent steward of the public funds." He defined that to mean obtaining "a dollar's worth of results from every dollar we spend."

Results to the head of a political party intent upon maintaining itself in power are quite a different matter from results sufficient to justify perpetuation of staggering taxes the while we plunge deeper into debt.

Even the forecast of a 2-year deficit of $5 billion was as full of ifs as a tipsheet on a maiden race: If Congress doesn't get spending fever; if revenue estimates prove accurate; if taxes are not cut; if farm subsidies do not rise, and so forth.

More evidence will be required to clinch it, but the President's first budget message places him with those to whom the meeting of politically conceived needs is more important than the question of whether the country can afford them.

He is in distinguished company to be sure; it has been the pattern of every President since Herbert Hoover. That is why in the last 8 years the Federal Government wrung from the taxpayers $53 billion more than it did in the 164 preceding years—in addition to another $23 billion which it borrowed and spent.

That is why Mr. Kennedy was obliged to ask that the present $293 billion limit on the Federal debt be again hoisted to a higher figure. He pays the same lip service as his predecessors to the desirability of debt reduction in good times, but there is no sign that Uncle Sam will ever be prosperous enough to pay his debts.

Anybody who thinks this is compatible with pledges to maintain the stability of the dollar ought to read the grocery ads over the last two decades.

The Johnsons of Texas

EXTENSION OF REMARKS
OF
HON. GEORGE A. SMATHERS
OF FLORIDA
IN THE SENATE OF THE UNITED STATES
Thursday, April 6, 1961

Mr. SMATHERS. Madam President, I ask unanimous consent that there may be inserted in the Appendix of the RECORD what I consider to be a very well deserved editorial. It appeared in last evening's Washington Star, and is entitled "The Johnsons of Texas."

It is a very commendatory editorial dealing with the fine work Vice President JOHNSON and his lovely wife are doing as representatives of the President on the African Continent.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE JOHNSONS OF TEXAS

In this era of most sensitive person-to-person diplomacy it is gratifying, but in this instance not surprising, that the Johnsons of Texas have been welcomed with the warmest of acclaim as America's foremost representatives at Senegal's Independence Day festivities in Dakar. For LYNDON and Lady Bird long ago—in Texas, in Washington, and on the nationwide campaign trail—demonstrated the charm and graciousness that win friends. On this basis alone, President Kennedy chose wisely in asking the Vice President to represent him officially at the anniversary ceremonies.

The occasion has brought to light other gratifying aspects. The warmth of welcome to Mr. and Mrs. Johnson and others of the American delegation obviously was not based entirely on personal grounds. Greetings from the Dakar crowds reportedly included shouts of "long live the United States, champion of independence"—a recognition not always accorded to our country in the current maelstrom of African politics. For the record, too, both the popular and official reaction toward the United States and its delegation was in contrast to the perfunctory reception given the representatives of the Soviet Union.

Perhaps most significant of all, however, were the words of President Leopold Senghor of the Senegalese Republic, itself a former French colony. Addressing his own countrymen in the presence of nearly 100 foreign delegations, Mr. Senghor saluted President de Gaulle of France as a statesman who has opened the road to independence for much of Africa, and warned the new nations of the continent against the error of attacking their former rulers. "Remember," he said, "that the colonizers of yesterday are the friends of tomorrow." It is, of course, an apt reminder, fully justified by the interest and willingness of such former colonial powers as Britain and France to contribute to the political and economic development of these young countries. As for our own country, not a colonizer, it has been made amply clear that we are ready and willing to aid in the same ways. In this context, the visit of the Vice President to Dakar is a manifestation of meaningful sincerity.

Agriculture in an Uneasy World

EXTENSION OF REMARKS
OF
HON. RICHARD B. RUSSELL
OF GEORGIA
IN THE SENATE OF THE UNITED STATES
Thursday, April 6, 1961

Mr. RUSSELL. Mr. President, several weeks ago I observed a most interesting article published in the Washington Star. As a matter of fact, it was published in the Star under date of February 26. It was from the pen of former Secretary of Agriculture Henry A. Wallace. I was greatly impressed by the article. A few weeks later I met the former Secretary and Vice President at a social affair in honor of former President Truman. I complimented Mr. Wallace on the article, and I told him that I had intended to have it inserted in the CONGRESSIONAL RECORD.

Thereafter he sent me the full text of his remarks, which were made at a forum conducted during Farmers' Week by the Michigan State University, on February 1, 1961.

The statement by the former Secretary of Agriculture is a very fine contribution to our efforts to solve this very serious farm problem.

I ask unanimous consent that it may be printed in the Appendix of the RECORD.

I may say that there were many things in Mr. Wallace's philosophy with which I did not agree. In fact, I was diametrically opposed to some of his views. However, Mr. Wallace was a great Secretary of Agriculture, and whenever he speaks on farm problems, he is entitled to be heard.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

STATEMENT PREPARED BY HENRY A. WALLACE FOR THE FORUM, "AGRICULTURE IN AN UNEASY WORLD," FARMERS' WEEK, MICHIGAN STATE UNIVERSITY, EAST LANSING, MICH.

Chairman Hannah has asked each of the five former Secretaries of Agriculture to cover the same three points in 12 minutes.

First I would say that every Secretary of Agriculture must have a fixed goal. In my case I wanted the farmers to get equality of bargaining power and parity of income while at the same time increase soil fertility and feed the people of the United States and the world more abundantly. I could never forget the masthead motto of the farm paper of which I had been editor for many years, "Good Farming, Clear Thinking, Right Living."

Of course every Secretary wants the conditions of living and the opportunities for education on the farm to improve. Therefore every Secretary wants greater security of tenure but no diminution in the speed of adopting modern technologies.

In 1933 when I became Secretary the situation was so desperate that the farm organizations, many insurance companies, and

even the U.S. Chamber of Commerce were behind me in getting action legislation from the Congress.

I had fought for the McNary Haugen bill and its equalization fee when my father was Secretary of Agriculture. Therefore, I was in close contact with farm organization leaders. These people looked on me as a special pleader for their cause. But I felt I had to be more than that.

Moreover I found what every Secretary of Agriculture knows, that I had to reckon with the Budget Bureau, with the Secretary of State, with the Secretary of Treasury, with the House and Senate Committees on Agriculture and the House and Senate Subcommittees on Agricultural Appropriations. And above all there is the need for loyalty to the President's overall program. A Secretary soon discovers that Senators and Congressmen often sympathize much more with high pressure, special interest groups, than with the President's program as set forth in either legislative requests or budget askings. Sometimes there is discord even in the Cabinet family.

The crosscurrents probably put the Secretary of Agriculture in more uncomfortable and difficult positions than any other Cabinet officer. He must balance off a large number of conflicting forces. He usually ends up by pleasing no one completely.

My second 4 minutes are supposed to center around the changes that have taken place since I ceased being Secretary of Agriculture in 1940.

First the war made temporarily irrelevant my ever-normal granary legislation of 1938 which was based on crop loans at 52 to 75 percent of parity. Great war needs rapidly used up the supplies accumulated in the ever-normal granary and the farmers were assured of a good price for everything they raised. The farmers responded so terrifically, partly because of price incentive, partly because of patriotism, and largely because-of very rapid improvements in seed, fertilizer, machinery, and management that postwar surpluses rapidly accumulated.

When I left the agricultural post in 1940 1 worker on the land could support 10 people. Today 1 farmworker can support 25 people. In other words farmworkers since 1940 have been increasing their efficiency at the rate of 4.3 percent a year. For the 60 years before 1940 farmworker efficiency increased at the rate of only 1.2 percent annually. Population in the United States and the world at the present time is increasing at the rate of only 1.6 percent annually.

No one can say that the American farmworker is not doing his share of carrying the world's burden.

The one large area where the American genius for organization and efficient, hard work shines forth most clearly in definite superiority over all other large nations is in agriculture. Russia will overtake us in many industrial fields before she begins to catch up with us in agricultural efficiency. Here we are supreme and are likely to remain that way for a long time.

Where else can one farm worker feed 25 people with abundant supplies of good food containing excellent proteins from animal sources as well as a variety of fruits and vegetables? From the standpoint of health most citizens of the United States get too many calories rather than too little.

If they pay too much that is not the farmer's fault. During the past 13 years farm net income has gone down more than 35 percent whereas nonfarm income has gone up more than 60 percent. Prior to World War II the income of livestock farmers went up and down almost precisely in step with the total payrolls of labor. Since 1946 payrolls of labor have left livestock farm income far, far behind.

It is much more difficult for a Secretary of Agriculture to sponsor continuous wage increases for city labor in 1961 than it was in 1935 or even 1946. The bargaining power of labor has outdistanced the bargaining power of the farmer. The gap between what the consumer pays and what the farmer gets continually widens. The Secretary of Agriculture must more and more appeal to the Secretary of Labor and labor leaders for labor statesmanship in the general interest.

In 1932 agricultural surpluses were built up partly because of low purchasing power on the part of our unemployed and partly because of unemployment overseas. Today only a small part of our surplus is due to unemployment at home. The surpluses accumulated during the past 10 years are due largely to rapidly expanding technology.

The problem is to turn these vast surpluses into a blessing instead of a curse. Public Law 480, passed in 1954, is one mechanism for doing this. We can use our vast surpluses either as a weapon in the cold war or to develop backward nations to a point where they can help themselves. We can store vast quantities in places where they can be protected from fallout both in this country and abroad. A strategic reserve is all-important. I felt this in 1939. I feel it many times as strongly in 1961.

Lastly, looking ahead 10 years I feel that all Secretaries of Agriculture will have to recognize that Government is in the agricultural business to stay.

I do not like it. Farmers do not like it. But how are farmers to get equality of bargaining power without help from the Government? The bargaining power of both corporations and labor comes largely from Government. If minimum wages are guaranteed, farmers will insist on minimum prices. They will never get parity of income as defined during the campaign. If they could be sure of half that amount year in and year out they would be lucky. As long as there are subsidies direct or indirect either of power or money to nonfarm groups, farmers will want their equalizer.

The Secretary of Agriculture in the future will be subject to greater pulling and hauling than any previous Secretary. His only safety will be in defining his goal in such a manner that when he lays down his office he can feel:

1. He has done his part to improve the soil of the United States.

2. His use of Government power has enabled the farmers of the United States to feed the people of our country well while at the same time farmers have been able to bargain more successfully in the marketplace.

3. His use of Government surpluses and surplus legislation have made our beloved country safer at home and abroad.

4. He has maintained the forward march of agricultural technology.

5. He has increased the pride of the farmers in their calling.

6. He has cooperated with his fellow Cabinet members in serving the welfare of the world.

7. He has convinced city people that food surpluses properly used are a blessing and that agricultural welfare is vital to city welfare.

8. He has convinced the State Department of the dominance of the agricultural problem in all of the crowded, undeveloped nations of the world.

In order to give life to these eight goals he must get the best judgment of—

1. The farm organizational leaders.

2. The land-grant college technicians and farm management experts.

3. Key men from Congress.

4. Farm economists in the USDA.

5. Agriculturally minded men in the State Department.

6. Commodity and cooperative leaders who are well posted on the details of the great surplus crops produced on 20 million or more acres.

7. Experts in the livestock-feed grain complex.

There will be many conflicts as many selfish interests collide. In 1935 we tried to reconcile these conflicts county by county, State by State, and region by region. That might be well done again against the background of 1961 realities.

It is quite possible that philosophers and historians at the end of the year 1999 looking back over the 20th century as they prepare to greet the 21st century will say:

"The United States failed because she failed to understand the earth-shaking potentialities in the nationalistic aspirations of the people in the crowded, underdeveloped areas. She could have used her agricultural surplus and agricultural technology to have prevented much of that destructive violence which has stained the last four decades of the most bloody century in all history. She did not bring together the best brains to meet that problem and act accordingly."

The statesmanship of the Secretaries of Agriculture and State during the next three administrations will largely determine whether or not this judgment of doom will be passed upon our beloved country.

Unemployment Problems

EXTENSION OF REMARKS
OF

HON. HOMER E. CAPEHART

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Thursday, April 6, 1961

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Job Incentives, Not Doles," which appeared in the Indianapolis News, March 20, 1961.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

JOB INCENTIVES, NOT DOLES

Most of Governor Welsh's conference on unemployment problems was devoted to extolling Indiana participation in the new Federal jobless pay program.

We could not disagree more on the merits of this plan. Not only is it a temporary palliative, but it does long-range harm to its recipients, the low-seniority workers who are always the first to be laid off.

The conference on unemployment problems might far better have occupied itself with incentives to business confidence in the State than in the ballyhoo of rewards for unemployment.

The principle of Federal extension of unemployment pay and its creeping increase should be of great concern to everyone. It can lead only to a kind of permanent dole, placing a premium on many to stay unemployed.

This increase, for example, is actually discouraging to a return of full business prosperity, since—in Indiana—it will place an additional tax burden on already hard-pressed employers, estimated by the Federal authorities at $28 million.

Furthermore, the added tax falls most heavily on new employers—the ones who have to pay high rates until they can prove the stability of their enterprises. Increasing taxation of this nature is the very opposite

of encouraging the new business Indiana needs to insure full unemployment.

The Governor's conference should have devoted its major attention to getting people back to work by giving their employers assurances that new taxes and new restrictions will not be imposed on them at the very time they need encouragement to resume and rehire.

Indiana's unemployed deserve every State help, but with emphasis on the word State. And with emphasis on job restoration and new job opportunities rather than on extension after extension of unemployment pay.

Some Hard Facts About Good Union Operations

EXTENSION OF REMARKS
OF
HON. GEORGE P. MILLER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, March 10, 1961

Mr. GEORGE P. MILLER. Mr. Speaker, the labor movement in the United States has had a brilliant history in working for the social and economic welfare and justice of workingmen and women of this Nation.

The road has not been easy. At every turn the labor movement has been confronted with opposition and hazards. In recent years, the public press has carried many adverse comments concerning individuals and practices within organized labor.

In view of this, I was most gratified to see the following editorial which appeared in the San Leandro Morning News of my district, which is a timely reminder of the many good labor leaders and unions which exist in our great democracy. I am delighted to submit it for the RECORD:

SOME HARD FACTS ABOUT GOOD UNION OPERATIONS

Good works, unfortunately, are seldom heralded by headlines.

The newspapers save the big headlines for stories about gangsters moving into unions and for articles about billion dollar price rigging conspiracy by industrial giants.

These are examples, we like to believe, of the exceptions to the rule. The majority of the labor movement, and leaders of industry are honest in their operation.

This week the East Bay Labor Journal printed some hard facts about good unions. Declared the voice of the labor movement in Alameda County: "No union corruption is right. No business corruption is right."

Russell Crowell, president of the county central labor council declared, "We must differentiate between the union in which an isolated union officer goes bad, and one permeated by corruption."

This is not to mean that the labor movement should try to gloss over the convincing evidence which the McClelland committee has produced—of sweetheart contracts, gangster tie-ins, looting of treasuries, perversion of the legitimate ends and aims of unionism, denial of union democracy and intimidation and violence. A black eye on the labor movement—whether they are AFL–CIO or not—hurts all who carry union cards.

Crowell declares that "there are some unions whose leaders have forgotten how to lead." No union member or officer should forget that the union exists for the rank-and-file membership.

Alameda County is fortunate that both Crowell and Executive Secretary Robert S. Ash stresses the need for responsible labor leaders. Labor leadership in the county has been a clean, vigorous movement with an outstanding record.

Project Employment

EXTENSION OF REMARKS
OF
HON. GEORGE A. SMATHERS
OF FLORIDA
IN THE SENATE OF THE UNITED STATES
Thursday, April 6, 1961

Mr. SMATHERS. Madam President, a group of business leaders in Milton, Fla., has responded with a novel idea to President Kennedy's plea to the American people to think in terms of what they can do for America.

Their idea is called Project Employment. It calls upon the citizens of Santa Rosa County to provide a boost to the economy of the United States by making needed repairs and purchases now. They reason, and rightly so, that such a move would help to provide employment and help the Nation's economy.

I commend both their ingenuity and their sense of civic responsibility.

Madam President, I ask unanimous consent to have printed in the Appendix of the RECORD the presentation of their idea as it is contained in an advertisement published in the Pensacola Journal of March 3, 1961.

There being no objection, the advertisement was ordered to be printed in the RECORD, as follows:

PROJECT EMPLOYMENT

The President has asked the American people to think in terms of "what we can do for the Government" and not in terms of "what can the Government do for us."

In response to his suggestions, we are now submitting to the people of Milton and Santa Rosa County: Project Employment.

The idea is simple:

If your house needs painting, paint it now.

The money you spend for such work will give employment and such employment will put money into circulation.

Multiply the number of homes that do need painting and you will come up with many jobs for many people.

In each case, the person who has his home painted is not giving money away. He is merely insuring and, perhaps, increasing the value of his property.

The same holds true in such projects as reroofing, planting shrubbery, trees, flowers, and lawns. Property value is enhanced. Properties are beautified.

Business properties fit into the same category.

Ask yourselves these questions: What can I do to put more money into circulation? What can I do to fortify our economy?

Perhaps your automobile needs repairing. Do it now.

Perhaps your boat needs repairing. Do it now.

Perhaps your home needs electrical wiring. Do it now.

Perhaps you need to trade your present automobile. Do it now.

Perhaps you need a new suit of clothes. Buy the suit now.

There are many ways we can help.

Fortunately, in Santa Rosa County, our economic position appears sound at this time.

But we can better keep it that way by sponsoring Project Employment.

By adopting such a schedule, it may be that we shall be the first community in America to accept the President's suggestion.

We believe we will be the first. Be this as it might, we three Milton business houses are happy and consider it a civic privilege to point out our opportunity with you.

Military Invasion of Other Countries by Communists

EXTENSION OF REMARKS
OF
HON. HOMER E. CAPEHART
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Thursday, April 6, 1961

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Big Words Won't Do It," which appeared in the Indianapolis Star, Thursday, March 30, 1961.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

BIG WORDS WON'T DO IT

When the armed forces of one nation invade another and occupy nearly half of the territory of the invaded state, international law, diplomatic usage, and the rules of war provide three possible courses of action for the victim of the invasion:

First, the invaded state might capitulate and ask for an armistice of surrender. The invaders then are usually allowed to occupy the whole territory of the invaded state and impose their own conditions of peace as victors.

Second, the invaded state might ask for a cease-fire to be followed by negotiations for armistice and peace based on existing military positions at the time the cease-fire agreement is signed. That means that the invading forces are allowed to hold all the territories they have occupied by force of arms. This kind of cease-fire request is not a full surrender, but is the nearest thing to it. It acknowledges that the invading armed forces have been victorious in battle. In future negotiations, which may or may not lead to armistice and peace, the invaders enjoy all the diplomatic advantages, since the negotiations themselves are the direct result of their military victories and provide a de facto recognition of their military conquests.

Third, the invaded state might demand the withdrawal of the invading armies from the territories they have occupied and then back this demand with military action, or the threat of military action. The course of events after that depends on the military strength and the political skill of the two opponents. If the invaders become convinced that the invaded state might be supported by superior military forces of powerful allies, then the invaders are likely to retreat without serious fighting. Or they might be forced to retreat after the armed forces of the invaded state have won a decisive battle.

In Laos the United States and the West have so far chosen the second course of action—the nearest thing to a surrender offer. This is the British proposed cease-fire agreement based on existing position, i.e., the Communists holding all the territories they

have occupied by force of arms. This puts the Communists in extremely advantageous diplomatic positions, as the cease-fire—if signed—would officially acknowledge that the Communists are de facto rulers of the territories they have conquered, i.e., nearly half of the Laos State.

Of course, in future negotiations the West might demand that the Communists should leave the territories they have occupied. Western diplomats might even persuade the United Nations Assembly to pass a resolution to that effect. But the Communists would pay as much attention to such demands and resolutions as they did to the demands and resolutions which asked them to withdraw from North Korea, from Hungary, and from Tibet.

Communists never, absolutely never, withdraw voluntarily from territories they conquer by force of arms. The Communists will not leave the territories they have already occupied in north and central Laos, unless they are forced to do so. And unless they are forced to do so by the threat of military action, neither the Communists nor anybody else would take the serious warnings of the West very seriously.

The Communists do not plan and organize invasions of foreign countries for the sake of impressing the West with their political moderation or good will, or intentions to work for a better international atmosphere. Communists plan and organize invasions with the purpose of conquering territories and enlarging the size of the Communist empire. The Communists will not be stopped on their road to world conquest by big words or vague warnings. They will be stopped only when they are confronted with superior military forces united against them and when they become convinced that aggressive military moves into the territories of their neighbors do not bring them military victories and diplomatic advantages, as they have done in Laos.

National Scholarship Auditions of Friday Morning Music Club Foundation, Inc.

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Thursday, April 6, 1961

Mr. WILEY. Mr. President, most of us are aware that when George Washington directed Maj. Pierre L'Enfant to plan a Federal city 170 years ago, he specified that it should be planned as a cultural and civic center for the new United States. The father of our country recognized, even at that early date, that our Capital City would be a showpiece of our way of life—a window through which much of the world would view our new Republic and its people. And, in his great wisdom, he recognized, too, that the fine arts and education would continue to reflect the true status of our Nation—the values which, in the words of President Eisenhower, "make our civilization endure and flourish."

We in America have every right to be proud of the diversified cultural life of our country and of the continued efforts by our citizens to encourage and expand appreciation of the creative output of our poets, playwrights, composers and visionaries of the past and present. We, here in the Congress, have demonstrated our recognition of the significance of the national level of our cultural heritage through enactment of Senate bill 3335 during the 85th Congress—which bill I was happy to cosponsor, and which resulted in Public Law 874 for the establishment of a National Cultural Center here in the Nation's Capital. Many of my colleagues will recall the long and sometimes discouraging battle fought by many dedicated Members in both Houses of the Congress in order to secure legislative approval for such an international cultural beacon, which will be commensurate with our leadership in world affairs. Many public-spirited citizens maintained the courage of their convictions that here was a project which would enrich countless numbers of lives through expansion of cultural horizons. They realized that this was an absolute necessity in order for our Capital City to fufill its role of importance as a tourist center from which local and foreign visitors derive their knowledge and lasting impressions of the United States. And, a splendid example of how Members from both sides of the aisle can work together in harmony for the cultural advancement and mutual benefit of our great country was shown in the commendable bipartisan spirit which marked enactment of this legislation.

Since that time great progress has been made by many prominent individuals who are contributing their time, efforts, and funds toward eventual realization of this center which will belong to every citizen of the United States. Such a national cultural establishment will develop a greater knowledge, understanding, and appreciation of the fine arts by providing a suitable building for the presentation of music, opera, drama, dance, and poetry.

Mr. President, I wish to call attention at this time to an outstanding example of our Nation's cultural maturity to be found right here in our Capital City—the Friday Morning Music Club, Inc. Founded in 1885, this pioneer organization is well qualified to assume its place in the forefront of our expanded cultural horizons; for the objectives of the Friday Morning Music Club are dedicated generally to the ennoblement of the spirit and specifically toward the promotion of musical culture among its members and in the community. One of the largest and most active musical organizations in the Capital, the club has a membership of 600 women musicians—active, associate, honorary, and student—who periodically sponsor concerts of local and world renowned artists.

In 1949, through the untiring efforts of one of its distinguished members—Mrs. Florence Howard, the club expanded its objectives to the younger generation by forming the Friday Morning Music Club Foundation. Incorporated in 1948, the foundation—of which Mrs. Howard is the capable director—establishes a legal means for the club to receive and administer bequests and gifts in order to promote and provide musical education for the especially gifted student; and particularly for those who need help to launch their careers or to provide further training.

As a result of this fine program, national scholarship auditions are held every 18 months for young musicians who compete for awards of $1,500, $1,000, and $300. After 3 days of elimination competitions, in which selected members of the music club choose six finalists, the winners are chosen by judges of outstanding reputation in the music field.

On Friday night, April 7, the foundation will hold the finals in its national scholarship auditions at the John Wesley Powell Auditorium, here in Washington. The auditions this year are for singers between the ages of 18 and 26 and applications for the contest came from 165 young singers from all our 50 States, including Hawaii. Applications were carefully screened by members of the foundation and 40 were accepted to compete in the auditions. The finalists on Friday night will be judged by a panel of distinguished musicians including Boris Goldowski ("Mr. Opera"), Julius Rudell, director of the New York City Opera Co., and Rose Bampton, former leading soprano of the Metropolitan Opera Co. Previous winners of the national auditions have included violinists, pianists, singers, and a cellist; all of whom are now actively pursuing their careers and some of whom have already made such names for themselves as to give promise of becoming stars in future years.

The top award this year has been named by the Friday Morning Music Club "The Florence Howard Award," in honor of the founder and director of the foundation; who, through her untiring efforts, has fulfilled so completely the club's purpose of "promoting musical culture among its members and in the community."

Mr. President, in these times when the United States is faced with the challenge of providing the alternative to the path toward communism, I believe that we need more such constructive efforts which prove to the world that the citizens of our great country are not materialistic—that our own unique approach to private action, endowment, and support of the arts produces the finest artists; and that we are truly worthy of being the leader among nations—culturally and spiritually, as well as economically and defense-wise.

I ask unanimous consent that there be printed in the Appendix of the RECORD a listing of the officers and trustees of the Friday Morning Music Club Foundation, Inc.; along with a listing of honorary membership in the foundation and past scholarship awards.

There being no objection, the list was ordered to be printed in the RECORD, as follows:

THE FRIDAY MORNING MUSIC CLUB FOUNDATION, INC.

OFFICERS

Director of the foundation, Florence Howard; chairman of auditions, Kathryn Hill Rawls; secretary, Constance Russell McKay; treasurer, Katherine Riggs Burchard; assistant to the director, Jane Lea; assistant to the chairman of auditions, Lenore Bryan; president of the Friday Morning Music Club, Dorothy Raynor.

TRUSTEES

Nabiha Gazda, Helen Grimes, Neva Garner Greenwood, Evelyn Swarthout Hayes, Alma Mitchell, Alice Nagle, Miriam Taylor, Margaret Tolson, Olive McD. Witters.

HONORARY MEMBERSHIP IN THE FOUNDATION

National Judges

Miss Alice Eversman, Dr. Rudolph Ganz, Mr. Walter Golde, Mr. Julian de Gray, Mr. John Gutman, Mr. Mieczyslav Horszowski, Mary Howe, Mr. Alexander Kipnis, Mr. Boris Kroyt, Mr. Marks Levine, Mr. Eugene List, Miss Mildred Miller, Mr. Mischa Mischakoff, Dr. Howard Mitchell, Mr. Homer Mowe, Miss Elena de Sayn, Mr. Mischa Schneider, Mr. Leonard Shure, Mr. Martial Singher, Dr. Reginald Stewart, Mr. Roman Totenberg.

SCHOLARSHIP AWARDS

September 8, 1950: The Friday Morning Music Club Foundation and Patrick Hayes $1,000 award. Winner, Diana Steiner, violinist, Philadelphia, Pa.

April 16, 1952: The Friday Morning Music Club Foundation Award for Singers. Winner, First award, $700—Madelaine Chambers, White Plains, N.Y.; winner, second award, $300—Bettye Brown, Nashville, Tenn.

September 11, 1953: The Bonita Crowe $1,000 Piano Scholarship. Winner, Naomi Weiss, New York, N.Y.

April 13, 1955: The Friday Morning Music Club Foundation $1,000 Scholarship for Strings. Winner, Elaine Skorodin, Chicago, Ill.

September 12, 1956: The Friday Morning Music Club Scholarships for Singers. Winner, first award, $1,000—Robert Kerns, Detroit, Mich.; winner, second award, $300—Gilderoy Scott Memorial—Robert Moulson, Atlanta, Ga.

April 11, 1958: The Friday Morning Music Club Scholarships for Pianists. Winner, first award, $1,000—Virginia Hutchings, Atlanta, Ga.; winner, second award, $300—Jerome Rose, San Francisco, Calif.; winner, third award, $100—Emily Zachary Bayly Memorial—Anton Baker, New York, N.Y.

September 11, 1959: The Friday Morning Music Club Scholarships for Strings. Winner, first award, $1,000—Toby Saks, Cellist, New York, N.Y.; winner, second award, $300—Charles Castleman, Violinist, Braintree, Mass.; winner, third award, $100—Frances Steiner, Cellist, Philadelphia, Pa.

April 5–7, 1961: The Friday Morning Music Club Scholarships for Singers. The Florence Howard Award, $1,500 (honoring the founder and director of the foundation); the second award, $1,000, the Church-Lyons-Scott Memorials Award, $300.

Prospects for Negotiated Truce in Laos

EXTENSION OF REMARKS

OF

HON. HOMER E. CAPEHART

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Thursday, April 6, 1961

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "The Terms?—Theirs," which appeared in the Indianapolis Star, March 31, 1961.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE TERMS?—THEIRS

Before there is too much good feeling about the prospects of a negotiated truce in Laos, the people of the United States should understand the basis for these diplomatic conversations.

The United States, Great Britain, and any other of our allies who enter talks with the Russians about Laos will do so on Communist terms even though our diplomatic corps will attempt to paint the scene in the colors of a victory.

The first and glaring inconsistency in the whole business is the expressed Russian hope that Laos may be a truly neutral nation, and not a pawn of the great powers. This is an absurdity. If Laos were capable of being anything of its own volition—neutral, pro-Communist, pro-American—there would be no crisis in southeast Asia today.

Laos is a pawn in the power struggle because the Communists made it so. The Reds have poured military hardware and supplies across the border to the pro-Red forces in Laos. In the face of constant warnings by this country and by other nations, the Communists have persisted in military operations against the Lao Government.

Two other points will show the real grounds for negotiations on Laos. President Kennedy has set no time limit for a cease-fire, nor has he indicated where a so-called cease-fire boundary will be drawn.

The Communists, in Russia and China, can continue to talk, and may continue to fight in Laos. Only when they are ready to stop shooting will the war there end. The Reds started the invasion of Laos, and they will be able to continue that intrusion at their leisure.

If past history offers any sort of precedent, the Communists will negotiate to keep absolutely all of the territory they have conquered in Laos. Current reports indicate the Pathet Lao has cut the narrow-waisted little country in two. If that is the case, the Communists will be happy to accept such a situation in the knowledge that the two amputated parts of the nation may be picked up at their later convenience.

A few concrete examples of this Communist method will serve to emphasize the statement made above. In Korea, the boundary lies right along the line of farthest Communist advance. The Reds are in East Germany and Berlin to stay, they say, even though a final agreement for Germany has never been reached. In Hungary, the Russians were willing to talk after they crushed the freedom fighters and reoccupied the country.

Measured coldly by the facts, the United States and its allies are preparing to negotiate on Communist terms for the dismemberment of Laos. Under such circumstances, there can be no diplomatic victory for the United States. At best, a nasty war fought a long way off from either Moscow or Washington may be averted. At worst half of Laos will be lost and the rest may follow later.

Tribute to Dr. Roy Lynde, of Ellendale, N. Dak.

EXTENSION OF REMARKS

OF

HON. MILTON R. YOUNG

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Thursday, April 6, 1961

Mr. YOUNG of North Dakota. Mr. President, many interesting stories have been written concerning most unforgettable characters. The current issue of the Reader's Digest has such a story concerning a Dr. Roy Lynde, of Ellendale, N. Dak., a city close to where I lived most of my life. I have been privileged to know Dr. Lynde for many, many years. The fine things said about him in this article are all true; and even much more could be said. He spent a lifetime helping others, oftentimes, without compensation, especially during the depression years. Most of his reward will be in the world to come. Probably one of the greatest joys of his life has been in being able to help other people.

Having grown up in a rural community, I am very familiar with the hardships endured by Dr. Lynde and other country doctors. Often such a practice involves night trips far into the country during all kinds of weather, including the worst of blizzards. Theirs has been a great contribution to mankind.

This particular story concerning Dr. Lynde was written by Helen Graham Rezatto. I am privileged to know the author, as well as other members of her family. Her father was a very public-spirited person and greatly interested in community, State, and National affairs.

I ask unanimous consent that this story be printed in the Appendix of the RECORD.

There being no objection, the story was ordered to be printed in the RECORD, as follows:

THE MOST UNFORGETTABLE CHARACTER I'VE MET

(By Helen Graham Rezatto)

"I've got to make a call," Doc Lynde said to me. "Want to come along?"

"Oh, yes, Doc," I cried. All the kids in Ellendale, N. Dak., vied to accompany Doc on his rounds and this time I, a 10-year-old, had beaten out the teenagers.

I delivered the exciting news at home and raced back to Doc's garage. Dr. Roy Lynde loved medicine and machinery in about equal parts, and with his brother Guy had the town's Plymouth-Chrysler agency. It was a two-story brick building with salesroom and service garage on the first floor, Doc Lynde's office and bachelor living quarters on the second.

Doc was waiting for me, and off we rolled over the flat farmlands toward the Coteau-Missouri hills. This was the fall of 1930, and the land was in the grip of the great drought. As we drove through the desolate countryside I saw endless drifts of dust, once topsoil, piled against the fences. Sometimes grasshoppers blanketed the road, and as we drove over them we'd hear a crisp crackling sound and the car would skid a bit. We talked about the drought, about school, and the teachers, about the football team. I talked as if he were 10 years old and he talked as if I were 55. We understood each other perfectly.

Finally we turned in at a farmhouse, and out of it came a man and woman in faded, patched clothes. Inside we found a boy, about my age, in bed. His face, terribly pale because of a blood disease, lit up when he saw us. Doc took his temperature, thumped and poked him, all the time talking about a baseball game he'd seen recently. Finally he poured some pills into an envelope and handed them to the anxious mother.

"You know what's gonna fix you up?" Doc said to the boy, "Frog spit." The boy let out a whoop of delight. "You do what your mom tells you, and when you're strong enough to get outdoors, then you get some frog spit on the middle finger of your right hand, and you'll be fit as a fiddle."

As we were going out through the kitchen I saw the farmer reach up on a shelf for a Mason jar half full of coins. Doc saw this, too, and hustled me out the door. "Next

time," he called over his shoulder, "Next time."

As we roared away Doc grumped, "The damn fool. Last money he had in the world and he wanted to give it away."

Strangers sometimes thought Doc Lynde was a grouch. True, there was a downward set to his month and a bulldog thrust to his chin and he said "hell" and "damn" a good deal, two words not generally employed in our Lutheran and Methodist town. But all you had to do was look at his eyes to see the merriment inside. He was every kid's friend, and the grownups' too.

Doc didn't have office hours; he was available around the clock. The 1,900 people in Ellendale went to bed early, but at any hour of the night in the darkened town you could find one square of light: Doc's window. It told us that he was sleeping lightly, ready to respond to any need. It gave everyone a feeling of security.

Realizing that his appearance at a bedside was good medicine, Doc would make a house call no matter what the distance or difficulties. I remember one January day during a terrible blizzard when the county road foreman stomped into my father's law office, shaking his head in disbelief. "You know what Doc just did? He came into the highway garage and said he had to make a call at the Schmidt farm and wanted me to plow him a way to it. I told him that's a back road and I've got barely enough men to keep the county roads open. Next thing I knew he jumped into one of the plows and took off into the storm. He's got 20 miles to go and he's never handled a snowplow."

"He'll make it," my father said.

He did. And he made it in another storm, too, a few winters later. That time he borrowed a handcar and we watched him head down the railroad tracks, pumping for all he was worth, to see a sick man in the north part of the county. It was midnight before he got home, by the same method.

Doc's bedside manner was unique. He'd enter the sickroom cracking jokes or telling stories, and never give the patient a chance to list his complaints. But all during his monolog he would carefully probe, touch, look, analyze. His theory was that if he ever appeared to take the symptoms seriously, the patient would imagine that he was sicker than he really was.

Actually, Doc's diagnostic skill was amazing, and he was ahead of his time in treatment. He massaged polio victims before Sister Kenny was heard of, and he gave thrombosis patients limited exercise when the rest of the country was giving only bed rest. Hypochondriacs and malingerers received short shrift, however. "Dam it," he'd say to a patient. "I wish I had your heart."

The Lynde garage was an after-school hangout for kids. We delighted in the practical jokes Doc and his cronies played on one another. We laughed when they laughed, and felt grownup. Doc always treated us as if we had good sense and opinions that deserved an audience.

The town's No. 1 sports fan, Doc didn't miss a single high school game if he could help it. When the games were out of town, he'd pile his car full of kids and off we'd go to cheer for Ellendale. When we grew older, Doc would loan us brandnew cars out of the showroom for joy rides and out-of-town games. (He still carries special insurance to cover this.) He never said, "Be careful." He said, "Take her out and see if she's any good." And because he assumed we were responsible, we were.

I never had an accident with one of Doc's cars, but I did with my father's. I wrinkled a fender against a telephone pole, then drove the car to Doc's garage and broke into tears.

"Hell," he said. "You didn't do much damage. We can fix that so your dad will never know."

He and Alvin, his mechanic, went to work on that fender and it came out smooth and shiny, and Dad never did know. No charge, of course.

Ray's Cafe was another hangout, where we went for sodas after school. Whenever Doc happened to drop in, every booth would set up a clamor for him to sit there. One time he paused before the booth where I was jammed in with seven other girls, looked directly at me (I thought) and said, "Damn funny thing. All the kids I deliver turn out to be the best looking."

I blushed with pleasure and pride, then suddenly realized that every girl in the booth had been delivered by him. Still, we each took it personally.

My first really objective view of Doc came after I had gone away to college and returned home for Thanksgiving vacation. Visiting his office, I observed his habit of dipping the thermometer in alcohol, then wiping it on his necktie before putting it in a patient's mouth, and noticed how he allowed Tom, his big striped cat, to sleep in the baby incubator when it was not in use. So what? Nobody ever got sick from the germs on Doc's tie, and no baby objected to Tom's use of the incubator.

I made a few country calls with Doc, but now he had a new systm of priorities; any medical student who was home vacationing had first rights. At least 10 boys from Ellendale were becoming, or had become, doctors because of Doc's inspiration—and often with the help of his cash. Kenneth Leiby was one of the medical students that fall. One morning as I was talking with Ken's mother, Doc's car came down the street. Ken was with him and his face was split with a triumphant grin. Even Doc was allowing himself a small Cheshire-cat smile. Ken jumped out of the car and came racing toward us.

"Do you know what happened?" he cried. "We went on this OB case about 50 miles out in the country, and she delivered at about 6 this morning. Well, Doc has the baby up by the heels and is spanking some wind into it when he turns to me and says, 'I got mine, now go get yours.' Gee, she was having twins—and I delivered a baby. What do you think of that?"

We thought it was pretty wonderful, and no one was prouder than Doc.

After college I married, and in 1943 my husband went off to war leaving me in New York, pregnant. I went to an immaculate, efficient obstetrician with a starched nurse and gleaming equipment, and I hated every minute of it. I wanted an old, cluttered medical office over a garage. I went home. Doc Lynde had delivered me, and it was he who delivered my baby son. With my husband away, it gave me a comforting sense of the continuity of life.

Doc was always there when needed. One afternoon while my father was working in the garden he had a heart attack. Doc was at our house in minutes and this time there were no jokes. Crisply he ordered me, "Run down to the garage and tell Alvin to bring the oxygen tank, the one we've been using to weld broken springs."

When we returned with the tank we found that Doc and my mother had improvised a tent with bed sheets draped over the four-poster and pinned down to the mattress. He inserted the valve of the oxygen tank under the sheets and began turning it on and off by hand. This makeshift arrangement needed constant attention and Doc was on his knees with it for 4 hours straight. He saved my father's life. It was this kind of devoation he gave to every sick man and woman and child in the county.

Despite other heart attacks, my father lived an active life for 9 more years. Then even Doc Lynde could do no more. After my father's funeral the family returned to the bleakness of an empty house. Each sat with his own heavy burden of loss. Suddenly up the sidewalk came Doc. He entered the room briskly, tossed his hat and coat in a corner and said, "Well now, that was a mighty fine speech the minster made about Fred. Don't you think so?"

The text had been from Timothy: "I have fought a good fight, I have finished my course, I have kept the faith." Doc grinned at us. "Now, you can't deny it, Fred did have some good fights."

My father had indeed been a strong-willed, rugged individualist. Doc now began to recall his more notable legal and political battles, and we found ourselves smiling, then laughing. Soon we were immersed in wonderful, sustaining memories of the living man. Doc helped us through that first day without our even realizing that we were his patients, that he was prescribing the potent medicine of good memories.

It took our town a long time to discover that Doc was growing old. He was so much a part of our daily lives that we failed to notice the slow accumulation of wrinkles on his face, or that he paused more and more frequently to catch his breath. It was hard to face the fact that one day the beacon light on the second floor of the garage would be extinguished.

Suddenly we all wanted to express to Doc how we felt about him. But how? Then someone thought of giving him a surprise party on his 76th birthday. On that evening he was taken out for an automobile ride. As the car approached the high school Doc saw the drum majorettes standing by the gym and he exclaimed, "Damn it, have I forgotten a game?"

His host suggested they stop and find out. As Doc stepped from the car the majorettes surrounded him and escorted him in. A mighty roar went up from the residents of Ellendale and Dickey County, and then the throng burst into "Happy Birthday." Doc looked stunned and glanced behind him as if to escape, but the drum majorettes were between him and the door. With a sheepish grin on his weatherbeaten face, he took the place of honor at the head table.

There were skits, speeches and gifts. Dr. Kenneth Leiby, the boy who had delivered the twins with Doc and was now a successful general practitioner in New Hope, Pa., had commissioned a large oil portrait of Doc, painted from photographs, which he now presented to the community.

At one point during the speeches the toastmaster said, "Of course, since Doc is a bachelor he has no kids."

"I'm Doc's kid," squeaked a 3-year-old, jumping up.

"I'm Doc's kid," called out a young housewife, standing.

"I'm Doc's kid," boomed the town newspaper editor, rising to his feet.

One by one, people identified themselves until there was a great throng standing. They looked at Doc and he looked back at them and suddenly his chin began to quiver. We had found a way to thank him. Our very existence was our tribute to his skilled and loving hands.

In recent years we've tried to honor Doc in other ways. We built the Dr. Roy Lynde Memorial Nursery section of the county hospital. On the 50th anniversary of the day he began medical practice after graduating from the University of Minnesota, we held a civic holiday with a parade and a doubleheader during which we dedicated the ball park as the Dr. Roy Lynde Memorial Athletic Field.

Today he is 86. The dust in his office is undisturbed, for his instruments are now relics of the past. When he leaves the garage to go to the restaurant for dinner he walks very slowly and, should he falter, a dozen people are at his side. Each night a

different neighbor looks in on him to be certain he's all right. During the week the population of Ellendale parades past his chair in the garage just to say, "Hi, Doc." The mighty force of the love he has given others over the years now returns to range protectively around him.

I look at him and think of all the sick people he's held in his arms, the bills he's forgotten, the jokes he's laughed at, the kids he's spoiled, the kind deeds he's hidden. And I think of the richness he's brought to our town. Each of us has tried to be a little bit like Doc. None of us made it all the way, but we're more understanding and generous and loving than we would have been if he hadn't lived among us.

Could any man hope to accomplish more?

The American Essay Contest

EXTENSION OF REMARKS

OF

HON. HOMER E. CAPEHART

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Thursday, April 6, 1961

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "The American Essay Contest—I," from the Indianapolis Star of April 2, 1961; an editorial entitled "The American Essay Contest—II," from the Indianapolis Star of April 3, 1961; also an editorial entitled "The American Essay Contest," which appeared in the Indianapolis Star on April 4, 1961.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

THE AMERICAN ESSAY CONTEST—I

We have been both delighted and dismayed by the results of the Star's American Essay Contest—delighted because the winning papers were so excellent, showed thorough preparation, research, good writing, and a clear understanding of the difference between a republic and a democracy—dismayed because the great majority did not.

But in this first editorial on the subject we want to speak of our delight in the job done by the 33 winners and several hundred other entries. These contestants made a real effort to discover the fundamental nature of the two contrasting systems. Most of them gained a fairly clear undertsanding of the obvious differences. As one of the top three winners put it, quoting former Chief Justice John Marshall, "Between a balanced republic and a democracy the difference is like that between order and chaos." Pure democracy, as it was under the Greeks, can become mob rule and usually does. As this same essay reminded us, Christ was crucified because of the democratic vote of a mob incited by the priests. Socrates took the hemlock for much the same reason.

Another of the top three papers made a vitally important point that was missed by so many of the others. Only in a republic are the rights of minorities protected. "In a democracy," this essay said, "the will of the majority suppresses minorities. Each man is equal before the law, but he is not equal in his ability to make the laws." It was for this reason that the Founding Fathers established a republic with the Constitution and Bill of Rights. It was for this reason that they sharply divided the powers of those who govern and left so much authority in the hands of the States—to prevent the centralization of political power so that it could not be seized in time of crisis by tyrants, either elected or imposed. Because they knew from history that this happened in democratic Greece and later in republican Rome, they went even further than the Roman Republic in providing protections for the people from the advent of tyranny.

Another thing that pleased us greatly about the winning papers was the excellent selection of a bibliography for reference. The best papers were uniformly the ones with the best reference works, not only books but also articles and papers like the Federalist Papers. Without a study of a variety of books and other material on the subject, a first-class essay simply is not possible. Not only were the best essays based on good sources, they also showed that what they read was applied in their work.

We are happy that we have received so many letters and calls from students and parents and teachers and others who are pleased that this American essay contest has stimulated a real interest among our high school students in the principles of American government. One contest winner's father came in to tell us that his son had now decided to make the study of government his main academic concern because of his experience in preparing his essay.

Finally we were very much encouraged to note that even in those papers that did not measure up, the ones that showed poor preparation and weakness in understanding, the participants were eager to learn about their country's institutions. They clearly showed their pride and gratitude for being Americans. They appreciate the liberty and the opportunity that the American way of life offers them.

Certainly the results of the American Essay Contest have been worth all of the time, effort, and money spent. The Star is proud of our young students and especially proud of those winners who did such a splendid job.

THE AMERICAN ESSAY CONTEST—II

Yesterday we said we were both delighted and dismayed at the results of the American essay contest sponsored by the Star. A minority of high school students did do a good job of differentiating between a democracy and a republic. That delighted us. But what dismayed us was that the majority did not. Their essays were, in many cases, simply almost word for word repeats of part of what they read in two encyclopedias, the Brittanica and the Americana. Some who added other books to their reference list plainly either did not read them or did not understand what they read. A great many showed by their essays that they had virtually no training in formal essay writing. In fact one teacher who wrote us said that this was the first chance her class had to write a formal essay. This astonished us.

And so did some of the conclusions reached by the students. Let us quote some: "There are many more people who immigrate from their republican form of government to our democratic government, than emigrate from our democratic government to a republican form of government [sic]."

"Republics fail to recognize the dignity and worth of the individual."

"I believe that our Government has gone through a great change. We have grown from a small colonial nation, which persecuted the minority, through our democratic and republican stages of government, and we are now entering what could be the answer—the socialistic stage. Could it be that this type of socialism is the same socialism that Russia is seeking so unsuccessfully?"

"I have always been taught that we live in a democracy. I can see now that this statement is not always true."

"What is the difference between a democracy and a republic? It really never occurred to me or probably to anyone else."

"In a republic a change of authority generally is begun or ended with riots."

"A democracy believes in more responsibility for economic conditions of the country by the government, and republics believe [sic] that most economic decisions should be left to private companies and to the people themselves."

"A republic, in my eyes, is a state led by a dictator and his own self-appointed people. The people can't go to bed at night without fear of bodily harm."

"A democracy is people working for themselves in free enterprises and paying taxes to local and State governments, for support, in proportion to what they earn. Therefore, the United States is an example of a democracy and the Soviet Union is an example of a republic."

These quoted ideas ran through hundreds of the essays we read. What conclusions should we draw from this?

First we must conclude that in many Indiana schools children are not taught the difference between a republic and a democracy, and their history or government books do not explain it.

Second in many schools essay writing is not required in English or other courses.

Third, in many schools students are taught that the United States is a democracy and not a republic despite the words of the pledge of allegiance and the history of the founding of the Republic.

No wonder so many students wrote that they hadn't considered the question before because "it really never occurred to me."

It seems clear, therefore, that school boards and principals and teachers should take a second look at the books they use and the courses that are taught about the Government of the United States. As we said, the majority of the entries do not show any understanding of the difference, which simply means that they were never taught the difference.

When asked about the results of the Constitutional Convention Benjamin Franklin replied, "We have given you a republic if you can keep it."

How can we keep it if we don't know what it is?

So what must the student do to make a clear distinction between a republic and a democracy? If he is not taught it in school he has to go outside to fundamental sources. Reading "The Federalist" papers, of course, would be instructive. But there are many books on the subject. For instance, Felix Morley's "Freedom and Federalism" is an excellent sourcebook. Morley, a political philosopher, journalist, and student of government, points out that the United States was conceived as a Federal Republic deliberately designed to limit democracy and avoid dictatorship. Quoting John Adams he writes, "There never was a democracy that did not commit suicide." He adds that democracy "was certainly not the system these men were supporting for the United States." And, "The theory of check and balance, as superimposed on our Federal structure, was derived from the writings of the French philosopher Montesquieu and has no relation whatever to the English political tradition."

Students preparing essays for the "American Essay Contest" should begin first with pondering the roots of the word "republic." It comes from the Latin res publica—meaning public things or something belonging to the people. If a government belongs to the people it cannot be either a dictatorship or a Communist state, for in those states the people clearly belong to the government.

We hope that teachers, students, and parents will all take to heart the lessons learned in this first "American Essay Contest." It has

been most gratifying to know that some of the students have come to learn well the distinction between a republic and a democracy. It has been useful to learn that many others, the majority, do not. For now that unfortunate situation can be corrected by students, teachers, and book publishers alike.

Santayana once wrote that "people who don't know history are bound to repeat it." If Americans don't know the nature of their own government, they are bound to lose it.

THE AMERICAN ESSAY CONTEST—III

In our second editorial on the Star's "American Essay Contest" we revealed that the majority of students competing either did not know or had only a vague idea of the difference between a republic and a democracy. The reason for this is quite clear. They are not taught the difference in their history or government courses in many schools. The references they used, chiefly two encyclopedias, the Americana and the Britannica, gave them only what might be termed the "modern" interpretation of the two concepts of government—which is most confusing.

This interpretation, used particularly by the Encyclopaedia Americana, classifies any government which calls itself a republic as a republic. We don't know why the Americana doesn't also claim the same for democracies, for the Soviet Union calls itself a republic, but it also calls its captive states "people's democracies." It should be clear to anyone who has studied the history of the American Republic and the Roman republic and also the government of the socialist Soviet Union that the Soviet Union is neither democratic nor republican. But the Encyclopaedia Americana states that there are three kinds of republics: "(1) democratic republics of the West," "(2) states officially designated as republics although they are in point of fact military or junta dictatorships." "(3) the Communist republics." Thus the average high school student would conclude, if this is his only source, that a republic can be a dictatorship or a Communist state, which is nonsense.

The Encycloaedia Britannica does not go nearly as far in making this distinction. It states, "The insistence that a republic is not synonymous with democracy either as direct democracy or as absolute majoritarian democracy, but rather as synonymous with constitutional democracy is correct in the specific U.S. context, though that usage is a narrowing of the wider use of the term to denote any nonmonarchial regime."

Of course any "nonmonarchial regime" could be a Communist state, and the student could conclude from this definition that outside of the United States a Communist regime could be a republic.

This kind of definition dilutes and destroys the true meaning of the word "republic" until it has no clear meaning at all.

Lift From Bootstrap

EXTENSION OF REMARKS
OF
HON. GEORGE A. SMATHERS
OF FLORIDA
IN THE SENATE OF THE UNITED STATES
Thursday, April 6, 1961

Mr. SMATHERS. Madam President, I ask unanimous consent to have printed in the Appendix of the RECORD a well deserved editorial which appeared in the Washington Post on Sunday, April 2, entitled "Lift From Bootstrap." It is an endorsement of the nomination of Mr. Teodor Moscoso, the former director of development in the Commonwealth of Puerto Rico, to be Ambassador from the United States to Venezuela. I am certain that Mr. Moscoso and President Romulo Betancourt will be able, together, to work toward improving the economic and political conditions in that important country, which is obviously so necessitous, and whose freedom and economic strength are so important to the Western Hemisphere.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

LIFT FROM BOOTSTRAP

Teodoro Moscoso, who has been designated as U.S. Ambassador to Venezuela, is a singularly able economic planner and a likeable public servant. He is also a Puerto Rican. In some Latin American capitals, where the myth persists that Puerto Rico is an unhappy colony, the appointment of Mr. Moscoso may be regarded mistakenly as a diplomatic slight. We think that President Kennedy was right in feeling that the merits of the appointment are well worth the risk.

It is understandable that some Latin Americans are confused about Puerto Rico's status—it is sometimes perplexing to a continental. Although Puerto Ricans are citizens of the United States, they have freely chosen commonwealth status. If Puerto Rico wanted independence, there is little doubt that the request would be granted. But the islanders themselves have voted to remain within the Federal system as a self-governing commonwealth.

No one is better qualified to explain Puerto Rico's unique status than Teodoro Moscoso. As the administrator of "Operation Bootstrap," he can give first-hand testimony on how the island has benefited from its status and has managed to double living standards in a generation. No less important, he can make clear that there has been no loss of dignity or of liberty under the island's elective government.

Puerto Rico's experience under "Operation Bootstrap" is a precious resource that can be profitably used in other countries facing similar problems of growth. But before the resource is employed, the myth of Puerto Rican servitude must be exploded. One way to do this is to appoint more islanders in a variety of posts until the service of Puerto Ricans is taken for granted.

Mr. Kennedy has already named Dr. Arturo Morales Carrion as Deputy Assistant Secretary of State. The assignment of Mr. Moscoso to Venezeula is all the more welcome because it will hasten the time when further appointments will become matter of course.

Opportunities for Use of Retired Persons in Peace Corps

EXTENSION OF REMARKS
OF
HON. HOMER E. CAPEHART
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Thursday, April 6, 1961

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Why Not Try This?" which appeared in the Indianapolis Star, Thursday, March 30, 1961.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WHY NOT TRY THIS?

Since the United States apparently is going to have a Peace Corps, complete with a Kennedy kinsman at its helm, the suggestion of Forest M. Shafer of this city deserves serious consideration. More than a month ago, he came up with the sound idea that retired persons be used as ambassadors of free enterprise in under-developed areas.

He broached the plan to Dr. Cleo Blackburn, director of the board for fundamental education, also of this city. Dr. Blackburn said, "It is my opinion that these mature senior citizens might provide a much more stabilized leadership in guiding people in underdeveloped countries than young people." There shouldn't be any serious argument with that statement.

Retired citizens, who wished to join the Peace Corps, could certainly serve as counterweights for some of the more enthusiastic young folks who undoubtedly will find their way into the organization. By the simple exercise of experience gathered over a lifetime, the older men and women would have knowledge and skill readily available without training. They could, if they wished, work in foreign nations at salaries under the figure which the Government has been accustomed to pay "career workers" in this field.

The retired man or woman will not have to learn about America or the free enterprise system of business from a textbook. He will know. The lives of the older citizens will be a human reflection of what the American system can do for its people.

As long as the New Frontier is looking for new ideas, this seems to be much sounder that the original plan which drew so much uncritical applause from the colleges of the land. Peace is not the prerogative of youth, but rather of advancing years. The President should think seriously about asking retired Americans to aid in the Peace Corps.

A Crusader Against Government Waste

EXTENSION OF REMARKS
OF
HON. J. CALEB BOGGS
OF DELAWARE
IN THE SENATE OF THE UNITED STATES
Thursday, April 6, 1961

Mr. BOGGS. Mr. President, Delawareans are proud of the senior Senator from Delaware, JOHN WILLIAMS, and his continuing fight for economy in Government.

I commend to my colleagues in the Senate an article which appeared in the New York Herald Tribune on April 2 by Victor Wilson which tells the story of Senator WILLIAMS' crusade against Government waste.

I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

A CRUSADER AGAINST GOVERNMENT WASTE

(By Victor Wilson)

WASHINGTON.—Members of the Senate are waiting with anticipation—tinged with just a bit of apprehension—for its strongest foe of waste in Government spending to unveil his latest finds in that field.

That Senator is JOHN JAMES WILLIAMS, Republican, of Delaware.

Though he helps to represent the second smallest State in the Union, there is nothing puny about Senator WILLIAMS' unrelenting campaign for economy in spending the taxpayers' money and against its misuse.

It shouldn't be long now before the gentleman from Delaware speaks out. An associate confirms that the Senator has a number of private investigations underway, and it's just a question of time until one of them jells firmly enough for him to provide details publicly.

The reason there is just a bit of apprehension among Senator WILLIAMS' colleagues about what he might disclose is their knowledge that he plays no favorites.

His next target could just as well be an influential constituent of a Senator or Representative, as the Pentagon, the Agriculture Department, the Internal Revenue Service, or the Federal Maritime Board. All have felt the whiplash of his senatorial indignation at one time or another.

The nature of Senator WILLIAMS' political courage is well illustrated by a vote of his a couple of years ago. His home State has frequently been called "The Du Pont Duchy." However, when a bill came up in the Senate beneficially affecting that giant company's interests—but failed to square with the Senator's conscience—he unhesitatingly voted against it.

At the last session of Congress Senator WILLIAMS spelled out in detail, on the Senate floor, the probable loss of millions because of the President's penchant for negotiating defense contracts with individual firms instead of calling for free-for-all bids.

Later in the session he told Senate colleagues how a group of westerners bought up some virtually worthless swampland, did a bit of crop-planting to "create a record," then quietly put it in the soil bank and collected Federal fees for not planting more crops there.

Wherever there's waste, or a lack of economy, one usually finds Senator WILLIAMS poking into it. Two years ago he revealed that one company collected $14 million in one year from the Government for storing surplus crops and another more than $13 million for the same purpose.

Three years ago he tried but failed to bar free, or cut-rate, trips on Government-subsidized vessels for Federal officials and Members of Congress. Last year he tried, but failed again, to require all Congressmen traveling in this country or abroad on Federal business to submit detailed expense accounts.

Way back in 1951, however, he had a bill passed making the salaries and expense funds of Presidents, Vice Presidents, and Congressmen liable to income tax, minus only legitimate business expenses. He declared that the previous practice of making the expense funds nontaxable favored these officials over ordinary citizens.

The value of a dollar came to Senator WILLIAMS early as the 9th in a family of 11 children. He was born May 17, 1904, on a Frankford, Del., farm and attended that community's grammar and high schools.

At 18 he struck out for himself, moving to nearby Millsboro, Del., and starting a chicken farm and a feed and grain business. He still lives there and still runs the farm and business, with his brother's help.

He got his first political experience on the town council of Millsboro (population about 1,000). In 1946, to use his own words, he became "fed up" with what was going on in Washington, particularly continuation of price controls by the Truman administration. He decided to make a bid for a Senate seat.

He ran against New Deal Senator JAMES M. TUNNELL, pushing hard on the issue of Federal controls on the national economy, and trounced him, 62,603 to 50,910. He took his Senate seat January 3, 1947, was reelected in 1952 and again in 1958.

Even before he went to the Senate, Senator WILLIAMS began to suspect something was wrong in the Internal Revenue Service because of a rather involved incident in his own bailiwick. In 1951 he helped expose corruption, fraud, and bribery in that agency. Sixty-one officials quit, resigned, or were indicted in the scandal. It's one of the Senator's proudest trophies.

Senator WILLIAMS has good sources of information as ranking Republican on the Senate Finance Committee and as a member of the Joint Committee on Internal Revenue Taxation and the Joint Committee on Reduction of Non-Essential Expenditures. He also watches General Accounting Office reports, which check Federal outlays.

Married, with one daughter and three grandchildren, Senator WILLIAMS likes hunting, when he finds time. He's also rather proud of the fact that he makes the AFL–CIO Committee on Political Education list of least desirable legislators as frequently as any Republican Senator.

States' Rights and Federal Subsidies

EXTENSION OF REMARKS
OF
HON. HOMER E. CAPEHART
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Thursday, April 6, 1961

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Why States' Rights?" which appeared in the Indianapolis News, Tuesday March 28, 1961.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WHY STATES' RIGHTS?

Last week a letterwriter challenged the News on its continued defense of States' rights. Surveying some of the absurdities and malfeasances of the late legislature, the reader said:

"These, then, are the clowns to whom the News and others would relegate our destinies. You go on preaching States' rights and the evils of the Federal Government. As for me, I am willing to pay a little more and take my chances with Washington." As we see it, the point is a good one to raise—not because it disproves the case for States' rights, but because it establishes it.

The reader, who signs himself "Servetus," seems to think that, in some way, the same legislators who are "clowns" in Indiana become statesmen when they are transported to Washington; that an agency, government, which acts foolishly when we are close to it, acts wisely when we are far away from it; that, by increasing size and distance, government gains in virtue.

As it develops, exactly the opposite is true. Government is government at all levels—an instrument of compulsion, wielded by fallible men. When it becomes more distant from us, and more complicated in its workings, it does not lose any of its flaws. The only real difference is in the ability of the voter—such as our irate reader—to keep tabs on what is going on. Thus when government acts absurdly in Indianapolis, it is recognized as being absurd. But when it acts absurdly in Washington, it is either pictured as too much a matter for "experts" for the average citizen to understand, or else labeled "confidential."

Granted, hula dancers and a lost thoroughfare bill are ridiculous. But what about building roads in Laos that don't lead anywhere, or uninhabited apartment houses in Lebanon? What about misestimating Federal road costs by $1 million a mile? Or a farm program that pays farmers to produce and not to produce—and has piled up $9 billion in surpluses? Or Federal aid programs which "help" us by selling us dollars at $1.87 apiece?

Could anything be more ridiculous than these actions by our Federal Government? Yet, because that Government is distant from us, we have accepted these and other absurdities as a matter of course. To make the point specific, let us consider two instances involving increased taxes—at the State level, and at the Federal level.

There was considerable unhappiness when Governor Welsh proposed a reduction in the gross income tax exemption. The change would have raised Indiana taxes by about $9 million a year. No one, including Democratic legislators, wanted any part of it, and the proposal never got off the ground.

Now look at the Federal level. President Kennedy proposed, and Congress passed, an unemployment compensation bill that will raise Indiana's taxes by $28 million. The measure passed with hardly a ripple of protest, and our taxes will go up to pay for it.

Why did no one protest this tax increase, after all the outcry against Welsh's program? The answer seems clear enough. The Federal proposal was so distant, and its mechanics so unfamiliar, that many people did not realize they were being asked to accept a tax increase. The remoteness of the Federal Government makes it seem like a cornucopia of subsidies—benefits which somehow do not have to be paid for. At the State level, this fiction cannot be maintained.

It is precisely for this reason that we prefer to keep government close to home, where the people can control it.

Economic Losses in Cuba

EXTENSION OF REMARKS
OF
HON. GEORGE A. SMATHERS
OF FLORIDA
IN THE SENATE OF THE UNITED STATES
Thursday, April 6, 1961

Mr. SMATHERS. Madam President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Make the Break Complete," published in the Miami News, of March 15, 1961. I commend the editorial to the reading of all Members of Congress.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

MAKE THE BREAK COMPLETE

The Miami News believes that if the United States continues to pour $70 to $80 million a year into Cuba, our Government is abetting Cuba's leaders in their avowed purpose of spreading communism throughout Latin America.

Fidel Castro's vituperative reaction to President Kennedy's proposed 10-point plan for the revitalization of Latin America is simply another in a long line of Castro insults to the people of the United States.

These insults we have endured, and we would continue to endure them if we thought there were any hope that economic relations would be of benefit to the Cuban people. There is on longer basis for such hope.

Continued purchase of products from Cuba can only prolong the tyranny in which the Cuban people are held.

We doubt that many Americans realize as well as we in south Florida that when this country stopped buying Cuban sugar, only about two-thirds of Cuba's exports to the United States were eliminated. Some 3 million pounds of Cuban fruit, vegetables, molasses, and tobacco still enter U.S. ports each week. Florida markets alone contribute $25 million annually to what remains of the Cuban economy.

Our own economic losses have been fantastic since the Castro regime came to power in January 1959. Millions of dollars in American property have been nationalized, and there is no hope that Castro will ever fulfill his promise of repayment.

All this from a regime that has ground to dust the basic democratic freedoms enjoyed by so many in this hemisphere and sought by so many others.

Hospitality for Foreign Visitors

EXTENSION OF REMARKS
OF
HON. JOHN A. CARROLL
OF COLORADO

IN THE SENATE OF THE UNITED STATES

Thursday, April 6, 1961

Mr. CARROLL. Mr. President, on several occasions recently I have discussed on the floor of the Senate the need for a Host Corps here at home in the United States. This Host Corps would provide hospitality, guidance, and helpful reception for foreign visitors in conjunction with our newly accelerated efforts to improve the tourist industry within our country.

The American Bar Association has written to me acknowledging its interest in this project and describing its own efforts to further international understanding.

The American Bar Association's hospitality work among foreigners visiting our shores is to be highly commended and so that all may read of its endeavors, I ask unanimous consent that the association's letter to me be printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

AMERICAN BAR ASSOCIATION,
Washington, D.C., March 30, 1961.

Hon. JOHN A. CARROLL,
U.S. Senate, Washington, D.C.

DEAR SENATOR CARROLL: I have read with interest your remarks in the March 1961 CONGRESSIONAL RECORD regarding hospitality for foreign visitors. The work of the American Bar Association and of the many lawyers on the local level in this field may be of interest to you.

Recognizing the need for making proper contacts for the many foreign lawyers and judges who visit this country, the association has established a special committee on relations with lawyers of other nations, composed of members in each State. The Washington office of the association acts as a clearinghouse for information about foreign visitors by maintaining liaison with embassies, the State Department and private organizations which arrange itineraries for the visiting lawyers. The special committee of the association has held a series of luncheons in Washington for representatives of the various Embassies to impress upon them the desire of the lawyers in this country to assist in making the proper contacts for visting lawyers and judges. This activity has been warmly received by Embassy officials. We make an effort to contact lawyers and judges in every community to be visited by the foreign lawyer. The success of this activity is evidenced by the comments of our foreign visitors after their stay in the United States.

The association is doing a great deal of other work to further international understanding. The annual meeting in Washington last August at which we had as our guests some 1,400 solicitors and barristers and their families from Great Britain, was perhaps the largest undertaking of its type by any voluntary association. The American Bar Association and some State and local bar associations are carrying on projects to collect modern lawbooks for the universities and courts of foreign countries. You may also have read that the association has now established a special committee to cooperate with Cuban lawyers in exile.

The nationwide observance of Law Day is one of the most extensive public relations projects of its type undertaken by voluntary associations. By action of the Congress, May 1 of each year has now been designated Law Day U.S.A. The purpose of Law Day is to foster an increased respect for law, to encourage responsible citizenship and to make more meaningful to Americans of all ages their inheritance of "freedom under law" and in doing so to point out the contrast between the great principle and the subordination of human rights under communism. This observance has international effect in that speeches are broadcast behind the Iron Curtain by the Voice of America, Law Day materials are sent to foreign countries, and Law Day observances are held in some nations.

An extensive program is being carried out by our world peace through law committee to crystalize the ideas of leading lawyers of the world as to effective steps that can be taken toward the establishment of the international rule of law to bring about an orderly conduct of relations between countries. In the pursuit of this objective continental conferences are scheduled for lawyers of the Americas, of Asia, of Africa and of Europe sponsored by the American Bar Association Special Committee on World Peace Through Law with funds supplied by the Ford Foundation and the International Cooperation Administration. The continental conference will have the participation of the national bar associations of 23 nations in the Americas, 19 participating associations of Asia, 29 participating associations in Europe, and in Africa delegates from 33 nations. The continental conferences are to be exploratory and educational in character, with the purpose of helping to lay a proper foundation for a world conference of lawyers. The first conference is that of the Americas and is scheduled to be held in San Jose, Costa Rica, on June 11–14, 1961, and the second, the Asian Conference is scheduled for Tokyo, Japan, on September 17–20, 1961. Plans for the European and African conferences are yet to be finalized.

Through these activities many American lawyers are striving to bring about a better understanding throughout the world of our system of law and justice.

Sincerely yours,

DONALD E. CHANNELL,
Director, Washington Office.

Espionage Activities by the Kremlin

EXTENSION OF REMARKS
OF
HON. HOMER E. CAPEHART
OF INDIANA

IN THE SENATE OF THE UNITED STATES

Thursday, April 6, 1961

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Moscow's U–2," which appeared in the Indianapolis News, Tuesday, March 28, 1961.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

Moscow's U–2

A sardonic footnote to the London spy trial would be good for a laugh if it did not so deeply expose the Western World's potentially fatal loss of will.

The footnote is this:

A lawyer for the defense of two of the spies disclosed that "U–2" was the designation of one of the hiding places used by the group convicted of employing elaborate equipment and methods to send secret submarine data from London to Moscow.

The Kremlin made an unholy fuss last year about the reconnaissance flights over Russia by the American plane designated U–2. Khrushchev and all the little Khrushchevs of the world threw up their hands in mock horror. A "summit" conference was wrecked. A President of the United States was humiliated. Further flights by the remarkably effective U–2 were canceled, a wrongheaded decision that has the hearty endorsement of the current President.

So perhaps the Slavic funnybones of the Kremlin agents involved in setting up the London espionage stakeout were tickled by the idea of naming one of their activities "U–2." Last year the Khrushchev gang obviously got a great wallop out of the way their very mention of the term "U–2" produced twitches of guilt in westerners who still believe we must court world opinion by going skunkhunting in top hats.

Despite legends to the contrary, Britons have a sense of humor. We hope they will find the disclosure of the London espionage hideout arrangement named "U–2" worthy of both a self-deprecating smile and a reappraisal of the way some of them carried on in protest against "those warlike Americans" after the original U–2 episode.

Espionage, as both Britons and Americans should know, is a two-way street. The enemy travels his way with determination and effectiveness. We of the West should do the same and not be detoured by spurious shrieks of "warmongering" from the Kremlin and from the faint of heart.

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U.S. Code, title 44, sec. 150, p. 1939).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

Appendix

Now That the President Has Asked the Congress To Provide Federal Aid for Public Schools He Should Also Ask the Congress To Modernize the Tax Structure in Order That Citizens May More Easily Give Financial Aid to Private and Public Educational Institutions

---

EXTENSION OF REMARKS
OF

HON. CARROLL D. KEARNS

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 10, 1961

Mr. KEARNS. Mr. Speaker, along with all other Americans I am deeply concerned over the financial plight of private educational institutions in our country. Now that the President has asked the Congress to provide Federal aid for public schools he has a clear moral responsibility to ask the Congress to modernize the tax structure in order that citizens may more easily give financial aid to private and public educational institutions in accordance with their own wishes.

As a member of the American Association of School Administrators, a former superintendent of public schools, and as ranking minority member of the House Committee on Education and Labor, I feel that the present educational misunderstanding need not have arisen, that it is serving no useful purpose, and that it is divisive at a time when unity of our people is more vital than at any previous period in our history.

Historically, financial support for American education has had two major facets: Public support for public education, and private giving for public and private education, the latter assisted by wise tax laws.

The new Democratic administration would have the Congress provide major benefits for public education but refuses to take, at the same time, the steps necessary to provide the essential tax reforms which would make possible private giving of the magnitude required by private education at this time in our history and without which it cannot and will not long survive.

Aid to public and private education through the tax route is as historic and as constitutionally sound as are Federal contributions to public education.

Private education is the leaven of our educational system, and democratic government such as we have always known in America cannot possibly long survive the disappearance of private education from the American scene.

Mr. Speaker, I have introduced legislation, H.R. 5673, to amend the Internal Revenue Code of 1954 to provide funds for educational purposes by providing increased incentives for private giving through the allowance of a tax credit for charitable contributions to educational institutions, and to allow a deduction for tuition and other expenses incurred by a taxpayer or his spouse or dependent at an educational institution.

I was highly pleased when the majority leader [Mr. MCCORMACK] praised my bill recently and pointed out that a study of his own legislative record would show that he had sponsored and worked for similar legislation since coming to the Congress.

The approach to the problem of financing education represented in my bill, H.R. 5673, is clearly nonpartisan and my mail, which is coming in from all sections of the country, proves that it is a bill which is popular with, and appeals to, all segments of our people.

The Clark-Morse plan for Federal loans to private education is a blind alley and American leaders in the field of private education should waste no more time on it. If grants to private schools are illegal, as President Kennedy says they are, then the loans which the Clark-Morse plan would provide are equally illegal.

Senator CLARK, apparently, is really trying to solve, with his educational loan bill, his personal political problem in Pennsylvania where Democratic Congressman WILLIAM GREEN, if he chooses to enter the senatorial campaign next year, will certainly beat him soundly. It may well be doubted if the Clark-Morse plan was really seriously designed to solve the dilemma which has developed over the growing financial needs of private education in our country.

Our private school educators should mobilize to support my bill, H.R. 5673, and the other bills, to modernize and update the tax structure of our Nation, which are gathering dust in the files of the House Ways and Means Committee.

The other educational advisers to the new Democratic administration are no more sound—if we are to judge by their recommendations in the field of education, and how else can we judge them—than Senator CLARK and Senator MORSE. Some of these advisers are grossly misleading the American people on the educational issue. Their approach to American education, by tackling at this time only one-half of the problem, is grievously dividing our people. This situation, I fear, will get worse before it gets better. These advisers should stop insisting that the appropriation of tax money by the Federal Government is the only legal way to help American education.

They are completely ignoring the role which tax incentives, provided by a modernized and updated tax structure, could play in providing, without any possibility of Federal control, and without the appropriation of a single cent of tax revenues, the funds necessary to adequately finance private education in the United States.

A half-truth is worse than no truth at all. I as astounded that the new Democratic administration should be so busily engaged in trying to sell the American people a half-truth. The entire performance of these New Frontiersmen regarding education is definitely misleading and devisive, because they refuse to take up, concurrently with their drive for Federal aid to public education, the equally pressing financial problems of private education. Division of the American people over any issue—and especially such a totally unnecessary issue—is morally wrong. And, unless decisive steps are taken to end this growing educational misunderstanding, the Democratic administration may entirely lose its school bill.

At his press conference on March 15, President Kennedy was asked what his position was regarding the proposals for modernizing the tax structure and to provide tax incentives for private giving to education which were before the Congress, especially to view of the fact that His Eminence Francis Cardinal Spellman had endorsed the tax approach to aiding private education.

The President replied that:

I think all of this matter should be examined carefully by the Congress. The Senator from Oregon, Mr. MORSE, has asked the Secretary of Health, Education, and Welfare to send him up a brief on all of the various kinds of assistance which are given to nonpublic schools and colleges, which the Secretary is preparing to do. The committees then of the House and Senate, and the House of Representatives, can consider what kind of program they wish to put forward and at that time we can consider what the constitutional problems might be. But it is very difficult as new proposals are made for me or for anyone else to be giving constitutional opinions on each of them as they come up, without seeing the definite language. That obvious is not my function. I would be glad to have the departments of Government participate in considering these matters with the Congress. But my view on procedures which I hope the Congress will follow are well known. I am hopeful we can get the program which we sent to the Hill out of the way. Then the Congress will have to consider what it wants to do in this other area. And the administration will be delighted to cooperate. But I could not possibly, unless I saw exactly what kind of language, give even a private opinion as to its constitutionality.

In his March 28, 1961, report to Senator WAYNE MORSE, the Secretary of Health, Education, and Welfare, Abra-

ham Ribicoff, bypassed entirely, private giving to education and the historic tax route by which private giving to education has been encouraged by the Federal Government, to which the President had referred on March 15.

Yet the President, on March 15, as I have noted stated that:

> The Senator from Oregon, Mr. MORSE, has asked the Secretary of Health, Education, and Welfare to send him up a brief on all of the various kinds of assistance which are given to nonpublic schools and colleges, which the Secretary is preparing to do.

Because the Secretary of Health, Education, and Welfare did not make any reference to the tax route aids to education written into the Internal Revenue Code I have taken certain definite steps which I trust will remedy this deficiency.

I asked two of Secretary Ribicoff's top aides to meet with me in my office on Tuesday, April 4, to discuss this glaring oversight.

Jim G. Akin, Congressional Liaison Officer of the Department of Health, Education, and Welfare, and Philip DesMarais, assistant to the Assistant Secretary for Legislation, conferred with me for an hour and a half on April 4, and promised to make a study of the entire subject to private giving to education now provided under the tax laws, and to furnish this report to me.

As I have said, the President declared, at his March 15 press conference, that he—

> would be glad to have the departments of Government participate in considering these matters with the Congress.

Since the Secretary of the Department of Health, Education, and Welfare is already hard at work on these matters, the President should now request the Department of the Treasury and Treasury Secretary C. Douglas Dillon to study and report "on all of the various kinds of assistance which are given to nonpublic schools and colleges" in the special field of Federal tax policy.

In other words, now that the President has asked the Congress to provide Federal aid for public education he cannot continue to ignore his responsibility to ask the Congress to modernize the tax structure in order to increase private giving to private and public education. For, clearly, the Secretary of Health, Education, and Welfare, Mr. Ribicoff, is at a grave disadvantage in reporting on taxes and tax incentives, a subject which is so clearly in the province of the Treasury Department, and the Treasury Department is most unlikely to report favorably on any tax bill to aid education until the President requests it to do so.

I am taking the statement of the President of March 15 at its face value, and, for my part, have asked the House Ways and Means Committee to request reports on my bill, H.R. 5673, from the Treasury Department, the Department of Health, Education, and Welfare, and the Bureau of the Budget.

I want at this time to thoroughly endorse the study in depth of the educational problem by leading educators from both the public and private educational fields meeting together for this purpose. Such a conference was suggested in the debate over the Columbia Broadcasting System on April 6 in which the participants were Msgr. F. G. Hochwalt, head of the education department of the National Catholic Welfare Conference, Dr. Oswald C. J. Hoffmann, director of information of the Lutheran Church, Missouri Synod, and Howard K. Smith, CBS news chief. If such a conference is held the tax approach to the financial needs of American education outlined in my bill, H.R. 5673, will surely be one of the major recommendations to come out of such a meeting. It is extremely doubtful, however, if the Clark-Morse bill would even get to first base at such a conference.

H.R. 5673 provides the same kind of privileged giving status to millions of Americans which is presently being provided in the Internal Revenue Code to those few Americans in the highest income bracket. At the present time it costs a person in the 91-percent income tax bracket—$400,000 a year and up—only $9 to give $100 to education. It costs the rest of us, on an ascending scale, up to $80 to give a $100 to education.

The Democrats, whose hearts always bleed for the little fellow, as they continually remind us, certainly ought to be wholeheartedly in favor of my tax incentive plan to encourage private giving to education. In fact, some tax incentives are already provided in the Internal Revenue Code for private giving to American education and it can be readily demonstrated that both major parties have supported and voted for this type of Federal aid to education through the years.

I include, as part of my remarks, a summary of the changes in deductions permitted for charitable contributions to education from 1917 to 1957. This summary appears in a study prepared in 1958 for the American Association for the Advancement of Science by the Surveys & Research Corp., of Washington, D.C. This information was supplied by the Internal Revenue Service.

The tax approach set forth in my bill is in line with recommendations advanced by such organizations as the Association of American Colleges, American Association for the Advancement of Science, U.S. Chamber of Commerce's Education Committee, National Planning Association, American College Public Relations Association, American Alumni Council, and the Council for Financial Aid to Education.

The summary follows:

Summary of changes in deduction permitted for charitable contributions and in standard deduction, Federal income tax laws, 1917–57

Income year	Maximum deduction permitted for charitable contributions [1]	Standard deduction
1917–40	15 percent of net income computed without benefit of personal exemptions and contributions.	None.
1941	Same	Tax reduced by 10 percent on gross income under $3,000 in lieu of deduction.
1942–43	15 percent of net income computed without benefit of personal exemption, contributions, and medical expense deduction.	6 percent of gross income for gross under $3,000.
1944–47	15 percent of adjusted gross income	10 percent of adjusted gross income up to a maximum of $500.
1948–51	Same	10 percent of adjusted gross income up to a maximum of $1,000.
1952–53	20 percent of adjusted gross income	Same.
1954–55	20 percent of adjusted gross income plus an additional 10 percent for contributions to churches, tax-exempt hospitals, and educational institutions.	Same.
1956–57	Same as for 1955, but the additional 10 percent can include contributions to medical research organizations.	Same.

[1] Applicable, except for a few individuals who during the years 1924–57 qualified for unlimited deductions for charitable contributions. (See sec. 170 of the Internal Revenue Code of 1954 and corresponding sections of earlier revenue acts for a complete treatment of this feature of the tax laws.)

Father Eusebio Francisco Kino

EXTENSION OF REMARKS
OF
HON. BARRY GOLDWATER
OF ARIZONA
IN THE SENATE OF THE UNITED STATES
Monday, April 10, 1961

Mr. GOLDWATER. Mr. President, in 1962, Arizona will have much to celebrate—not that she is not possessed of these opportunities every year, but 1962 becomes a special one. First, we shall have been a State for 50 years. At the same time, we shall have been a member of the Union for 100 years. In addition, we shall celebrate rightly the 50th anniversary of my senior colleague [Mr. HAYDEN] in the Congress of the United States.

With all of these things to be grateful for, one could not imagine a State so rich in memory that she could possess even more. But 1962 will also be the 250th anniversary of the passing of Father Eusebio Francisco Kino, the illustrious Catholic priest who brought religion into what is now the United States, by building the string of missions for which the Far West is famed, beginning at Guevavi, and being topped by his most famous mission, San Xavier del Bac. A delightful article about Father Kino appears in the March issue of the Catholic Digest; and I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FIRST RIDER OF THE DEVIL'S HIGHWAY

(By Weldon F. Heald)

March 15, 1961, marks the 250th anniversary of the death of Father Eusebio Francisco Kino, who penetrated the arid wilderness of northern Sonora and southern Arizona and almost singlehandedly planted the seeds of civilization there. Where Father Kino went, divided highways now follow. The heroic black-robed Jesuit looms large in our American past as a champion of God and as a man of action.

But what is planned by way of celebration on March 15 to honor our most distinguished founding father? I decided to find out. I could visualize a color-splashed series of pageants, Indian ceremonials, Mexican fiestas, and religious services—even perhaps a commemorative stamp issued by the Post Office Department; 1961 would be a Kino year in Arizona, for sure.

The Tucson area was the scene of much of the great padre's spiritual and temporal labors, so I called on five organizations which represent the religious, cultural, economic, and tourist activities of the city. At the first I was told that they knew of no plans whatever. The priest at San Xavier del Bac, Kino's most famous mission, said no particular observances had been scheduled. The mission is now Franciscan. At St. Augustine's Cathedral they said that it was too early to know; and at the fourth place I was informed that nothing had been planned.

I called the office of the tourist organization, and the personable young secretary offered to help me—but as she had never heard of Kino, she said she would have her boss call me back as soon as he returned.

But this indifference shouldn't have surprised me. It's typical. The sole "Kino" listed in encyclopedias is an astringent drug obtained in East India. And only three rather insignificant southwestern geographical features are named for him: Kino Bay and Puerto Kino on the Sonora Coast of the Gulf of California and the 4,200-foot Kino peak in southern Arizona's Growler Range.

North of the border there is but a single modest monument raised to Kino's memory. It stands unobtrusively in a little park back of Tucson's City Hall. The memorial was erected in 1936, and consists of an oblong block of dark lava rocks, with a bronze plaque showing Father Kino striding across the desert in his long robes, led by an Indian boy. The artist must have been unaware of the fact that he was depicting the tireless Padre on Horseback, whose equestrian exploits equaled or surpassed those of the best cowpokes who ever raised Arizona dust.

In fact, for more than two centuries the name of Kino and his activities in the Southwest were more legend than history. No picture or likeness of him had survived; no book had been written on his life; no exhaustive studies made of his remarkable achievements, nor any detailed chronicle of what he had actually accomplished. While Coronado, de Anza, and Father Serra grew in fame, Father Kino's brilliant light became dimmer as the years went by.

Then suddenly in the 1930's three eminent historians clearly revealed the true greatness and commanding stature of this extraordinary missioner, explorer, scholar, and empire builder.

They were the University of Arizona's Frank C. Lockwood, Herbert E. Bolton of the University of California, and Peter Masten Dunne at the University of Santa Clara. As early as 1919 Professor Bolton translated and edited the padre's own narrative as Kino's Historical Memoir of Pimeria Alta. This monumental two-volume work gives a description of the topography, plant and animal life, and natives of northern Sonora and southern Arizona.

Pimeria Alta—the upper country of the Pima Indians—was Kino's vast field of activity. It stretched 250 miles east to west and 200 miles from the Gila River southward.

But the two popular and definitive books on Kino are Lockwood's "With Padre Kino on the Trail," published in 1934, and Bolton's "Rim of Christendom," which appeared 2 years later. Both are based upon thorough research among original sources, and Bolton personally followed Kino's trails and visited the sites of all his missions. They make fascinating reading for those interested in the background of the desert Southwest. Father Dunne's contribution was to place Kino accurately in the long procession of Jesuits who carried the cross through the barbarian lands of northern Mexico to the shores of the Pacific in Baja California.

Because of this historical triple grand slam, we now know almost every detail of Kino's life.

He was born on August 10, 1645, of German-Italian background, in the little Tirolese hill town of Segno, 18 miles north of Trent, Italy. The Italian form of his name is Chini, and members of his family still live in the community.

Young Eusebio was well educated, having attended five south German universities. His proficiency in mathematics gained him the offer of a professorship at Freiburg. But after an illness and wondrous recovery, he adopted Francis Xavier, apostle of the Indies, as his patron saint, and entered the Society of Jesus in 1665. From then on he burned with unquenchable missionary zeal and constantly petitioned superiors for assignment to the wild frontiers of Christianity.

Kino's wish was finally granted, and he sailed from Cadiz, Spain, for Mexico in 1681. His first labors in the New World were in Lower California, where the Spanish attempted to plant colonies and missions. Because of international politics and other matters beyond Kino's control, the project was abandoned by order of the king, and he was transferred to northwestern Mexico.

There, on the outer fringe of civilization, Kino established his headquarters, Mission Nuestra Señora de los Dolores, in 1687. The site is a hilltop beside the San Miguel River, about 20 miles east of the present Sonora city of Magdalena, but no sign of the mission remains today.

At that time this was the end of the road—northward in all directions stretched an utter wilderness of deserts and rugged mountain ranges; unknown, and inhabited only by Indians. The region is still in a sense "Father Kino's country," for in his 24 years of ceaseless activity he pioneered there the main routes of travel we use today, and laid the foundations for many of our leading communities.

Historian Bolton mapped 35 major journeys, or entradas, made by Kino through Pimeria Alta. They followed down the Santa Cruz, San Pedro, and Gila Rivers westward to the site of Yuma and across the Colorado River. He also blazed the fiendish short cut across the desert along the Arizona-Sonora line, still known as El Camino del Diablo (the Devil's highway). According to one authority, between 3,000 and 4,000 travelers have since died on this trail from hunger, thirst, and fatigue.

Alone or accompanied by friendly Indian guides, and sometimes with a small military escort, the invincible padre rode the Rim of Christendom for God and the King of Spain. Kino's four-legged journeys were prodigious, and even his horses must have sensed the epic nature of his errands. In 1695, when 51 years of age, he covered 1,500 miles in 53 days. Two years later he made a trip of 700 miles in 30 days, and in 1700, he traveled 1,000 miles in 26 days, for an average of 40 miles a day. Once, between sunrise and sunset, he rode more than 75 miles in response to an urgent message from a brother priest.

But besides being one of our foremost early explorers, Father Kino achieved international fame as a cartographer, and his maps gave the first accurate delineation of the whole region. To him also belongs the credit for discovering that California is not an island, as was supposed, and for finding a practical land route from northern Mexico to the Pacific coast.

However, the great-hearted padre made his major exploration among human souls. Wherever he went he preached to the Pima, Papagos, Cocopas, Maricopas, and Yumas in their own languages, and he personally baptized 4,500 Indians. He established 25 missions—more than one a year—and many smaller vistas in the native villages.

He taught his converts how to plant wheat, maize, beans, and melons—and even furnished the Indian women with recipes for making bread and tortillas. He also brought in the first fowl, sheep, goats, cattle, and horses. In fact, Kino introduced large-scale stockraising, becoming Arizona's first "cattle king," with prosperous ranches totaling hundreds of thousands of acres. When San Xavier del Bac was started he was able to stock it with 700 head of domestic animals.

For a quarter of a century on the remote frontier of New Spain, Father Kino was builder, statesman, teacher, rancher, student, writer, and priest. A small band of stalwart Jesuits assisted him. But there were never enough and he constantly petitioned for more.

Three Kino missions were located in the Santa Cruz river valley in what is now Arizona. First was Guevavi, founded in 1692 8 miles north of present Nogales. It was devastated by the marauding Apaches in 1773. The ruins are barely traceable today.

The second mission, Tumacacori, established in 1697, still stands beside U.S. Highway 89, 17 miles north of Nogales. No sign of Kino's original church remains, and the present building, dedicated in 1822, is in partial ruins. Tumacacori, now preserved as a national monument, is an impressive structure, 100 feet long and more than 40 feet wide, with adobe walls 6 feet thick. At the monument entrance the Park Service has built a museum which houses exhibits pertaining to the early days of the mission and the life of Father Kino.

Nine miles south of Tucson stands by far the best known of all Kino's missions, San Xavier del Bac, founded in 1700. It seemed to be closest to the padre's heart. When there he became Arizona's first enthusiastic booster and predicted that someday a great city would rise nearby. The 1960 census figures have proved Kino to have been a true prophet. However, as at Tumacacori, he never saw the present establishment. After the Jesuits were expelled from Mexico in 1767, the mission passed to the Franciscans, who completed a new church in 1797. Called the White Dove of the Desert, it is considered today to be the most beautiful of all Spanish missions in the United States.

Situated in a reservation of Papago Indians, San Xavier del Bac is still active, and ministers to the descendants of its original communicants. They serve as choir, altar boys, decorators, and janitors. Men outstanding for their good deeds are annually chosen as the "12 apostles," and are the mission's leaders and deacons for the following year. The ceremony of their installation occurs over the vigil and the feast of St. Francis Xavier, December 2, 3, and 4. This is the mission's big fiesta and is a picturesque event worth going far to see.

The Tucson Festival Society has developed a brilliant pageant which is held each April at San Xavier. There are bonfires in the plaza, fireworks, religious processions, dancing, and feasting. In 1961 the festivities are scheduled for April 7, and I hope that some special observances in honor of the mission's distinguished founder will be included. Such would be particularly fitting at San Xavier. The Papagos are peculiarly Father Kino's people, for they have continued to this day the customs and ceremonies their ancestors learned from the great padre.

Iron men are not really made of iron. On March 15, 1711, while dedicating a new chapel at Mission Santa Maria Magdalena, Father Kino became ill. He died a few hours later. He was 65 years old. History gives no details, so we can only conclude that he was simply worn out from years of constant self-sacrificing service to his fellow men. He was buried in the chapel beside an image of St. Francis Xavier, who had been the guiding inspiration of his life.

We have made fetishes of our early Western gun slingers. But they were second-string people compared to the padres, like Kino, when it came to courage, fortitude, and stamina, in addition to zeal for God's greater glory.

NEW HONORS

Father Kino will probably enter the Hall of Fame in the U.S. Capitol soon. The Arizona Historical Foundation, recently established, has voted that such a statue be commissioned for presentation to the Statuary Hall. Senator BARRY GOLDWATER, foundation president, said he would introduce Federal legislation necessary for acceptance of the Statue. Each State is allowed two figures in the Hall of Fame; Father Kino would be Arizona's second, joining Gen. John C. Greenway of the First World War.

Freedom Is Sold, Not Bought, by Taxes

EXTENSION OF REMARKS
OF
HON. STEVEN B. DEROUNIAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, April 10, 1961

Mr. DEROUNIAN. Mr. Speaker, I have often said that the accomplishments of a Member of Congress, and his contribution to the Nation, are to be judged not by what he says but by what he does. The same holds true for the President and his Cabinet.

The following is an editorial which appeared in the New York Daily News on April 3:

JUST HOW FREE ARE WE?

At a banquet laid on here the other evening by the Four Freedoms Foundation in honor of the AFL–CIO President George Meany, Secretary of Labor Arthur J. Goldberg orated as follows:

"The true national interest in America is the attainment of individual freedom—not only intellectually, so that we may look any man in the face and speak our piece, but economically, so that want and fear do not become the landlords of our private stations in life."

Those are noble sentiments, and it seems to us that all Americans can endorse them without reservation.

It happens, though, that we've just run across a news item, from the Tax Foundation, Inc. (nonprofit research), of New York, which makes us wonder just how free Americans are and are not, and what if anything the Kennedy administration is doing to make them more nearly free and less unfree.

The Tax Foundation's news is that the average American now has to pay out more of his hard-earned money on taxes than on food. This means all kinds of taxes—Federal, State, and local, visible and invisible.

In his working day, he puts in 1 hour and 39 minutes to earn enough for the day's food; and he labors 2 hours and 29 minutes to get up the money for his taxes.

Thus, in an 8-hour day, he gives just about 30 percent of his time to government as represented by the taxgatherers.

Since these gentry are extremely tough about collecting the last cent due them, it is fair to say that all of us are 30 percent slaves to government.

Of course, there have to be taxes, and no human being is completely free. But wouldn't it be a nice gesture if all our politicos, from President Kennedy on down, were to set their sights on cutting our tax bills to the level of our food bills, at the least?

The Case for Simplified Spelling

EXTENSION OF REMARKS
OF
HON. HARLAN HAGEN
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 27, 1961

Mr. HAGEN of California. Mr. Speaker, under leave to extend my remarks, I would like to include as part of the CONGRESSIONAL RECORD an article which appeared in the Parents' magazine, issue of January 1961, entitled "The Case for Simplified Spelling." The article is under the byline of Mr. George J. Hecht, publisher of the magazine.

I am bringing this matter to the attention of my colleagues because of my interest in reformed spelling of the English language. In each of the last three Congresses I have introduced legislation which would provide for the establishment of a National Spelling Commission, which would study our current language deficiencies and make general recommendations as to the means by which reforms and simplifications could be effected.

I feel that the material contained in the article by Mr. Hecht is of great interest in this regard. The article follows:

THE CASE FOR SIMPLIFIED SPELLING—IT WOULD SPEED UP THE EDUCATION OF OUR CHILDREN

(By George J. Hecht)

(This thoughtful article will undoubtedly give further impetus to the healthy movement to reexamine all facets of the proposal. One of the greatest needs in education today is for more research wherever it may carry us.—Lawrence G. Derthick, U.S. Commissioner of Education.)

The education of American children (and those in other English-speaking countries) could be speeded up very considerably by the adoption of a simplified system of spelling. Let's face it: English is one of the world's most difficult languages—especially difficult to spell and with many words difficult to pronounce.

If written English could be made phonetic, as is possible—with words all spelled as they sound and all pronounced as they are spelled—it would reduce the time devoted to the study of spelling by 2 years, according to experts. This would sharply reduce school costs or provide time for students to take additional courses. Another important point is that if written English were made phonetic and thus easier to master, this would remove one of the chief hurdles to the rapid spread of English as a world language.

The English language is composed of 40 basic sounds, but our alphabet contains only 26 letters, so certain sounds have to be designated by combinations of letters. Even so, pronunciation and spelling would be relatively simple if each sound were represented by a specific letter or a specific combination of letters. Unfortunately, this is far from true. First, the same letter often represents many different sounds. The letter a, for example, is pronounced in eight different ways (not counting the silent a in such words as dead): quota, are, any, make, image, what, walk. The same is true of letter combinations, such as ough in cough, rough, though, thorough, through, plough, thought, hiccough. Second, a single sound can be represented in many different ways. In the following sentence the long sound of o is spelled in nine different ways: "Tony, our chauffeur, and Mary's beau, yoemanly towed our bags to the depot even though he had stubbed his toe against the coalbin." Third, many English words contain unsounded letters, such as the b in debt, c in scissors, h in school, u in build.

The result of these irregularities is that children must memorize the appearance of words in order to learn to read and write them, instead of learning to associate appearances with sound. Estimates of how many words must be so memorized range from about 2,000 to 25,000. Obviously it would be a great deal easier if each of the 40 basic English sounds were indicated by a single letter. In many languages this is so. Russian, Turkish, Italian, Hungarian, German, and many other languages are almost entirely phonetic.

Originally, English also was a relatively phonetic language. Anglo-Saxon (also called Old English), spoken from about the year 500 until about 1066, was spelled much as it was pronounced. During the period when so-called Middle English was in use, from about 1066 to about 1450, many inconsistencies were introduced, largely because there were many dialects with variations in spelling. Then, in the early days of movable type, England imported many of its printers from Holland, and these men added to the confusion. Finally in the 18th century, when classical studies assumed a new importance, scholars tried to spell words so as to make clear at a glance their Greek or Latin origin, and even though in many cases their assumptions as to origin were incorrect, their way of spelling survived. The most notable of these men was Dr. Samuel Johnson, whose dictionary was enormously influential. He, probably more than any other man, should be blamed for the irregularities of English spelling.

Attempts to counter these tendencies and simplify the spelling of English began at a very early stage. Among the very first efforts at spelling reform were those made in the 1550's and 1560's by John Hart, Sir John Cheke, Sir Thomas Smith, and James Howell. Many other attempts to simplify spelling have been made since then but none of the radical ones has succeeded to any great extent. Prominent men who have advocated spelling reform include Noah Webster, Charles Darwin, Alfred Tennyson, Mark Twain, Jacob Grimm, Theodore Roosevelt, Andrew Carnegie, George Bernard Shaw, and Col. Robert McCormick. Shaw left a considerable portion of his large estate to be used for research and trials of a new 40-letter phonetic alphabet, and McCormick instituted a certain amount of simplified spell-

ing in the Chicago Tribune, such as tho, thoro, and thru.

Many plans of simplified English spelling have been advanced. The two leading organizations in the field, the Simpler Spelling Association of America and the Simplified Spelling Society of Great Britain, jointly suggest a choice of two different systems of simplified spelling. One is called world English spelling which would retain the present 26 letters but would make each of them designate a single basic sound, and would have certain combinations of these letters indicate each of the remaining 14 basic sounds.

The other most advocated system of simplified spelling uses the so-called Spelling Reform Alfabet. This system would add 14 new letters to our present 26-letter alphabet so that each of the 40 letters would indicate one of the 40 basic sounds out of which all English words are composed.

For many years, leading American educators have urged the simplification of English spelling. William T. Harris, who was U.S. Commissioner of Education from 1889 to 1906, devoted space in his annual report in 1889 to the advantages of phonetic spelling. He said, in part: "The American child must spend a large portion of his school days in learning, one by one, the peculiar combinations of the written words of his language. In fact, there are at least 5 years as good as thrown away in learning the mass of heterogeneous conventionalities dignified by the name of 'orthography.'"

Dr. Frank Laubach, who has taught many millions of people to read and write their native language in more than 100 different countries, and who is one of the world's leading authorities on linguistics and a strong advocate of simplified spelling, said: "In English we can never know with certainty how to pronounce a word which we have only seen written but never heard, or how to spell a word which we have only heard, unless someone tells us, and then we cannot be sure that he knows."

In 1918, the year after they gained control of Russia, the Communists modernized the Russian alphabet so that 36 symbols could be used to write the 34 standard sounds of which all Russian words are composed. In 1930 Kemal Ataturk not only changed Turkey's alphabet from the Arabic to the Roman one but added a letter to it so that each of the 27 basic sounds of the Turkish language could be represented by a single letter.

The French Government is now considering spelling reform of the French language and has set up a government committee to examine various possibilities. Among basic changes this committee has recommended that all "parasite consonants" (i.e., those silent ones in which French abounds) be thrown out altogether. There is no need, the committee said, for children of this modern day to spell words the same way their grandparents did.

A practical demonstration and scientific test on how simplified spelling speeds up the learning of English was conducted, strangely enough, in Sweden, shortly before the beginning of World War II. English was taught in a number of elementary schools as the second language, using the world English spelling system (which was called Anglik). That this system substantially speeded up the learning of English is certified to by Dr. Helge Kökeritz, now head of the English Department, Graduate School, Yale University, and formerly the assistant head of the demonstration and experiment in Sweden.

Dr. Ralph D. Owen, president of the Simpler Spelling Association, has said: "It takes most of our children 2 years of extra concentration on beginning reading and the necessary followup of spelling in order to compete with children who are fortunate enough to have a language that has a phonetic alphabet."

Russian children learn Russian very much more rapidly than American children learn English because Russian is a phonetic language. This gives the Soviet Union a great advantage in our education race with them. Parenthetically may I say that after I visited the Soviet Union in the spring of 1956 I wrote an article for Parents' magazine entitled "The Coming International Brains Race" (published in the November 1956 issue) which expressed the thought that we are in an arms, trade, scientific, and brains race with the Soviet Union, and that the most basic of all is the brains race. If for no other reason, should we not simplify our English spelling to eliminate our handicap in our educational competition with the Communist powers?

The Ministry on Education of Great Britain is currently greatly concerned about the difficulty that many British youngsters are having in learning to read. It is conducting an experiment this year, in which some 1,200 schoolchildren are learning to read and write with a 42-character alphabet, one for each of the 42 sounds which the Ministry calculates can be made by the human voice. No children are being pressed to participate in the experiment if their parents are opposed to it. In the new alphabet the letters "c," "q," and "x" are being dropped and 19 new letters are being added. Later, the speed with which these children learn to read and write, using this enlarged alphabet, will be compared with the learning time of those using the conventional one.

The adoption of any system of extensive spelling reform would require governmental action, preferably jointly by the United States, Great Britain, and the other English-speaking countries. First a commission, preferably but not necessarily an intergovernmental one, should be set up to decide which of the presently proposed systems of simplified spelling is the best, or to develop some better and simpler one. Furthermore, a standardized pronunciation of all words would have to be adopted. Then a date, some years hence, would have to be selected at which time the new system would be put into use.

If additional letters are to be added to the alphabet, new typewriters would have to be built and new typesetting machinery would have to be developed. Everyone would, of course, have to learn the new system of spelling. On a selected date, all newspapers, magazines, and new books would have to change over to the new spelling. All dictionaries, encyclopedias, and textbooks would, of course, have to be revised. Difficult as all this would be, such drastic reforms have been successfully accomplished in other countries. English-speaking countries should be able to do what others have done.

Although, in the 86th Congress, Representative HARLAN HAGEN, of California, introduced a bill to establish a National Commission for English Spelling Reform, I do not believe that the United States is ready to adopt any of the proposed systems at this time. Considerably more research is needed before legislative action should be attempted.

A thorough, far-seeing study of the whole question of simplified spelling should be made to investigate scientifically the desirability of a new system, which of the systems proposed or what new system would be the best, and how the selected system could be put into operation. The study should be undertaken by some outstanding American university or research institution, the National Education Association, or the American Council on Education. As far as I know, no funds are now available for this purpose. My hope is that one of America's great foundations or some other organization interested in education in particular, and public welfare in general, can be persuaded to finance the needed research. Then, on the basis of the experts' findings, a system of simplified spelling could be introduced through legislation and put into effect over a period of 5 years or so. The transition would be difficult, of course, but other countries have proved that it is not only possible but infinitely worthwhile.

The Capehart Housing Program

EXTENSION OF REMARKS
OF
HON. WILLIAM G. BRAY
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES

Monday, April 10, 1961

Mr. BRAY. Mr. Speaker, retention of able, trained personnel is still a central problem in our defense preparedness. One of the farsighted proposals which is creating conditions favorable to retention of armed services personnel is the Capehart housing program.

Here is an article from the Air Force Times which analyzes the current situation in terms of benefits to service families:

CAPEHARTS PROVING "LIFT" FOR FAMILIES

(By Ed Gates)

WASHINGTON.—U.S. Air Force families receiving orders for a faraway station, like Kincheloe Air Force Base, Mich., can cast aside their apprehensions—about housing and hence their finances—if they are assured of Capehart quarters.

The same applies in only slightly lesser degrees if the orders are for a close-in post like McGuire Air Force Base, N.J. At scores of stateside bases the success of the family's tour may well turn on whether a Capehart is available.

The lucky ones live comfortably in modern, well-equipped homes, at a price they can afford—their quarters allowance. Dwelling on base, they are close to the exchange, theater, commissary, club, etc.—the things which comprise the little extras which make life in the service satisfying.

The unlucky ones, who can't rate good on-base quarters because there are not enough to go around, may find living difficult and life in general a financial headache, or both.

Civilian rentals normally are neither adequate nor reasonably priced. Frequently they are located miles from base, which makes continual travel costly and inconvenient and hence discourages families from taking advantage of the little extras found only on the base.

U.S. Air Force housing officials last week toured new Capehart projects recently completed at six bases. The Air Force Times representative who accompanied them had strongly suspected that getting a set of Capeharts can make considerable difference in whether a tour succeeds or fails for the family.

The journey confirmed it.

In addition to McGuire and Kincheloe, the housing party inspected quarters at Griffiss Air Force Base, N.Y., Syracuse Air Force Station, N.Y., and Selfridge and Wurtsmith Air Force Bases, Mich. The locations, except for the frosty climate, are held to typify various housing situations found at bases throughout the country.

At each the story was similar: the family's morale rose when they moved into their new Capeharts. Pride in occupying a nice, new home was reflected in the care given the facilities and the attractive furnishing schemes individual families came up with.

Many obviously stretched their budgets a bit to purchase furniture to match the quality of the quarters.

Near McGuire and Griffiss, for instance, $125 for rent and $30 for utilities was reported as typical. These outlays, they said, by no means assure a home as nice as Capeharts, yet for an NCO drawing $96.90 in quarters allowance the arrangement requires he dig down into his basic pay for nearly $60 if he rents outside.

At Syracuse, station commander Lt. Col. Jerome Schweickert said that a typical NCO family living off base might well pay $125 plus utilities, while an officer family (for something slightly better) could expect to pay $150–$200 plus utilities.

At Wurtsmith, a resort area, the off-base rate for little more than a cabin may hit $100 a week during the summer months.

At Kincheloe, on the upper Michigan Peninsula only a stone's throw from the Canadian border, where things are truly remote, officials say the off-base rental story is one of "very little selection, and where something is available it is far below standards."

The point has been reached at many U.S. Air Force locations where the quarters allowance meets little more than half of a family's monthly housing expenditures, so rapidly have rents and utility charges climbed. An alternative is to occupy submarginal off-base quarters, which far too many families must do. But this is not the way U.S. Air Force officials want it, which is why they are arguing strenuously for authority to build 50,000 more U.S. Air Force Capeharts during the next 3 years.

Added to the 46,000 Capehart units already built, and the 14,000-plus under construction or already scheduled for construction, Air Force would then have around 110,000 Capeharts which, officials contend, is the "bare minimum" to handle requirements.

The odds on getting the administration and then Congress to approve a program of this scope are not good, Air Force this week was presenting its case for more Capeharts to the Senate.

At Kincheloe, meantime, 507th Fighter Wing Commander Col. Thomas W. Hornsby and his associates are bursting with pride over the 475-unit project recently completed and occupied. And well they might, for the quarters are delightful—inside and out.

These are slant-roof split-levels, featuring a large snug basement which easily converts into a spacious recreational room.

Exteriors are part brick, part aluminum siding, and the entire project is handsomely wedded to the pine trees native to the area. Through some magic of design, the homes appear to contain much more living space than is actually there.

The principal Headquarters U.S. Air Force housing officials in the inspection party, Mr. George Robinson and Col. Guy Goddard, promptly awarded the Kincheloe project a rating of "9.00."

Kincheloe, while low in personnel strength at the moment, is representative of other bases in the total housing need department. When the named missions arrive at the base, during the next year, total military strength will hit nearly 4,000. Base officials estimate 2,500 units will be required to properly house the families. Here's what they can expect to satisfy this need:

The 475 just-completed units; a second project of 330 Capeharts now under construction; and a third project of 190 units which, with luck, will be completed by December 1962. Add some trailer pads and a drop of "community support," and the most the site can count on is around 1,300 in another couple of years.

To bridge this gap closer to the ultimate 2,500-unit total requirement (which includes airmen of the lower grades) Air Force would like to get 400–500 additional Capeharts in a fourth project for Kincheloe. This seems very "iffy" at the moment, however.

Even if all these plans eventually produce constructed homes, some Kincheloeites in the near future face one of two alternatives: (1) Try to find something off base, which won't be easy or satisfactory, or (2) leave the family behind.

Here is a capsule report of the other sites visited:

McGuire: A 300-unit Capehart project fully occupied, and a 1,450-unit project just completed and about two-thirds occupied, with others filling up rapidly. When fully occupied, the base will still be about 2,000 units short of what is needed. There are nothing like 2,000 adequate units in the nearby communities, according to Base Commander Col. Albert W. Brownfield.

Griffis: Two Capehart projects of 460 and 270 units each completed, the latter only very recently. Bids have just gone out for a third project of 135 units. The base also has 250 substandard Lanham Act quarters, for lower grade airmen, and 28 reconverted barracks for company grade officers. Air Force plans to tear down the Lanhams and the barracks. While the overall housing picture seems less difficult than at the other sites, base officials said they need 300–400 more Capeharts.

Syracuse: This Sage site has 216 new Capeharts, all occupied. Need for more is not too great, and none are planned.

Selfridge: This large site has many types of housing, totaling 1,205 units of which 918 are adequate. The newly completed 380-unit Capehart project, entirely for officers, is a beauty, although it's 3 miles off base. The 489 Wherry quarters, 367 of which have been rehabilitated, are exclusively NCO. The base wants $2,500 to improve its substandard Lanham Act quarters, but Air Force indicates they are beyond repair and plans to tear them down: (See story p. 44).

Wurtsmith: Has two attractive projects, beautifully situated in pine forests. The first project of 618 units is occupied, and the second of 330 units is moving fast toward completion and families probably will begin moving in it this summer. There is a small development of appropriated fund houses, and an on-base trailer park. Off-base selection is about nil, as there is no community of any size for 55 miles.

A Full and Complete Investigation and Study of the District of Columbia Redevelopment Land Agency Would Be Helpful

---

EXTENSION OF REMARKS

OF

HON. CARROLL D. KEARNS

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 10, 1961

Mr. KEARNS. Mr. Speaker, I have introduced legislation today to provide that the Committee on the District of Columbia shall conduct a full and complete investigation and study of the District of Columbia Land Agency.

I am moved to do this by two things: First, the study of this Agency by the Committee on the District of Columbia of the Senate which is already underway, and, second, the irregularities uncovered by the Comptroller General of the United States in his audit of the District of Columbia Redevelopment Land Agency for the fiscal years 1957 and 1958.

I include as part of my remarks an excerpt from the 1959 report to the Congress by the Comptroller General on his audit of the District of Columbia Redevelopment Land Agency.

COMPTROLLER GENERAL OF THE UNITED STATES,
Washington, May 29, 1959.

Hon. SAM RAYBURN,
Speaker of the House of Representatives.

DEAR MR. SPEAKER: Herewith is our report on the audit of the District of Columbia Redevelopment Land Agency for the fiscal years 1957 and 1958. Our audit was directed principally to a review of transactions involving Federal financial assistance provided by the Urban Renewal Administration, Housing and Home Finance Agency, for slum clearance and urban renewal work.

The findings noted during our audit are summarized in the forepart of the accompaying report and concern principally (1) tentative approval by the Urban Renewal Administration of estimated cost of facilities as noncash local grants-in-aid (a) which do not directly and substantially benefit the slum clearance projects, as required by law, (b) where cost estimates were not supported with documentary data, or (c) where the bases used to determine percent of project benefit were not proper or not supported, (2) scheduled demolition of sound commercial structures which could possibly be retained, (3) costs of holding cleared land for redevelopers not reimbursable, (4) proposed disposition of land without competitive bidding, (5) need for followup on land value, (6) ineffective followup on collections of rent due from delinquent tenants, and (7) deficiencies in RLA operations pertaining to families self-relocated in private housing.

This report is also being sent today to the President of the Senate. Copies of the report are being furnished to the Chairman, District of Columbia Redevelopment Land Agency; Administrator, Housing and Home Finance Agency; and Commissioner, Urban Renewal Administration.

Sincerely yours,

JOSEPH CAMPBELL,
Comptroller General of the United States.

REPORT ON AUDIT OF DISTRICT OF COLUMBIA REDEVELOPMENT LAND AGENCY FISCAL YEARS 1957 AND 1958

The General Accounting Office has made an audit of the District of Columbia Redevelopment Land Agency (RLA), for the fiscal years ended June 30, 1957, and 1958, pursuant to the Budget and Accounting Act, 1921 (31 U.S.C. 53). This audit was our first, other than preliminary surveys, of the RLA and included limited reviews of operating activities and financial transactions before fiscal years 1957 and 1958. The scope of the audit is described on page 72 of this report.

SUMMARY OF FINDINGS AND RECOMMENDATIONS

Our principal findings and recommendations are summarized on pages 1 to 8 and, together with other findings and recommendations, are discussed in detail in later sections of this report.

1. Federal subsidies may exceed total cost of facilities provided by District of Columbia as noncash grants-in-aid

Under existing law the District of Columbia is permitted to receive Federal subsidies which exceed the total cost of facilities provided as noncash grants-in-aid to slum clearance and urban renewal projects. No other local community is in this same position. If the Congress desires that the credit received by the District of Columbia for noncash grants-in-aid be limited in the same manner as for other local communities, sec-

tion 20(d) of the District of Columbia Redevelopment Act of 1945 will have to be amended. (See p. 20.)

2. Approval as noncash grant-in-aid of facility that will benefit the entire community

For project areas B and C, Urban Renewal Administration (URA) tentatively allowed one-third of the estimated total cost of the Southwest Expressway as a part of gross project cost and as a noncash grant-in-aid even though the expressway is of communitywide benefit.

We are recommending that URA adhere to the policy set forth in the Local Public Agency Manual (LPA Manual) and not allow the cost of facilities of communitywide nature as noncash grants-in-aid. (See p. 24.)

3. Certain cost estimates not supported with documentary data

The RLA files generally did not contain data to support the cost estimates for noncash grant-in-aid facilities to be provided by the District of Columbia. In addition, officials of RLA and of the District of Columbia were unable to locate data in support of cost estimates of the Southwest Expressway and a proposed grade separation at South Capitol and M Streets. Nevertheless URA had tentatively approved the loan and grant application for project area B which included these estimates.

We are recommending that URA require the RLA to submit to URA current cost estimates for all facilities to be provided by the District of Columbia, including sufficient supporting data to enable URA to make an adequate evaluation of such estimates, before approval of the amounts claimed as noncash grants-in-aid. (See p. 28.)

4. Bases used to determine percent of project benefit not proper or not supported

The percent of benefit claimed by the RLA for certain facilities was in our opinion determined on improper bases, and the data used to determine the percent of benefit on another facility was not supported by adequate documentation.

We are recommending that URA review the determinations and followup to obtain the needed supporting information. We are recommending also that, if revisions are found necessary in credits tentatively allowed, URA revise the project budgets accoordingly. (See p. 29.)

5. Scheduled demolition of sound structures

With some exceptions, the renewal of project area C will be accomplished by a strict clearance operation rather than by rehabilitation (demolishing only those structures which cannot be conserved). We were informed that certain commercial structures which, during our site visit, seemed to be sound in appearance and condition would probably be demolished. These structures, in areas which are to be redeveloped for commercial uses, have an estimated cost of about $2 million for acquiring and demolishing.

So that Federal costs would not be increased unnecessarily, we suggested that RLA consider the feasibility of retaining additional commercial structures in areas which are to be redeveloped for commercial purposes. The Chairman subsequently advised us that RLA will consider further the feasibility of the retention of additional commercial structures in areas which are to be redeveloped for commercial use. (See p. 35.)

6. Costs of holding cleared land for redevelopers not reimbursable

The RLA has agreed to hold certain acquired and cleared land for public and private redevelopers but will not be reimbursed for the costs it incurs from the date the land was available for delivery until possession is taken. These costs consist primarily of real estate taxes and interest on borrowings, which, with respect to land held for the General Services Administration, will amount to about $52,000 annually.

The Chairman, RLA, informed us that it is now the policy of RLA to assess private redevelopers carrying charges but that he did not believe that RLA could require that public redevelopers pay such charges because there is no agreement of a contractual nature.

We are recommending that in the future, where land is held for specific public redevelopers, the agreements provide that RLA be reimbursed for all costs of holding the land from the dates the land is available for delivery until possession is taken. (See p. 38.)

7. Proposed disposition of land without competitive bidding

The redevelopment plan for project area B was prepared jointly by the RLA and the National Capital Planning Commission. The redevelopment plan for project areas C and C–1 was prepared, in part, by a potential private redeveloper of the area. Because of the redeveloper's assistance, the RLA entered into a memorandum of understanding with him and believes that it has a moral obligation to negotiate only with him for the disposition of land that he desires to redevelop in project area C. Our review indicated that the RLA, therefore, has neither invited nor encouraged other potential private redevelopers to submit bids or proposals for the disposition of that land. We also noted that neither the RLA nor the URA obtained for comparative purposes independent appraisals of the Town Center land from Federal Housing Administration (FHA) when the initial value of $4 per square foot and the later value of $2.50 per square foot were established by the appraisers employed by RLA. FHA is expected to insure the mortgage on the Town Center.

We believe that generally the sale or lease by competitive bidding results in the disposition of land in a fair and impartial manner. We believe further that competitive bidding generally will give reasonable assurance that the highest return is obtained in the disposition of land. The disposal of project land on a negotiated basis does not appear to us to provide such assurance.

We are recommending that URA require the RLA to—

(a) Discontinue the practice of negotiating with only one potential private redeveloper.

(b) Publicize the availability of land and invite competitive bids or proposals.

(c) Refuse to accept redevelopment plans prepared by a private redeveloper if such acceptance obliges the RLA to negotiate only with such redeveloper.

We are also recommending, when it appears that FHA will insure the mortgages of property in the redeveloped area, that, before URA approves the disposition prices, it require the RLA and other LPA's to obtain independent appraisals from FHA for comparative purposes. (See p. 41.)

8. Need for followup on land value

The estimated value of $2.50 per square foot for the Town Center land was based on tentative plans and specifications of the redeveloper. At October 1958, the redeveloper had not submitted, for RLA's approval, the final plans and specifications for the construction of the Town Center. In view of the method used by the appraisers to value the land, we are recommending that the RLA have the appraisers review the final plans and specifications to be submitted by the redeveloper and report any construction changes that would result in a change in their valuation. If significant changes are made, we are recommending that the RLA require that appropriate changes be made in the potential selling price of the land and the annual ground rent. (See p. 48.)

9. Waiver of rent from former owners

On May 6, 1958, the RLA's Board of Directors approved a resolution whereby former owner-occupants would be given free rent until the first day of the second month after acquisition of their properties by RLA. This waiver of rent reduces potential revenue and results in increased net project costs.

We are recommending that URA revise part 3, chapter 3, section 4, of the LPA Manual to prohibit the granting of free rent periods to former owner-occupants unless satisfactory evidence of the necessity for granting free rent is submitted by the LPA and approved by URA. (See p. 55.)

10. Follow-up on collections of rent due from delinquent tenants not effective

In our review of accounts receivable from tenants in project area C, we were informed that through May 9, 1958, the RLA (a) obtained 175 judgments against delinquent tenants for possession of the properties, (b) evicted 3 tenants for nonpayment of rent, and (c) obtained no judgments to attach the assets or income of delinquent tenants. Of the 172 delinquent tenants that were not evicted by RLA, through May 9, 1958, 8 tenants had fully satisfied the judgments and 64 tenants had partially satisfied the judgments by the payment of rent. The other 100 tenants, however, had not paid rent after the judgments were obtained.

After completion of our review the RLA advised us that its procedures for collecting delinquent rentals have been strengthened. (See p. 58.)

11. Control over relocation operations deficient

The RLA's control over the records pertaining to the relocation operations in project area C is inadequate and statistics maintained by the RLA are inaccurate. We also found that suspected violations of the District of Columbia housing code were not reported to code enforcement units.

We are recommending that URA include a provision in the LPA manual requiring that LPA's report in writing to local code enforcement units those dwellings at which LPA's inspections disclosed obvious code violations of a serious nature. (See p. 60.)

12. Deficiencies in accounting procedures and financial statements

In our audit we observed a number of deficiencies in the RLA's methods of recording financial transactions in that Agency's accounting records and, because of these deficiences, we are unable to state that the accompanying financial statements present fairly the assets and liabilities of the RLA at June 30, 1957, and 1958. (See p. 67.)

Real Champions

EXTENSION OF REMARKS

OF

HON. CLARENCE J. BROWN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, April 10, 1961

Mr. BROWN. Mr. Speaker, as one who many years ago participated in basketball, I am proud to advise my colleagues in the House that the basketball team of Wittenberg University, Springfield, Ohio, in my congressional district, won the NCAA championship as the best small college basketball team in the United States. The Wittenberg team this year had 25 victories, and the winning of the championship gave it its 100th, under the direction of Coach

Mears. It is pleasing to note the national press, and such news magazines as Sports Illustrated, have given full recognition to the championship victory of the Wittenberg University team.

I am also very proud of the fact that from my own district the basketball team of Urbana High School—the smallest school participating in the State tournament—took second place in the Ohio State AA Tournament among the 399 high school teams participating in the championship playoffs at district, regional, and State levels.

Farmers Face Income Loss as Result of Feed Grains Bill

EXTENSION OF REMARKS
OF
HON. PAUL FINDLEY
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 10, 1961

Mr. FINDLEY. Mr. Speaker, market trends of the past 3 weeks indicate that the New Frontier feed grains bill will cost farmers $75 million in lost income on their 1960 corn crop.

The sudden drop in the corn market is attributed by market experts to Government selling of surplus stocks plus fears that the Government will market even larger amounts of corn to keep market prices down.

The feed grains program enacted by Congress 3 weeks ago—over my opposition—permits Uncle Sam to sell surplus corn to depress prices. The aim is to induce farmers to agree to cut 1961 acreage and thus qualify for price supports.

The corn market the past 2 weeks confirms my fears that the bill would drive market prices down. The market is down about 15 cents a bushel, and with about 500 million bushels of 1960 corn still unmarketed, that means an income loss of about $75 million.

Market observers also predict that fear of Government price breaking will force a record number of farmers to seal their 1960 corn with Commodity Credit Corporation. This will add to Federal costs for handling and storage. The new feed grains bill has already had the effect of hurting farm income and adding to our tax burdens.

The current marketing year for corn started October 1, 1960, and runs to September 30, 1961.

When farmers planted last year's crop in the spring of 1960, they expected that the then existing program would be in effect throughout the entire 1960 marketing year. Now that the Department of Agriculture is intentionally depressing corn prices to stimulate sign-up in the new feed grain program, corn farmers rightfully feel that the rules have been changed in the middle of the game.

The corn market 10 days ago was actually reported by newspapers down 15 cents, the sharpest March decline in 13 years.

Since corn farmers have until May 31 to place their 1960 corn under loan, the lowered market price is encouraging more farmers to put more corn into Commodity Credit Corporation hands. This can mean only more storage costs, more handling costs, and a total increase in Government expenses.

The Wall Street Journal reports that grain men expect loans on 1960 crop corn will cover a record total of 600 million bushels.

Diplomatic Blunder

EXTENSION OF REMARKS
OF
HON. STEVEN B. DEROUNIAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, April 10, 1961

Mr. DEROUNIAN. Mr. Speaker, we have dealt from weakness in the Lao situation and as indicated in the following news article by Edgar Ansel Mowrer, which appeared in the Long Island Daily Press on March 31, our future position in that part of the world is quite clearly defined:

WE'VE LOST AGAIN TO MOSCOW
(By Edgar Ansel Mowrer)

Whatever comes out of the Lao negotiations, one thing is certain: the United States has suffered a defeat and the free world has once more retreated in face of advancing communism. This is the price for avoiding a nasty fight in another faraway country of which we know nothing as Britain's Chamberlain called Czechoslovakia in 1938.

The United States thought, and rightly so, that Laos should be kept in our orbit. Now it is certain to be neutral in the unpleasant way of Indonesia and will probably go Communist.

Lenin's threat to take Paris and London through Peiping and New Delhi is one step closer to realization. And what is worse, this has been done with the connivance of Paris and London.

One can understand the reluctance of France—with its army bogged down in Algeria—to get into another Indochinese mess. Besides, France has never really forgiven the United States for urging it to relinquish Indochina and then stepping into France's former place as the chief adviser and protector of South Vietnam.

Britain has no such excuse. Yet the truth is, since 1945, the British have favored every decision that aided communism in Asia—not, of course, because the British favor communism but because they had no stomach for trouble in the Far East and hoped that the developments in that area would not ultimately endanger Britain.

Certainly, every time the United States has followed British policy in that area we have lost something.

Then, as now, Eisenhower chose to give in to avoid the risk of war.

Since then Britain has arranged two disastrous summit conferences at both of which the U.S.S.R. got unilateral concessions from the United States. It endeavored unsuccessfully to shackle the United States at the Formosa Strait and is trying—in the teeth of American congressional opposition—to get Red China into the United Nations and recognized by us.

Now it has masterminded another Western retreat—all, naturally in the name of peace and in areas remote from Britain.

The American administration had better ask itself how long it can afford to follow the policies of an ally whose people are still suffering from the shell shock of their marvelous wartime effort.

Some Americans refuse to blame Britain for the setback in Laos. They say that Laos was no place to fight a local war. The advantages were all on the other side, since Laos is contiguous to Communist strength in China. But actually the United States did not have to fight in Laos to save that country. It had the chance to bring pressures upon the Soviet Union elsewhere. President Kennedy could have informed Khrushchev that unless he stopped sending arms into Laos the United States would—

Break off negotiations and resume nuclear testing.

Refuse to negotiate disarmament or arms control until the Communists in Laos gave up.

Inform Russia and China that not only will we yield no more territory and peoples to communism but that our policy is to liberate all those peoples everywhere who were brought under communism against their will.

Such a threat—or only part of it—would have forced Mr. K. to do some frantic thinking. But it would require a real revolution in the thinking of many of President Kennedy's closest advisers.

For the First Cruise of the "Hope," Well Done

EXTENSION OF REMARKS
OF
HON. RICHARD BOLLING
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, April 10, 1961

Mr. BOLLING. Mr. Speaker, the following interesting editorial appeared in the Kansas City Times of March 18, 1961.

FOR THE FIRST CRUISE OF THE "HOPE," WELL DONE

The SS *Hope*—America's medical ambassador to southeast Asia—is home again. The overall effect of its shakedown cruise has been summed up by Dr. William D. Walsh, director of the People-to-People Health Foundation:

"Whenever one of us goes ashore in a jeep on the outer islands (of Indonesia), kids dart out of the jungle and yell 'Hopie, Hopie.' They certainly don't say 'Hopie, go home.'"

For 6 months the *Hope*, a former Navy hospital ship that borrowed the name of a distinguished World War II ship, cruised the Java Sea. Its 520 feet of glowing whiteness was a symbol of the good will of the people of the United States. As a joint effort of private citizens and the Government (which provided only the vessel and $2 million for refitting), the *Hope* was in a sense a pilot project for Mr. Kennedy's Peace Corps. The sponsoring foundation was so pleased with the results that it hopes eventually to send similar ships to Africa and South America.

In the beginning, the Indonesian reaction to the *Hope* was not entirely unmixed. Initially, the ship anchored in the larger ports. The more metropolitan areas of the sixth largest nation were disappointed. They had expected, apparently, a floating medical school. In Jakarta, some officials suggested that the United States would do better to establish permanent hospitals ashore, "as the Russians are doing."

But anticipation is usually greater than realization, and perhaps the publicity build-

up had been too great. At any rate, the *Hope* later encountered its greatest success in the more primitive areas. Skipper Jack M. Windas told the New York Times of the crowds that lined the beaches of Sumbawa for treatment in a clinic on the beach or on the ship. The few local doctors were instructed in the latest medical techniques.

In June, the *Hope* is scheduled to sail again, for South Vietnam. As a symbol of U.S. intentions, the ship should have a long and fruitful career afloat. And its record to date—its many successes and relatively few failures—might be instructive reading for the enthusiastic Peace Corps.

The Recession—Overall

EXTENSION OF REMARKS
OF

HON. J. ARTHUR YOUNGER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 10, 1961

Mr. YOUNGER. Mr. Speaker, the current recession which has caused so much comment from the administration is not alarming when compared with other recessions which have occurred since World War II.

Under leave to extend my remarks in the RECORD, I am pleased to insert the following survey by Nate White, business and financial editor of the Christian Science Monitor, which is a reprint from the March 28, 1961, edition:

THE RECESSION—OVERALL

(By Nate White)

BOSTON.—It may be surprising to the reader to know that the recession now ending is the second mildest of the seven which have occurred since the end of World War II—second to the recession of 1948–50.

After all of the publicity about the sad state of the U.S. economy the past year, it is now time to take an objective look.

First, it is important to record that no recession can be taken lightly. It is basically an attack—an attack of bad planning, bad economic planning, for the economy is both flexible, resilient, and accommodating.

It is important to remember that numbers, as such, do not tell the story. For instance, 5,560,000 people were out of work in 1941. This was 9.9 percent of the 1941 labor force of 55,910,000 persons. In February 1961, 5,700,000 persons were out of work. This was 6.8 percent of the labor force of 70,400,000 persons.

The percentage rate in persons out of work has ranged as follows since the end of the war:

1945	1.7
1946	3.9
1947	3.9
1948	3.8
1949	5.9
1950	5.3
1951	3.3
1952	3.1
1953	2.9
1954	5.6
1955	4.4
1956	4.2
1957	4.3
1958	6.8
1959	5.5
1960	5.6

January 1961, was 6.6 percent. February 1961, was 6.8 percent.

MANUFACTURING HIT

The only years that unemployed persons numbered under 2 million since 1929 were 1943, 1944, 1945, 1952, 1953—all war years. The only years the unemployment rate fell under 4 percent, since 1929, were years of immediate postwar boom and Korean war boom, 1945–48 and 1951–53.

For this reason, it may surprise many to look at the picture of employment and unemployment. Employment steadily rises while unemployment has held relatively at the same levels.

Where the 1960–61 unemployment hurts is in manufacturing.

The 1960–61 recession took the following pattern: The economy hit a peak high in May 1960, and then held, as Chase Manhattan Bank terms it, "roughly level." This was an indication that it had stopped going up. What was not known was whether this was a "plateau" in which the economy stayed at a high level but went no higher, or whether it was the beginning of a decline. During the fall, most economic indicators began to slide, and as they did so, they increased in speed. February and early March found them beginning to make the turn back.

While this recession hit mainly in production, nevertheless production fell less this time than in any other postwar recession. It stopped greatly above the 1957–58 recession, and notably above the average of all of the others. See the Chase Manhattan chart accompanying this column [not printed in RECORD].

IN 1959, DISTORTIONS

Unfortunately no one has charted the decline in expectations. This would show probably an alltime and sharp falloff.

Two distortions occurred in 1959 which were destructive and gave a false impression of the economy.

One was the rapid production buildup in steel after the destructive strike in that industry in 1959. This led the economy to an abnormal pitch of activity in January, February, and March 1960, and has exercised a distorted effect ever since. Despite efforts to write the steel strike off as inconsequential in the strange pattern of 1960, it cannot be written off. It distorted the picture in every major category.

The second distortion was in the advertising of expectations which were not founded in solid fact. Those talking and writing about the sizzling sixties usually failed to note that the increase in population would not begin to affect markets for houses and durable goods until about 1965 or 1966.

The sudden decline in expectations was more damaging in some respects, mainly psychological, than the actual declines which eventually took place.

For instance, the gross national product—which is the total output of all the Nation's work—increased substantially in 1960. It jumped from $482,100 million in 1959 to $503,200 million in 1960—a dollar increase of $22,100 million—or in noninflated dollars, equated in 1960 prices, an increase of $13,800 million.

FALLOFF IN GNP

That is a substantial increase in a year in any kind of language, inflated or noninflated. However, the economy was running at an increase rate of $25 billion the last quarter of 1959. It failed to sustain this rate and fell off 1 percent. This was not a major falloff. Here is the falloff picture in GNP as it occurred (expressed in 1960 prices):

Quarter 1, 1959: $485.1 (B).
Quarter 2, 1959: $497.9 (B).
Quarter 3, 1959: $488.5 (B).
Quarter 4, 1959: $491.5 (B).
Quarter 1, 1960: $504.8 (B).
Quarter 2, 1960: $506.3 (B).
Quarter 3, 1960: $501.7 (B).
Quarter 4, 1960: $500.4 (B).

The noninflated GNP ran at an increased rate of between 3¾ and 3⅞ during the early peak and the final falloff.

This kind of increase is not to be laughed at, yet for a growing, dynamic economy, many political economists argue that it should be greater.

RESEARCHERS REPORT

One of the finest research teams in the United States has made a careful study of the 1960–61 recession and finds it showing the following:

Industrial production: Milder, slower, more quickly over in its decline than any of the seven. The worst decline was 1957–59, next worst 1953–55, next 1948–50.

GNP: The same pattern.

Personal income from production: Here the 1960–61 recession was lightest in its impact, hardly approaching the others. Worst was 1948–50, next worst 1953–55, next 1957–59.

Employment: In this category 1960–61, despite the large talk about joblessness, showed plus factors with employment showing its seasonal (students back to school, etc.) dropoff, but otherwise a steady increase. Worst, 1948–50, next 1957–59, next 1953–55.

Unemployment: Worst, 1953–55, next 1948–50, next 1960–61, next 1957–59.

Average workweek in manufacturing: Worst, 1960–61; next, 1953–55; next, 1957–59; next, 1948–50.

Real retail sales: Worst, 1957–59; next, 1953–55 but closely approached by 1960–61; best, 1948–50.

Total new orders in manufacturing: Worst, 1953–55; next, 1948–50; next, 1957–59; best, 1960–61.

Excess of new orders over sales in manufacturing: Worst, 1953–55; next, 1957–59; next, 1948–50; best, 1960–61.

Housing starts: Worst, 1960–61; next, 1957–59; next, 1953–55; best, 1948–50.

Plant and equipment expenditures: Worst, 1957–59; next, 1948–50; next but ending sooner, 1960–61; next but declining longer, 1953–55.

Change in business inventories: Worst decline, 1957–59; next, 1948–50; next, 1953–55; sharply down but now at an end, and least in duration, 1960–61.

Consumer prices: Sharp, prolonged decline, 1948–50; steady plateau, 1953–55; steady, gradual increase, 1960–61 (1.5 percent); sharp, prolonged increase, 1957–59.

Federal expenditures: Sharpest decline, 1953–55; steady, steep rise, but violently fluctuating up and down, 1948–50; steady rise, 1957–59, almost paralleled by 1960–61.

Federal surplus or deficit: Steady, sharp decline and recovery in budget supply, 1953–55; 1957–59; 1948–50, with 1960–61 the mildest and due for a sharp decline, as deficits increase.

Money supply: Steady but low, 1948–50; falling but then sharply rising, 1957–59; steady rise after a slump, 1953–55; sharp increase, sudden drop, then recovery, 1960–61.

Yield on long-term Government bonds: Worst, 1953–55; next, 1957–59; next, but recovering, 1960–61; best for 8 months but then gradually declining, 1948–50.

Interest rate on Treasury bills: Sharpest down, gradually up, 1953–55; next sharply down, deeper, but sharply up, 1957–59; next sharpest down, but evening and trending slightly up, 1960–61; high on a nonvariable plateau, sharply off for 2 months and resumption of plateau, 1948–50.

In human terms—the terms of persons out of work—no recession can even be pictured for its intensity. But in overall economic impact, 1960–61 comes off with the judgment "mild and short."

Audit by U.S. Comptroller General Indicated That District of Columbia Redevelopment Land Agency Has Neither Invited Nor Encouraged Other Potential Private Redevelopers To Submit Bids or Proposals for Disposition of Land

---

EXTENSION OF REMARKS
OF

HON. CARROLL D. KEARNS

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 10, 1961

Mr. KEARNS. Mr. Speaker, in his 1959 report to the Congress on his audit of the District of Columbia Redevelopment Land Agency, for the fiscal years 1957 and 1958, the Comptroller General of the United States states that—

Our review indicated that the RLA, therefore, has neither invited nor encouraged other potential private redevelopers to submit bids or proposals for the disposition of that land.

We believe that generally the sale or lease by competitive bidding results in the disposition of land in a fair and impartial manner. We believe further that competitive bidding generally will give reasonable assurance that the highest return is obtained in the disposition of land. The disposal of project land on a negotiated basis does not appear to us to provide such assurance.

In connection with a bill I have introduced to provide for a full and complete investigation and study of the District of Columbia Redevelopment Land Agency I include here an excerpt from the report to the Congress by the Comptroller General to which I have referred:

PROPOSED DISPOSITION OF LAND WITHOUT COMPETITIVE BIDDING

The redevelopment plan for project area B was prepared jointly by the Redevelopment Land Agency and the National Capital Planning Commission. The redevelopment plan for project areas C and C–1 was prepared, in part, by a potential private redeveloper of the area. Because of the redeveloper's assistance, the RLA entered into a memorandum of understanding with him and believes that it has a moral obligation to negotiate only with him for the disposition of land that he desires to redevelop in project area C. Our review indicated that the RLA, therefore, has neither invited nor encouraged other potential private redevelopers to submit bids or proposals for the disposition of that land.

We believe that generally the sale or lease by competitive bidding results in the disposition of land in a fair and impartial manner. We believe further that competitive bidding generally will give reasonable assurance that the highest return is obtained in the disposition of land. The disposal of project land on a negotiated basis does not appear to us to provide such assurance.

On March 15, 1954, the RLA and the potential private redeveloper executed the memorandum of understanding which stated, in part:

"1. The redeveloper had already expended substantial sums of moneys for a schematic proposal for the redevelopment of the area and desired a memorandum of understanding with the RLA before additional sums were expended for further studies and plans.

"2. It is understood that the RLA does not intend to negotiate with any other potential private redevelopers, except by mutual understanding between the parties, for the disposition of land in the area during the period, not to exceed 15 months, when steps leading to a definitive proposal by the redeveloper are being pursued.

The period for the submission of definitive proposals was extended on several occasions and did not expire until September 15, 1957. At that time definitive proposals had been submitted for the construction of a proposed town center and about 50 percent of the residential property in project area C. In a letter dated September 24, 1958, to the redeveloper, however, the chairman of RLA stated that certain procedures had been approved by RLA's Board of Directors for disposing of land in the proposed plaza area of project area C. The procedures indicated that the redeveloper would have 6 months in which to submit plans and a proposal for developing the plaza area and that the RLA would not negotiate with other potential redevelopers for the disposition of this land during that period.

In May 1957, three appraisers employed by the RLA to jointly appraise the town center land submitted their report to RLA showing a value of $4 per square foot (about $2.4 million). The RLA advised the potential redeveloper that the selling price of the land would be equal to this value and that if the land were leased the annual ground rent would be based on that value. In June 1957, the redeveloper declined to purchase or lease the land on this basis and offered to lease the land on the basis of a value of $1.25 per square foot (about $0.75 million). In September 1957, the three appraisers employed by RLA reduced their appraisal to $2.50 per square foot (about $1.5 million). In October 1957, the RLA submitted this appraisal to URA for approval. The URA advised the RLA that a value of $2.50 per square foot was unacceptable and suggested that the RLA explore the possibility of disposing of the land by public auction. RLA's Board of Directors expressed the belief that a public auction of the land could be construed to be inconsistent with the intent of the memorandum of understanding with the redeveloper. In December 1957, URA approved the value of $2.50 per square foot and the RLA offered to lease the land to the redeveloper at an annual ground rent equal to 6 percent of the purchase price of $2.50 per square foot. The redeveloper accepted the offer in January 1958 subject to agreement being reached on the terms and conditions of the proposed disposition document.

Shortly before the redeveloper accepted the offer of $2.50 per square foot, the RLA received and rejected an uninvited offer of $4 per square foot for the land. RLA's Board of Directors stated that the offer of $4 was unacceptable because of the memorandum of understanding between the RLA and and the redeveloper who had prepared part of the redevelopment plan.

In arriving at the values of $4 and $2.50 per square foot for the land, the appraisers employed by the RLA used only the land residual method of valuation. The use of this method required that the appraisers estimate (1) the rental income and operating expenses of the proposed Town Center, (2) the construction cost of improvements, (3) a fair rate of return to the owner of the improvements, and (4) a fair rate of return on the land. The value of the land is determined by (1) multiplying the estimated construction cost of the improvements by the estimated rate of return for improvements, (2) deducting the product (the estimated income attributable to the improvements) from the estimated total net annual income, and (3) dividing the residual amount (the income attributable to the land) by the estimated rate of return on the land.

After a review of the land disposition phase of the slum clearance and urban renewal program, a firm of expert real estate consultants reported to URA in January 1956 that—

"There is a tendency among many of the reuse appraisers to use the land residual method, too often with little, if any, consideration of comparative land prices. The land residual method can be a treacherous procedure when applied to proposed or nonexistent improvements unless it be thoroughly understood, handled by extremely competent men and most astutely used in each one of its numerous important and critical steps. This method should never be used without full inclusion of checks against or with comparative transactions."

In appraising certain residential land in project area B, FHA used this method and three other methods of valuation. Regarding the land residual method, an FHA appraiser stated:

"As is always the case, we must caution that the land residual approach can at least be considered a 'check' and cannot be depended upon to be an accurate indicator of value."

We discussed the value of $2.50 per square foot for the Town Center land with FHA officials and they informed us that commercial land, such as that to be used for the Town Center, generally should have a higher value than residential land, such as that in project area B to be used for an 8-story apartment building. FHA valued this residential land at $2.50 per square foot, but has not appraised the Town Center land.

In a letter dated February 26, 1959, the Chairman, RLA, informed us that—

1. The RLA entered into a memorandum of understanding with the potential private redeveloper in order to secure a plan with a known market for a very large area. When the memorandum was executed on March 15, 1954, there was serious question whether a market existed for a project as large as area C. The redeveloper guaranteed to cooperate in the development of a plan and to underwrite the market for half of the area when the plan was approved. The firm did this and RLA has been negotiating in good faith with it for the lease of certain land in the project.

2. The RLA had advertised twice for proposals on the disposition of land in project area B and expects to advertise the availability of other land in the future.

The Chairman, RLA, also informed us that—

"As the audit report (draft) indicates, the reuse value for the Town Center land was set without FHA approval. The reason for this is that at the time the value was approved neither RLA nor the developer had considered FHA financing. * * * It might be pointed out that at the time the RLA price of the Town Center ($2.50 per square foot) was approved by HHFA and subsequently accepted by the redevelopers in January 1958, the redeveloper had not filed an application with FHA for mortgage insurance. Until FHA received such an application accompanied by a fee, it was precluded from pricing land. * * *."

In contrast to these stated reasons for not requesting FHA to appraise the Town Center land before approval of the price, we found that—

1. Representatives of the redeveloper, the RLA, and the FHA attended a meeting on November 18, 1957 (before the value of $2.50 per square foot was approved), and discussed the possibilities of the redeveloper's obtaining FHA financing, and on December 20, 1957, FHA administratively ruled it could insure a mortgage on the Town Center.

2. The FHA appraised the residential land in project area B in July 1955, and again in June 1956. FHA did not receive any appli-

cations for mortgage insurance and the required fees until December 14, 1956.

In March 1959, the RLA received uninvited offers of $3 and $3.50 per square foot for the land. The offerer of $3.50 also offered to reimburse the proposed redeveloper for all costs incurred at that time. Shortly thereafter the proposed redeveloper informed the RLA that he was willing to pay whatever value between $2.50 and $3 per square foot is set by FHA when it appraises the land for mortgage insurance purposes. The RLA then proposed to revise the value of the Town Center land upward to $2.75 per square foot. The redeveloper agreed to this revision provided that the FHA concurs in the valuation. If FHA considers the value of $2.75 per square foot to be too low, the matter will be restudied. If FHA considers the $2.75 per square foot value to be too high, the RLA will lower the price in accordance with the value established by FHA, but not below the initial agreed-upon price of $2.50 per square foot. The RLA rejected the other offers and accepted the revised proposal.

Considering the following facts, we believe that, when FHA appraises the land for mortgage insurance purposes, it will find establishing an independent value of more than $3 per square foot (if warranted) extremely difficult.

(1) The RLA and URA had previously approved a price of $2.50 per square foot.

(2) The RLA has now accepted a proposal between the limits of $2.50 and $3 per square foot.

(3) Five years have passed since the RLA and the redeveloper executed the memorandum of understanding, and all parties are anxious for construction to start without further complications.

(4) Both FHA and URA are constituents of the Housing and Home Finance Agency.

(5) If a mortgagor defaults on an FHA-insured mortgage, the FHA has an option to purchase the land for a price equal to the value set by FHA for mortgage insurance purposes.

We believe that the RLA or the URA should have obtained for comparative purposes independent appraisals of the Town Center land from FHA at the time the initial appraisal of $4 per square foot and the later appraisal of $2.50 per square foot were obtained from the three appraisers employed by the RLA.

We believe also that, even if the RLA obtains a rental based on a land value of $3 per square foot, it still will not have reasonable assurance that it has obtained the highest return obtainable. Our belief is based on the fact that, at the time offers of $3 and $3.50 were received in March 1959, a proposed price of $2.50 was public knowledge and the offerers were no doubt influenced by that price.

On July 8, 1958, the operators of a restaurant to be acquired and demolished by RLA submitted an uninvited schematic plan for a restaurant and planetarium on land in project area C that had been planned for an overlook of the waterfront and requested that the RLA not negotiate for the sale or lease of the land for a period of 1 year. On September 9, 1958, RLA's Board of Directors accepted this proposal subject to the approval of URA. On December 10, 1958, the URA requested the RLA to reconsider the proposal because such disposal was not in accordance with the urban renewal plan.

The RLA files show that, in August 1958, other restaurant operators and owners to be displaced by RLA objected to the exclusive negotiation aspect of the proposal and indicated interest in developing the overlook land. We believe that the RLA should not have accepted a proposal of this type because it was similar to the memorandum of understanding dated March 15, 1954, and could create a moral obligation to negotiate exclusively with one redeveloper.

RECOMMENDATIONS TO THE COMMISSIONER, URA

We recommend that URA require the RLA to—

1. Discontinue the practice of negotiating with only one potential private redeveloper.

2. Publicize the availability of land and invite competitive bids or proposals.

3. Refuse to accept redevelopment plans prepared by a private redeveloper if such acceptance obliges the RLA to negotiate only with such redeveloper.

We recommend also, when it appears that FHA will insure the mortgages of property in the redeveloped area, that, before URA approves the disposition prices, it require the RLA and other LPA's to obtain independent appraisals from FHA for comparative purposes.

Children's Crusade of 1961, Potential for Tragedy

EXTENSION OF REMARKS
OF
HON. H. R. GROSS
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 10, 1961

Mr. GROSS. Mr. Speaker, in his column appearing in a recent issue of the Washington Evening Star, Constantine Brown describes the alleged Peace Corps as "a publicity stunt with the potential for tragedy." His valid criticism of the scheme deserves the widest possible circulation, and I desire to include the column as part of my remarks:

In the year 1212 a group of idealists, aided and abetted by some of the most naive parents, led thousands of children on a march from their homes in Europe to free the Holy Lands from the grip of infidels.

The debauchery, the horror, the torture, and the enslavery of these pathetic children is without parallel in history. By the time the atrocity was abandoned, the lives of 50,000 children had been sacrificed on the altar of human stupidity.

With the lessons of history behind us, the bold New Frontier plans to launch the children's crusade of 1961—the Peace Corps—to spread enlightenment and establish the brotherhood of man. This action could be likened insofar as the concept is concerned with the blunders of seven centuries ago.

It is remarkable that in this enlightened country few voices have been raised to label this proposal for what it actually is, a publicity stunt with the potential for tragedy.

A young man, Sargent Shriver, has been appointed to head the program. His only qualification seems to be that he is a very nice young man, a very sincere young man, who hates war. Perhaps, however, his lack of qualifications makes him eminently qualified as head of the Peace Corps because, insofar as can be determined, this 20th century crusade has no duties, no missions, no obligations, and only few chances of performing real services.

Any attempt to elicit from any public official the work to be performed by the Peace Corps is met with a rambling, nebulous discourse on the advantages of people-to-people communication in the name of freedom, love, and democracy.

Young American college graduates are expected to mingle with Congolese, Ghanians, and a host of others, trying to ingratiate themselves into their society.

Under the point 4 program, the Marshall plan, and the technical assistance program, we have for years been attempting to send to many areas of the world trained and talented specialists to assist these people to improve their economic status, their agriculture, industry, hygiene, etc. Billions of dollars of the American taxpayers' money have been invested in these projects. Does anyone believe that the innocence of the youngsters of the Peace Corps will succeed where the knowledge of the mature and the experienced has thus far faltered?

Medical missionaries of every faith, such as Dr. Albert Schweitzer and the late Dr. Thomas E. Dooley, have devoted millions of dollars and their lives in efforts to bring to the unenlightened the message of hope in the hereafter and better, more healthy, prosperous life in the present.

How can we suppose that any part of the world desires to be invaded by a corps of American adolescents whose mission seems to be only to win friends and influence people?

Furthermore, we have been told publicly that these youngsters will not be allowed to preach either religion or anticommunism, since this would lend a political aspect to their undertaking and can be exploited by the Communists to create incidents which might have serious consequences.

On the other hand, we are told that the preliminary budget for this escapade will be about $10 million the first year and that aspirants to membership will be subjected to the most rigorous training. One might assume that by "rigorous training" is meant that members will be taught to be agricultural experts, medical doctors, engineers, biologists, chemists, linguistic or diplomatic experts, or industrial technicians. Such an assumption, however, obviously is fallacious since, if it were true, by the time the youngsters finished their training they would be adults competent to assist in the technical assistance program and not eligible for the children's crusade.

Of all the propositions advanced within the recent history of the United States this truly is the most astounding. Yet there has been so far little criticism of this amazingly naive project.

There was a day in America when the authors of such a scheme as the Peace Corps would have had to answer to very pertinent questioning of an alert, intelligent citizenry. Today they are fawned upon as though they had just found the Holy Grail.

The Flash of Lightning and the Deeper Tides

EXTENSION OF REMARKS
OF
HON. PAUL FINDLEY
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 10, 1961

Mr. FINDLEY. Mr. Speaker, this article by James Reston, published in the New York Times of March 24, 1961, analyzes the foreboding outlook for freedom in the Lao area. Mr. Reston also points with clarity and vision to the need for an effective consolidation of the free nations which are frequently known as the Atlantic Community.

I believe this article deserves the attention of all thoughtful Americans:

The Lao crisis is bad, but not all bad. It is a flash of lightning on an ugly truth. The situation was worse before the flash because Laos was slipping away in the dark. Now at least we can see a little of what is happening and President Kennedy is beginning to tell the country what it should have been told some days and even weeks ago.

In the process, it is fairly clear that, while taking precautionary military moves in the Pacific, the President is seeking an international solution to the problem, and any international solution is bound to be a compromise solution.

What the President said was impressive, but no more so than what he didn't say. He avoided any go-it-alone commitment to intervene in the Lao war. He put the question to his allies in the Southeast Asia Treaty Organization, including Britain and France, who are in no mood for any adventures in the Lao jungle.

What is happening there is roughly what happened in North Korea and North Vietnam. The Communists are expanding from their central position on the Eurasian continent into areas adjacent to their borders. They are close to home; to oppose them, we must travel to the end of a long line of communications and either intervene in the jungle of Asia ourselves or rely on troops that have little will to fight and little capacity to understand what the fight is all about.

The history of these battles close to the Communist empire is that they usually end in a truce. Thus both sides settled for a division of both Korea and Vietnam. Whenever one of the great powers was so committed to battle that the intervention of the other side might have produced a major war, the second always held back, or compromised.

This was what happened in Greece and Turkey in 1946–47; in the Berlin blockade in 1948–49; the Korean war of 1950–53; the Hungarian revolt of 1956, and the Lebanon crisis of 1958. In every case, either Moscow or Washington abstained when the other risked war, and when the war was fought by proxy through third-power troops, some accommodation was always reached, usually at the West's expense.

Thus what is happening in Laos is not the first skirmish on the fringe of the Soviet empire and it won't be the last. The outlook in these areas is not good. The assumption of the bold is that somehow the West can keep the Communists out of all the once-free areas adjacent to Russia and China despite the rise of Communist power, but it is not the kind of assumption most governments like to risk a major war to prove.

THE VITAL QUESTION

The drift of all this is that each side in the cold war tends to prevail when geography is on its side. The Communists may influence Cuba but they will not hold it. We may by bold maneuvers influence events in Laos and even save its independence for a while, but the odds are against us. It is not like the Congo, where we can beat Communists to the scene.

Two vast consolidations are now proceeding in the world: The Communist consolidation of all but a few areas next to their frontiers, and the Western consolidation of the free nations. In the Communist case the nations concerned are comparatively underdeveloped and therefore easier to control; in the other, the nations are old and proud and highly developed.

Accordingly, the Communist consolidation is going ahead faster than our own. It is proceeding by subversion and force, but it is moving fast.

The same goal is available to the West. It has the capacity, if it has the will, to create a commonwealth of the Atlantic, strong enough to stand against any threat from the expanding Communist nations.

Even in Laos, however, the Atlantic nations have had trouble working out a common policy or even adequate consultations.

Events in that area, they complain, are "uncontrollable," and this may be true despite the President's bold moves, but events in the Atlantic are controllable if somebody will concentrate on the task.

Control by District of Columbia Redevelopment Land Agency Over Relocation Operations Held To Be Deficient by U.S. Comptroller General

EXTENSION OF REMARKS
OF
HON. CARROLL D. KEARNS
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 10, 1961

Mr. KEARNS. Mr. Speaker, in connection with a bill I have introduced today, to provide for a study of the District of Columbia Redevelopment Land Agency by the Committee on the District of Columbia of the House of Representatives, I include an excerpt from the U.S. Comptroller General's report of his audit of this Agency:

RELOCATION

CONTROL OVER RELOCATION OPERATIONS DEFICIENT

We reviewed Redevelopment Land Agency's relocation operations in project area C and noted a lack of control over records, reports, and inspections pertaining to families self-relocated in private housing.

Section 105(c) of title I of the Housing Act of 1949, as amended (42 U.S.C. 1455), provides that with respect to the relocation of displaced families:

"There be a feasible method for the temporary relocation of families displaced from the urban renewal area, and that there are or are being provided, in the urban renewal area or in other areas * * * at rents or prices within the financial means of the families displaced from the urban renewal area, decent, safe, and sanitary dwellings * * *."

In Report No. 1, transmitted to the House Committee on Banking and Currency on January 31, 1956, the Subcommittee on Housing made the following comments on the relocation of displaced families:

"The subcommittee is concerned that adequate safeguards are being taken to see that such families are transferred, as painlessly as possible, to alternative decent housing which they can afford. * * * The subcommittee urges that the Federal authorities charged with overseeing relocation responsibilities exercise increased vigilance to make sure that the municipalities are in fact doing an effective and humane job in this area. Every effort should be made to insure a workable relocation plan with adequate personnel to supervise the working out of the program. If displaced families are merely shunted to another slum area or an area which is on the verge of becoming a slum, the problem is only aggravated further."

Regarding voluntary rehousing, part 3, chapter 4, section 5, of the LPA Manual provides, in part, that—

"The local public agency should request permission to inspect the unit into which the family has moved.

"Results of these inspections shall be recorded. If the unit is not 'decent, safe, and sanitary' by the standards, which the local public agency has established, the move should be considered temporary offsite relocation, and further assistance in locating decent, safe, and sanitary housing should be made available to the family. Records of the action taken to encourage the family to move to decent, safe, and sanitary housing should be maintained in a manner which will enable the local public agency to report upon the status of families voluntarily rehoused at all times, until the relocation responsibility of the local public agency has been discharged."

In a report of relocation progress (form H–666) as of June 30, 1958, submitted to the URA, the RLA showed that 1,315 families in project area C had been relocated—310 families in public housing and 1,005 families in private housing. The report showed that, of the 1,005 families relocated in private housing, 956 families self-relocated and 49 families were relocated by the RLA.

Noted during our review were the following principal deficiencies:

1. Records made available for our review pertained to only 747, rather than 956, families self-relocated in private housing. We believe that RLA's statistics are inaccurate and that the number of families self-relocated in private housing and the total number of families relocated at June 30, 1958, were overstated in the report to URA.

2. RLA's report to URA showed that 340 dwellings to which families had relocated had not been inspected at June 30, 1958. We reviewed RLA's relocation record folders on July 29, 1958, and observed that 240 folders did not contain inspection reports—35 folders were segregated and awaiting inspections and 205 folders were mingled with about 870 other relocation record folders.

3. We observed 10 inspection reports on dwellings to which families had moved that showed the dwellings to be substandard and were filed in the relocation record folders which were mingled with over 1,000 other folders. The 10 relocation record folders did not contain evidence indicating that the RLA had (a) encouraged the families to move to decent, safe, and sanitary housing or (b) reported the substandard conditions of the dwellings to the city's code enforcement units.

4. From RLA's relocation records, we selected at random 37 families relocated in private housing to evaluate RLA's inspection procedures. Three families had moved to dwellings which had not been inspected by RLA and 10 families were not at home at the time of our inspections. Our findings concerning the 24 inspection reports are presented below:

(a) No dwellings existed at two of the addresses even though inspection reports had been completed fully.

(b) Tenants at nine dwellings informed us that an RLA inspector had not visited the dwellings. The description of the exterior design of two of the nine dwellings shown on the inspection reports was materially inaccurate.

(c) Tenants at three dwellings informed us that an RLA inspector had visited the dwellings but did not inspect the interior.

(d) Using RLA's standards as criteria, we observed that one dwelling, which the RLA certified as standard, was actually substandard.

5. We also inspected six dwellings to which families had moved in an area near the project area. RLA had certified all six dwellings as being standard. Tenants at four dwellings informed us that an RLA inspector had not visited the dwellings and a tenant at one dwelling informed us that an RLA inspector had visited the dwelling but did not inspect the interior. We observed that two of the five dwellings were actually substandard.

We discussed the above deficiencies with the chief of RLA's project management division and furnished him the addresses of the dwellings concerned. He informed us that action would be taken to (1) review all relocation record folders and to segregate those folders on families that have self-relocated in private housing which is substandard and in housing which has not been inspected by RLA, (2) inspect those dwellings that have not been inspected, (3) followup on families that have relocated in substandard private housing, (4) require that 1 out of 10 inspections of private housing to which families have relocated be independently checked by another employee, and (5) review and reconstruct the statistical data to be included in future reports to URA. Shortly thereafter, we noted that relocation record folders were being reviewed and segregated. On March 3, 1959, the RLA project management division issued new procedures designed to control inspections of private housing and provide for systematic followup on families relocated in substandard housing.

The Chief of RLA's project management division informed us also that the URA had suggested that all suspected violations of the District of Columbia housing code be reported to code enforcement units but that the RLA believed that such action would jeopardize its relationship with realtors and owners of the dwellings.

In a letter dated February 26, 1959, the Chairman, RLA, stated that (1) the RLA believed that if it were to report such violations, its ability to obtain listings from real estate firms would be impaired and (2) in certain respects RLA standards exceed minimum code requirements and a violation of RLA standards may not be a violation of minimum code requirements.

We agree that a violation of the RLA's standards may not be a violation of the District of Columbia housing code. However, when RLA's inspector encounters conditions which are obviously serious code violations, we believe that such conditions should be reported to the local code enforcement agency.

We believe also that URA should make periodic reviews of RLA's relocation records, reports, and inspections in order to determine whether adequate controls are maintained to avoid the recurrence of the above-cited deficiencies.

In a letter to us dated March 23, 1959, the Commissioner, URA, stated that HHFA regional office relocation staff made periodic visits to projects in execution to review relocation and property management activities of the LPA's. The Commissioner stated also that the supervision of these activities is now being strengthened through the use of site inspectors on the regional office staff who will be required to make monthly reports on their assigned projects.

RECOMMENDATION TO THE COMMISSIONER, URA

To retard the spread of blight and slums to other areas, we recommend that URA include a provision in the LPA Manual requiring that LPA's report in writing to local code enforcement units those dwellings at which the LPA's inspections disclose obvious code violations of a serious nature.

PAYMENTS FOR PROPERTY LOSSES IMPROPER

We tested relocation payments totaling $45,256 that were made to families and business concerns displaced from project areas B and C. These payments included three payments totaling $5,850 to business concerns for alleged losses on fixtures and equipment moved by the business concern to their new location. The HHFA project auditors had questioned one of these payments which occurred in the period covered by their audit. The payments represented the difference between the replacement value and the liquidating value of the property.

We discussed the three payments with the chief of RLA's project management division and he stated that the three payments were proper because (1) in one case the business concern was required to construct an addition to the building at the new location to house the equipment and did not receive payment for any moving expenses, (2) in one case the business concern also received a payment for moving expenses, but that payment did not include the cost of dismantling and reinstalling equipment, and (3) in the other case the business concern did not receive payment for any moving expenses.

We believe that the RLA should have made payments to the business concerns for moving expenses, including the cost of dismantling and reinstalling equipment, rather than for losses of property.

The Housing Act of 1956, approved August 7, 1956 (70 Stat. 1101), authorized the making of relocation payments to individuals, families, and business concerns for their reasonable and necessary moving expenses and any actual direct losses of property, except goodwill or profit resulting from their displacement from a project area. Such payments may not exceed $100 to an individual or family, or $2,500 to a business concern.

Since August 1956, the URA has issued a number of LPA letters and revisions to rules and regulations prescribed by the Housing and Home Finance Administrator. In April 1958, URA issued an advisory bulletin titled "Questions and Answers on Relocation Payments," which interprets the rules and regulations. In October 1958, however, the LPA Manual (pt. 2, ch. 6, sec. 5, and pt. 3, ch. 4, sec. 8) contained provisions which (1) related to financial assistance to site occupants that were dated February 11, 1953, and May 19, 1955, and (2) were inconsistent with provisions of the Housing Act of 1956.

We recommended that URA revise its LPA Manual to include specific policies and procedures to be followed in making relocation payments, as authorized by the Housing Act of 1956.

In a letter to us dated March 23, 1959, the Commissioner, URA, stated that he agreed with the above recommendation as it applies to relocation payments authorized by the Housing Act of 1956. Pending the issuance of policies and procedures which are now in clearance for inclusion in the LPA Manual, LPA letter No. 171 was issued on December 31, 1958.

Kennedy School Bill Should Not Be Amended

EXTENSION OF REMARKS
OF
HON. HOWARD H. BAKER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Monday, April 10, 1961

Mr. BAKER. Mr. Speaker, I should like to have inserted in the Appendix of the CONGRESSIONAL RECORD a very fine editorial which appeared recently in the Maryville-Alcoa Daily Times, Maryville, Tenn.

The editorial follows:

KENNEDY SCHOOL BILL SHOULD NOT BE AMENDED

The Kennedy bill on education has received many plaudits and educators have called the message in which he delivered the bill to Congress one of the great documents in the history of American education.

There is no doubt that this bill will become one of the landmarks in our educational system for it will start, if passed, a whole new idea of direct Federal help in this field heretofore considered a State responsibility. The fact that some States have not accepted their responsibility has brought the Federal Government into action and this time without the normal control which the central government exercises over all its other aid programs.

Incorporated in the bill is the following paragraph:

"SEC. 103. In the administration of this title, no Department, Agency, officer, or employee of the United States shall exercise any direction, supervision, or control over the policy determination, personnel, curriculum, program of instruction, or the administration or operation of any school or school system."

This paragraph, if left in the act at its signing, should allay any suspicions that Federal grants will mean Federal controls on our educational system. True, the natural bureaucratic tendency would be to advance interpretations which would weaken and change the intent of the no-control clause but the language is so definite and positive that little misinterpretation could take place.

The proposal of President Kennedy is fourfold. There would be grants to States for public schools for teachers' pay or construction or both, grants for 212,500 college scholarships to be issued on the basis of ability and need, long-term, low-interest loans for college academic facilities and finally more loans for residential housing for college students and faculty.

In all, the bill calls for $5.6 billion to be spent in support of the Nation's educational program.

As could be expected, many proposed amendments will and have cropped up. Some of them will try to circumvent the no-control clause such as the one proposed to allow no Federal aid to go into a school system which is not intergrated. This is a definite control measure and should be treated as being outside the intent of the bill.

Another measure which has caused a great deal of comment is the proposal by some bishops of the Catholic Church to include parochial schools in the program. Almost all churches have some type of church-supported school but, as far as we have been able to ascertain, this request by some members of the Catholic Church remains by itself.

In fact, the other religious groups are rather firmly against any intervention of the Federal Government in the financial affairs of their schools. Commercial and trade schools are also viewing the Federal grants and will act if other amendments are successful.

Many of the educators who helped write the bill are fearful that the zealous efforts of private groups will defeat the bill by the amendment route. The tacking on of these will add other groups in opposition.

The bill as designed will assure that every child is given the opportunity to learn in a school prepared to foster health and higher achievement. We are in full accord with the bill and with the benefits that are certain to accrue to the advancement of education in this country.

We cannot condone the amendments that private groups are proposing which will threaten the bill. It is our hope that they will defer their own selfish desires in order that the problems confronting public education in this country can be overcome.

The greatness of this country and the advancement of it in all fields of endeavor can be traced back to the public school system. This has failed to keep pace in many areas of the country and the Federal bill is designed to aid these without control.

Hope Dims for A-Test Treaty

EXTENSION OF REMARKS
OF
HON. KATHARINE ST. GEORGE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, April 10, 1961

Mrs. ST. GEORGE. Mr. Speaker, the following article by Mr. Roscoe Drummond appeared in the Washington Post of today, April 10. Having just returned from Geneva, where I attended the spring meeting of the Inter-Parliamentary Union, I can agree 100 percent in what Mr. Drummond says of the Russian strategy. It is always the same; they will never give in and they will never take "No" for an answer. They are willing to wait years to obtain their objectives and they believe they can wear us out eventually.

It is for us to realize the truth and to face it without compromise and without fear. Any other action on our part can but spell the defeat of our cause.

REDS AT GENEVA—HOPES DIM FOR A-TEST TREATY

(By Roscoe Drummond)

We should be ready for bleak news on test-ban and disarmament negotiations with the Soviets.

I suspect the real state of affairs will soon be out in the open at Geneva.

The Russians are now backing away from any inspectable treaty to end the testing of nuclear weapons.

There is yet no solid Soviet agreement to begin the talks on comprehensive agreement August 1.

There is an appearance of an agreement, but Moscow has attached a condition. The United States, Britain, France, Canada, and the others are ready to resume the Disarmament Conference, where they left off last year. Moscow says yes, but only if some additional nations are brought to the conference table. So there is nothing firm about the August 1 date.

Such news from Geneva can only mean that the Soviets do not want to negotiate a test-ban agreement which has any element of secure enforcement. Naturally they do not say so. That would be bad propaganda, but their actions reveal their intentions:

1. The United States and Britain have made seven significant concessions to Soviet views on inspection. The Russians offer nothing in return.

2. Actually the Soviet delegate not only makes no return concessions, but he has withdrawn Russian approval of one of the most important agreements already reached in previous Geneva meetings—that a single neutral administrator be in charge of the test-ban control commission.

3. In place of a single neutral administrator, Moscow now says it will only accept a three-man committee on which, at all points, each would have to agree before any inspection was authorized.

4. This means inspection only at the will and wishes of the Kremlin. This means that the Soviets could stop the control machinery at any time, anywhere.

No wonder Vice President LYNDON B. JOHNSON, after conferring with the American negotiators at Geneva, warned that the United States will not be lured into a treaty "just for the sake of a treaty" and will not accept a veto-locked inspection system.

It is quite possible that the Soviets have decided that the value of a test ban is not equal to the amount of inspection needed to make it work. Or, they might have decided that they can get the United States to continue the moratorium on testing without any inspection agreement at all.

Whatever their reasons, the Soviet demand for a veto-laden control commission makes the outlook for any kind of disarmament agreement nearly hopeless.

It now seems clear that the Kremlin is insisting upon a veto over any international agency which could affect the Soviet Union. Their demand at Geneva for a "committee secretariat" to run the test-ban control commission is exactly what Premier Khrushchev has been demanding at the U.N.—a committee to run the secretariat of the United Nations with a Soviet veto over any action.

Is there any reason to think that the Soviets will accept a veto-free inspection system for general disarmament when they will not accept a veto-free control commission to verify the test ban?

Thus far the Soviet record at Geneva is a dismal dashing of the hopes of the whole world for serious negotiation.

Participation in an Airborne Alert Mission Flown in One of SAC's B–52 Jet Bombers

EXTENSION OF REMARKS
OF
HON. VICTOR WICKERSHAM
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 10, 1961

Mr. WICKERSHAM. Mr. Speaker, I am privileged to report to the House of Representatives about a most memorable experience which occurred recently when I visited my home, the Sixth Congressional District in the State of Oklahoma. During this visit, as many of you may know, I was privileged to become the first Member of Congress to participate in an airborne alert mission flown in one of the Strategic Air Command's giant, eight-jet, B–52 bombers which is assigned to the 11th Bombardment Wing.

We have two Strategic Air Command bases located within Oklahoma's Sixth Congressional District. They are Altus Air Force Base located in the southwestern corner of Oklahoma and Clinton-Sherman Air Force Base in the west central part of our State. Both bases are equipped with the Strategic Air Command's giant B–52 bombers and the high-altitude, high-speed KC–135 jet tankers which are used for in-flight refueling to greatly increase the range of SAC's bomber force.

Further, Altus Air Force Base has been assigned the task of establishing and maintaining 12 Atlas intercontinental ballistic missile sites. The Altus Base is also presently involved as one of the first operational bases to receive the Hound Dog, air-to-ground missile, which is carried beneath the wing of the B–52 to greatly increase that bomber's striking capability.

Altus Air Force Base is the home of the Strategic Air Command's 11th Bombardment Wing, commanded by Col. Frederick R. Ramputi. Under his able command, Colonel Ramputi has jet bombers, jet tankers, air-to-ground missiles, and will soon have operational ICBM's. To visit the 11th Bombardment Wing is to see a truly integrated aerospace force in operation.

Besides being one of the first bombardment wings within the Strategic Air Command to attain an integrated systems status—that is, to have both jet aircraft and ballistic missiles—the 11th Bombardment Wing has a long history of firsts and of excellent achievement. Most of you gentlemen are aware of the combat competition held annually by the Strategic Air Command. Top aircrews from all over the world compete for the huge Fairchild trophy which is given for excellence in bombing, navigation, aerial refueling and the highly technical field of electronic countermeasures. When you have the top crews, from the most awesome fighting force the world has ever known, competing for the Fairchild trophy, the winner must be really good. Gentlemen, the 11th Bombardment Wing has won that Fairchild Trophy three times during the 12 years of the trophy's existence. No other bombardment wing has ever won that trophy more than once.

In the 1960's Strategic Air Command's combat competition the 11th Bombardment Wing became the first to win the Fairchild trophy while using the B–52 bomber and the KC–135 jet tanker. Besides the huge Fairchild trophy, the 11th Bomb Wing also brought home the trophy for having the best jet tanker unit—the 96th Air Refueling Squadron—within the Strategic Air Command. These are the men that I was privileged to visit and to fly with.

Upon arrival at Altus Air Force Base, I was immediately given a tour of the newly completed Hound Dog missile facilities and it was explained to me how this missile would be carried beneath the wings of the B–52 to be launched hundreds of miles from a potential target or be used to wipe out enemy defense which might stand between the bomber and its primary target area. The B–52 is our Nation's first airborne missile platform bomber. The destructive capability of this weapon system defies the imagination.

From the Hound Dog facilities, we proceeded to the far north end of Altus' 2½-mile runway where I saw demonstrated the capability of the Strategic Air Command's ground alert concept. Aircrews, housed in a giant, half buried, concrete and steel building, maintain the ability around the clock, every day of the year, to launch SAC's retaliatory force. Within sprinting distance from the heavily guarded alert building many B–52 Stratofortress bombers and KC–135 Stratotankers perch, fully loaded and ready to roll down a high-speed taxiway to the runway. These dedicated men spend 25 percent of their lives living in isolation within the alert compound, always ready to perform their awesome task.

The men who fly these aircraft are highly motivated with their mission. When the klaxon horns sound an alert one had better get out of the way fast. If he does not, I will guarantee you that, Congresman or not, he is liable to be trampled. These men fully realize that

they must utilize every second of any warning they may receive of an impending attack and they are not going to be caught on the ground. There is not much humor in their deadly business.

The following day, it was my privilege to tour 1 of the 12 Atlas intercontinental ballistic missile sites presently under construction near Altus Air Force Base. These are to be hardened sites. That is to say, the missiles will be housed in giant silos buried 180 feet deep into the ground. This is to make them invulnerable to anything other than a direct hit by a weapon from any potential aggressor.

Conducting me on this tour were Air Force Col. Ernest L. Ramme, commander of the Site Activation Task Force and Lt. Col. Carl F. Baswell, project engineer for the Army Corps of Engineers, who are responsible for construction of the Atlas missile facilities. They explained to me many of the complicated problems involved in this $65 million project. I came away convinced that this is a sound investment of our defense dollars, because, as I stated earlier, these sites will be nearly invulnerable to attack.

Gentlemen, the real highlight of my tour came when approval was granted for me to fly aboard one of the 11th Bomb Wing's B–52 Stratofortress bombers on an airborne alert mission. The hours immediately preceding the mission were so filled with events that it is difficult to recall everything that happened.

Briefly, I sat in the premission briefing with the flight crew where top wing specialists outlined the requirements of the flight and briefed us on the weather that we could expect along our route.

After the briefing I was given a complete physical checkup and a clean bill of health by Lt. Col. Bradley W. Prior, the 11th Bomb Wing Flight Surgeon.

From the flight surgeon's office I was taken to the wing's personal equipment section where I was completely outfitted from head to toe with the heavy-duty clothing worn by all SAC crews whenever they fly. I was fitted with special, quick-donning alert boots, heavy winter flight coveralls, gloves, and jacket. Last but not least came the jet helmet—SAC men refer to them as "brain buckets"—and the very necessary oxygen mask which connects to the helmet. By the time they had a parachute strapped on my back I was beginning to wonder how these men managed to wear all this paraphernalia throughout a long airborne alert flight.

Gen. Thomas S. Power, SAC Commander in Chief, announced in January that Strategic Air Command aircraft were participating in airborne alert training which means that a certain number of aircraft are in the air at all times as part of the command's routine aircrew readiness program.

As the Members of the House are aware, the funds for the airborne alert training program are provided from money previously allotted to the Department of Defense to develop an airborne alert "on-the-shelf" capacity. I must say that these highly skilled men are making good use of those funds.

Missions, such as the one in which I participated, are flown under quite realistic conditions. At all times during the flight we were in direct radio contact with Strategic Air Command Headquarters at Omaha, Nebr., and could have been ordered to change course and strike any potential enemy target.

Colonel Ramputi, the 11th Bomb Wing commander, said that the feasibility of maintaining a part of the SAC bomber fleet in the air around-the-clock has been proven by over 6,000 airborne alert training sorties completed successfully by SAC bombers during the past 2 years.

In the cockpit I watched as Maj. Thomas W. Martin, pilot and aircraft commander of this giant craft, and his copilot, 1st Lt. Wilber H. Smith, went through page after page of checklists to prepare for flight. Behind me, 1st Lt. Raymond C. McAdoo carefully checked the maze of gear required to conduct electronic countermeasures activity. Downstairs, on the lower deck, Capt. David G. Ebert, the radar-navigator checked his bombing equipment while Capt. Frank M. Nakamura, the navigator, made certain that all navigational equipment was functioning properly. In the tail section M. Sgt. Russell D. Bick, tail gunner, busied himself checking out the defensive gunnery system.

The coordination required between these crew members both on the ground and throughout the flight is simply fantastic to one who has never witnessed these men on the job before. Their language, like their jobs, is highly technical and it was difficult to really understand all that seemed to be going on. I did know, the meaning of the term "roger." The crew, at every opportunity, explained to me what they were doing so that I feel I can really appreciate the tremendously technical business of getting a giant jet bomber into the sky.

When we took off, rain clouds hung low over the airfield but we climbed through them on instruments, along a designated flight path, almost as if the clouds did not exist. Soon we burst into bright afternoon sunshine, as if climbing into another world. During the takeoff, I had buckled into an ejection seat and connected my quick release parachute lanyard as Major Martin had shown me, however, I never had the slightest worry about having to make use of this equipment.

After the aircraft was established in the climb to altitude, I was free to move about and visit each of the crew member's positions, watch over their shoulders and learn something of each man's job. It was tremendously interesting. At some time during the flight I sat at each position while the crew set switches, tuned radios and focused radar scopes; all the while explaining to me what I was seeing or hearing with their equipment. At one time I was allowed to take the aircraft's controls and make a turn.

To maintain the bomber in the air for so many hours requires both day and night aerial refueling. Many hours after takeoff we rendezvoused with a KC–135 jet tanker of the 96th Air Refueling Squadron, also a part of the 11th Bomb Wing at Altus.

I was truly amazed at the precision flying required to place these two aircraft in position for refueling and I was astounded at the amount of fuel that flowed from the tanker into our bomber. It was almost unbelievable to see those pilots, strapped into the same seat for so many hours, make a night hookup and fly perfect formation, get their fuel. Believe me, they must have tremendous stamina, because refueling is really handwork.

During the 24 long hours of an airborne alert mission they continually fight cramped muscles and other physical inconveniences Under these conditions I think it must be doubly hard to maintain an alert, quick thinking mind, which is a prime requirement when flying at jet speeds. A continuous vigilance for other aircraft must be maintained by the pilots, who only leave their positions when it is absolutely necessary. But this crew never once slowed down. I found them highly conscious of air safety problems and extremely competent and careful.

During this long flight, I did manage to catnap on a couple occasions, however, I was far too interested in the activity around me and in these hard working airmen to worry very much about losing sleep.

As I talked with the men and it started to get light again in the east, I began asking myself what it must be worth to our Nation to have airmen such as these dedicated, devoted professionals, willing to endure the physical discomforts created by 5-pound helmets, heavy parachutes, and the many other inconveniences demanded of them in order to keep this weapons system ready to strike should ever the need arise. I came to the conclusion that these men are worth a great deal more than we are willing, at least at the present, to give.

These men told me of the thousands of man-hours and great technical knowledge that are required by their ground maintenance personnel in order to provide them with sound aircraft and reliable bombing, navigation, electronics countermeasures and gunnery systems which are required to make this an effective weapons system. The aircrew had nothing but the highest praise for the technical specialists who spend untold extra hours to make sure that their equipment was the best that was humanly possible to provide.

Gentlemen, I have always felt that the Strategic Air Command had mighty good men and equipment, but this flight made me appreciate them and the job they are doing a lot more. These men are a far cry from the old scarf and goggles Air Corps. I witnessed highly trained, highly skilled men doing a professional job infinitely more complex than I can begin to explain. And I must add doing it effectively and efficiently.

One of the greatest problems that the Strategic Air Command faces is that of holding their men. SAC spends millions of dollars training these men only to

have them leave the service for higher paying, less demanding careers in civilian industry. This is a great loss to our Nation; an unnecessary drain of defense dollars.

I walked away from that flight—truly one of the most thrilling experiences of my life—firmly convinced that we, the Congress of the United States, are not providing adequate compensation for these SAC men. As a member of the House Armed Services Committee, I shall strive to enact legislation to provide extra pay for the air crews who man SAC's alert force; for the highly skilled technicians who maintain SAC's intricate weapon systems and to find a way to provide more promotions for these most deserving men.

We can, and we must, provide greater incentives for these professionals to remain in military service. Their job is tough, demanding, exasperating and particularly hard on their families—yes, the average SAC man does have a family. If we fail to find the added incentives necessary to keep these men in SAC we shall have failed to spend our defense dollars wisely and—worst of all—we cannot help but to slip behind in our efforts to contain the Communist threat to world peace. I stand firmly convinced that we need immediate approval for increasing subsistence allowance for SAC's airmen, increase in SAC officer and airman promotions, establishment of an SAC alert pay and to do something about proficiency pay for these highly skilled technical specialists.

We, as Congressmen, must evaluate our positions, particularly with regard to defense spending, to see if we are really up to date with the requirements for establishing and maintaining the fantastically technical and complex aerospace force that present-day military concepts demand. I am certain that if every Congressman could just realize the type of prepardeness program that the Strategic Air Command has built and the great sacrifices that are made to maintain this vigilance, he would plainly see the immediate necessity for remedial legislation.

My flight aboard one of the 11th Bombardment Wing's B–52 bombers marked the anniversary of my first trip to Congress 20 years ago. The military services—and particularly the aerospace forces—have undergone a tremendous change in all areas of operation during that time. One cannot begin to draw a comparison between the efficiency and complexity of the forces today to those of 20, or even 10, years ago. Why, then, should we expect these men to work for the same pay or the same promotional opportunities that they have in the past?

In conclusion, just let me say that as a result of my flight aboard one of the world champion 11th Bomb Wing's B–52's, I have returned to my seat on the floor of the House of Representatives, a much more interested, more highly motivated, more determined Member of Congress. I shall work tirelessly to see that no stone is left unturned toward seeing the U.S. Air Force and the Strategic Air Command realize their famous slogan, "Aerospace Power for Peace." Thank you.

Federal Aid to Education

EXTENSION OF REMARKS
OF
HON. BARRY GOLDWATER
OF ARIZONA
IN THE SENATE OF THE UNITED STATES
Monday, April 10, 1961

Mr. GOLDWATER. Mr. President, because we are approaching the time when this body will be engaged in debate on Federal aid to education, I believe it behooves all of us to select from our reading articles which we feel will be of value to our colleagues as they try to make up their minds about the correctness or incorrectness of this proposed step.

There was published in the Chattanooga Free Press of Friday, March 31, a very excellent editorial entitled "The Facts Refute the Lobbyists." The writer of the editorial correctly pointed out that—

One of the most significant things about the current agitation for massive Federal aid to education is that its primary source has not been the people on the local level who are supposed to be in such need of Federal help.

I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE FACTS REFUTE THE LOBBYISTS

One of the most significant things about the current agitation for massive Federal aid to education is that its primary source has not been the people on the local level who are supposed to be in such need of Federal help.

Most of the propaganda for Federal aid has come from professional educationists such as those running the National Education Association, which maintains a lobby in Washington that even the AFL–CIO, with all its big spending for lobbying, might envy. And the Federal aid to education propaganda has spread from the NEA to various school administrators.

There are several things basically wrong with the idea of Federal aid to education.

For one thing, such a program as has been proposed would be unconstitutional, because the Constitution of the United States simply does not provide any authority for Federal aid to education, and does provide that the powers not specifically delegated to the Federal Government shall remain in the hands of the States or the people, where education is, has been, and should properly remain.

Another thing wrong with the idea of Federal aid to education—although the fact that it is unconstitutional ought to be enough by itself to cause its discard—is that it is economically unsound. The Federal Government has no money except that which its gets from the people. The Federal Government never returns to the people in aid more than a fraction of the money collected from them. So Federal aid, rather than creating more money actually shrinks the money available on the local level so that it buys less education than otherwise could be bought by proper local action.

Still another major fault of the idea of Federal aid is that it inevitably poses the threat of Federal control. Any level of government handing out tax money has a responsibility to direct how that money shall be used. Federal control of education would be extremely dangerous. The control might not be very noticeable at first. But after a short time local communities drained of tax funds to finance the Federal aid program would become dependent upon it, and then would be powerless to resist controls in the form of strings attached to the aid funds.

But there is still another overriding reason the Federal aid scheme ought to be rejected.

That reason: It is not needed.

Federal aid proponents claim 60,780 classrooms need to be built each year for the next 10 years. Current classroom building already totals 70,000 a year—without Federal aid.

Aid proponents say Federal intervention is needed because of increasing school population. The average annual increase in school enrollment for 1955–59 was 1.2 million; for 1960–64 it is expected to drop to 1.1 million—and for 1965–69 will decrease still more to only 0.6 million.

Furthermore, the aid backers are using phony statistics. For example, the Bureau of the Budget found that aid proponents claimed Alabama had a 256-percent increase in "pupils in excess of normal capacity"—although the school population had not increased but the number of classrooms had been increased by 4,200.

Just a few days ago we received, and assume that other newspapers across the Nation did too, a stack of eight alleged "news" releases that were propaganda from the lobbying NEA and the National Congress of Parents and Teachers agitating for Federal aid.

These outfits are pretty good at lobbying, but they can't change the facts that what they propose is: (1) Unconstitutional, (2) uneconomic and requiring high taxes, (3) an opening for Federal controls, (4) proposed on the basis of false statistics, (5) unneeded. Any one of these reasons ought to be enough to bring rejection; surely all together are reasons enough.

Death Claims Dr. Cloyd S. Harkins, of Osceola Mills, Pa., Internationally Famous Dentist and Pioneer in the Field of Cleft Palates

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 10, 1961

Mr. VAN ZANDT. Mr. Speaker, the death on March 22, 1961, of Dr. Cloyd S. Harkins, of Osceola Mills, Pa., ended his distinguished career of 51 years in the practice of dentistry.

Dr. Harkins' two sons, Dr. William F. Harkins, of Osceola Mills, Pa., and Dr. John F. Harkins, of Erie, Pa., followed in their father's footsteps in the dental profession assisting him in the operation of the Harkins Cleft Palate Clinic at Osceola Mills, Pa., founded by their internationally famous father.

The grief occasioned by the death of Dr. Cloyd S. Harkins is not only prevalent in his home community of Osceloa Mills, Pa., but is shared throughout the world by members of the dental profession and the countless thousands who have benefited from his expert knowledge which earned him world acclaim as a renowned specialist in odontology, orthopedics and prosthetics. Dr. Har-

kins' pioneering spirit and the dental techniques he developed remain as an enduring monument to his humanitarian and professional accomplishments.

It was my privilege to value Dr. Cloyd S. Harkins as a personal friend for many years. His sudden death is a source of deep personal sorrow. The community of Osceola Mills has lost a distinguished resident while the dental profession here and abroad has suffered the loss of an outstanding member.

Mrs. Van Zandt joins me in extending sincere expressions of deepest sympathy to Mrs. Harkins and sons Dr. William F. Harkins and Dr. John F. Harkins in their loss of a devoted husband and loving father.

In further tribute to the memory of Dr. Cloyd S. Harkins, I wish to include the following article concerning his notable career which appeared in the Clearfield, Pa., Progress March 23, 1961, and a subsequent editorial in the March 30, 1961, issue titled "He Left His Mark":

[From the Clearfield (Pa.) Progress, Mar. 23, 1961]

DR. C. S. HARKINS, INTERNATIONALLY KNOWN, DIES AT 72—OSCEOLA MILLS DENTIST, EXPERT IN CLEFT PALATE WORK, STRICKEN AT PHILADELPHIA

PHILADELPHIA.—Dr. Cloyd S. Harkins, of Osceola Mills, internationally known expert in cleft palate work and dentistry, died suddenly yesterday en route to Hahnemann Hospital at Philadelphia after suffering a heart attack.

Dr. and Mrs. Harkins and their son, Dr. William Harkins, also of Osceola Mills, were in the city attending the Greater Philadelphia Dental Association meeting.

In Dr. Harkins' death, Clearfield County loses an internationally known and honored citizen. Thousands of persons afflicted with a cleft palate lose the man who directly, or indirectly, made it possible for their handicap to be corrected.

Born November 16, 1888, at Orafino, Nebr., Dr. Harkins was the son of John and Josephine (Klare) Harkins. The family later moved to Mount Pleasant, Mich., where his father died of typhoid fever. Following her husband's death, Mrs. Harkins brought her children back to Wallaceton, her native home.

Dr. Harkins was graduated from the University of Pennsylvania with a degree of dental surgery in 1910 and the same year opened the dental office at Osceola Mills where he practiced continuously until his death.

The office at Osceola Mills became more than just a smalltown dental office. There Dr. Harkins developed the techniques and innovations which made him a recognized specialist in odontology, orthopedics, and prosthetics. He was a pioneer in research and rehabilitation of the cleft palate patient, a field virtually untouched until his work in it.

University professors, specialists in dental and palate prosthetics, and public health officials from all sections of the United States and from abroad came to observe and work with Dr. Harkins.

In 1935, the honors which were to continue throughout the remainder of his life began to come. That year he was made a fellow of the American College of Dentists. Four years later, after conducting clinics throughout the Argentine and classes at the University of Buenos Aires; the University of Litoral at Rosario; and at the University of Rio de Janeiro, Brazil, he was made a member of the Sociedad Odontologica Argentina de Proteses.

The following year, in 1950, Dr. Harkins received the Certificate of Honor from the American Dental Society at its national convention and in 1951 a similar certificate was presented to him and his two sons—Drs. John F. and William F. Harkins—who followed their father into dental work and the cleft palate specialty.

The same year Dr. Harkins received an honorary degree from Temple University and was made a member of Omicron Kappa Upsilon, honorary dental society; 1952 found the Osceola Mills dentist abroad again, this time in London where he was a speaker at the 11th International Dental Congress and honored by the Congress with its Certificate of Service. This was followed by honorary membership in the Congreso Universitario, Panamericano de Odontologia and being awarded a prized Thomas P. Hinman Medallion Award for leadership in dental progress.

Recognition in his home county came to Dr. Harkins in 1953, when the Clearfield County Medical Society presented him its first Benjamin Rush Award for outstanding health services.

For many years Dr. Harkins served as a member of the Pennsylvania State Dental Council and Examining Board and as a member of the State advisory board of vocational education. In addition to his private practice and public clinic work, he was an instructor and member of the staff of the Philipsburg State Hospital; founder and director of the State Department of Health Cleft Palate Diagnostic Clinic at the Philipsburg State Hospital; staff member of the Cleft Palate Clinic at Allegheny General Hospital at Pittsburgh; and consultant to the Diagnostic Cleft Palate Clinic at the Temple University Hospital and St. Christopher Hospital for Children, both at Philadelphia.

He was the author of "Cleft Palate Rehabilitation," used as a text in dental and medical schools, and just last year, of a second book, "Principles of Cleft Palate Prosthesis" written in collaboration with his sons. The prosthesis, or light plastic speech aid, he developed for the cleft palate patient is now, like his books and professional papers, standard therapy in their treatment.

Away from his professional life which also included membership in a dozen or more societies, Dr. Harkins found time for community and civic affairs. At one time he was a Scoutmaster and a member of the Executive Board of the Bucktail Council, Boy Scouts of America. He was also a member of the Osceola Mills First Presbyterian Church, the B.P.O. Elks and several Masonic organizations.

Included in the latter are the Moshannon Lodge No. 391, F. & A.M.; the Clearfield Royal Arch Chapter, the Moshannon Council, Royal and Select Master Masons; Moshannon Commandary, Knights Templar; the Williamsport Consistory, and the Jaffa Shrine.

Dr. Harkins was married in July 1911 to the former Irene Fritzinger of Slatington, who survives. His son, Dr. William Harkins is associated with the Harkins Cleft Palate Clinic and private practice at Osceola while Dr. John Harkins is located at Erie, Pa.

He also leaves five grandchildren.

Funeral services will be held Sunday at 2 p.m. from the Heath Funeral Home at Osceola Mills, with the Reverend Graeme Sieber officiating. Burial will be in the Umbria Cemetery.

Friends will be received at the funeral home from Saturday evening until time of services. Masonic services will be conducted at 7:30 p.m. Saturday.

[From the Clearfield (Pa.) Progress, Mar. 30, 1961]

HE LEFT HIS MARK

With the death of Dr. Cloyd S. Harkins of Osceola Mills a week ago yesterday while attending a dental association meeting at Philadelphia, not only Clearfield County and the Moshannon Valley but the Nation and, it is not exaggerating to say, the world, lost a great man and a great humanitarian.

Dr. Harkins was a pioneer in the field of cleft palate (open roof of the mouth) rehabilitation and his achievements in this field brought him international recognition. Few, if any residents of our area, can claim or ever attained the national and international honors that did Dr. Harkins in his lifetime. As is so often the case, his fame and contributions to humanity were never really understood or fully appreciated in the area that he called home. Not that we fellow citizens didn't appreciate his talents, but it was difficult to realize the worldwide respect that he enjoyed in his field of endeavor.

The work that Dr. C. S. Harkins did in his lifetime for cleft palate victims will live on for long years after his untimely death. His pioneering in cleft palate treatment and rehabilitation has given new hope and new life for victims of this birth-originated defect. We have no idea how many youngsters, and older men and women, too, Dr. C. S. aided by correcting a serious physical handicap but the total must be tremendous. His achievements and the knowledge he left behind him will be the means of aiding hundreds and thousands of such victims in the future. Undoubtedly, his methods will be improved upon by those who follow him, but his original pioneering and teachings will remain the basis for such improvements.

The success and fame that Dr. Harkins achieved did not surprise those who came in contact with him. He possessed the patience of Job in the trying and difficult task of working with his patients. Inborn or developed through his work, he had a determination to solve the cleft palate problem, regardless of the reluctance of his patients to accept treatment. Those who visited his office for ordinary dental work, at which he also excelled, came away marvelling at his patience and perseverance in the face of patient opposition. He was a fighter, and a stubborn one, too, for the cause in which he believed. He pulled strings, played politics, demanded until he gained recognition of the plight of the cleft palate victim and what could be done about it. For that fight we must be grateful, for without it cleft palate treatment and rehabilitation of its victims might still be unknown and its victims handicapped throughout life. Dr. Harkins was a worker who did not know the meaning of an 8-hour day, a 40-hour week. His sacrifice of his own personal health and life for the benefit of his fellow men possibly led to his death of a heart condition at 72, not an elderly age in these days.

Those of us who were privileged to know Dr. Cloyd S. Harkins professionally or as an acquaintance will never forget him or the work that he did. In the years to come, the youngsters with cleft palates and their parents will have cause to pay tribute to his memory because of the leadership in treatment that he gave to the medical and dental profession in this fairly common birth defect. We in the Clearfield County-Moshannon Valley area can take pride in the fact that he was a fellow citizen.

Supergraft on Superhighways

EXTENSION OF REMARKS
OF
HON. FRANK M. CLARK
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Monday, April 10, 1961

Mr. CLARK. Mr. Speaker, ever since the Federal-Aid Highway Act of 1956 was enacted by the 84th Congress, the

Federal-aid highway program has been the target of criticism.

Criticism was to be expected in connection with the most ambitious public works program in history, especially when it was geared to anticipate the Nation's needs almost two full decades in the future, and especially when it called for the expenditure of billions of dollars to bring into existence a national network of adequate, modern superhighways linking together the principal metropolitan areas from border to border and coast to coast.

It is an indisputable fact that the 84th Congress acted with commendable foresight. The intervening years have underlined with disturbing clarity an ever-growing transportation crisis, particularly in the urban areas, for which relief must be provided.

The 41,000-mile Interstate System and a sustained program of primary, secondary, and urban construction are pressingly vital to the national economy and the national defense.

There has been criticism of the Federal-aid highway program in the past. It is under fire now. It will be criticized in the future. It probably will always be subject to criticism.

Criticism is healthy when it is constructive and generates corrective action. It is destructive when utilized as a vehicle for condemnation merely to accentuate a posture of unalterable opposition.

The Federal-aid highway program has its friends and it has its enemies. Numbered among the latter are a great many reactionaries who refuse to equate costs with commensurate benefits that are evident in terms of the greatest good for the greatest number.

Some of the criticism of the Federal-aid highway program has been justified; much of it has not. Admittedly there was enough justifiable criticism to warrant the formation of the Special Public Works Subcommittee on the Federal-aid highway program on which I have been privileged to serve as a member.

Under the very capable and energetic leadership of the distinguished gentleman from Minnesota, the Honorable JOHN A. BLATNIK, this subcommittee has been engaged in the separation of the factual from the fanciful. In a series of hearings conducted during the past year the subcommittee has been successful in bringing to light a number of serious deficiencies in the conduct of the program at both the Federal and State levels. Immediate corrective action has followed.

More than anything else, in my opinion, the work of the subcommittee has emphasized the necessity for maintaining the traditional congressional watchdog function during the life of this all-important program. The magnitude of this undertaking is indeed formidable. Many areas remain to be explored.

Members of the House can be confident that our subcommittee and its capable and indefatigable chairman, the gentleman from Minnesota, will continue to carry out its assignment with vigor and determination.

My observations today are prompted by an article written by Stanley Meisler in the April 1 issue of the Nation. It bears the title "Supergraft on Superhighways."

Under the present state of the record before our subcommittee the title definitely represents too great an exercise of journalistic license and is designed, as so many such headlines are, solely to direct attention to the article.

I do not doubt that Mr. Meisler was motivated by a desire for reasonable objectivity. Obviously he has carefully scrutinized and weighed all of the testimony thus far adduced at subcommittee hearings. He has achieved a fairly creditable analysis of the testimony. I have noted, not without a sense of satisfaction, that Mr. Meisler praised the subcommittee for one of the fairest and most painstaking investigations of recent years and that he has placed a proper emphasis on the corrective action resulting from the subcommittee's hearings.

I concede that Mr. Meisler's article is studded with some painful truths.

Because I believe all Members of Congress should have access to material presently being disseminated, under leave to extend my remarks I desire to insert in the CONGRESSIONAL RECORD the full text of the article.

THE FEDERAL HIGHWAY PROGRAM—SUPERGRAFT ON SUPERHIGHWAYS

(By Stanley Meisler)

In 1975, Americans will have 111 million cars, trucks, and buses. To keep these wheels rolling, the Federal Government has embarked on the biggest public works project in history, spending billions of dollars for 41,000 miles of superhighways crisscrossing the Nation. Millions of this money already have been spilled over into waste, inefficiency, and fraud.

There is nothing secret about this. Newspapers and Congress has uncovered scandal after scandal. But the revelations have not evoked the same indignation and outcries that scandals like the Dave Beck plunder of the Teamsters treasury have caused. Instead, much of the public has a boys-will-be-boys attitude about corrupt highways. When you spend $41 billion in a public program, influential and impatient people say, you have to expect some tomfoolery, so let's get on with the show. Americans want their highways in a hurry.

"When you have a program of this magnitude," Representative GORDON H. SCHERER, Republican, of Ohio, told the House last July 1, "you are bound to attract the chiselers and the grafters." Carl A. Carpenter, Assistant Chief of Physical Research for the Federal Bureau of Public Roads, questioned closely about deficiencies in a road inspected by State officials who had accepted secret payments from the contractor, offered a House subcommittee on December 13 this analysis: "If we have to face these slight deficiencies in jobs that we have, I think they may be a lot easier to live with than extensive deliberation in this interstate program." What about the money lost by the taxpayers? "The taxpayer is the same person who is eagerly waiting for this job to get done * * *," Carpenter replied. And Al C. Church, State highway engineer for the Florida State Road Department, dismissed deficient roads and paid-off inspectors by noting, "If the taxpayers never get a worse job than that, they are going to be mighty lucky."

These statements evolve from a national mood, a mood aptly summed up by Representative JOHN A. BLATNIK, Democrat, of Minnesota, who heads the House subcommittee investigating the highway scandals: "In the 14 years I have been here, never has a multibillion-dollar tax program and construction program had such overwhelming confidence and support, not only in Congress, but from taxpayers all over America."

Taxpayers are supporting the program because it promises to satisfy their hunger for cars and roads. If the program progresses, by 1972 superhighways will link 90 percent of all cities with more than 50,000 population. A driver will be able to travel from coast to coast at 60 to 70 miles an hour without encountering a single stop sign, traffic light, or railroad crossing. In the main, these highways, with entry only at selected places, will have four lanes, swelling to six and eight lanes near metropolitan areas. President Kennedy has predicted that "the Interstate System when completed * * * will save at least 4,000 lives a year."

The estimate of total cost has varied. When Congress approved the program in 1956, the Bureau of Public Roads figured the cost at $27.5 billion; Congress, raising the Federal gasoline tax, agreed to put up 90 percent, the States paying the rest. Since then, however, the Bureau has raised its estimate to nearly $41 billion, and a controversy is brewing in Congress over President Kennedy's proposals for levying taxes to meet the difference. In fact, some of the attempts to minimize the scandals stem from the fear of highway supporters that Congress, in disgust, will refuse to authorize enough money to complete the system by 1972.

How corrupt is the program? A veteran newsman has said that if an editor sent six reporters around the country digging up information, he could put half the country's State highway officials in jail. The statement is no doubt somewhat exaggerated. But BLATNIK's subcommittee, in one of the fairest and most painstaking investigations of recent years, has quietly uncovered a depressing panorama of bumbling Federal bureaucrats, bribe-taking highway engineers, chiseling contractors, fat-cat State commissioners, and cracking roads in the Federal superhighway system.

At its first hearings in February 1960, the subcommittee unfolded a near-comic tale of bureaucratic ineptitude. The highway program had been sold to many Congressmen as a defense measure. The program officially is titled the "National System of Interstate and Defense Highways." But truckers, assigned to cart missiles from California to Cape Canaveral, testified they almost never could move the Atlas and other huge weapons under the 14-foot clearances of the highway overpasses. Sometimes a driver would deflate the truck's tires and move the Atlas under a bridge inch by inch while traffic on the highway backed up for 20 miles. On other occasions, the truck simply took an alternate, roundabout route.

For years, the Department of Defense and the Bureau of Public Roads had been unable to clear through their labyrinthine channels an agreement on a minimum height for bridges and overpasses. One unit of the Department of Defense told the Bureau in 1957 that 14-foot bridges were fine, while another ordered the production of missiles that could not clear these bridges. In 1959, the Department and the Bureau decided to study the matter further. But, while more study was underway, the Bureau continued to approve bridges with only 14 feet of clearance. Suddenly, on January 27, 1960, when BLATNIK's investigators started probing the matter, the Bureau and the Department hurriedly reached a decision; all bridges and overpasses must have 16 feet of clearance.

Since the start of the program, the Bureau of Public Roads had approved 2,259 bridges and overpasses on the 14-foot standard at a cost of $374 million. If the structures had had 16-foot clearances in the

first place, the cost would have been only $18.7 million more. Reconstruction will cost $205.7 million—a clear waste of $187 million.

In May 1960, the subcommittee investigated construction of the 13-mile Skelly bypass in Tulsa, Okla., which had cost the Federal Government almost $6 million. After examination of the finished product, already starting to crack, the directors of a private engineering firm and private testing laboratory testified that the contractor evidently had billed the State for $524,689 worth of materials which he had never put into the road. Testimony revealed that the contractor and the State engineers and inspectors had covered up the shortage by submitting false testing samples, making fraudulent bookkeeping entries, using improper scales, padding bills, adjusting record-books and ignoring State specifications. There was no evidence, however, that the contractor had bribed the State engineers and inspectors.

But the subcommittee did hear testimony linking the contractor, Layman & Sons, with a State highway commissioner. Lee Olen Downey, a partner in the D. & G. Construction Co. testified that Commissioner Tom H. Kight was a silent partner in D. & G. when the State highway commission awarded a contract to Layman & Sons for a section of the Skelly bypass. Layman & Sons immediately subcontracted half the sodding work to D. & G.

Federal inspectors never uncovered any of this fraud. Even after the Tulsa Tribune, in a November 1959, editorial, "Is Uncle Sam on the Job?" questioned the worth of the road, the Bureau of Public Roads found nothing. Disturbed by the newspaper criticism, the Bureau ordered its regional inspector, Ralph Cecil Glover, to examine the bypass again. "No stone was left unturned in efforts to secure the highest type of performance from the contractor," Glover wrote in his report. "* * * While accusations have been made * * * [they] have not been substantiated to date. Those making the accusations can hardly be said to be competent to judge such matters." But Glover, following Federal policy, simply had scrutinized the reports of the State laboratories and engineers—reports based on fake samples and fraudulent bookkeeping. He had not made a single attempt to test the road material himself.

Subcommittee Counsel Walter R. May questioned Glover at the hearing:

"Question. Did you accept those reports at face value?

"Answer. Yes.

"Question. You did not ever go behind those reports to determine exactly what was happening?

"Answer. No.

"Question. Does the Bureau of Public Roads expect you to go behind those reports?

"Answer. No."

The subcommittee turned to Florida in hearings last December. Testimony revealed that six contractors, who had handled Florida road contracts worth more than $70 million in the last 4 years, had distributed $54,000 to $75,000 in gifts to 33 Florida State highway engineers since 1956. These came in the form of secret cash payments, unrepaid loans, liquor, lumber, hunting licenses, and bonuses for extra services. William L. Cobb, head of a large construction company, admitted he also gave gifts to State road officials in Georgia, Mississippi, Tennessee, North Carolina, South Carolina, and Alabama.

Cobb told the Congressmen he deplored the practice and had ordered an end to it, but other contractors and State personnel professed to see little wrong with the gift-giving. Charles E. Bailes, Jr., general superintendent of Cone Bros. Contracting Co., said his firm had mailed State engineers secret payments of $25 a week to get "that little effort" the company needed to complete the job. "And I believe the payments helped." Bailes said. "I am obligated to my company to do the best job I possibly can. * * * As long as I didn't engage in anything that I though was faulty, I would employ many different things to get this accomplished." One after another, the State engineers denied they had done anything improper to please the gift-bearing contractors.

But the subcommittee heard evidence that indicated laxity, at least, on the part of some of these paid-off engineers in seeing that the contractor met specifications. H. C. Weathers, Florida's chief testing engineer, testified that he had found substandard material, poor workmanship and poor inspection on a $2.5 million strip of highway built by Cone Bros. near Tampa. Weathers said some of the deficiencies were serious. Representative WILLIAM C. CRAMER, Republican, of Florida, described the Howard Franklyn Bridge over Tampa Bay as rough and substandard. It had been built under the supervision of State Engineer Joseph R. Maseda, Jr., who received $4,700 in 4 years from several contractors, including the Hardaway Contracting Co., which had built the bridge. "If this is the kind of bridge we're building in America then there is something wrong with our standards," CRAMER said. In closing the hearing, BLATNIK said he found "it difficult in the light of all the testimony to believe that the conditions prevailed without involvement of a quid pro quo, whatever its nature might have been."

In its latest hearings, which ended March 10, the subcommittee, again spotlighting Florida, discovered that the State had lost hundreds of thousands of dollars because of the slipshod way it got rid of houses and other property on rights-of-way it had acquired. In many cases, the State paid a contractor to dispose of a house, which he proceeded to sell at a neat profit. For example, one contractor, Paul Slusher of Maitland, testified the Florida Highway Department had paid him to clear a house on an Orlando right-of-way for $100. He then sold it for $24,500. Testimony revealed that the State paid $103,000 for the removal of structures in Miami when it might have sold the property for $372,500. The loss to the State: more than $475,000. In contrast to this sorry situation, Frank Balfour, former chief of the rights-of-way division of the California Highway Commission, testified his State had made a 6-percent profit on the sale and rental of properties it had acquired on rights-of-way since 1956. At the close of the hearings, BLATNIK cautioned all States to get every possible dollar out of the houses and properties on lands they acquire for highway construction.

Despite the muck it has uncovered, the subcommittee still has not reached the core of corruption. The most damaging fraud in the program involves the $7 billion the States will spend to acquire rights-of-way.

A consulting firm hired by the Federal Bureau of Public Roads has produced a 200-page report on land appraisals in Massachusetts. The report is still secret, but, in a series of articles last May, the Boston Traveler said that an unnamed State official had put pressure on land appraisers to issue false, inflated evaluations. The Traveler said the estimates appeared to be 25 to 50 percent too high. The subcommittee has opened an office in Massachusetts and its next hearings probably will focus on that State. In the meantime, the Bureau has refused to reimburse the State for its rights-of-way purchases.

A scandal on rights-of-way acquisitions also appears to be stirring in Florida. Last December 1, Al Rogero of the State road board admitted to a legislative committee that he was an unnamed partner in a group that had bought a tract of land in St. Petersburg which was later needed for a highway. Rogero testified that the group bought the land for $165,000 in 1956 and sold it for $240,000 a year later. Rogero's fee: $24,000. But the official denied any conflict of interest. "I simply have refused to build a wall around myself and stop the purchasing, selling and developing of properties simply because I was a member of the State road board," he testified.

The subcommittee has a host of other areas awaiting investigation: an evidently excessive use of expensive, private consultants by several States, including Massachusetts, Pennsylvania, New Jersey, and Maryland; monopoly practices by suppliers of highway material, particularly in the West; collusive price-fixing among contractors, such as the subcommittee noted in Oklahoma, where sodders met in secret before submitting bids to the State; the care of homeless persons who have been bulldozed out of the way by highways cutting through large metropolitan areas; and waste such as the General Accounting Office found in Nevada, where 3 interchanges were built on a 3-mile stretch of highway to handle an average of 89 cars a day.

It is not difficult to spot the reasons why the interstate highway program reeks of corruption. In a recent interview, BLATNIK, in his precise, articulate way, outlined the causes. First, he noted, State highway departments traditionally have been close to the Governor's office. The departments have become centers for dispensing patronage and extending favors to contractors who contribute to the party treasury. Next, the States have poor recruitment policies and low salary scales. As BLATNIK had pointed out in an earlier hearing, "You find some of these inspectors and even engineers working at a salary at which you couldn't hire a good file clerk here for the wages they are getting back there." To these men, a $25 cash payment, a loan, a turkey at Thanksgiving, a bottle of whisky at Christmas, become formidable gifts. Finally, BLATNIK said, there has been inadequate supervision both by the States and the Federal Government. In many cases, the States make no checkup at all. And, BLATNIK emphasized, there has been "an utter failure by the Bureau of Public Roads to poke through the façade." The Bureau traditionally never disputes the word of the State.

Anyone attending the hearings can sense certain attitudes that supplement BLATNIK's outline. An observer is struck, for example, by the corruptibility of small people: How simple it is for a man to participate in a system of bribery without a twinge of conscience or even a realization of his wrong. A business ethic also emerges from the testimony, a feeling by the contractor that anything goes so long as the job gets done and the profits pile up. When the ethic is questioned, the contractor reacts by despairing that congressional investigators ever will understand the business world. This attitude evokes sympathy from highway bureaucrats, particularly State officials who like to feel that they understand the peculiar problems of the contractor and that this understanding allows them to wink, when the contractor cuts corners to get the job done. An observer quickly senses that these State officials were totally unprepared to handle the billions of dollars suddenly put into their hands by the Federal Government. At the same time, a smugness, an almost lazy indulgence, is exhibited by Federal bureaucrats as they talk vaguely of States rights while justifying their refusal to interfere with the machinery of the State, no matter how lax or stupid or corrupt.

But, knowing the causes of the trouble does not lead automatically to finding a solution. The subcommittee has not made any legis-

lative recommendations and evidently does not have immediate plans to do so, even though the staff has drafted a tentative report. Most likely there will emerge limited proposals for revision of the income-tax laws to discourage gift-giving and increased appropriations to the Bureau of Public Roads for more inspectors. No radical change in the program is expected.

Any such change would stir enormous complications. In view of all the corruption, one logical change would be to slow up the program, at least until the States clean house. But this would ignore two factors: that the administration is using highway funds to stimulate the economy and that the country, no matter how much the critics of Detroit decry a culture on wheels, actually will need the roads in 1975.

An even more logical change suggests itself. If the States can't do a proper job, the Federal Government must wrest control of the highways from them. State officials recognize the validity of this threat to their power. At the annual meeting of the American Association of State Highway Officials last November 28, its president, David H. Stevens, warned: "If the States cannot satisfactorily demonstrate that they do have the ability to carry on the program in a proper manner, then the Federal-State relationship will be further modified or eliminated. It will be a tragic day for the States if either should occur."

If Congress does hand control of the highways to the Federal Government, the day could be somewhat tragic. The highway program will have proven that Federal aid really does eventually become Federal control. And the proof will drop new weapons into the laps of the enemies of such needed spending programs as Federal aid to education, who have always argued that Federal aid leads to Federal control. For this reason, liberal Congressmen, no matter how appalled at highway corruption, will not find it easy to vote control to the Federal Government.

These complications, however, do not mean that the country is powerless to eliminate corruption from the highway program. The subcommittee's hearings themselves have had some beneficial effect. State highway officials seem to have been attempting to tighten up the program on the State level, if only out of fear that Blatnik's subcommittee may strike them next. The American Association of State Highway Officials has revised its handbook to suggest ways of eliminating some of the abuses uncovered by Congress. And the Federal Bureau of Roads, smarting from the barrage of congressional criticism, has taken steps to initiate some realistic inspection.

But the subcommittee continually faces two obstacles as it tries to carry the story of highway corruption to the public. One is an undertone of Republican disparagement based on fears that the Democratic-controlled subcommittee will use the scandals to embarrass Republicans. (But during the Eisenhower administration, the subcommittee investigated Democratic State highway boards with as much vigor as it investigated the Republican-administered Bureau of Public Roads.) A second obstacle involves news coverage. Newsmen in Washington have tended to treat the hearings as regional stories. In this way, stories about the Oklahoma hearings were filed mainly for Oklahoma newspapers. The same was true of the Florida hearings, which made headlines in Florida newspapers and almost nowhere else. The subcommittee must share the blame for this. Its hearings generally have focused on a specific bit of wrongdoing in a specific area, instead of spotlighting corruption in several areas at once. If, in its next hearings, the subcommittee would show how fraud has infested right-of-way acquistion in several States and would call a parade of witnesses from areas all over the country, the press would suddenly grasp the national implications of the highway scandals and treat them accordingly.

The end of highway corruption will be signaled when the American people begin to realize that there is nothing normal or playful about contractors, State officials, and speculators stealing millions of dollars from the Federal Government. Public indignation may be a more effective weapon than legislation in the battle against highway corruption. And the time for public indignation has come.

Recession Not in San Mateo County

EXTENSION OF REMARKS
OF

HON. J. ARTHUR YOUNGER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 10, 1961

Mr. YOUNGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to insert the following page from the March 29, 1961, issue of the San Mateo Times, San Mateo, Calif., which shows that the business people in our county are doing business and not talking about recession:

RECESSION? NOT IN SAN MATEO COUNTY—BUSINESS IS BETTER THAN EVER—MERCHANTS FROM PALO ALTO TO SOUTH SAN FRANCISCO TELL US

Here are some statements and figures for you to ponder:

TO OPEN NEW BRANCH

"We really believe in our specialty of serving skin divers, outfitting and equipping them. As is customary with a new business, we did so 3 months ago with confidence in ourselves, but with some caution regarding the public's acceptance of us.

"Whatever reservation we had has since been swept aside in these last 3 months by the public's interest and demand for our services and equipment. We have been so greatly encouraged that we have taken the further step of opening a branch in Monterey.

"We wish to take this opportunity to thank the Times for their aid in making this possible.

"T. H. DUFFY,
"*The Seven Seas.*"

AN 8 PERCENT INCREASE

"As you know, every February Loewe & Zwierlein holds its annual spring fabric event. This year, in spite of recession talk, we had a very nice 8 percent increase during this month long event. We are looking forward with enthusiasm to our annual anniversary sale and anticipate increase in volume.

"LOEWE & ZWIERLEIN,
"HERBERT WALCHA."

SUBSTANTIAL GAIN

"A substantial gain for the month of February and so far in March are running well ahead. We feel that this spring season will be much better than 1960. Business looks good.

"J. C. PENNEY CO.,
"W. I. HANKS."

BEYOND OUR EXPECTATIONS

"Our San Mateo store is one of three locations. Concerning business here, we find such far beyond our expectations during this first year. We have done better in San Mateo in the opening of our Ski Shop than in our Sacramento grand opening which took place 5 years ago, and with the present excellent business indications, we expect before long to exceed anything we have ever done in our Sun Valley shop.

"HELM OF SUN VALLEY,
"C. J. HELM."

EXCEEDED LAST YEAR'S SALE

"Our fourth anniversary sale was a smashing success. The first day's business exceeded last year's, a feat which we thought to be impossible. There's no recession at Rakestraw's.

"RAKESTRAW'S MARKET,
"BILL RAKESTRAW."

TWENTY-SIX PERCENT INCREASE

"What we have done to offset the recession is simply to step up our advertising and do more of it. We have studied * * * all our advertising efforts, and have concentrated most of it in what we consider our best media * * * newspapers. This year we advanced our usual spring program about a month, but I think the consistency of our advertising has been one of the greatest factors in its effectiveness. The results: Last year a 22-percent increase over 1959; the first 2 months of this year a 26-percent increase over the same period last year.

"BAILEY RUG & UPHOLSTERY CLEANERS,
"D. W. BAILEY."

WHAT CAN "NORMAL" BE LIKE?

"My experience hereabouts may be somewhat unique in comparison with the majority of business firms in the area, being engaged not only in retailing, but also as a wholesaler and manufacturers' representative * * * as well as being relatively new in the area. Also, the retail branch of my business operations is predicated on a somewhat different and individualized approach to the selling of high quality imported furniture, home accessories and gifts from Scandinavia at low prices on a direct-from-importer-to-you basis.

"However, perhaps for the very reason of being engaged in both wholesale and retail operations, I have been privileged to observe both aspects of business in recent months. And because of being relatively new in the area, perhaps I have also been able to view the situation open-mindedly. In any case, I can assure you that I have found every justification for the confidence I originally felt when, after careful consideration, comparison and evaluation, I chose to set up business operations and make my residence in the beautiful and prosperous San Mateo area.

"As far as the public is concerned, the retail aspect of my business operations, known as Kjell of Norway, is perhaps the more familiar. * * * This retail store in San Mateo was opened early in February of this year. Of course, I had read and heard much about the so-called 'recession' and the dire forebodings for business and economic conditions. However, I felt that this talk was somewhat overdrawn, and ventured ahead anyway.

"From the first day the store was opened, business has not only justified but has exceeded expectations many fold * * * and if this kind of result can occur in what some people are terming a 'recession,' then I can only wonder what 'normal' business conditions are like in this wonderful section of this marvelous country. Of interest also may be the fact that the only advertising or promotion undertaken in behalf of my Kjell of Norway retail store has been a relatively small and modest program of advertising in the San Mateo Times. The results have been exceptional, and convince me of two things: (1) there is no 'recession' if you offer people what they want when they want it and at the right price; and (2) the Times is the strongest medium for advertising and promotion available to local businesses, and has readers who possess discriminating taste and

the buying power to act on purchases which appeal to them.

"KJELL OF NORWAY,
"KJELL REIMERS."

BUSINESS MOST GRATIFYING

"Thank to the faith of our clientele in us and in our country's economy, business is most gratifying at present and most encouraging for the future.

"ROBERT W. GATES OF BURLINGAME,
"ROBERT W. GATES."

GRAND RESPONSE

"Although we have only used the San Mateo Times and San Mateo Post once a week since our grand opening March 1, we are very happy with the grand response the readers of these papers have made to our ads.

"We will be making every effort to perpetuate the fine trend of customers that the Times and Post has helped us to achieve by continuing to give good values and service.

"FARMERS MARKETS, INC.,
"WILLIAM F. SCHMITZ."

SAVINGS BONDS SALES UP

"Sales of U.S. savings bonds in San Mateo County during January and February showed a big gain over the same period in 1960.

"Sales for first 2 months in 1961 totaled $973,623 against $882,512 a year ago, showing a net gain of $91,111 or 10 percent.

"GEORGE A. MCQUEEN,
"Volunteer County Chairman."

MOVING FORWARD

"The cooperation of the San Mateo Times in assisting the Hillsdale merchants plan and execute our 1961 spring merchandising events has been most rewarding.

"Business is good at Hillsdale and we are constantly moving forward. Our plans and programs are optimistic for the rest of 1961."

"HILLSDALE SHOPPING CENTER,
"CLARK C. MADSEN."

TEN-MILLION-DOLLAR EXPANSION

"California—particularly the bay area—has a challenge and an opportunity. We have the greatest number of people employed in the history of this State. But at the same time, the labor force in California during the last calendar year increased by more than 240,000. This means we must find jobs for this addition to our actual work force.

"People create business opportunity and markets. Business will take advantage of this opportunity, thus creating more job opportunities. Thus, the total velocity of growth will be accelerated.

"An example of this is the expansion now starting at the Hillsdale Shopping Center where approximately $10 million is being committed in new construction and store development. This is evidence that knowledgeable businessmen are aware of the increasing purchasing power. The expenditure of $10 million, in itself, creates hundreds and hundreds of job opportunities. The completed stores, such as the Emporium, will permanently employ hundreds of people. This is a local example of confidence.

"DAVID D. BOHANNON ORG.,
"DAVID D. BOHANNON."

NEW SALES RECORD

"Levy Bros. is confidently predicting and planning for a new sales record during 1961.

"LEVY BROS.,
"G. W. BROMFIELD."

GOOD RESULTS

"Very good results obtained in advertising in your St. Patrick's Day ad."

"MIRACLE AUTO PAINTING,
"JOHN THAYER."

BUSINESS IS GOOD!

"Here are examples that business is flourishing:

"1. Five hundred thousand dollar office building under construction in Mills Estate—27,000 square feet of luxurious offices for national tenants being built by George E. Congdon Construction Co. and Delcon Realtors.

"2. A new office building for the Girl Scouts Council of San Mateo County, to be constructed on the corner of Juanita and California Drive in Burlingame.

"3. New apartment buildings soon to be built: 121 Lorton Avenue, Burlingame; 1108 Peninsula Avenue; and 124 El Camino Real, Burlingame.

"4. Recent sales include the commercial property located at the corner of Murchison Drive and California Drive, Mills Estate—the future site of a service shopping center; an eight-unit apartment building on Lorton Avenue, Burlingame; a new four-unit apartment building in San Mateo; three new homes in Mills Estate and Burlingame Hills.

"DELCON REALTY,
"DON NAHRWOLD."

CONFIDENCE AND HARD WORK

"As far as we're concerned, our viewpoint is that there just isn't any recession or anything else wrong with business conditions that confidence and a little hard work won't cure.

"In our own particular case, we can report that every month so far this year we are well ahead of last year's sales volume. And last year was the biggest in our history (and we've been in business for many years).

"We commend the San Mateo Times on its positive approach to dispelling this recession talk * * * and we shall continue to depend on the Times not only for straightforward news coverage, but also, and of vital importance to a local business firm, for our advertising and promotional efforts to build our business even bigger.

"TALBOT'S TOYLAND,
"GORDON MOORE."

OVER $200,000 SALE

"We have just * * * completed a sale of a new 16-unit apartment house in Belmont at 180 Irene Court for the price of just under a quarter of a million dollars.

"NICK CARTER CO., INC.,
"G. CECIL MARTIN."

EMPLOYMENT

In the bay area, 1,125,200 people were gainfully employed during Februray 1961, as compared to 1,114,300 in 1960, an increase of 10,900. Unemployment is up, too 86,000 in February 1961, but shows signs of decreasing. During the second week of March, the number of claims started dipped to 264 from 362 claims started during the week of March 6 to 10. The problem in San Mateo is that new workers are arriving at a faster rate than new jobs. If we keep moving ahead, that problem can be licked.

INCOME

People in California have more money to spend than practically anywhere else in the United States. The county income per family, according to Sales Management Annual Survey of Buying Power, the leading authority on the subject, is $8,350. That rates as the highest in California and the 16th richest county in the United States. Income per person, $2,657, is even higher ranked. We are second richest in California and fifth richest in the United States.

RETAIL SALES

According to sales management, effective buying income makes San Mateo County the newest billion-dollar market in California. The 1960 effective buying income is $1,087,-225,000. Retail sales per family are $4,757.

POPULATION

According to the 1960 census, population in San Mateo County is 444,387. This represents a 10 year gain of 208,728 over the 1950 figure of 235,559. The number of dwelling units has more than doubled in 10 years to 143,039 from the 1950 number of units, 71,448.

INCREASES IN BUSINESS, INDUSTRY, AND TRANSPORTATION

There are over 6,000 businesses in San Mateo County, an increase of over 1,600 in 10 years. Likewise, there are close to 1,200 industries, an increase of 631 in 10 years. Air travel increased threefold in 10 years, with over 4½ million passengers passing through San Francisco International Airport. In the first 10 weeks of 1961, there were 33 announcements of new plants and 30 expensions of existing plants announced in this county. All evidence that San Mateo County is dynamic and growing.

Newsweek magazine's continuing survey of consumer buying plans indicates Americans are optimistic. A rundown on buying plans as indicated in the survey which was conducted during November and December 1960:

HOUSES

"House buying plans at year's end were at the same level as a year ago, but considerably improved over the second and third quarter rates. Plans to buy new houses were 2 percent below 1959 levels, but buying plans for older houses scored a 6-percent advance. The overall pattern shows that the decline in homebuilding is about over, and builders can expect a somewhat better year than they had in 1960."

APPLIANCES

"Of all the items surveyed, television sets showed the best improvement over 1959 levels, with buying plans up 21 percent. Hardest hit were the 'luxury' appliances: buying plans for air conditioners, dishwashers, driers, and freezers were running, on the average, some 20 percent below 1959 levels. The more essential appliances whose market depends on replacement demand (e.g., refrigerators, ranges, and vacuum cleaners) were holding near the 1959 levels."

AUTOMOBILES

"Plans to buy autos were 5 percent above 1959 levels in November and December, due to a 22-percent surge in plans to buy used cars. Plans to purchase new cars were 4 percent below the 1959 figures. While a better year than 1960 is still possible, it's more likely that auto sales this year will be somewhat less than in 1960 and somewhat more than in 1959. Best sales area: The South and Far West."

VACATIONS

"Americans will travel more in 1961 than in 1960 although they may not travel as far. The biggest gains were in vacationers' plans to travel in their own State and to visit neighboring States, or Canada. Plans to take a European vacation were down 25 percent, and plans for trips to other places abroad dropped 26 percent."

Centennial Anniversary of the Civil War

EXTENSION OF REMARKS
OF
HON. JOHN V. LINDSAY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, March 27, 1961

Mr. LINDSAY. Mr. Speaker, in this year of the centennial anniversary of the

Civil War many admirable ceremonies, publications, and other forms of commemoration are being conducted to remind our citizens of the great tragedy of a century ago out of which our forebears forged in blood and pain the more perfect union of which we are the beneficiaries.

One of the most notable of the centennial events is the publication of Newspaper Americana's Civil War papers. It was recently my privilege to be presented with Newspaper American's copy of the New York Herald headlining the inauguration of Abraham Lincoln as President of the United States.

Newspaper Americana's Civil War papers, published by Mr. Robert Miller, of New York City, are a significant set of historical documents which constitute a worthy contribution to the centennial commemoration while contributing to the knowledge and edification of all who read them.

University of Redlands, Redlands, Calif., Associated Students President Writes Congressman Clyde Doyle, 23d District, California, in Support of Youth Peace Corps

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 10, 1961

Mr. DOYLE. Mr. Speaker, by reason of unanimous consent heretofore granted me so to do, I wish to call to your attention, and the attention of my other distinguished colleagues, a letter I have recently received from the student body president, Redlands University, Redlands, Calif., concerning the student council's support of the "proposed Youth Peace Corps":

ASSOCIATED STUDENTS,
UNIVERSITY OF REDLANDS,
Redlands, Calif., March 1, 1961.

Rep. CLYDE DOYLE,
House Office Building,
Washington, D.C.

DEAR REPRESENTATIVE DOYLE: The student council of the associated students of the University of Redlands takes this opportunity to express to you its deep concern over the recently proposed American Youth Corps and we enclose a resolution adopted by the student council of the University of Redlands supporting the proposed Youth Peace Corps.

As the resolution indicates, we believe the establishment the the Youth Peace Corps would again demonstrate to the world that the United States is still primarily concerned over peace—in eliminating poverty and underdevelopedness from the world for that reason alone. We find that the positive benefits of the Youth Corps, in terms of American public relations and foreign policy effectiveness, far overshadow any minor problems involved in establishing it.

In actively supporting the Youth Corps proposal, we are not advocating, and we do not believe it is even implied in the proposal, that the American Armed Forces be weakened. This proposal is supplementary in our national defense, but nonetheless vital. We are especially concerned over the draft-alternative controversy, and we cannot help but feel that all the arguments which have been asserted thus far objecting to the selective service alternative are nothing short of ridiculous.

We send you the enclosed resolution, unanimously adopted, and the accompanying student newspaper articles, with the hope that your convictions will lead you to actively support the Youth Peace Corps idea—which perhaps is the most dynamically new, forceful and idealistic peace proposal in years.

Thank you for your consideration.

Sincerely yours,

JERRY TINKER,
Student Body President.

The Blame for the Deficit

EXTENSION OF REMARKS
OF
HON. J. ARTHUR YOUNGER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 10, 1961

Mr. YOUNGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Roscoe Drummond from the Washington Post of April 1, 1961:

BUDGETS AND POLITICS—THE BLAME FOR THE DEFICIT

(By Roscoe Drummond)

President Kennedy is, I think, making a serious mistake by claiming that the next two budget deficits, this year's and 1962, are due to Eisenhower "miscalculations."

This claim is made over and over again in the President's message and in Budget Director David Bell's testimony. Repetition does not make it true. The budget figures just do not bear out this claim.

This kind of thing can't do anybody any good. Certainly it is not going to win Mr. Kennedy the support of those Democratic and Republican liberals who believe that a larger Federal deficit is desirable during the present recession. And it is not going to win Mr. Kennedy the support of those Republican and Democratic conservatives who will judge the President's "fiscal responsibility" by what he does, not by what he says.

Mr. Kennedy is not one who is overly eager to spend the public money. He does not belong to the school of "when in doubt, let's spend." When you consider the high cost of defense and the urgency of the Nation's needs—highways, housing, schools and aid to depressed areas—the Kennedy administration has acted moderately in adding to probable Eisenhower deficits.

But the President cannot claim that the projected 1961 and 1962 deficits will be the result of past misjudgments on income and spending. Such a claim is sheer political propaganda. It is inaccurate and misleading, and violates a pledge which, as candidate and President, Mr. Kennedy made: to neither blur nor sugar-coat the facts.

Here is the way Mr. Kennedy put it in his budget message: "Should there be a deficit in 1962, it will be the consequence of the overestimation of revenues and underestimation of expenditures" in Mr. Eisenhower's January budget.

The catch in this claim is all in one little word—the word "it." The "it" refers to the anticipated deficit 18 months from now. The budget message repeats again and again that the deficit will be limited to the miscalculations—the overoptimism of his predecessor, not at all to the Kennedy administration's own spending programs.

But do the figures in the Kennedy budget confirm the Kennedy words? Mr. Kennedy's own figures show that, while the new administration's expenditures do not alone create the deficits this year and next, they do increase the size of those deficits appreciably. That seems to me quite different from what the President is saying.

It is quite true that, because of the recession, the economy is producing less revenue than the Eisenhower administration expected, that Mr. Eisenhower underestimated his own expenditures. The truth is that Mr. Eisenhower would almost certainly have had a deficit and that Mr. Kennedy has increased it. The facts are these:

Mr. Kennedy's additional spending programs this year will produce an estimated deficit of $2,169 million while, even on Mr. Kennedy's own calculations, the Eisenhower deficit would have been $805 million. And in June, 1962, the Eisenhower programs would have produced a $704 million deficit while the new Kennedy programs, including $655 million increase in the defense budget, will produce a deficit of $2,826 million.

President Kennedy may have felt he had to go through this strained political exercise of blaming his predecessor for the upcoming budget deficits. Only 2 months ago he went far out on a precarious limb by declaring that his programs would not "of and by themselves unbalance" the earlier budget—and there he hung.

The President can reasonably defend his spending programs as prudent and necessary, but what seems unfair is to give so much "credit" to Mr. Eisenhower for the size of the deficits.

Free Flow of Dairy Products Between the States

EXTENSION OF REMARKS
OF
HON. FRED MARSHALL
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 10, 1961

Mr. MARSHALL. Mr. Speaker, I call to the attention of the House a resolution adopted recently by the Minnesota State Legislature urging Federal action to encourage the free flow of pure and wholesome dairy products between the States.

This problem has concerned us for some time since unrealistic regulations have frequently been used to create and protect monopoly markets that are costly both to consumers and to the dairy industry itself. By the same token, reasonable and constructive action in this area will benefit the entire industry by improving and expanding the market for quality dairy foods.

The resolution follows:

RESOLUTION 3

Resolution memorializing the Congress of the United States to enact laws to permit the free flow of dairy products

Whereas the economy of the State of Minnesota is based to a large degree upon its large and productive dairy industry; and

Whereas production of pure and wholesome dairy products in the State of Minnesota exceeds the consumption in the State; and

Whereas certain dairy interests in the eastern markets have been instrumental in

the erection of artificial milk barriers under the guise of health barriers which inhibit the free flow of milk and dairy products from the productive areas of the Midwest; and

Whereas it would be to the mutual interest of the midwestern producer and eastern consumers to have Federal health standards for milk and dairy products which would be uniform throughout the Nation: Now, therefore, be it

Resolved by the Legislature of the State of Minnesota, That the Congress of the United States be requested to enact Federal laws which will permit the free flow of pure and wholesome dairy products between the States; be it further

Resolved, That the secretary of state be requested to send copies of this resolution to the Members of Congress from the State of Minnesota, to the President of the United States, and to the Secretary of Agriculture.

The Victory of Bataan

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 10, 1961

Mr. VAN ZANDT. Mr. Speaker, on Sunday, April 9, the 19th anniversary of the fall of Bataan was observed here in Washington when the two streets near the Philippine Chancery named Bataan and Corregidor by the District of Columbia Board of Commissioners were dedicated.

The ceremonies were attended by high Government officials as well as many former servicemen who took part in the Pacific war. Recognition was given to the loyalty of the Filipino people to the ideals of democracy and freedom as shown by those who fought on Bataan during the dark days of 1942.

The following article by Gen. Carlos P. Romulo, Philippine Ambassador to the United States, describes in detail the ceremonies as well as a defeat which was turned into a great victory.

The article follows:

THE VICTORY OF BATAAN

(By Gen. Carlos P. Romulo, Philippine Ambassador to the United States)

Sunday, April 9, is the 19th anniversary of the fall of Bataan. To commemorate the event, the Board of Commissioners of the District of Columbia decided to name two streets near the Philippine Chancery, Bataan and Corregidor. At the official naming ceremony which will take place at 3:30 in the afternoon, Secretary of State Dean Rusk will deliver the main address.

That Bataan and Corregidor should thus be remembered in the Capital City of the United States recalls the inner meaning of the blood brotherhood between the American people and the Filipino people that was sealed on that little peninsula and on that little rock whose names are enshrined in the histories of both our countries.

Bataan fell but its fall was really a victory. It was the victory of the human spirit. It was such a victory because it was a strange and wonderful symbol of what the 20th century could mean to the human race. Ever since these terrible days of 1942 we have been aware of this symbolism. It does no harm to repeat it now—because, like all great verities, it seems to acquire new truth each time it is repeated.

We recall the victory of Bataan: The demonstration to the whole world that people of different races, different origins, different backgrounds, have a common cause in liberty. That the old and despicable balance of mastery and slavery, of colonial power and subject nation, can be wiped out in a spirit of mutual trust and respect. That the men of the west and the men of the east can face a common foe in absolute and unquestioned equality.

That was the victory of Bataan. It sealed the bond of friendship between Filipinos and Americans—a bond already established through the long years that led up, before the great war came, to the guarantee of national independence. As the long shadows of military defeat fell over those Philippine and American warriors in the tropical night in Bataan, the victory of the free spirit hovered overhead. It foretold the irreversible march of nationalism in Asia and Africa, the massive and exciting roster of nations that would quickly win their freedom in the years to follow—India, Pakistan, Burma, Ceylon, Indonesia, and all the others.

The victory of Bataan showed the way. It was important in time of war. It is even more important now. For we can now place the troubled problems of relationships between nations against the background of the lesson we taught ourselves on Bataan. Today we are faced with a new menace. We are really still fighting the battle that we fought on Bataan. It is a new threat, this menace of imperialistic communism. We see it in Laos, in South Vietnam, in Berlin, in the Congo, even in the august halls of the United Nation. And under the leadership of President Carlos P. Garcia, we are meeting it in the Philippines with the same determination and the same courage that we showed in Bataan 19 years ago.

Asia and Africa are afire with nationalism. This powerful force, which in a different incarnation gave Europe its bloodiest centuries and its most magnificent civilizations, can now do the same, one or the other, in the rich and vast continents peopled by human beings in the millions. American survival and that of freedom itself depends on the capacity of the people of the United States to recognize what is happening in the world; and, having recognized the nature of the upheavel, on the ability of American leadership to act with wisdom and imagination.

To us in the Philippines and to you here, Bataan is a symbol of the bond between us. Bataan is of the past; but the bond lives, and must never be shaken. And today we look to America for more than maintenance of that bond. It may be a natural human impulse to pay closest attention to those who waver than to those who are trusted; to give greater help to the uncertain, the uncommitted, than to the committed, to take stanch allies for granted. But it may be good to remember that this impulse, however human, does not always coincide with the realities of world affairs. Bataan should always stand as a reminder of the continuing mautuality of Philippine-American friendship.

So today, in 1961, we Filipinos and Americans recall the symbolism of Bataan—the spiritual victory that makes the military defeat look puny—and in the remembrance of that gerat moment in our common history we have the right to stand side by side through all the years to come, certain of the rightness of our cause and the timelessness of our frinedship.

(EDITOR'S NOTE.—General Romulo was General MacArthur's aide-de-camp in Bataan, Corregidor and Australia and returned to the Philippines with the U.S. forces that landed in Leyte.)

Putting the Farm Situation in Proper Perspective

EXTENSION OF REMARKS
OF
HON. DON L. SHORT
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 10, 1961

Mr. SHORT. Mr. Speaker, we read so much concerning the farm situation that I am sure a great many people in this great country of ours are completely confused.

Some publications emphasize the fact that statistics show farmers as a class are not receiving their fair share of the national income and are not deriving proper remuneration for the time they devote to producing the necessary food and fiber for the American people and an ever-growing number of people in foreign lands. They make the argument that the farmer is particularly deserving of sympathetic consideration by the American people and treatment by the Congress of the United States.

On the same day, you can read in another publication a story condemning the farmer for being subsidized and pointing out the great cost to the taxpayer of the farm programs.

There is some truth in each story and the degree of truth is almost as broad as the total number of farmers in the country and the number of other lines of endeavor which are also directly or indirectly subsidized.

I believe the last election indicated that a majority of the farmers are about like any other cross section of American citizens. They do not want sympathy. They want an unrestricted opportunity to run their own farms to the best of their ability and judgment and an even break in our competitive economy. In spite of Senator Kennedy's lavish promises of help, sympathy, and higher price supports during the election campaign, many predominantly agricultural districts elected Republicans to Congress. Why did this happen? Largely, I believe, because a majority of the farmers know that Republicans are just as sympathetic with the problems of agriculture as the Democrats. Further, that the farmer is considerably disillusioned over the results of Government farm programs over the past 25 years. He has come to recognize that for some reason, the price of some of his products such as cattle, hogs, potatoes, and soybeans which have had little or no help from the Government are enjoying the highest prices.

The farmer recognizes that if prices are to be maintained at a high level by Government assistance, production controls must be applied. Our sizable surpluses of wheat, corn, cotton, and grain sorghums—to name only a few—are the concrete proof that with a price incentive established by law production will exceed consumption unless production controls are in effect.

I believe the farmers do not believe the so-called supply management approach endorsed by Secretary of Agri-

culture Freeman can effectively apply to every farm. When Senator Kennedy stated in many speeches in farm areas his belief that all of agriculture must have "supply management" by Government, he scared the daylights out of a lot of farmers who still think they can do a better job of running their farms than any Federal agency in Washington.

Mr. Speaker, Newsweek magazine in its issue of April 10 carried an excellent editorial entitled "The Farmer's Best Friend," which puts the farm situation in extremely clear perspective. I ask unanimous consent that it may be printed with my remarks in the Appendix of the RECORD:

THE FARMER'S BEST FRIEND

(By Raymond Moley)

Last summer after traversing several of the major farm States during an automobile trip from New York to the Pacific coast, I expressed in this space some doubt whether there was any identity between the farmer himself and the image so pitifully portrayed by his political friends. For by observation and from what I heard along the way, the farmer's lot was not so unhappy after all. Then came the election and a great majority rejected the political party which had promised most to the farmers.

President Kennedy has now presented to Congress a plan the enactment of which may take weeks of hearings and debate. Then, if adotped, many months will pass before it is in full operation. Meanwhile, natural developments in agriculture will continue which may go a long way toward remedying the farmer's problems. If given time, the farmer may save himself and measurably eliminate Government from his business.

To the farm politician "the family farm" is an expression which calls for devout genuflections and muttered prayers. Scratch the skin of a family farmer in the Midwest and the hot blood of a score or two Congressmen and Senators will flow copiously.

Those politicians have been telling us about how farmers have been driven from their ancestral holdings in great numbers. Senator BENTON said a century and a quarter ago that in those stricken farm regions there is no sound but the auctioneer's hammer knocking down the family heirlooms.

SIZE BRINGS EFFICIENCY

It is true that the family-size farm is vanishing. But not the family farm. It has simply been growing in size and in well-being.

More than 1 million farms have "disappeared" in the past 5 years—a drop of 23 percent. In 1920 the average size of a farm was 148.2 acres, in 1940 170 acres, in 1954 it was 242.2 acres, and now it is 302.4 acres. This change has come about through the operation of economic law in a free society. It is an example of free enterprise. And it has not been accompanied by increasing distress.

A farmer can no longer realize a profit on what used to be a family-size farm. He must have more of the techniques of agriculture and more mechanical equipment. The farmer has learned to use machinery and to take advantage of new chemical discoveries. He now has the use of the internal-combustion engine and electrical equipment. His production per hour of work has risen. He must have more land, fully to utilize his time and equipment.

NATURE TAKES OVER

The economic status of the farmer has been gaining as the number of farms has decreased. Seventy-nine percent of the farms in the United States are owned by the people who operate them, an increase of 22 percent since 1935.

But what of those "poor" fellows who have left the farms which they have sold to other farmers? They have been getting excellent prices for their acres so that they carry away to other regions or into the towns a nice package of greenbacks.

In 1959 the selling value of land and buildings averaged out at $121 per acre, an increase of 44 percent in 5 years. For whole farms the average value of land and buildings has increased 63 percent since 1954. There are 12 percent more tractors than in 1954, 12 percent more trucks, 7 percent more combines, and almost 100 percent more forage harvesters and balers. More than 35 percent of the farms have two or more tractors.

I was told by a farm editor in Tulsa 2 weeks ago that until recently a good deal of "La Salle Street money" was available for financing corporate farms but that it has been "scared away" by the high prices demanded for farmland.

The farmer is irked by the controls now imposed upon him. Essentially he believes in a free market. He wants above all to be rid of government in his business. This cannot be accomplished at once—that would be a disaster. But surely and steadily the Government should take itself out of the farming business. It is getting to be a sector of the economy which will be able to stand on its feet if it gets the chance.

Freedom and Responsibility Within the University Community

EXTENSION OF REMARKS
OF
HON. JEFFERY COHELAN
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Monday, April 10, 1961

Mr. COHELAN. Mr. Speaker, Clark Kerr, President of the University of California, is one of the foremost leaders in the field of higher education today.

At the university's 93d Charter Day ceremonies in March, President Kerr made some penetrating and thoughtful remarks regarding freedom and responsibility within the university community.

I believe that my colleagues will find these remarks of interest and value.

EXCERPTS FROM PRESIDENT KERR'S CHARTER DAY ADDRESS

And now for a few moments I should like to share with you a concern which goes to the very heart of the university—a concern about freedom and responsibility within the university community. In 1953 I delivered my first farewell to a graduating class of the University of California and I chose to welcome the members of that class as new alumni. One paragraph from those remarks applies perhaps as much today as it did then:

"One reason for stressing the importance of the alumni relates to the times in which we live. This is perhaps the most continuously troubled period internationally which has ever beset our Nation, and the consequences are felt far beyond the Army, the Navy, and the State Department. We do not exaggerate when we speak of ourselves as engaged in an enormous struggle for the preservation of the right of personal independence against the constantly pressing forces of totalitarianism. The consequences of a political climate of this sort will always be severely felt upon a university campus. The lifeblood of an intellectual community is free inquiry and discussion, yet on every hand the question is raised whether there is a right to freedom of inquiry and freedom of discussion, with the Nation in its present peril. Thus an important and even imperative function of an alumni body is to carry back to the community, by means which the college professor cannot command, the conviction that there cannot possibly be any connection between blindness and survival; that the right to free inquiry, even the necessity of free inquiry, is an integral part of the strength of a progressive society; that the nonconformist, as contrasted with the conspirator, today as in ages past also serves humanity and that the university is one of his havens; and that when freedom of thought and expression has died on a university campus, it has died everywhere."

Freedom of thought and expression has not died at the University of California; nor, despite the currently rising passions of the radical left and the radical right, will it die. As in all the affairs of men, freedom must be matched by responsibility if freedom is not to die. And the university has the responsibility to insure that the search for truth will never be subverted internally. For this precise reason, the University of California has refused to employ persons whose commitments or obligations to the Communist Party, or to any other organization prejudice impartial scholarship and the free pursuit of truth. That has been the policy of the regents and the academic senate for many years. That is our policy today. That will continue to be our policy.

Members of the university community, faculty members and students alike, deserve the same right to freedom of thought and expression which every citizen enjoys outside the campus boundaries. They are not, however, entitled to trade on the university's good name, or to use the university community or a part of it as a captive audience, or to violate the law. The university, in turn, is not entitled to place limitations upon the off-campus actions of students or faculty members in their roles as private citizens. Participation in the university community does not sever either the rights or the obligations of citizenship in the broader community.

Those of little faith are disposed today to see in one episode, or in one speech, the end of all they hold dear. But America is stronger than that; the way of freedom has more to commend it than that. Our Nation was founded not on fear, but on faith. Those persons who act as agents of suspicion and distrust, or who resort to conspiratorial action to defeat another conspiracy, are unwittingly forsaking the very heritage they claim to protect. Our American ideals are not fragile objects of historical interest to be sheltered from the reality of today's world. They are strong and resilient and as serviceable today as in 1776. They need no special care except daily exercise, and no shield but truth.

We need today a fresh avowal of confidence in traditional democratic principles and in good American commonsense and decency. We need a reaffirmation of faith in our citizenry, including its younger members, among them the students at this university; and of faith in the established institutions of our society, including its universities, among them our own. We welcome the voices of sanity and reason that are giving expression to that faith and confidence today.

Let us as members of a great academic community assembled here this afternoon rededicate ourselves and our institution to both preservation of freedom and the exercise of responsibility.

I should like to conclude by quoting from the celebrated essay by Cardinal Newman

when he was rector of the Catholic University of Dublin, on "The Idea of a University." The university, wrote Cardinal Newman, "is the place to which a thousand scholars make contributions; in which the intellect may safely range and speculate, sure to find its equal in some antagonist activity, and its judge in the tribunal of truth. It is a place where inquiry is pushed forward, and discoveries verified and perfected, and rashness rendered innocuous, with error exposed by the collisions of mind with mind and knowledge with knowledge."

That is "The Idea of a University." That is the "idea" of the University of California.

How To Depress Areas

EXTENSION OF REMARKS
OF

HON. STEVEN B. DEROUNIAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, April 10, 1961

Mr. DEROUNIAN. Mr. Speaker, who fools whom with "pie-in-the-sky" legislation? The so-called area redevelopment effort of the Federal Government was discussed in the Wall Street Journal, this morning, in an article by Paul Duke, and further in a sensible editorial, both of which I submit for the interest of the Members of Congress:

HOW TO DEPRESS AREAS

By arbitrary definition of the Government, a "depressed area" is one which has reached a certain percentage of unemployment. Yet, as Mr. Duke notes on this page today, even the backers of the Federal depressed-areas bill before Congress doubt that it will have any appreciable impact on unemployment.

There are many reasons. A region receiving Federal aid to attract new industry may simply attract industry—and employment—from another area. In any case capital is by no means the only consideration in attracting industry; some depressed areas are depressed because new industry has no logical reason, in the form of good transportation or natural resources or whatever, for coming to them.

Nor are the defects of this proposed legislation solely negative. A community that is truly depressed for inescapable economic reasons cannot be given prosperity by Federal aid. It can only be put on a Federal dole. Such subsidy is hardly a prescription for economic growth or for combating unemployment; it is a prescription for permanent depression.

Thus the trouble with this bill, it seems to us, is that it misunderstands just about everything it is trying to deal with. It misunderstands the problem of unemployment and it misunderstands the economic development of the United States. It even manages to misunderstand human nature by supposing that handouts create incentive.

Is there, then, nothing the Government could do about depressed areas? There certainly is. The biggest imaginable spur to general economic growth would be a Federal spending-revenue balance that permitted large tax cuts.

That, it will be objected, would not help the people in an area depressed because the economy has passed them by. But real, noninflationary economic growth would obviously reduce unemployment and attract those in depressed areas to firmer ground. Since when is it a crime for Americans to follow the beckoning of opportunity?

The contemporary political mind, admittedly, doesn't work that way; it prefers to preach economic growth and practice stagnation. Even so, it would seem axiomatic that any welfare measure must provide welfare; otherwise it is a fraud and delusion on the general taxpayer and the specific would-be recipient. And that isn't even very good politics.

DEPRESSED AREAS

AID LEGISLATION RAISES SKEPTICISM EVEN AMONG BACKERS

(By Paul Duke)

WASHINGTON.—Within the next couple of weeks an uncertain Congress will put the final legislative touches on an ambitious new Federal program that even some ardent supporters doubt will be able to accomplish its assigned task.

The bill, a major recommendation of the Kennedy administration, is designed to rehabilitate areas suffering from prolonged unemployment by funneling more than $400 million in Federal grants and loans into hard-hit reigons of Pennsylvania, New York, West Virginia, Kentucky, Michigan, Illinois, and elsewhere.

Yet, even those who have fought hardest for the new program are skeptical of its potentialities. A Democrat from depression-ridden West Virginia is typical. "If anybody thinks this will solve the unemployment problem, he's crazy," the lawmaker declares.

If such a remark seems strange, it expresses perhaps the overriding contradiction of a new Federal program that is riddled with paradoxes. Consider: President Kennedy listed aid to depressed areas as part of his anti-recession program to pep up the economy quickly and put people back to work. Yet, Labor Secretary Goldberg and "liberal" Democratic sponsors in Congress don't regard the program as an antirecession device at all, but rather an attempt to revive communities over a period of years. "There's nothing (in it) that will put a man back to work tomorrow," says a House Democrat from Ohio.

Far from curing unemployment, many liberals who support the new program fear its chief impact may be merely to reshuffle unemployment geographically. That's because, despite alleged safeguards written into the bill, they're afraid the result may be to encourage the pirating of industry from one region of the country to another. "The Jolly Roger is flying at the masthead of this bill," gripes a New England Senator.

To win the votes of southern Democrats, a special provision was inserted in the bill to permit Federal aid for rural areas. Yet, almost no one thinks such a program is necessary because the Agriculture Department already has a rural development plan.

LOTS OF CAPACITY

Though the aid-to-depressed-areas scheme is designed primarily to help medium-sized communities, such industrial giants as Detroit and Pittsburgh would also qualify for assistance in building new plants and for community facelifting projects. Yet, their unemployment troubles stem more from unused rather than a lack of industrial capacity. "We've got more damned plant space in our State than we know what to do with," snaps a Michigan Democrat.

These, then, are just some of the more obvious difficulties involved in undertaking from Washington the job of invigorating local economies. The more subtle complexes can be enormous. Solutions that may seem logical on the surface can turn out to be illogical upon closer examination; actions to help can produce conuteractions of harm.

Consider, for example, the plight of a major company that planned to move its plant from one area of a State to another. To soften the impact on the community it was leaving, the company decided on what it thought was a bold stroke—save the jobs of its 300 workers by taking them along. Not that simple, however. New employment opportunities were scarce in the community where the plant was relocating, and the influx of 300 new workers threatened to create bitter antagonism from the local citizenry.

If the program's chances of success are so doubtful, why then is it all but certain to become law? The answer is not unfamiliar in the realm of politics: It's hard to oppose extending a helping hand to the drowntrodden, even if the gesture outdoes the accomplishment. Most liberals, when discussing aid to depressed areas, will echo the philosophy voiced by President Kennedy in his inaugural address: "If a free society cannot help the many who are poor, it cannot save the few who are rich." But many of these same liberals, when pinned down on the potential effectiveness of the legislation, agree with one colleague who concedes that "the chief value of this bill will be symbolic." Or, in the words of still another: "This is like the United Nations, the faith will greatly exceed the accomplishment."

To be sure, supporters of the depressed areas legislation see some solid good coming from the new multi-million-dollar rehabilitation effort. The very passage of the legislation, they believe, will lend new encouragement and hope to scores of areas on the economic skids. In more practical terms, backers believe the program will genuinely help some areas which have been unable to attract industry because of a lack of lending funds.

In West Virginia, for example, a shortage of private credit is cited as a major adverse factor in the State's drive for new businesses. Proponents of the new legislation note that the Pennsylvania Industrial Development Authority has lent $17 million since its creation 5 years ago and this has accounted for 26,000 new factory jobs with payrolls of $99 billion annually. If such a program can work at the State level, they ask, "Why can't it work on a bigger scale nationally?"

THE 1946 EMPLOYMENT ACT

Advocates claim that the Government already has a mandate to clear up pockets of depression under the 1946 Federal Employment Act which calls for policies promoting full employment in the United States. The longer Uncle Sam remains aloof, they contend, the more serious the blight becomes. Besides, the argument goes, the Government is losing potential tax revenue from economically depressed regions while Federal and State welfare and unemployment compensation payments mushroom.

Moreover, the plan's pushers envision it as the last barrier to a general public works program that would cost billions instead of millions. Commerce Secretary Hodges has already said that a new PWA will be necessary unless the economy snaps back soon and reduces the number of areas with substantial unemployment, now at 101.

Critics don't question the motives behind the new program, only its chances for success in easing unemployment. "This is one of the biggest phonies to come down the legislative pike in a long time," grumbles a Virginia conservative. What provokes him and others of like mind is that the program probably will take years to produce results, which may well be niggardly. For example, it's been estimated that only about 1 of every 17 unemployed workers in a depressed locality could hope to obtain a job as a direct result of the Federal help that's contemplated.

Most importantly, perhaps, many opponents think the program skirts the root problems of persistent unemployment. "It prescribes a painkiller without being concerned whether the pain is caused by an incurable cancer or a hangover," cracks a Western GOP critic. Better, the foes say, to remove the 10-percent excise tax on automobiles to help stimulate car sales; or to launch a crash program to find new uses for

coal; or to undertake a major job retraining program; or to reconsider trade policies.

Besides, the argument goes, factors other than favorable financing are frequently more important to business in choosing a plant location. What industry can overlook an area's transportation connections, the availability of raw materials, and the closeness of markets? Too, business is increasingly concerned about the character of the community—its schools, its recreational facilities, the quality of the work force. Some lawmakers suggest the Federal inducements will tend to attract only speculative and undesirable industries looking for windfall aid.

And, of course, it's pointed out that the Federal Government already is offering some area assistance through the Small Business Administration and the community facilities loan program. Moreover, 22 States now have privately financed development corporations to help in the obtaining of credit; Pennsylvania and nine other States have gone even further and set up State-supported credit corporations. New Hampshire and Maine have established public authorities for the construction of industrial parks.

PHILOSOPHICAL QUESTION

But even granting that economically stricken regions do need more help, there's the philosophical question of whether the job should fall to a special Federal program. And opponents pose these other questions: Should hard-hit communities be helped while others, only less slightly depressed, be denied assistance? What about the communities which aren't depressed but are earnestly trying to build up their economies and will face rougher competition in attracting new businesses? Should the Government favor some areas over others? Concludes a New England conservative: "This is a bad bill because it forces Uncle Sam to play favorites among his children." Possible upshot: Greater political pressure to enlarge the program to include more areas.

For all their self-doubts, supporters of the new depressed areas legislation tend to reject as exaggerated claims that the program eventually will expand significantly. "This is a rifle for a specific target," proclaims a Pennsylvania Democrat. "It was never meant to be anything else, and if properly administered, should not be anything else."

Nevertheless, friend and foe alike can pretty much agree on one basic conclusion: Even if the rifle does strike the target, it's not likely to penetrate deeply.

A Well-Known Constituent in Washington

EXTENSION OF REMARKS
OF
HON. JAMES C. CORMAN
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 10, 1961

Mr. CORMAN. Mr. Speaker, the Nation's Capital has had the distinct honor recently of having as a visitor a well-known constituent of mine, Mr. Jack La Lanne. Mr. La Lanne is more than a television personality and advocate of physical fitness. He is a welcome fixture in households from coast to coast. His bright and cheerful program each morning has brought enjoyment to the lives, and slimness to the waistlines, of millions of American housewives and husbands.

During the last week, while Mr. La Lanne has been here in Washington, D.C., he has been in touch with members of the Government on the subject of our country's physical fitness. He has an especial interest in the Peace Corps, and I am certain Mr. La Lanne's counsel would do much to enhance the image of a vigorous American youth that we hope to project abroad through this exciting experiment.

Mr. La Lanne, as I said, is more than a television personality. His articles and books on physical fitness are read by thousands and thousands. Yet that is not all. For Mr. Jack La Lanne is, besides that, a man who devoutly believes in what he professes. He lives the sort of life he advocates, and is walking proof of his own good advice.

Next week, Mr. La Lanne will be broadcasting his daily television show from Baltimore. I would commend his counsel, and his programs, to all my colleagues.

Address of Constant Mierlak, National President of Byelorussian-American Association at the Commemoration of the 43d Anniversary of Byelorussian Independence at the Biltmore Hotel, New York City, on March 26, 1961

EXTENSION OF REMARKS
OF
HON. SAMUEL S. STRATTON
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, April 10, 1961

Mr. STRATTON. Mr. Speaker, on March 26, 1961, the Byelorussian-American Association held a special ceremony at the Hotel Biltmore in New York City to commemorate the 43d anniversary of the independence of Byelorussia. It was my privilege to be present at that occasion and to bring to the group the greetings of the Congress of the United States and our assurance that we share with them the hope that the couutry of their origin will soon be free from Soviet oppression.

Under leave to extend my remarks, I include the text of the address made to the group by Mr. Constant Mierlak, national president of the Byelorussian-American Association and also the text of a resolution adopted unanimously by the meeting. The address and text of the resolution follow:

ADDRESS OF CONSTANT MIERLAK, NATIONAL PRESIDENT OF BYELORUSSIAN-AMERICAN ASSOCIATION AT THE COMMEMORATION OF THE 43D ANNIVERSARY OF BYELORUSSIAN INDEPENDENCE AT THE BILTMORE HOTEL, NEW YORK CITY, ON MARCH 26, 1961

Your Excellencies, distinguished guests and representatives of friendly nations, ladies and gentlemen, "we, therefore, the representatives of the United States of America, in General Congress, assembled, appealing to the Supreme Judge of the world for the rectitude of our intentions, do, in the name, and by authority of the good people of these colonies, solemnly publish and declare, That these United Colonies are, and of right ought to be free and independent States."

This is a quotation from the Declaration of Independence of the United States of America in Congress on July 4, 1776.

Nineteen years later Byelorussia, at that time known, as the Commonwealth of the Grand Duchy of Lithuania, lost her independence, having been forcibly incorporated in 1795 into Imperial Russia.

Since then, the United States of America enjoyed the blessings of freedom in all branches of national life and built the most powerful and democratic nation in the world.

On the other hand, Byelorussia, during 123 years, endured russification and colonial exploitation, as a result of which, Byelorussia became the poorest country of all in the Russian Empire.

Having lost her independence, Byelorussia lost the right to live by her own laws, to speak her own language and to pray in her own churches.

During that time of persecution and slavery imposed by imperial Moscow the Byelorussians attempted several times to regain their freedom and independence and finally they succeeded in 1918, on March 25.

The Presidium of the Rada (Parliament), which was elected at the All-Byelorussian Congress in December 1917, declared in its Third Constitutional Act:

"Now we, the Rada of the Byelorussian Democratic Republic, are liberating our country from the last vestige of state dependency imposed by the Russian monarchy upon our free and independent country.

"From now on, the Byelorussian Democratic Republic is proclaimed a free and independent state. The peoples of Byelorussia through their elected constituent assembly shall themselves determine the future relations of Byelorussia with other states."

Although the Byelorussian independence was declared 142 years later, the wording of the declaration is almost identical with that of the United States. The fate of these two nations, however, has been entirely different due to many factors: a different geopolitical location being one of them.

Today, 43 years later, we gathered here to commemorate the magnificent act in Byelorussian history and also to pay a tribute to the heroic generation of that time, who envisoned a free and independent Byelorussian state.

We also shall pay tribute to all who died since then defending the principles of freedom and democracy.

Free and independent Byelorussia, as well as other countries which became a part of today's Soviet Union, could not resist for a long time and fell victim to new Soviet or Communist imperialism which surged from the old traditional Russian messianism.

The historic Russian imperialism, now under new leadership, systematically destroyed people after people, nation after nation. Thus from 1920 to the present they have subjugated at least 23 nations which had been independent in the past and lived peacefully, respecting human rights and international treaties. Since that time the Russians completely destroyed and virtually wiped out from the surface of the earth about seven nations or ethnic groups consisting of several millions of people.

Nobody seems to have learned the lesson from Byelorussian history and from history of other nations which later on also lost their independence, that Communist imperialism destroys everything which stands in its way to world domination.

Through policy of containment, coexistence, etc., and due to misunderstanding of the nature of Russian imperialism and to our American complacency the Communists gradually succeeded in spreading their domination and influence as far as 90 miles from U.S. borders, and they are challenging our very existence through overt and subvert activities.

The manifest published by 81 Communist parties in Moscow demonstrates unequivo-

cally the conviction that the free world is unable to resist their aggression and therefore the Communists believe that it will not be necessary to use physical force in conquering other lands, as they have done before, but that the domination of the world will be accomplished through the coexistence policy.

According to the declaration there will be no nuclear war at all. The fear and lament, that the civilization will be destroyed in an event of such a nuclear conflict, is raised by the pro-Russian and pro-Soviet circles or by the pretended defenders of humanity in the United States. In reality this is simply an attempt to divert the attention of our Government from the real danger which our country is approaching.

Various actions coordinated between internal and external elements demonstrate how easily our society is led astray by disguised Communist organizations. This can be illustrated by the following facts:

The student demonstration in California against the hearings of the House Committee on Un-American Activities and the organized "Operation Abolition" which culminated in the resolution introduced in the House of Representatives calling for the dissolution of the House Committee, show that all efforts were made to destroy the Committee in order to carry on the subversive activities more effectively.

Another fact, the authorization given by the Commerce Department to sell precision machinery to Russia which would enable the Soviets to put missile production on assembly line is extremely discouraging. It shows that the Federal Agencies are packed with politically immature elements, which should have been cleared off a long time ago. Thanks to the Senate Internal Security Subcommittee and particularly to Senator THOMAS J. DODD who objected strongly, the Commerce Department was forced to withdraw the authorization, but unfortunately it was too late: the Russians already got the blueprints.

To this, we may add the suppression and boycoting by the Voice of America, Radio Free Europe and Radio Liberty of the joint congressional resolution on Captive Nations Week (Public Law 86–90). The policymakers and so-called experts on Soviet affairs in the U.S. Information Agency and other private committees considered themselves better Americans who know better than the entire U.S. Congress what is best for the United States.

And here is another fact that concerns exclusively the Americans of Byelorussian descent: the attempts made by the Byelorussian-American Association to convince the proper U.S. agencies of political value and actual urgency of establishing Byelorussian-language broadcasts by the Voice of America have simply remained futile in the last 10 years. The director of the broadcasting service of the Voice of America writes: "The limitations of both the voice's funds and technical facilities have not changed since I wrote you on this matter on September 16, 1960."

After having read this and the headlines that the United States again granted assistance of $100 million to Tito of Yugoslavia one can become worried indeed about the fate of this country.

Ladies and gentlemen:

We gathered here not only to commemorate an act of declaration of independence, but also to remind the free world that there are nations which aspire to be free and which unfortunately are almost forgotten today in political dealings. Some countries, as for instance, the countries of Africa, are helped in gaining the independence; on the other hand, countries dominated by Soviet Russia are left at the mercy of their enslavers.

We also assembled here to rededicate ourselves in the struggle for liberation of our old country and to rededicate ourselves to the cause of preserving this country free forever.

The nation which aspires and fights for its freedom will eventually become free and equal among all nations and under God.

Thank you.

RESOLUTION SPONSORED BY THE BYELORUSSIAN-AMERICAN ASSOCIATION, UNANIMOUSLY ADOPTED AT THE MASS MEETING COMMEMORATING THE 43D ANNIVERSARY OF BYELORUSSIAN INDEPENDENCE ON MARCH 26, 1961, AT THE BILTMORE HOTEL IN NEW YORK CITY

We, Americans of Byelorussian descent, assembled at the commemoration of the 43d anniversary of Byelorussian independence, declare—

That the United States of America, politically and economically the leading nation of the democratic world, guarantees its people political, religious, cultural, social, and economic freedom;

That the American people have long accepted the basic principles set forth in the American Declaration of Independence that "all men are created equal" and that they are entitled to the enjoyment and exercise of freedom and independence;

That on the other hand, during its 43 years of existence Communist Russia has enslaved many nations of Europe and Asia by means of aggression or subversion and deprived them of basic liberties;

That Russia has become a great imperialist peril which threatens all free nations and particularly the United States of America—our new fatherland; and

That the United States of America has the necessary strength and the will to resist aggression of Communist Russian imperialism and to defend the principles of freedom for all enslaved nations and for the Byelorussian people.

We protest—

Against imperialist aggression of Communist Russia, against enslavement of Byelorussia and deprivation of Byelorussian people of political, religious, cultural, and social liberties; against forced russification, economic bondage, and colonial exploitation; and

Against the government of terror in Byelorussia, against mass deportation and the policy of genocide which has resulted during the last 20 years in a demographic deficit of 6 million people on the territory of the Byelorussian Soviet Socialist Republic.

We condemn—

Any policy of coexistence and complacency with Communist Russian imperialism, any policy that approves the acts of aggression committed by Moscow, any policy that might assist in spreading the totalitarian Communist ideas;

Any policy of discrimination of nations, for example, a policy which supports the liberation movements in Africa but which, at the same time, denies the right for freedom to the nations enslaved by Russia;

The ignoring and boycotting of the resolution of the U.S. Congress (Public Law 86–90) by certain official agencies and privately sponsored committees;

The Communist-organized "Operation Abolition" and conscious support of this action by some American circles in order to destroy the House Committee on Un-American Activities and to weaken the Federal Bureau of Investigation and thus to paralyze the security laws of our Government; and

The discriminating attitude of the U.S. Government agencies regarding the Byelorussian language which is excluded from the programs broadcast by the Voice of America.

We support—

The Government of the United States in its aspiration to achieve a permanent peace in the world by means of securing freedom and justice for all men and nations;

The resolution (Public Law 86–90) which was unanimously voted by both House of the U.S. Congress and the proclamation by the President of the third week of July as "The Captive Nations Week";

The House Committee on Un-American Activities and its patriotic and indispensable services rendered in strengthening the security of the United States;

Senator THOMAS J. DODD, of Connecticut, for his patriotic and farsighted action in halting the shipment to the Soviet Russia of precision machinery which would speed the limping production of Russian military missiles; and

The resolution sponsored by Hon. DANIEL J. FLOOD, Representative of Pennsylvania, in the House of Representatives proposing the creation of a Special Captive Nations Commission.

We pledge—

To strengthen our efforts to create a united front of Americans of Byelorussian origin in order to join more actively the political cultural and social life of the United States, in order to increase our contribution to the economic and spiritual growth of this country; and

To disseminate knowledge and truth about the Byelorussian people and their independence aspirations in order to win the sympathy and support of the American people for the cause of liberation of Byelorussia and restoration of the independent Byelorussian state.

We appeal—

To the people of the United States and of the whole free world to provide all possible assistance for the Byelorussian people in their perennial struggle for liberation from Russian communism;

To the U.S. Government to be on guard and properly prepared against inevitable aggression that is being planned by Communist Russia which intends to dominate the world; and

To the U.S. authorities to give due consideration to our request concerning the Byelorussian-language programs to be broadcast by the Voice of America.

The Sad Story of Haj Mohammed

EXTENSION OF REMARKS
OF
HON. ROBERT H. MICHEL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Monday, April 10, 1961

Mr. MICHEL. Mr. Speaker, the following editorial from the April 1, 1961, issue of the Chicago Tribune tells a story with a moral of which we should all make special note:

A 95-year-old Egyptian, Haj Mohammed Marzouk, has retired after spending 85 of his years embroidering quotations from the Koran in gold thread on the enormous black plush covers used to cover the Kaba stone in Mecca, toward which all devout followers of Islam face when they pray. His covers for the holy shrine reach Mecca each year before the arrival of the faithful on their pilgrimage.

Mohammed began this service to the Prophet as an apprentice of 10. A few days ago, when his final embroidery was finished, he was retired, receiving a pension of seven Egyptian pounds, or $20, a month after having been classified as a civil servant in the ministry of religion.

Then around came the tax collector, to say that the classification was wrong and that Mohammed really was a craftsman who should have been paying income tax at a

rate 5 percent higher than had been deducted from his pay during his working life. The collector thereupon presented a bill for £212 ($615) in back taxes.

To satisfy it, Mohammed was obliged to sell his few household effects, among them his bed and blanket. At 95, he is down to a ragged coat, without a piastre to his name. The man who covered the Prophet's shrine for 85 years hasn't a blanket to sleep under.

Somehow we see in this pathetic person a symbol and forerunner of that merciful governmental dispensation known in this country at the moment as the New Frontier. When we have all passed through the grinder of spending and taxing for the greater glory of the public sector, will we have a blanket to our name?

Distinguished Editor, Tom Goff, Huntington Park Daily Signal, Huntington Park, Calif., in the Great 23d District, Writes Two Timely Editorials Pointing Up Some Errors of Opponents of House Un-American Activities Committee and Critics of Film "Operation Abolition"

EXTENSION OF REMARKS

OF

HON. CLYDE DOYLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 10, 1961

Mr. DOYLE. Mr. Speaker, by reason of unanimous consent heretofore granted me so to do, I am pleased to present the text of two editorials written by Mr. Tom Goff, editor of the Daily Signal at Huntington Park, Calif., in the great 23d District which I represent this my 15th year. Because almost all of these years I have been an active member, and now am, of the House Un-American Activities Committee, I deem it especially appropriate I have the privilege of unanimous consent to insert these editorials which appear to me timely, pertinent, and crystal clear for any reader who is unbiased, unprejudiced, and who, Mr. Speaker, is anxious to throw all of his or her influence toward strengthening the international security processes of our beloved Nation against the deceitful, destructive, aggressive and subversive activities and programs and propaganda which emanates and grows out of the Communist conspiracy.

The first editorial "Ministers Overlook Basic Message of Anti-Red Film" follows:

MINISTERS OVERLOOK BASIC MESSAGE OF ANTI-RED FILM

The last thing in the world I want to do is to offend a couple of courageous gentleman of the cloth, but I am compelled, nevertheless, to voice the opinion that I believe both the Reverend Richard Dunlap, of Huntington Park, and the Reverend Norman Taylor, of South Gate, missed completely the principal message carried by the film, "Operation Abolition."

The premise, as I see it, is not as the reverend gentlemen stated in this paper yesterday that "to oppose the House Un-American Activities Committee is treason per se." It is, instead, that loyal Americans were led into committing illegal acts by an element whose loyalty is, at the very least, questionable.

NOT A QUESTION OF RIGHT TO OPPOSE

There is no question in my mind—or in any other thinking American's mind—that those who disagree with the purposes, methods or any other aspect of the committee have every right in the world to oppose it—by peaceful and legal means.

The truly appalling thing the film does show, however, is that a group of Americans—many of them college students—took it upon themselves to go far beyond this point. Following the lead of a few well-placed Communists they attempted to disrupt the committee session, in one instance, by catcalls and chants inside the hearing room, and in another, by creating a vocal disturbance in the hall outside the hearing room.

Furthermore, when ordered by police officers to stop the noise, they persisted and made it necessary for the officers to eject them bodily.

Now this type of thing is not mere opposition. It is, at a minimum, disturbing the peace. Those who express their opposition to the Un-American Activities Committee in this fashion are, no matter how high minded their individual motives—serving as duptes for the Communists.

HOW ABOUT CHURCH?

Let's bring the issue up to the level of religion, a field in which both the Reverend Dr. Dunlap and the Reverend Dr. Taylor are eminently qualified.

Now both of these gentlemen are Methodists, one of the great and widely accepted Protestant denominations. No American in his right mind would dream of challenging their right to conduct their business despite the fact some people disagree, to one degree or another, as to the correctness of their approach.

But let's suppose, just for the sake of argument, that some other denomination decided that the Methodist approach not only was incorrect but was harmful. And let's suppose that several members of this denomination decided to let their views be known by picketing, for example, the Reverend Dr. Dunlap's church.

Once again just for the sake of argument, let's suppose, too, that a handful of still another group—let's call them "church wreckers" for lack of a better name—joined the picketers and convinced some, not all, of the picketers that the best way to get their message across was to demand entrance into the church, interrupt the services with catcalls and boos and make so much noise on the steps of the church that the services could not continue.

Now, those who went along with the proposal would not, perhaps, be "church wreckers" per se. But they would be dupes of the "church wreckers." And they would be wrong.

RED TECHNIQUES

The Reverend Dr. Taylor made the statement in criticizing the committee that "you don't overcome it (communism) by adopting the same techniques they use."

I agree. And I would add that you can't correct any injustices—real or imaginary—caused by the Un-American Activities Committee by adopting Communist techniques such as were used in San Francisco.

And I say further that even tacit approval of the San Francisco demonstrations is an open invitation to the ridiculous type of thing I have described above in relation to the church. An encouragement of the San Francisco type of demonstration is aiding and abetting the Communist cause far more than any of the "injustices" charged to the committee.

The second editorial "All Americans Should See San Francisco Riot Film," follows:

ALL AMERICANS SHOULD SEE SAN FRANCISCO RIOT FILM

I'd like to devote this column to a discussion of "Operation Abolition," the controversial documentary film showing last year's violent attacks on the House Un-American Activities Committee during 2 days of hearings in San Francisco.

The film, being widely shown in the southeast district as elsewhere, is under heavy attack by Communists; their dupes who, for one farfetched reason or another, would terminate the work the committee is doing, and still others who naively argue the film does not offer a fair presentation of the San Francisco hearings facts.

The film has its weaknesses, to be sure. The commentary, for example, is far more heavily editorialized than necessary; its impact is lessened materially by too frequent "commercial" breaks to allow various members of the committee to make a pitch.

A MESSAGE FOR ALL THINKING AMERICANS

But these and other faults are minor points in the final analysis. Stripped to its bare bones, the picture carries a message which should be seen and absorbed by all thinking citizens of this country.

Parents, particularly, and youngsters starting or preparing to start a college career should make a special point to see the film. It should be required fare for every senior class in every American high school.

For "Operation Abolition" shows in the most graphic manner possible precisely how a few Communist agitators—expertly trained and wholly dedicated—can incite, cajole and seduce a group of young men and women into the misguided belief that open defiance of law and order is a crusade against "tyranny."

And that is the issue. There is no quarrel with the right of Americans, young or old, Communists or non-Communists, to picket or otherwise peacefully protest the work of the committee if they so desire.

On the other hand, wilful disobedience of the law, physical interference with the work of a legally constituted congressional committee, popular or not, and outright defiance of law enforcement officers carrying out legal orders in the performance of their duties is wrong. There can be no legitimate defense made for it.

I can readily understand why the Communists are enraged by the film. Not only does it lay wide open the particular techniques used in the San Francisco incidents, but it bares to all an eye-opening explanation of how they have been able to generate the riots which have become their favorite weapon throughout the world.

SPECIAL PREY

The special prey of the Communists in these activities everywhere have been college students and other young people.

Men and women at this stage of life, fortunately in most instances but not in this, are at their most idealistic. They want to do things; they want to crusade; they want to set the world on fire.

They become too easy victims of the professional agitator who would lead them to glorious victories over imaginary forces of evil.

Those who see "Operation Abolition" should not be misled, however, into believing that all or even most of those young people in the crowds around the San Francisco City Hall were there as participants. Far more of them, I am sure, were at the scene out of curiosity more than anything else.

Nor should parents be led to mistakenly believe that all—or even most—of the youngsters in today's colleges are willing Communist dupes.

The proportion really is small. The danger is that the youngster who hasn't been informed—the boy or girl who doesn't know what to look for—can end up a participant in a disgraceful exhibition such as that staged last year in San Francisco.

SHOE ON OTHER FOOT

I think, too, that it's about time we start putting the shoe on the other foot with regards to this Un-American Activities Committee.

It's time that we say a few words, even shed a few tears, for the men who sit on this committee and hearing after hearing, year after year, have the vilest kind of abuse heaped upon them by those who strive by every foul means written in the Communist library to put this Nation under the yoke of the cruelest tyranny the world ever has known.

Our sense of personal liberty slips way out of line when we make monsters out of the men who try to preserve this country by exposing these conspirators for what they are and make heroes out of those who would destroy us.

Sure, the Un-American Activities Committee and similar bodies have made mistakes. When battling shadows it becomes very easy to mistake a misguided dupe for the real thing.

But this committee and others like it have done a tremendous and thankless job in pointing out very real and very frightening dangers which do exist.

Only those who have reason to fear exposure to public view have anything real to fear from well-conducted committees of this sort.

Neat Budget Trick

EXTENSION OF REMARKS

OF

HON. J. ARTHUR YOUNGER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 10, 1961

Mr. YOUNGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following three articles from the Wall Street Journal of March 24, 1961, on current Government problems:

REVIEW AND OUTLOOK—NEAT BUDGET TRICK

Washington reports indicate that President Kennedy's budget message today, revising the Eisenhower budget for the next fiscal year, will be minus a sizable piece—namely defense costs. A revision of the defense budget, it's said, will be sent separately to Congress next week.

And the suspicion in Washington is that this is partly an attempt to allay any fears that the Kennedy administration is off on a wild spending spree. For it can be argued that, if you forget defense for the moment and assume the Eisenhower budgetmakers were correct in their revenue expectations, the nondefense budget would not necessarily be unbalanced, or hardly unbalanced.

In other words, the Kennedy increases in domestic spending might come to just about the $1.5 billion surplus forecast by the Eisenhower administration. As for the increases in defense outlays, to be presented separately to Congress, who can argue against spending for national security?

We hope this interpretation of the administration's thinking is wrong, for it smacks of devious devices to persuade the people that Federal "civilian" spending is not on a drastic rise. But in any case, the separation of defense from other outlays is a novel approach to budgeting which has disturbing implications.

It seems to be saying that all is well if part of the budget is in balance, or nearly so, even though the total plainly will not be. Thus it distorts the whole Federal financial picture.

Moreover, it seems to be putting defense into a category of its own, too sacred to be subject to the secular restrictions of normal budgeting. Obviously it is imperative to spend as much on defense as is demonstrably necessary. It is equally imperative to spend no more than that.

Once the idea became prevalent that defense is something apart from the regular budget, the quality of defense would dangerously deteriorate. Such an approach would be an invitation to still more waste and duplication and mismanagement. For when the yardstick of strict financial control is thrown away, it becomes impossible to establish defense priorities or intelligently allocate defense resources.

Finally, this separation of defense from other spending tends to put the finger on the Pentagon as the chief reason the total Federal budget has been soaring like a missile for so many years. The increases in domestic welfare costs, it's suggested, are minor compared to the enormous boosts in defense costs.

That assertion, however, is not borne out by the budget documents over the years; they show just the opposite. Since 1955, for example, Defense Department spending has gone up something like $5 billion, but total Federal spending has gone up about $15 billion. The bulk of the increase is not defense but the proliferating host of domestic subsidies, handouts, and whatnot. The budget category called "labor and welfare" has doubled in a decade.

And it is these domestic programs President Kennedy is so busily trying to add to and magnify. Perhaps their additional cost in fiscal 1962 will be no more than the $1.5 billion surplus estimated by Mr. Eisenhower, but no one has even tried to figure their eventual cost beyond the obvious fact that it will be staggering.

What is urgently needed now is a facing up to the financial meaning of the President's proposals, not a political budget trick to disguise their meaning.

WHAT'S 1 PERCENT?

As part of President Kennedy's approach to foreign aid, the United States reportedly will suggest next week that the members of the newly created Development Assistance Group, embracing Western Europe and Japan, join the United States in pledging 1 percent of their annual gross national product to aid the underdeveloped countries.

This formula seems at once modest and magnanimous, although a closer look reveals that it's neither. One percent of anything sounds insignificant, but 1 percent of the U.S. gross national product this year would be more than $5 billion. As for the estimated $8 billion in aid money which this approach would draw from the 10-nation group that sounds more impressive than it really is. Right now, by one means and another, economically advanced free nations are pumping out almost that much in aid.

What else may be said of this scheme that isn't all it seems? Well, it's strange to hear that this country's gross national product and foreign aid budget are intimately related. By this reasoning, our generosity to Upper Volta is in part determined by how many automobiles Detroit sells and what sort of year soybean growers have and the number of people who decide to buy houses. Never mind whether aid to Upper Volta makes any sense on its own merits.

Actually, the 1-percent formula contains a built-in apparently endless escalator. Since Government spending is included in the gross national product, an increase in foreign aid expenditures would automatically increase the gross national product. And that, of course, would make the proposed 1-percent aid allotment proportionately larger, which would automatically boost the gross national product and begin the cycle anew.

Of course, there's a hitch to hooking ourselves into this belt. The present weakness of the dollar, reflecting the large and persistent deficit in U.S. international payments, is an urgent warning that Government spending overseas must be cut back sharply. The warning, apparently, hasn't troubled the formulamakers. After all, what's a measly 1 percent?

SPECTACULAR HOMEWORK

In his recent message to Congress proposing Federal aid to school construction, President Kennedy observed:

"It is clear that we do not have enough classrooms. In order to meet current needs and accommodate increasing enrollments, if every child is to have the opportunity of a full-day education in an adequate classroom, a total of 600,000 classrooms must be constructed in the next 10 years."

Since the President left that stark statistic unexplained, one might easily suppose that here is another unmet need of the country which only Government can provide; that without Washington's help communities won't begin to build those 600,000 necessary classrooms. Happily, the impression is mistaken.

According to the U.S. Chamber of Commerce, the country is building classrooms at such a clip that 1970 could bring a surplus. It is noted that the Government's generous estimate of future needs, proposed by the U.S. Office of Education, is 610,000 new classrooms by 1970. Local communities over the past 5 years have been building classrooms at the rate of 69,000 a year—a pace that would produce 690,000 by the end of the decade, or 80,000 more than Washington deems necessary.

No one, of course, would argue that each community in the country has all the classrooms it may need or desire. But neither can it be argued convincingly that the unmet needs of some localities add up to an unmet need of the Nation which only Washington can handle. On the contrary, the chamber's findings confirm the fact that parents and taxpayers in communities across the country are meeting their responsibility to their children, without aid or advice from Washington.

This spectacular achievement ought to delight educators and cheer up politicians who fear that the country is inadequate to the challenges of the 1960's. Yet, in the President's message and other pleading for Federal aid, it passes unnoticed and unapplauded. Obviously, if there is an unmet educational need, it is to enlighten Washington about the way communities are doing their homework.

The Penalty of Change

EXTENSION OF REMARKS

OF

HON. ROBERT H. MICHEL

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, April 10, 1961

Mr. MICHEL. Mr. Speaker, I wish to call the following editorial to the attention of my colleagues. The editorial ap-

peared in the April 3, 1961, issue of U.S. News & World Report and was written by David Lawrence:

Many millions of persons, with the best of intent, voted last year for a change of administration.

Many millions of others, also believing that they were doing what would be best for America, voted against change.

Today all the people of the United States are paying the penalty of the change. It is costly. It could lead us into a war that nobody wants.

If this happens, it will not be the fault of our President. For he will earnestly strive to keep us from such a catastrophe, and he will have the support of the American people, irrespective of party.

But 1960 was not the time for a change in administration, and events now unfortunately are proving that thesis true. The risk we have taken by "changing horses in midstream" is being revealed in the headlines.

We didn't take such a risk in the midst of World War II, when we even broke the third-term precedent by reelecting a President for a third and a fourth term.

What is being revealed today is that a cold war is really not much different from a hot war as far as possible dangers are concerned. A fixed election date therefore is risky. Flexibility in the date for holding national elections—such as the parliamentary systems provide—would be a wise precaution.

Nikita Khrushchev and his clique in the Kremlin knew, of course, that the Eisenhower policies would be maintained by a Nixon administration. But Moscow had been led to believe that the United States would be "softer" under a Democratic administration.

Hints to this effect were given to the Kremlin from time to time in the last few years by prominent Democrats, inside and outside of Congress, who criticized the Eisenhower policies.

Will the United States now suffer the effects of the Kremlin's miscalculation?

Almost immediately after the election last November, the Communists stepped up the cold war. They increased military support to their stooges in Laos. They sent arms to Lumumba's forces in the Congo in direct defiance of the United Nations. And they have moved more intensively in Cuba and other areas.

All through November, December, January, and February, the cold war was pressed with renewed vigor by the Communists throughout the world, while American policies stagnated. Though ostensibly concerned with the possibility of reaching agreements in negotiations for disarmament and on such issues as the status of Berlin, the Moscow government saw a chance meanwhile to build a stronger position for itself in Latin America, Africa, and southeast Asia.

Unfortunately, partisan comments in recent years in this country indicated that maybe a Democratic President in the White House would bring a "peace at any price" policy. It will be recalled that in the spring of 1954, when the Indochina crisis was developing, the United States was ready to take a firm stand to meet Communist aggression in southeast Asia. Vice President Nixon made an off-the-record speech to the American Society of Newspaper Editors that was later paraphrased in print and viewed as threatening military action. It was indeed a show of firmness that was essential to our diplomacy. It led to bitter attacks by the Democrats. Senator Kennedy said at a political fundraising dinner in Chicago on April 20, 1954:

"The American people should be told the truth about the situation in the Far East. For if Secretary Dulles' and Vice President Nixon's words are to be taken at their face value, we are about to enter the jungle and do battle with the tiger. But I do believe it both proper and necessary that those who bear responsibility should indicate in advance the course that should be adopted."

So the Kremlin in 1961 apparently decided to test Mr. Kennedy's philosophy.

Another Vice President of the United States—LYNDON JOHNSON—now has made, after a conference with the President, the following statement:

"And I think it should also be known to the world that the United States, while it is going to be reasonable and prudent in all of its moves, is not in a mood to meekly permit an independent nation to be gobbled up by an armed minority supported from the outside."

It is to be hoped that blind partisans and the advocates of "peace at any price" will not again endanger American foreign policy by disparaging the comments of the present Vice President, who has just proclaimed the resolute policy of the United States.

Despite what was said by the Democrats in their ridicule of the policy of the late Secretary Dulles, called "brinkmanship," it is a fact that after 2 months of a Democratic administration we are at the brink of armed conflict. It is important, therefore, to let the Soviets know that the American people stand solidly behind their President and will back him fully in whatever stand he may take to resist any further aggression by the Communists in any part of the world.

U.S. Savings Bonds

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, April 10, 1961

Mr. MULTER. Mr. Speaker, many of our colleagues during the 8 years prior to January 20, 1961, joined me in urging the Treasury Department to give more attention to savings bonds and to paying a fair return on them, commensurate with market rates on other securities. Most of our efforts were ignored.

I am pleased to note that without any prompting from us, the new Secretary of the Treasury has increased interest rates accordingly. Secretary Dillon is to be commended for his early attention to this important problem.

The Treasury Department's release of March 24, 1961. I am sure will be of interest to all our colleagues. It is as follows:

TREASURY ANNOUNCES HIGHER INTEREST RATE FOR LONG-TERM HOLDERS OF SAVINGS BONDS

Treasury Secretary Douglas Dillon today announced new regulations that will benefit some 10 million Americans who own series E savings bonds issued from May 1941 through May 1949.

Under the new regulations, these bonds—the first of which will be 20 years old on May 1—will earn a full 3¾-percent interest a year. They may now be held for an additional 10 years. About $15 billion of the $43 billion currently outstanding in series E and H savings bonds will be affected by this action.

"In addition to benefiting the bondholder," Secretary Dillon said, "this action to encourage him to retain his bonds will diminish the Treasury's problem of refinancing the public debt and will contribute to the contry's stability by keeping a sizeable portion of it in the hands of the average citizen.

"By retaining their matured bonds and purchasing new ones, individual citizens will not only prepare themselves and their children for a more secure future, but will help strengthen the economy of our country. The more than $43 billion now outstanding in series E and H bonds testifies to the foresighted thrift of our people and to their faith in the future of America."

The new rate of interest on series E bonds bearing issue dates from May 1941 through May 1949 is comparable to the yield on outstanding marketable obligations of the United States that have 10 years to run to maturity. These bonds originally earned 2.90 percent if held to maturity. In their first extension period they have been earning from 2.90 to 3.47 percent if held to extended maturity. During the second extended maturity they will all earn a straight 3¾ percent per year, compounded semiannually.

Washington Report

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 15, 1961

Mr. ALGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following:

WASHINGTON REPORT

(By Congressman BRUCE ALGER, Fifth District, Texas)

APRIL 1, 1961.

More new tax increases are shaping up (beside earlier unemployment compensation insurance costs; see newsletters, February 25, March 4, March 25) in user taxes in the highway program and social security program. The highway taxes will include, I suspect, an increase in the gasoline tax and truck taxes. Social Security will raise the employer and employee one-eighth of 1 percent each on the pay base of $4,800 annually and self-employed three-eighths of 1 percent. These are in addition to the escalator taxes already in the law to go up to 9 percent.

Aid for depressed areas or the area redevelopment bill, as it is variously called, was the big debate and controversy before Easter adjournment. Two days of debate and voting confused more than clarified the scope, intent and anticipated operation of the bill. On the surface, the language was repeated over and over, but the true implication, I must assume, the Members did not comprehend, unless, of course, politics completely replaced a sense of reason.

The Federal Government would extend outright grants and loans to "redevelopment areas" as determined and so designated by the Secretary of Commerce. One hundred million dollars would go to industrial area plant loans, $100 million to rural areas, $100 million for public facility loans, $75 million for public facility grants, $4½ million for technical assistance, $10 million for subsistence payments and $4½ million for occupational training, for a total of $394 million (as a starter). Everyone agreed this sum was a flyspeck compared to the amount really needed to do the job.

Let's look at the logic (as I endeavored to do in floor debate) of the declaration of purpose of the bill. "The Federal Government, in cooperation with the States, should help areas of substantial and persistent unemployment and underemployment to take

effective steps in planning and financing their economic redevelopment; that Federal assistance to communities, industries, enterprises, and individuals in areas needing redevelopment should enable such areas to achieve lasting improvement and enhance the domestic prosperity by establishment of stable and diversified local economies and improved local living conditions; and that under the provisions of this act new employment opportunities should be created by developing and expanding new and existing facilities and resources." Isn't that carte blanche control directly or indirectly in the bureaucratic hands of the Federal Government over private enterprise? Isn't that unconstitutional in a limited government of checks and balances wherein all rights reside in the people except those specified in the Constitution as the prerogative of the Federal Government? Doesn't that declaration of purpose put the Federal Government in the position of helping anyone or everyone according to bureaucratic whim from a complex industry and a whole community down to each and every specified individual of any designated area? It can mean nothing else. Here are other quotes from the bill:

"The Secretary is authorized to make loans to aid in financing any project within a redevelopment area for purchase of land and facilities, for industrial or commercial usage, including construction of new buildings, the rehabilitation, alteration, conversion, or enlargement of existing buildings.

"The project for which financial assistance is sought must be reasonably calculated to provide more than a temporary alleviation of unemployment or underemployment within the redevelopment area wherein it is, or will be, located. [What does that actually mean?]

"No such assistance shall be extended hereunder unless the financial assistance applied for is not otherwise available from private lenders or other Federal agencies on reasonable terms."

Loans or grants if "the project for which assistance is sought will tend to improve the opportunities."

Other features: (1) Secretary will work with local authorities determining their needs; (2) Secretary will "establish new rules, regulations, and procedures as he may deem appropriate in carrying out the provisions of this act." (3) The Secretary (of Commerce), Secretary of Labor, Secretary of Health, Education, and Welfare will work together to "determine the occupational training of individuals residing in the redevelopment area"; (4) all wages paid on projects under this act will be at a rate set by the Secretary of Labor in accordance with the Davis-Bacon Act; (5) the Secretary is authorized to delegate to the heads of other departments and agencies of the Federal Government any of the Secretary's functions, powers, and duties under this act as he may deem appropriate, and to authorize the redelegation of such functions, powers and duties by the heads of such departments and agencies.

Where is the constitutional limitation of power in this nightmare jumble of bureaucratic planning, regimentation and control? To do what—to help? No, to spend money the Federal Government doesn't have until it collects more taxes (Uncle Sam is worse than broke by hundreds of billions). What is this legislative sickness? It is: (1) An almost hypnotic belief in the efficiency of Federal spending, planning and taxing; (2) failure to understand basic economics, private enterprise and the right of property ownership—that what the Federal Government puts into the economy as aid is first taken out in taxes; (3) never to be forgotten, of course, is the determination of each politician to stay in office. My answer to "aid to depressed areas" is to lighten the tax load. A substantial tax cut within a framework of a balanced budget (less Federal spending) would spark an economic expansion and prosperity eclipsing anything in the history of our Nation.

Secretary Goldberg: Come See How Omaha Does It

EXTENSION OF REMARKS
OF
HON. GLENN CUNNINGHAM
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 10, 1961

Mr. CUNNINGHAM. Mr. Speaker, Omaha is one of the four cities in the Nation with a balanced labor market. We have no serious unemployment in Omaha and we have not had since prior to World War II.

Such a situation does not just happen. It is the result of sound planning and a confidence in the future of the Omaha area, Nebr., and the Nation. It is typical of the attitude in the Middle West—an attitude that we can plan for the future, a prosperous future, without massive doses of Federal aid, but by having confidence in America.

The city of Omaha, Omaha Chamber of Commerce, and Omaha AFL–CIO joined last week in inviting Labor Secretary Goldberg to visit Omaha and learn how a nondepressed area operates. Noting press reports of Secretary Goldberg's visits to depressed areas, these Omaha leaders believed it would be valuable for the Secretary also to visit an area that is enjoying good business, high employment, and vigorous planning and expansion to take care of the future needs of the area.

Certainly if there are lessons to be learned from tours of depressed areas, there must be more lessons to be learned from tours of prosperous areas.

I hope Secretary Goldberg will be able to visit the Omaha area personally. I know he would learn a great deal about how a city operates and how its people, businessmen, and labor representatives work together for the common good.

I would like to include now a copy of the letter addressed to Secretary Goldberg and signed by the mayor of Omaha, president of the Omaha Chamber of Commerce, and president of the Nebraska AFL–CIO:

HON. ARTHUR J. GOLDBERG,
Secretary of Labor,
Washington, D.C.

DEAR MR. GOLDBERG: Citizens of Omaha have been very gratified, but hardly surprised, to read recent reports from the U.S. Department of Labor describing our city as one of four balanced labor markets in the country. We had been well aware in Omaha that our economy was maintaining a generally prosperous level, and even improving in some sectors, while there was news of mounting unemployment and business slumps in many major cities.

We have noted with interest that you and representatives of your department have been visiting some of the designated depressed areas to gather information on the causes of the economic ailments which afflict them, with an eye toward finding possible cures.

As representatives of the city of Omaha, the business community, and the labor force, we feel that you and your investigators would find it equally valuable to study information on an area that is not depressed, that has succeeded in maintaining a favorable employment level and a confident spirit throughout this period of uncertainty in many industrial areas.

It is our opinion that Omaha's fortunate position at this time is the result of many factors. Among these are our diversified industrial economy, a business climate which has encouraged expansion of basic industries and development of a variety of new industries, a spirit of fairness and cooperation in labor-management relations which has given our city an enviable record of labor peace, a tax structure which has succeeded in providing needed Government services on a local level while giving rein to private initiative to solve local problems.

We were never more confident of Omaha's bright future, in terms of the period immediately ahead and for years to come, and it is our feeling that conditions here, created in part by circumstances but also through the vision and faith and integrity of our people, can be an inspiration if not a pattern for other communities in the United States.

The resources of the city of Omaha, the Omaha Chamber of Commerce, and the unions of the Omaha AFL–CIO are at the disposal of the Labor Department in assembling data for your study of economic problems of metropolitan cities.

If your busy schedule permits, we would welcome the chance to tell you our story personally in Omaha; if not, representatives of our city and our organizations would be happy to take our story to you in Washington. Communications on this matter can be addressed to Mr. Ralph E. Kiplinger of the Omaha Chamber of Commerce, 108 South 18th Street, Omaha, Nebr.

Sincerely yours,

JOHN ROSENBLATT,
Mayor, City of Omaha.
RALPH E. KIPLINGER,
President, Omaha Chamber of Commerce.
RICHARD NISLEY,
President, Nebraska AFL–CIO.

New England Council Requests White House Investigation of Residual Oil Quotas

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 10, 1961

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a release by the New England Council for Economic Development at Boston, indicating that it has asked for an investigation by the White House of residual oil import restrictions and resulting increased fuel prices to the New England consumer:

WASHINGTON, April 9.—The New England Council announced today that it has asked the White House to conduct a full scale investigation of residual oil import restrictions and resulting increased fuel prices to the New England consumer.

The regional economic development organization petitioned the Office of Civil and Defense Mobilization to restudy their original recommendations which resulted in Presi-

dent Eisenhower's March 1959 proclamation imposing mandatory quotas.

Charles W. Colson, Washington counsel for the New England group, said that "the new quota system announced by Secretary Udall last month is totally unsatisfactory. The Secretary of Interior has said that the new system is intended to permit an adequate supply of residual oil and that the quota would compensate between domestic production and domestic demand. This new system makes the existence of the quota program even more fruitless since it can no longer be said that the system is designed to limit imports.

"We think it is fair to ask why quotas should be imposed at all if they are no longer intended to restrict importation. Even more than before, the quota system is an artificial restriction on the normal competitive process and tends only to create monopolies in fuel oil distribution; its only result can be increased prices to the consumer."

The council's formal petition seeks removal of the mandatory quota system and asks for "an immediate investigation to determine the effect of the residual oil import program on the price of residual oil and other fuels in the East; and to determine the efficacy of the program with respect to the purpose for which it was established—to promote national security.

"We are convinced that an impartial study by the Office of Civil and Defense Mobilization would demonstrate clearly that the residual oil restrictions have not fulfilled in any way the national security objectives of this proclamation, but rather have resulted only in increasing hardships to industry and consumers."

Nearly 1,000 in Orleans Learn Now, Pay Later

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 30, 1961

Mr. BOGGS. Mr. Speaker, one of the grave problems confronting many high school graduates who desire college training is lack of money with which to do so.

Through the National Defense Education Act, our Government has helped many young Americans to meet their financial needs for a college education—particularly in the sciences and in engineering, but not limited to these fields. Mr. Robert N. Kelso, a reporter for the New Orleans (La.) States-Item, has written a very fine series of three articles dealing with the availability and the workings of federally financed student loans at New Orleans universities and colleges. Mr. Kelso describes what a particular American community is doing through its institutions of higher learning to aid well-deserving students to obtain university training.

With these thoughts in mind, Mr. Speaker, under unanimous consent, I include in the Appendix of the CONGRESSIONAL RECORD on consecutive days. Mr. Kelso's three articles which appeared late last month in the States-Item. The first article follows:

[From the New Orleans States-Item, Mar. 27, 1961]

FEDERAL GOVERNMENT CHIEF UNDERWRITER: NEARLY 1,000 IN NEW ORLEANS LEARN NOW, PAY LATER

(This is the first in a series of three articles dealing with the workings of federally financed student loans at New Orleans colleges and universities which help meet the current high cost of education.)

(By Robert N. Kelso)

Nearly 1,000 students are financing at least part of their college education in New Orleans on a "learn now—pay later" basis.

Chief underwriter of loans bolstering student pocketbooks is the Federal Government.

Congress in the summer of 1958 authorized a 4-year program to get more talent into and out of college through the National Defense Education Act.

Solons were spurred to action by the firing of Russia's Sputnik I on October 5, 1957, a scientific feat that brought searching analysis of the quality of American education.

The act was designed to "identify and educate more of the talent of our Nation" and to "insure trained manpower of sufficient quality and quantity to meet the national defense needs of the United States."

Special emphasis was given to training more and better teachers, and to turning out more engineers, scientists, mathematicians and experts in modern foreign languages to meet challenges this country faces in the space age.

Loans to needy and academically sound undergraduate and graduate students in colleges and universities are a key part of the program.

A total of some $295 million was to be pumped from Government coffers during the 4-year period ending June 30, 1962, into student loan funds administered by participating colleges and universities.

Expectations are the program will be continued beyond the expiration date of the National Defense Education Act.

Colleges struggling to help out needy students with their own heavily committed resources leaped at the offer to fatten loan funds.

Asked what their estimated needs for student loans were when the U.S. Office of Education began mapping operational plans for the program in the fall of 1958, 1,000-odd institutions came up with a total figure of $79 million.

Urged to whittle this figure, by the Office of Education, they pared the sum to $62 million.

But Congress had goofed. It had authorized spending of up to $47.5 million for the first year's operation of the student loan program, but wound up appropriating only $6 million.

The program, consequently, got off to a slow start. But it was in full swing by February 1959.

In New Orleans, Tulane University has asked for and received $250,000 annually—the top amount allowed any one institution—for the 2 years of full-scale operation.

Loyola University has funneled some $203,000 to needy students during the same period.

Lesser amounts—depending generally on the size of the school's full-time enrollment—have been parceled out by Dillard and Xavier Universities and St. Mary's Dominican College.

Louisiana State University in New Orleans has handled very little of this Federal money because the need for student loans at the lakefront facility is minimal.

LSUNO charges no tuition, and exacts annual fees totaling only $80. Ninety-six percent of its students live in the New Orleans area with parents or relatives, further cutting their expenses.

The student loans underwritten with Federal funds are far from signature only deals.

Participating schools take a hard look at the financial resources of the student and his parents.

They also scrutinize his academic accomplishments and capacity.

If the student is granted a loan it is no greater than needed to bridge the gap between what he can scrape together and what a year's attendance will cost him.

Under terms of the Federal law, a student may borrow no more than $1,000 in any academic year, for a total of $5,000.

Repayment of the loan starts 1 year after the student finishes school, and is paid back with 3 percent interest at a rate of 10 percent a year over a 10-year period.

Borrowers who become full-time elementary or high school teachers are exempted for repayment of up to 50 percent of the loan, plus interest, at the rate of 10 percent for each year of teaching.

Another easement is offered borrowers during periods of military service (or up to 3 years), or while they are attending an accredited college or university on a full-time basis.

No repayment on principal or interest is required during such period.

The college or university participating in this Federal student loan program has exclusive responsibility for selecting students who will receive the loans, for administering the program, and collecting the debt.

Each institution must put up $1 of its own money for every $9 it gets from the Government in the student loan program.

One fly in the ointment from the institution's standpoint—say local administrators—is that the Government so far hasn't put up a cent to help defray administrative costs. They fear these will run into substantial amounts when collections start on a large scale.

But they don't expect to lose money because of loan defaulters.

Tulane's student loan administrator, Dr. Joseph E. Gordon, says educational institutions with long experience in handling a big loan program for students find defaulters are rare birds.

"Massachusetts Institute of Technology (MIT) has been in the big time loan business for about 20 years," Dr. Gordon said, "and they've found the bad debt writeoff to be about 2 percent."

The Reverend Father Robert L. Boggs, dean of students and loan administrator at Loyola, confirms this.

"The Government has made a study which shows that all institutions engaged in a loan program come up with gains because of the interest rate," Father Boggs said.

"There are a number of defaulters, but not enough to put anybody in the red."

Federal funds aren't the needy student's only hope.

There are also scholarships and part-time employment arranged by the school which can bolster student finances.

Some schools also arrange loans for students with big commercial finance companies offering low interest rates for such a purpose.

Beyond this, many schools have continued their own student loan programs alongside that underwritten by the Government.

Tulane, for example, lent out some $50,000 of its own money this year to graduate students, and provided some $10,000 from small endowments earmarked for loans to students needing emergency assistance.

A common practice at many institutions is to offer financial assistance in a "package" including loans, scholarships, and part-time jobs.

The applicant who proves his need may get help from any or all of these sources.

At Tulane, for example, an estimated one-third of its 4,500 full-time students are receiving some kind of financial assistance.

Dr. Gordon points out that 90 percent of the scholarships offered at Tulane are limited to tuition charges.

This still leaves a big gap for a student short of money.

A freshman at Tulane needs another $600 to meet expenses, says Dr. Gordon, "and a freshman normally can't make that much in a part-time job.

"If we just had tuition scholarships to offer," he added, "an impecunious student, even if he was the brightest boy in the world, couldn't come to Tulane."

The Aim and the Health of the American People

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, April 10, 1961

Mr. DINGELL. Mr. Speaker, we Americans owe an immense debt of gratitude to the physicians of this country. American medicine at its best has no equal anywhere in the world. We can indeed be proud of the dedicated men and women who are our doctors of medicine.

The organization which speaks for these physicians on matters of national concern is the American Medical Association. The American Medical Association has well served the health of the Nation in many areas of its activity. It is the American Medical Association which is in large part responsible for the development of standards and procedures for specialty certifications which contribute significantly to maintaining high quality medical care. The excellent training provided in our medical schools is a product of the American Medical Association's efforts to upgrade the quality of medical education to equal any in the world.

These facts make it all the more appalling to observe the role being played by the American Medical Association in the political and social sphere. The American Medical Association is in the midst of a campaign to distort the President's program to provide health benefits to the aged through social security. It is distorting the President's proposal beyond recognition and beyond the bounds of decency. I am convinced that the American Medical Association, when it does this, does not speak for the majority of informed American physicians. I suspect that a large number of doctors share the thoughts expressed by Samuel Standard, M.D., associate professor of clinical surgery, New York University. In the New York Times of February 26, he wrote:

When the American Medical Association leaves medicine, and enters into the field of economics, politics, and general sociology, our paths of thinking diverge. I cannot agree with the AMA's insistence that, despite the advances in the science of medicine, the methods by which it shall be distributed to society's needs must remain unchanged.

What is most distressing is that the American Medical Association's fight against a new way of financing the hospital and related care needed by the aged is but the latest in a long history of opposition to social progress. The extension of social security benefits to the disabled, the elimination of a means test in the Federal program for crippled children, Federal grants to the States for material and child welfare programs—and even voluntary health insurance—all of these were at one time bitterly and vigorously opposed by the American Medical Association. All of these measures are today in effect over the original opposition of the American Medical Association, and all of them have made life better for vast numbers of Americans.

Mr. Speaker, I should like to put into the RECORD the documented history of the American Medical Association, related to the points that I have mentioned, in the hope that knowledge of these facts will provide the Members of the Congress with some perspective to assist them in evaluating the current activities of the American Medical Association:

THE DOCUMENTED RECORD OF THE AMERICAN MEDICAL ASSOCIATION

1. OPPOSITION TO THE EXTENSION OF SOCIAL SECURITY BENEFITS TO THE DISABLED

American Medical Association bitterly opposed from 1948 to 1956 the extension of social security to provide cash benefits to the permanently and totally disabled at age 50. The American Medical Association cited this program, which was enacted in 1956 and which is in its 5th year of successful operation, as a serious threat to American medicine. The incalculable cost to the public which the American Medical Association foresaw has been so moderate that the Congress in 1960 found it possible to eliminate the age limitation without any increase in social security taxes.

Source: The house commended the following statement by Dr. F. J. L. Blasingame and recommended that each delegate bring it to the attention of his constituent association:

"The proposed amendment to the Social Security Act, embodied in H.R. 7225, which would establish a cash benefit under the Old Age and Survivors Insurance System for disabled beneficiaries beginning at age 50, constitutes a serious threat to American medicine. It is obviously one important step on the road to a system of complete Federal medical care. No government can long provide cash benefits as a right under a so-called social insurance system without eventually injecting itself into the physician-patient relationship. It will necessarily become a responsibility of government to regulate the medical care and the rehabilitative programs that are associated with the payment of the cash benefits. Because of this undesirable impact on medicine, the incalculable cost to the public, the inhibiting effect on the patients' will to be rehabilitated, and for other reasons which have been detailed in many communications to you from our Washington office and the committee on legislation, we have properly opposed this proposal and recommended that a careful nonpartisan study be made of disability as it relates to employability for the purpose of determining the best possible methods of conducting constructive programs in this area." (Official proceedings of the house of delegates, American Medical Association, June 1956: 18, 66, 67; Digest of Official Actions, 1846–1958, American Medical Association, p. 661.)

2. OPPOSITION TO THE ELIMINATION OF MEANS TEST IN CRIPPLED CHILDREN'S PROGRAM

The American Medical Association in 1953 called socialistic a Federal regulation requiring that State crippled children's services shall "provide that diagnostic services * * * will be made available * * * to any child (a) without charge, (b) without restriction or requirement as to the economic status of each child's family * * * and (c) without any requirement for the referral of such child by any individual or agency."

Source: The house of delegates adopted the following resolution from Indiana: Official proceedings of the house of delegates, American Medical Association, June 1953: 56, 61, 62; December 1953: 50, 90, 91:

"Whereas section 200.9 of part 12–4 of regulations for maternal and child health and crippled children's programs, entitled 'Crippled Children's Program; Diagnostic Services' states as follows: 'State plans for crippled children's services shall provide that diagnostic services under the plan will be made available within the area served by each diagnostic center to any child (a) without charge, (b) without restriction or requirement as to the economic status of each child's family or relatives or their legal residence, and (c) without any requirement for the referral of such child by any individual or agency: Therefore be it

"*Resolved*, That the board of trustees work through whatever channels may be necessary to eliminate this section of the regulations, the same being a socialistic regulation." (Digest of Official Actions, 1846–1958, American Medical Association, pp. 90–91.)

3. EARLY OPPOSITION TO VOLUNTARY HEALTH INSURANCE

Until the American Medical Association, in the midst of its fight against a national health insurance program, was advised by public relations counsel to support voluntary health insurance, organized medicine had been a barrier to the development of voluntary plans. In December 1949 the Journal of the American Hospital Association commented editorially that "It is a sad fact that through the 1930's and early 1940's the American Medical Association did not believe in voluntary sickness insurance, did almost everything possible to prevent its development."

Source: The American Medical Association's defense of its early record on the prepayment issue is set forth in Dickinson, "A Brief History of the Attitude of the American Medical Association Toward Voluntary Health Insurance" (AMA Bureau of Medical Economics Research Bulletin No. 70, 1949). The American Hospital Association, an organization in a position to know, reacted skeptically to this document:

"Bulletin 70 sets out to prove that the American Medical Association has never opposed voluntary sickness insurance plans in this country as they exist today. It quotes many official statements between 1916 and 1938. It points out that the opposition expressed—and this was sometimes pretty vicious—was aimed at earlier types of plans, not at those currently in operation. This document is not wholly convincing to hospital and Blue Cross leaders whose experience dates back a few years. Nowhere in the selected quotes is there a genuine word of encouragement to voluntary plans, much less a sign of leadership. There are words of caution, of criticism, of fear and warning. There are no words of confidence in the pioneers of voluntary sickness insurance, no words of faith in the principle of prepayment, and not even a forthright statement that some way must be found to make medical and hospital services more widely available.

"It is a sad fact that through the 1930's and early 1940's, the American Medical Association did not believe in voluntary sickness insurance, and did almost everything

possible to prevent its development." (Editorial, "Hospitals," Journal of the American Hospital Association, December 1949, p. 60.)

"It is difficult to reconcile with actuality the popular fiction * * * that the American Medical Association has always fostered experimentation in voluntary prepayment plans. The fact is that the American Medical Association did nothing positive to encourage voluntary health insurance until the formation of associated medical care plans only a year ago, though in 1938 the house of delegates had enunciated certain principles approving voluntary hospitalization plans, reversing an action taken 5 years previously when the plans had been roundly condemned. During the early struggles of the plans, many State and county societies, far from aiding in their development, actually opposed them; and it is reported reliably that American Medical Association officers from time to time expressed consternation at their growing popularity. To Blue Cross executives, among others, the doctrinaire view crediting the American Medical Association with early sponsorship of experimental voluntary prepayment programs emerges as a simple untruth." (Medical Economics, February 1947, pp. 80, 84.)

4. LABELING OF OLD-AGE AND UNEMPLOYMENT INSURANCE AS A STEP TOWARD EITHER COMMUNISM OR TOTALITARIANISM

Speaking in 1939, on behalf of the American Medical Association board of directors, Dr. Morris Fishbein stated that "a Federal security plan * * * will be the first step in the breakdown of American democracy." He went on to say that "Indeed, all forms of security, compulsory security, even against old-age, unemployment, represents a beginning invasion by the state into the personal life of the individual, represent a taking away of individual responsibility, a weakening of national caliber, a definite step toward either communism or totalitarianism."

Source: Dr. Fishbein, speaking to the annual conference of secretaries of Constituent State Medical Associations, held in the American Medical Association Building, Chicago, November 17–18, 1939, said:

"The introduction into this Nation of a Federal security plan whereby the Nation itself, as a Federal agency, will step intimately into the sickness and life of every person in the country, will be the first step in the breakdown of American democracy. Indeed, all forms of security, compulsory security, even against old age and unemployment, represent a beginning invasion by the state into the personal life of the individual, represent a taking away of individual responsibility, a weakening of national caliber, a definite step toward either communism or totalitarianism. The people of this country today have begun to awaken to the insidious approach of such new forms of government."

The speech which ends with these words, begins with a statement by Dr. Fishbein that "the board of trustees has asked me at this point to interpolate a statement relative to a proposed platform of the association * * *." It appeared in the Journal of the American Medical Association under the heading "The Platform of the American Medical Association." (Journal of the American Medical Association vol. 113, No. 27, p. 2428, Dec. 30, 1939.)

5. OPPOSITION TO FEDERAL GRANTS FOR MATERNAL AND CHILD WELFARE PROGRAMS

In 1930 the American Medical Association condemned the principle of the Sheppard-Towner Act, granting Federal funds to appropriate State health agencies to reduce the death rate among mothers and children, as unsound in policy, wasteful and extravagant, unproductive of results, and tending to promote communism.

Source: The house of delegates approved the following resolutions and requested the board of trustees to initiate a movement to enlist every member of the medical profession to carry into effect the policy defined in these resolutions. (Official proceedings of the house of delegates, American Medical Association, June 1930: Pp. 35, 40, 41:

"Resolved, That the house of delegates of the American Medical Association condemns as unsound in policy, wasteful and extravagant, unproductive of results and tending to promote communism, the Federal subsidy system established by the Sheppard-Towner Maternity and Infancy Act and protests against the revival of that system in any form;

"Resolved, That it is the sense of the house of delegates that each State should be left free to formulate its own health programs, with the coperation of the U.S. Public Health Service if desired by the State, free from any inducement or compulsioh in the way of Federal reward or coercion;

"Resolved, That any legislation involving cooperation between the Federal Government and the several States in the field of public health must, in the interest of efficiency and economy, in the judgment of the house of delegates, be administered under the joint supervision and control of the U.S. Public Health Service and the State health authoritites." (Digest of Official Actions, 1846–1958, American Medical Association, p. 92.)

Hiring the Handicapped

EXTENSION OF REMARKS
OF
HON. ED EDMONDSON
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 23, 1961

Mr. EDMONDSON. Mr. Speaker, the employment of handicapped people is a cause which should be championed by every fair-minded American. It is inspiring to know that this cause is vigorously supported in Oklahoma, and that our State has an effective program in this field.

In that program, one of the greatest influences operating in our State is the Oklahoma State Technical College in Okmulgee, which was recently saluted in an honor winning essay by Pat Deatherage of Okmulgee.

With pride in this high school student's achievement, as well as in the cause and the institution which are saluted, I am commending to the attention of my colleagues this essay, "Jobs for the Handicapped":

JOBS FOR THE HANDICAPPED—A COMMUNITY CHALLENGE

(By Pat Deatherage)

A challenge is something which offers real opposition to one's mind and body. Getting employers to realize the importance of hiring the handicapped is such a challenge. Breaking down old prejudices and replacing them with modern principles is many times an opposition to the mind which is almost overpowering.

Hiring the handicapped is our challenge, which we must meet if we expect the people of our Nation to be happy. But, what must we do to meet this challenge? First of all, we must educate ourselves with facts about the handicapped; what is being done to help them and what has already been done. Then we can present sound reasons to other people in persuading them to hire the handicapped.

Many times in talking with our friends, we may have a chance to put our education to work. For instance, a friend makes the remark that he would not hire a handicapped worker because a handicapped worker would not be as productive as other workers. If we can show our friend actual facts and figures which show that, quite often, the handicapped worker is more productive and efficient, and is a safer worker on the job than able workers, we may be able to change our friend's mind. If our friend will think about it, he will realize that it would only be natural for the handicapped to work a little harder on his job. The handicapped worker knows that he has to keep the job he has because another one may be hard to find. This tends to make him more productive and efficient. He also knows what it means to be handicapped, and this may tend to make him a safer worker than an able worker who does not realize how terrible a handicap may be.

It is also up to us, as a community, to see to it that the places of business have certain devices which will enable a handicapped worker to work there. By this, I mean, that the businesses should be equipped with elevators and ramps instead of stairs so that workers in wheelchairs can work there. When these businesses install the ramps and elevators, they will find that they are really helping themselves as much as they are helping the handicapped. They will receive goods returns from the handicapped worker in the form of efficient and productive work.

We should feel a definite responsibility for helping the handicapped. Wouldn't it be better to help them to help themselves than to pay taxes to support them when they don't want our help in the form of welfare? These people can be happy only when they feel they are a part of our society. So shouldn't we try to help them be a part by giving them an equal chance to work as normal people do? We must strive to make all our people happy, so, as a nation, we can stand united in the face of danger. We should also stop to think that some of these handicapped people may have received their handicaps while fighting for our country. Could we, as human beings, shove these individuals into a corner and just forget them when they have given so much for us? Likewise, we should also feel a responsibility for other handicapped people. Could the reason for their being handicapped be attributed to us? Was the car accident our fault in which the young girl lost her legs? Did we mean to check that piece of machinery to see if it was safe and just forgot to do it, and then someone lost a hand or arm because we forgot? We need not feel as guilty about being the cause of a person being handicapped as we should about not doing something about it.

Another reason we just can't forget these people is that they may be an inspiration for others. To see a blind girl holding a typist's position, or a man without legs doing the job of a draftsman, may be the inspiration needed by some other handicapped person who just needs a little push to make him have faith in life once again. It may also make able workers try just a little harder when they see how well some handicapped workers do their jobs.

Helping the handicapped to help themselves should give us a lift, too. Although we may never realize the thrill the handicapped worker gets when he can buy his family the things which they need with his own hard-earned money, we can realize the thrill of knowing that we have been even a small part in making someone else very happy.

In our own community we are very fortunate to have a trade school which has a rehabilitation center. I am referring to Oklahoma State Technical College in Okmulgee, Okla. At the rehabilitation center, the han-

dicapped are given therapeutic treatments, and at the same time they can learn a trade at which they can work with their particular kind of disability. The State aids the handicapped financially so that all handicapped people can attend and not just a few of them. This kind of center is one of the most wonderful opportunities for handicapped that there can be. People from all parts of the country come to the Oklahoma State Tech Rehabilitation Center to learn a trade so they can lead a normal, self-subsistent life.

If our community and all the communities in our Nation will realize the importance of hiring the handicapped and then meet the challenge which is put before them, our people will become a happier people, and our Nation will become more prosperous and united.

Wisconsin Loses Four Electric Co-op Leaders

EXTENSION OF REMARKS
OF
HON. LESTER R. JOHNSON
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, March 27, 1961

Mr. JOHNSON of Wisconsin. Mr. Speaker, on February 16, a tragic car-truck collision at Mount Pleasant, Tex., took the lives of four of Wisconsin's outstanding rural electrification leaders. Killed in the accident were H. O. Melby, Mr. and Mrs. N. F. Leifer, all of Westby, Wis., and Elmer T. Smith, La Farge, Wis.

In addition to helping organize Vernon Electric Co-op and Wisconsin Electric Co-op, Mr. Melby served as president of these cooperatives for many years. Mr. Leifer was manager of Vernon Electric Co-op since 1937, and his wife shared his intense and active interest in a forward-looking rural electrification program. Mr. Smith was treasurer of Vernon Electric Co-op. All found time to be active in civic affairs in their communities.

As the Madison Capital Times observed in an editorial:

Without people of this stature, REA would never have become the great instrument of service it is for the farmers of this Nation.

Wisconsin and the Nation are better for the fact that they lived, and have been made poorer by their deaths.

Under leave to extend my remarks, I would like to include in the RECORD two articles from the Wisconsin REA News about the lives and deaths of these public-spirited citizens:

DEATH AT A PLACE CALLED PLEASANT

It had been such a pleasant affair, this 19th annual meeting of the National Rural Electric Cooperative Association. For the first time in many years, apprehension over frowns from the White House was absent. Instead there was enthusiasm over a statement from the Department of Agriculture that revealed a belief in the same principles which NRECA members had been advocating for many years. There was also enthusiasm over the man President Kennedy had designated to be the next Administrator of REA—Norman Clapp, of Wisconsin. Those in Dallas from his home State were very proud of him.

For everyone, and for Wisconsinites in particular, it had been the most enjoyable meeting in the history of NRECA.

But four persons from Wisconsin were destined never to get their enjoyment out of Texas.

The first news of the tragedy in Wisconsin was as terse as a police report. Some heard it via radio, others read it: "Four persons from Wisconsin were killed Thursday night when a truck-tractor skidded on wet pavement and crashed into the station wagon in which they were riding. The Texas department of public safety identified the dead as Norbert F. Leifer, 55, of Westby; his wife, Violet M. Leifer, 52; Helmer O. Melby, 72, of Westby; and Elmer T. Smith, 52, La Farge. The driver of the truck, Lloyd D. Lowe, of Iowa Park, Tex., was injured."

The impact of the news was not immediate because the names played tricks. Norbert F., Violet H., Helmer O. * * * could it possibly be Lefty, Pat, and H. O.? People called newspapers and radio stations for verification of the names, hoping perhaps for a mistake, but there was none. It was enormous truth.

Subsequent newspaper editions unfolded more of it. The ill-fated four had been heading east from Dallas on the road to Texarkana when a big truck, headed west, swerved into their lane to avoid another vehicle which had stopped in front of the truck to make a right turn. The station wagon from Wisconsin was smashed almost beyond recognition and four lives were ended there on the highway near a town called Mount Pleasant.

PERSONAL MEMORIES

(By Les Nelson)

When life ends for people dear to you, your mind reaches back beyond death for memories that suddenly stand out against the black curtain of today like precious cameos. Yesterday these memories were lost in the blur of current action; today they are so sharp and clear and prominent that even tears cannot blur them.

Everyone who knew Lefty and Pat Leifer, H. O. Melby and Elmer Smith is the possessor of such memories. Some will be able to discuss them with their friends, others will remain silent because voices break at times like this. A typewriter, less likely to fail, is a friend through which I can relay the memories made silent by the tragic anticlimax to last month's NRECA annual meeting. These are foremost among the many memories, some of them shared with others, some of them mine alone:

Last summer's pilgrimage with Lefty Leifer, Cliff Hooverson, and Harvey Schermerhorn to the Crawford County apple tree under which this publication was started 20 years ago. Lefty Leifer had been the first to see the importance of rural electrification publications and had published one of his own before he helped launch the Wisconsin REA News. The postal permit under which this publication is mailed was originally obtained for Vernon Electric Co-op by Lefty Leifer.

Although our purpose that day was to look back at history, Lefty characteristically looked ahead. He asked again the question he had asked so many times during the past several years: When are you going to print offset?

Lefty Leifer was the first and most active advocate of printing this publication by the modern offset method rather than letterpress. The decision to do just that was made during his lifetime, but the first issue printed by the new method will not be out until July or August.

The day in May 1953 when I first met Lefty and Pat. It was my first day on the job as a member of the REA News staff; in fact I had not yet been assigned a desk. Ten minutes after I walked in the door of the News office I was on my way to Westby. The Leifers treated me like an old friend and instilled in me a conviction I have never lost; that there is no better way to spend one's life than in this business of cooperative rural electrification. Later I learned that to visit Vernon Electric Co-op was traditional first assignment for REA News staff members. Jim Sullivan's first assignment was a trip to Westby. The same was true of Dick Priebe, and 2 years ago the tradition was passed on to Walt Seaborg. To go to Westby was the best possible way for a man to start off on the right foot.

The time in the fall of 1957 when I traveled to the NRECA regional meeting at Springfield, Ill., with Lefty, Pat, and H. O. Melby. I remember so many things about that trip—where we stopped to eat, what we talked and laughed about. But especially I remember the incident of the hotel keys on our way back to Wisconsin.

Mr. Melby had shared his room with me in the hotel at Springfield. About an hour out of Springfield, while talking about the World Series which had ended during the meeting with a Braves victory, Pat mentioned that the Braves players would certainly get the keys to the city when they returned to Milwaukee. This prompted me to search my pockets, where I found my hotel room key. Then Mr. Melby searched his pockets and found another key to the same room. He laughed uproariously and I laughed with him. It gave me great pleasure to share a small weakness with a man of so many great strengths.

The time I first met Elmer Smith. Lefty introduced us, and Mr. Smith in that tall, quiet, and sincere way of his, invited me to drop in to see him next time I was in the La Farge area. I promised that I would, a promise which this day I am sorry I never kept.

Then Lefty, talking through a grin to Mr. Smith, said "I hope you realize you are one privileged character as far as the REA News is concerned. Remember that picture they had of you in the paper a couple of months ago after you were elected to the board? Remember when that picture was taken at the annual meeting? I was shaking hands with you. Well, you saw what they did with the picture—they cropped me off and left you on."

"Well," replied Mr. Smith, who was 3 years younger than Lefty, "maybe they didn't want any youngsters like you in the picture."

I wasn't sure what they were joking about at the time because I hadn't been the one who took the picture and cropped it. I made a mental note to look for it but didn't find that note until tragedy sharpened my memory. Then I found the picture and wanted it and all of it and more.

New Britain Surgeon Back From "Hope" Tour

EXTENSION OF REMARKS
OF
HON. EMILIO Q. DADDARIO
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 29, 1961

Mr. DADDARIO. Mr. Speaker, there recently appeared in the Hartford Courant, my district, a story of Dr. Paul Tisher, a New Britain surgeon who is back from serving 2 months aboard the hospital ship *Hope* in Indonesia.

Dr. Tisher's story is an encouraging one of what can be accomplished through people-to-people contacts, such

as President Kennedy's Peace Corps hopes to accomplish in other areas. The story of the *Hope*, and what it is doing, should be of interest to all of us and I commend it to the attention of the House.

[From the Hartford (Conn.) Courant, Mar. 19, 1961]

NEW BRITAIN SURGEON BACK FROM "HOPE" TOUR

Dr. Paul Tisher, a New Britain eye surgeon who returned home this week after serving 2 months aboard the *Hope*, says the friendliness of the Indonesian people toward the American doctors and nurses extended from the bottom to the top of society.

President Sukarno received Dr. Tisher and his associates at the presidential palace in Djakarta and talked with them for an hour "in fluent English." Tisher said, "Sukarno couldn't have been nicer."

The people of Ambon held a party for the Americans in the school building, and at Makassar in the Celebes Islands families came as many as 200 miles through hill country to see the ship. In every port the piers were jammed with sightseers.

THE "HOPE'S" MISSION

The mission of the *Hope* is primarily to teach, Dr. Tisher says. More can be accomplished by teaching local doctors than by treating patients.

At one port he said, the local Chinese eye doctor told him 300 patients needed treatment. Dr. Tisher, who was accustomed to seeing about 50 patients in one morning, thought the workload a light one until he learned the 300 on the list were blind. The Chinese doctor was a thoroughly competent man, but he had been away from the centers of modern teaching for so long he did not know how to operate on cataracts.

In a few days Dr. Tisher and the local surgeon performed as many operations as possible, starting with younger patients and working through the list. They did not finish, but when Tisher left the Chinese could remove cataracts himself. Dr. Tisher's work in that village, and the work of the *Hope*, will continue. It is teaching which pays the greatest dividends, Dr. Tisher says.

PEOPLE TO PEOPLE

"The *Hope* is divorced completely from from military or government contact," Tisher told the Courant. "It is part of the People to People Health Foundation. The American people are sending American doctors, nurses and technicians to other parts of the world as teachers and ambassadors. And we learn as much from the Indonesian doctors as they learn from us." By and large Indonesian doctors are very capable. Their only handicap is being removed from teaching centers.

In their country infectious diseases, malnutrition, malaria, leprosy and tuberculosis are widespread, mainly as a result of poverty and certain unhygienic habits.

The country is progressing rapidly, using its own energy and resources as well as outside help. The Universities of California and Kentucky are assisting medical schools in Indonesia to expand their programs and improve their methods. "There are three good medical schools in Indonesia." Dr. Tisher said. In one of them "every member of the faculty will be American-trained when the University of Kentucky completes its program there in 3 years. And they will all be under 40 years of age."

Tisher concludes, "We are one step ahead of the Russians there. Our diplomacy is extremely effective."

WITCH DOCTORS

Alluding to the unhygienic habits of some of the Indonesians, Dr. Tisher said that in interior sections some witch doctors are still practicing; but the local doctors do not fight them. "They work with them, because the witch doctors do a certain amount of good with their herbs."

The universities are graduating about 100 doctors a year, with every prospect of increasing the number. And Tisher emphasized, "They are good doctors." The trouble is the enormity of their job. In an American city a doctor might operate 5 or 6 times in 1 day—and that would be a hard day's work—but in Indonesia 20 or 30 operations are sometimes necessary in a day.

One doctor, a permanent member of the *Hope's* medical staff, said the need is so great the ship could remain in Indonesia for years to come. The people are to erect a hospital in Djakarta to be staffed with American doctors. The cost of such a project is great. Operating expenses of even one hospital ship, the *Hope*, are $3.5 million per year, and all the money comes from private contributions within the United States.

The need is so tremendous and the obstacles so large, Dr. Tisher says, that the *Hope's* staff sometimes wonder whether the effort is worthwhile. "The morale of the ship fluctuates," he said.

Dr. Tisher was asked what was his answer to the question, "Is it worthwhile?" He said, "I have to wait and see. There is no immediate answer" in a long-term effort like this.

One index of effectiveness is that during his 2 months aboard the *Hope* Dr. Tisher trained three Indonesian doctors in up-to-date methods. He recalls talking about glaucoma with one doctor from 9 a.m. to 3 p.m.

One afternoon an Indonesian doctor, a member of the permanent staff of the *Hope*, talked to us directly from the heart. He explained patience was necessary in working in the Orient, where obstacles are overwhelming. The speaker cheered his listeners, and there was a visible change in morale aboard ship.

In every port the piers were jammed with sightseers.

"They wanted to see the ship," Dr. Tisher said, "and they also heard we were giving out ice cream.

"And we were."

Some Budget Director

EXTENSION OF REMARKS
OF
HON. ROBERT H. MICHEL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Monday, April 10, 1961

Mr. MICHEL. Mr. Speaker, as a member of the House Appropriations Committee, I am impressed with editorials appearing in the March 29 and 30 issues of the Chicago Tribune. Evidently the Harvard brain trusters think the New Frontier has unlimited boundaries. The editorials referred to follow:

[From the Chicago Tribune, Mar. 29, 1961]

Congress has listened to a lot of people spout a lot of economic nonsense, but surely it has never heard such concentrated nonsense come from a Director of the Budget as it did on Monday.

David Bell, who holds this position under Mr. Kennedy, appeared before the Joint Economic Committee to explain the Kennedy budget for 1962. He told the members what was already common knowledge: that the balanced budgets planned by Mr. Eisenhower for this year and next are out of date; that this year will end up with a deficit of about $2.2 billion, and that an even greater deficit is likely for 1962.

The Director of the Budget doesn't seem to be the least perturbed by all this deficit spending. On the contrary, he told the committee members that Federal outlays would be expected to climb steadily in the years ahead. He said that a consistent effort to balance the budget would be not only extremely difficult, but positively harmful. He said that deficits this year and next are clearly essential to economic recovery and won't lead to any significant inflation. And he said there is no use hoping for a decline in Federal spending unless there is a substantial reduction in armament.

To cap it all, he says that it would be a serious error to reject public spending programs simply because we cannot afford them.

What does Mr. Bell think the budget is? Most people think of it as something to live within. Historically it is based on the amount of money available to spend; the word itself, centuries ago, meant "wallet." The British Government still opens the budget.

Our Bureau of the Budget was established in 1921 in response to protests that the Government was living beyond its means. It was designed to fix responsibility for a sound fiscal policy. In 1939 it was made an independent office under the President, but the law still says that its studies and reports are to be made with a view of securing greater economy and efficiency in the conduct of the public service.

Here we have a Director of the Budget saying, in effect, that the budget should not stop anybody from spending what he wishes to spend. The agent who is expected to stand up against the extravagance of his colleagues (as Mr. Stans often did, to their discomfiture) is actually promoting extravagance. If the Budget Bureau is to become a spineless tool of the spenders, we would be much better off without either it or its Director.

[From the Chicago Tribune, Mar. 30, 1961]

The second section of Mr. Kennedy's budget, dealing with defense expenditures, discloses that he has upped Mr. Eisenhower's proposed spending on the Military Establishment by $700 million for the coming fiscal year. Coupled with Kennedy's proposals last week for nondefense spending, the combined budget is $3.4 billion higher than the $80.9 billion in spending recommended by the outgoing Republican administration.

Whereas Mr. Eisenhower had anticipated an estimated $1.5 billion surplus in revenue, Mr. Kennedy is reconciled to a deficit of at least $2.8 billion. The probability is that the deficit will be much larger than that, with spending both on nondefense and defense items destined to continue rising in the years ahead. All this is in prospect although Mr. Kennedy's conceded total spending in the fiscal year starting July 1 will hit just short of $85 billion, far and away a record for any peacetime year and a figure exceeded only in two of the World War II years.

The largest increases in spending are in the welfare categories of the nondefense budget, where Kennedy has added $3.2 billion, about 4½ times the increase for defense. As we suggested when, for the first time in American governmental practice, the revised budget was submitted in two installments, it is as is nondefense items bore no relationship to defense spending or to aggregate spending. The apparent intention was to confuse the people.

The result is what has been described as a fiscal fable and a confused apology for a deliberate program of deficit spending. In a recession and facing a troubled world situation, with an imminent threat of war, Kennedy proceeds unconcernedly as if there were no need to husband resources through fiscal discipline.

"We can afford," he says, "to do what must be done, publicly and privately, up to the

limit of our economic capacity—a limit we have not even approached for several years."

This is a statement that, although yesterday has failed to provide for today, tomorrow may be trusted to bring out today's improvidence all even. Things are to balance over the years of the business cycle—a theory that has been applied for 30 years and has yet to prove itself. Publicly—that is, by Government—Kennedy may think the country can afford anything. But if every citizen set out to govern his private affairs by the same standard, the Nation would be one vast and continuous sheriff's sale.

Department of Agriculture Has Positive Attitude on Farm Credit

EXTENSION OF REMARKS
OF
HON. LESTER R. JOHNSON
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, March 27, 1961

Mr. JOHNSON of Wisconsin. Mr. Speaker, the current attitudes and actions in the U.S. Department of Agriculture are refreshing and encouraging not only because they are positive, but because they are rooted in optimism and determination.

In the field of farm credit, Secretary of Agriculture Orville L. Freeman recently had this comment:

> To the extent that farm loan policies and available funds can prevent it, no qualified family farmer will be required to give up farming because of his inability to finance his 1961 operations.

The Secretary at that time asked the Farmers Home Administration of the Department to review its regulations and take every step within its authority to meet farm credit needs. The Secretary's request accompanied action by the President making an additional $35 million available for farm operating loans during the 1961 fiscal year.

Mr. Speaker, over the past 9 years, declining farm prices and income have caused many beginning and other farmers to exhaust their normal sources of credit. This is a poor time to throw upon the labor market families which can, through loans and guidance enabling them to achieve full utilization of earning resources, continue in a way of life they know and love.

It is the intention of the administration, working in cooperation with the Congress and the farmers of our Nation, to reverse the downward farm income trend so our efficient family farmers can earn and get a parity of income. Secretary Freeman has said:

> When the new farm program becomes effective, these family-type farmers will again be good commercial credit risks. It would be unthinkable to allow many efficient farm families to give up the struggle now because they are unable to obtain credit needed to finance 1961 operations.

The Farmers Home Administration's broadened look at the credit needs of small farmers does not mean individuals will be financed beyond ability to pay—but it does mean that problems will not be allowed to overshadow potentials. The revised loan eligibility requirements give increased consideration to young farmers who in the future will be able to obtain additional land and other resources, and to young and middle-aged farmers who may be able to obtain off-farm income in the future. The operating loans are made for purchase of livestock and equipment, for fertilizer, tractor fuel, feed, and other essential farm and home operating needs, and to refinance chattel debts. The loans are scheduled for repayment in accordance with borrowers' abilities, over periods not exceeding 7 years.

Mr. Speaker, experience has shown that Farmers Home Administration loans do not result in increased expenditures by the Federal Government, because borrowers have an outstanding repayment record.

Secretary Freeman and the Department of Agriculture deserve appreciation for their recognition of a genuine social and economic need in the field of credit, and their constructive attitude and actions in meeting it.

Some Guideposts for Education

EXTENSION OF REMARKS
OF
HON. ED EDMONDSON
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 22, 1961

Mr. EDMONDSON. Mr. Speaker, today the eyes of all Americans are rightly focused upon our educational system, and the need for its improvement wherever possible.

In a recent edition of an Oklahoma daily newspaper, attention was directed to some of the genuine virtues of the educational system of the Cherokee Nation, as that system operated in Indian territory before it became the State of Oklahoma.

In the middle of the 19th century, the Cherokees National Male Seminary and Female Seminary at Tahlequah began making a great contribution to the culture and progress of this great people.

We could learn a lot today from an examination of the operation of those seminaries, more than 100 years ago.

In the Tulsa Tribune of March 22, 1961, the Tribune's correspondent, Frosty Troy, summed up the story of the Cherokees educational system in this way:

CHEROKEES HAD RIGOROUS SCHOOLING—CATALOG OF TAHLEQUAH SEMINARIES REVEALS STERN DISCIPLINES

(By Frosty Troy)

"Morality and knowledge being necessary to good government, the preservation of liberty and happiness of mankind, schools and the means of education shall forever be encouraged in this nation."

These words are found in the constitution of the Cherokee Nation, once the wellspring of educated red men whose profound effect upon Oklahoma affairs is still felt today.

The educational system of the Cherokees set them apart from other Indians, and from their lofty eminence they produced intellectuals, politicians and poets who had a hand in shaping the destiny of the 46th State.

The Cherokee thirst for knowledge led to the founding of the National Male Seminary and Female Seminary at Tahlequah in 1850.

Both institutions brought honor and fame to the Cherokees at a time when the white man's educational opportunities on the American frontier were primitive. The Cherokees were undoubtedly far in advance of their white neighbors in matters of education.

An old "Catalogue of the Cherokee Male Seminary" rests in the archives of the University of Oklahoma, and it contains the key to the success of the seminaries under the title of "Daily Programme." The schedule:

Students rise 5:30 a.m.; study hall 6–7 a.m.; breakfast and detail 7–8:30 a.m.; chapel service 8:30–9 a.m.; recitations 9–12 a.m.; recess 12m.–2 p.m.; recitation 2–4 p.m., military drill 4:15 to 4:45 p.m.; supper 5 p.m.; study hall 6:45–8:45 p.m.; first bell to retire 9 p.m.; final bell 9:15 p.m.

There was no beadwork, leathercraft or pottery in a Cherokee school. The male and female seminaries taught metaphysics, ancient languages, higher mathematics, natural sciences, English, history, music, military tactics, and domestic courses for the girls.

There were no fraternities or sororities, and all students, rich or poor, took turn washing dishes and waiting on tables, plus handling chores such as sweeping and cutting wood.

Students took turns reading at meals, sometimes from books, generally from the news of the day and the literary articles of magazines.

"The object being to stimulate reading and conversation upon current topics," the catalog said.

The institutions were nonsectarian, but this did not mean they were nonreligious. Moral training, the founders agreed, was every bit as important as Latin and Greek.

To make free time interesting, the Male Seminary built a greenhouse and stocked it with the finest in common and rare specimens of flowers and plants.

The catalog also explained the philosophy of discipline: "Correct teaching is one mode of discipline. Discipline itself is a great educational process. The well disciplined alone are well educated. Discipline can add nothing to the mental or moral capacities; but can bring them under such a process of training as to develop the latent energies of the mind and body, and direct them to a course of right action, so that the future citizen and law giver may be fitted for his great work."

By keenly selecting the students to attend the seminaries, the Cherokee Nation was able to produce leaders of unparalleled stature in Indian territory.

Not many decades after the schools were founded, one of the Nation's leaders boasted: "In no other country can such advantages be found in a first-class institution. The Cherokee Nation is not excelled by any other country in the inducements offered the youth."

During the Civil War, both seminaries were demolished, but the undaunted Cherokees rebuilt. It took the influx of white men to finally bring about the deterioration and eventual closing of the seminaries.

The Cherokees were a people who relied heavily on strict tribal discipline, but their young people were no match for the temptations of the settlers. Whisky, broadcloth, and trinkets and redistribution of Indian territory lands by the great white father eventually brought poverty and ruin to the Cherokee Nation.

When the Russians dazzled the world by sending the first sputnik aloft, an agonizing reappraisal of the American educational system was touched off.

Parents and educators began to discuss whether courses such as driver's training, home economics for boys, golf, personality development, and similar courses were really

necessary in the public schools and universities.

There was a hue and cry for hard education—math, science, languages, history, English—the type of educational process the Cherokee Nation had honed to a sharp degree on these very plains over a hundred years ago.

Former House Page in December 1887, When 10½ Years of Age, Writes Congressman Clyde Doyle of His Page Experiences and Recollections—He Writes at 83 Years of Age

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 10, 1961

Mr. DOYLE. Mr. Speaker, I herewith present the text of a letter written to me recently by Mr. E. L. Conklin, Compton, Calif. Mr. Conklin was born June 25, 1877, and became a page in the House of Representatives when he was a few days less than 10½ years of age: to wit, in December 1877.

In writing this letter to me he knew that my eldest grandson, Danny Doyle Stanton, is now a House page. I mention this because at the close of his letter he mentions Danny.

Historical comments and personal experiences of this senior American citizen who, as he says, was "stationed on the Republican side," will be of very great interest to all who read.

I am sure you, Mr. Speaker, and all my distinguished colleagues join me in thanking this distinguished American, Mr. E. L. Conklin, for writing this letter to me.

Supplementing his letter to me is a letter to me from his daughter, who is mentioned in his own remarks:

COMPTON, CALIF., *February 24, 1961.*

HON. CLYDE DOYLE,
House of Representatives,
Washington, D.C.

DEAR CONGRESSMAN DOYLE: Complying with suggestion in your letter of February 14 addressed to my daughter, Mrs. Mildred C. Specht, I will endeavor to give a brief résumé of my experiences and impressions gained as a page in the House during the 50th, 51st, and 1st session of the 52d Congresses. I hope it may be of some interest to your grandson.

I was born on June 25, 1877, so upon assuming the duties of a page on the first Monday in December 1887, I was a few days less than 10½ years old, which was about 4 years younger than the next youngest boy. I was informed that I was the youngest to serve up to the time I was appointed. Whether there have been any boys who have served at a younger age since then I would not know.

My father was a veteran of the Civil War, serving under Generals U. S. Grant and Geo. G. Meade in the Army of the Potomac. He contracted typhoid-malaria during the campaign in the Virginia swamps, a fever which recurred each year with increasing intensity and longer duration, finally to the extent that he could not hold a job in private industry. Incidentally my father is buried in Arlington National Cemetery and upon visiting there 2 years ago, I found the marking on the headstone to be quite legible.

As was customary in those days, a committee from the Geo. G. Meade Post, GAR, of which my father had b[illegible] member, investigated our financial [illegible]on and obtained my appointment [illegible]ge. You may or may not know tha[illegible]hat time the GAR was a very powerful organization, politically stronger than veteran groups of more recent days. I trust you will understand that I have to go into so much detail regarding myself in order to explain why I received the appointment at such an early age.

There were, as I recall, 30 page boys; I was No. 28 and still have my badge "Page 28, H.R." We lined up in the lobby at 10 a.m. for rollcall; as there was no page school at that period, some of the intervening time until 12 noon when the House convened was spent placing in the file of the Congressmen's desks the CONGRESSIONAL RECORD of the previous day. The pages then took their places on the carpeted steps leading on either side to the Speaker's rostrum; the one in front answering a summons (the Representative signaling by clapping his hands) and the one returning from an errand taking his place at the end of the line.

It so happened that during my entire service on the floor of the House I was stationed on the Republican side. The 50th Congress was fairly serene although there would occasionally be a waving of the "bloody shirt" which would call forth some vituperative exchanges of language. My service during the 50th Congress was very limited due partly to my youth which gave the other pages an opportunity for teasing and it didn't help that my mother had enrolled me as "Bertie" when I much preferred being called Bert (actually my real name is Egbert Hopkins Conklin). I finally became fed up and suddenly hit one of my tormentors, unfortunately at an inappropriate time—directly after the House had been called to order—and place, center of the main aisle directly in line with the Speaker where I was standing awaiting the Chaplain's invocation.

Captain Chauncey who occupied a position of authority between the chief page and the Doorkeeper, doubtful of my promise to engage in no more fisticuffs and of the pledges of the others to behave, transferred me to the Press Gallery. However, I didn't remain there long as I naively repeated in my mother's hearing, some stories the reporters told and at her request (poor Captain Chauncey) was transferred to the ladies' reception room. I was the only page on duty there and was under the supervision of Captain Cunningham, titled the "Card Writer." He would write the lady caller's name on a card which I would take into the Member she desired to see. Now I must inject a personal incident into this already lengthy account. Early in my ladies' reception room duty I took a card in to a certain Member who, after looking at the card said "Tell her I'm not in." I was speechless for a minute for I had been trained to never lie; then I asked him to rise and I would report that he was "not in his seat." I mentioned this for I had occasion to use the same tactics on many occasions and believe I established a precedent as on a visit to Washington several years later I sat in the visitor's gallery, saw a page come in and hand a card to a Congressman who rose from his seat and handed the card back to the page.

The 51st Congress, Republican, was anything but serene. Thomas B. Reed of Maine was the Speaker and was known as Czar Reed. He had a heavy, raspy voice and was the most sarcastic man in public life; also the fact that he had held the House in continuous session for 3 days and nights, doors locked, in order to defeat a Democratic filibuster, helped earn the appellation. It was during this extended session that Representative Kilgore of Texas achieved passing fame for kicking down a door and striding out.

The Doorkeeper was our boss and under him were Captain White, a one-armed Confederate veteran on the Democratic side, and Captain Chauncey, a Federal veteran, on the Republican side. The men who actually were Doorkeepers serving both the doors to the House floor and the galleries, were all disabled veterans with one or more limbs missing. Indeed many of the Representatives themselves were disabled especially on the Democratic side, the South having "scraped the barrel" to maintain their army. There were also many military titles from major on up, so much so in fact that Representative Allen, of Mississippi gloried in the title "Private John Allen."

While I was reared in a northern, Republican family (where Democrats were usually spoken of as "rebels" or "copperheads") I had many more friendships among the affable and considerate Democratic Congressmen.

Awed and impressed as I was on my first day as a page, as I think every young man must be on his first day, I think the most impressive occurrence I have ever witnessed was the funeral for Chief Justice Waite, of the U.S. Supreme Court. The President and his Cabinet were there in the House Chamber, members of the Supreme Court, the Senate, the members of the diplomatic corps in their brilliant uniforms—I particularly recall the Chinese and Japanese Ambassadors in their richly embroidered uniforms—and the galleries filled with the wives and families of the statesmen. But the one whose appearance really thrilled me was Gen. Philip Sheridan, then commanding General of the Army who was the particular hero of my father and his veteran friends. The Commanding Admiral of the Navy was also there with his staff, in dress uniform as was General Sheridan and his staff. I wish I could recall the eulogy and by whom delivered for I remember it as being a masterpiece, even to my young ears.

Of course there were tedious times too during long debates but these were far outweighed by the exciting times as, for instance when Wm. F. Cody with his full-dress Indian chieftains talked to us all and gave us his autograph and Henry Stanley of Livingston fame addressed the House.

Should Danny have the patience to wade through this, he may possibly be entertained by contrasting a page's life in 1887 with that of 1961.

I should like to add that while I am not a constituent of yours, my district (the 15th) also has a very capable Representative, HARLAN HAGEN.

I appreciate your interest and should you see fit to answer am staying for the winter with my daughter Mrs. Specht, 704 South Ward Avenue, Compton.

Very truly yours,

E. H. CONKLIN.

COMPTON, CALIF., *February 24, 1961.*

DEAR CONGRESSMAN DOYLE: I am happy that my father complied with your wishes—he did the writing and I typed it for him. I thought you might be interested in seeing this snapshot of him and my mother, though it was taken before she passed away 7 years ago. Unfortunately more recent pictures are slides which we haven't yet made prints of. I would appreciate it very much if you would return this picture.

Very truly yours,

MRS. MILDRED C. SPECHT.

A Good Omen

EXTENSION OF REMARKS
OF
HON. ROBERT H. MICHEL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 10, 1961

Mr. MICHEL. Mr. Speaker, Mr. Walter Trohan's column, "Report From Washington," in the March 28 issue of the Chicago Tribune, pointed up some interesting and heartening developments among the young people of America. I wish to insert this article in the RECORD as follows:

A GOOD OMEN

WASHINGTON, March 28.—A strange and heartening movement is developing among the young people of America—those on college campuses and those who are making their way in the world.

Youth is in revolt, which is its right, but the curious thing about the current revolt is that it is on the right. Perhaps it is because there is no room on the left for revolt, but it is more likely due to sincere concern over an economic system which resists the pride of the young by doing too much for the individual and making it all but impossible for him to assert "the world is mine oyster" and proceed to open it with the keen blade of his own talents.

In the initial issue of a conservative magazine, the New Guard, Lee Edwards, an assistant to Senator JOHN MARSHALL BUTLER, Republican of Maryland, sounded the call which is echoing over halls of ivy. He wrote:

"Ten years ago this magazine would not have been possible. Twenty years ago it would not have been dreamed of. Thirty-five years ago it would not have been necessary. Today, the New Guard is possible, it is a reality, and it is needed by the youth of America to proclaim loudly and clearly: We are sick to death of collectivism, socialism, statism, and other utopian isms which have poisoned the minds, weakened the wills and smothered the spirits of Americans for three decades and more."

MEMBERSHIPS IN CONSERVATIVE CLUB SWELLS

At Harvard, where the yard has been emptied to fill saddles of power on the New Frontier, the head of the student council is a crusading conservative, who has tossed down the gage of battle to departing professors. At Yale and Princeton where conservative clubs were as forlorn as a corporal's guard, membership is swelling to trumpeting legions.

At the University of Wisconsin in Madison, where a conservative had long been regarded as something for exhibition alongside a two headed calf in a side show, a student publication termed professors "a smug collection of liberals." Similar phenomena have appeared on other campuses where conservatives were long without honor, but where conservative groups now find students beating paths to their doors.

Three decades ago the mellifluous accents of Franklin D. Roosevelt were summoning a generation of young people to remove economic risks in their path. Today a new generation finds that the risks were reduced at the price of freedoms and wants the freedoms restored.

Today's generation appears to have been mobilized to action because the recent presidential campaign served to emphasize how little difference there is between the two parties.

GENERATION CALLS TEACHINGS TO ACCOUNT

Young people found the only challenge in the thunder on the right from the conservative wings in both parties.

This generation is openly calling to account the teachings of professors in economics and political science, if one can ever call the game of chance for power a science, just as the previous generation called the lessons taught in its day up for question.

One of their battle cries was drafted at a meeting of conservative groups in Sharon, Conn., during the campaign. These formulated a declaration of belief which read in part:

"That foremost among the transcendent values is the individual's use of his God-given free will, whence derives his right to be free from the restrictions of arbitrary force; that liberty is indivisible, and that political freedom cannot exist without economic freedom; that the purposes of Government are to protect these freedoms through the preservation of internal order, the provision of national defense, and the administration of justice; that when Government ventures beyond these rightful functions, it accumulates power which tends to diminish order and liberty."

One day the young people are going to own this country. Who has a better right to challenge the teachings of a generation which is piling up a public debt approaching $300 billion?

World's Largest Flatcar Completed at Delaware & Hudson Shops at Oneonta, N.Y.

EXTENSION OF REMARKS
OF
HON. SAMUEL S. STRATTON
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, April 10, 1961

Mr. STRATTON. Mr. Speaker, symbolic of the major role which the city of Oneonta plays in the railroad industry of our country was the announcement made last week that the largest flatcar ever built in the world was recently completed in the shops of the Delaware & Hudson Railroad located in my district in Oneonta, N.Y.:

In view of the great skills in railroading which are represented by the people of Oneonta as well as other communities in my district, it is most imperative that Congress should take steps to see that the railroads are not allowed to die of neglect.

Under leave to extend my remarks, I include a news report from the Oneonta Star of Monday, April 3 describing this important event:

WORLD'S LARGEST FLATCAR COMPLETED HERE—CALIFORNIA JAUNT NEXT FOR "SPECIAL"

The Delaware & Hudson Railroad has completed the assembly in its Oneonta Shops of the world's largest capacity flatcar, J. P. Hiltz, Jr., vice president in charge of operation and maintenance, said Sunday.

The car will be available for the transportation of huge machinery units beyond the present capacity of existing equipment on American railroads.

Its first use, Mr. Hiltz said, will be in the shipment of a 535,000-pound turbine from the General Electric Co.'s plant in Schenectady destined for Bellflower, Calif.

The turbine was loaded aboard the car yesterday.

It will be shipped over the D. & H. to Jefferson Junction, Pa., where it will be turned over to the Erie-Lackawanna Railroad for the second leg of its journey to the Pacific coast.

Other railroads participating in the movement include Nickel Plate, T.P. & W., Santa Fe, Union Pacific, and Pacific Electric.

The car is 60 feet 6 inches in length and has four six-wheel trucks equipped with roller bearings and multiple-wear steel wheels. The load platform is constructed of cast nickel steel.

A complete set of the latest designed air brakes are installed on each end of the car along with handbrakes.

The car weighs 148,300 pounds and has a load limit of 604,700 pounds for a gross weight on rail of 753,000 pounds.

Mr. Hiltz said the car cost $110,000.

The car was designed by D. & H. enginers and built entirely by the railroad's own employees in the Oneonta Shops.

Rural Electrification Builds the Nation

EXTENSION OF REMARKS
OF
HON. LESTER R. JOHNSON
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, March 27, 1961

Mr. JOHNSON of Wisconsin. Mr. Speaker, more than 7,000 members of rural electric and rural telephone cooperatives across the Nation met in Dallas, Tex., in February for the 19th annual convention of the National Rural Electric Co-op Association, which has generally been termed as "the best, most enthusiastic NRECA annual meeting ever held." They passed a series of resolutions that adequately cover the broad field of rural electrification and public power. Under leave to extend my remarks, I would like to include a number of these resolutions in the RECORD:

PREAMBLE

As we enter the 26th year of rural electric development, it is heartening to the large number of rural as well as Government people who started this necessary program and carried it forward with courage in the initial 25 years, to realize that in the 1960 silver jubilee year a significant number of our Nation's people, who had known little about rural electric development before, came to accept the fact that "rural electrification is truly good for all America."

These first years have been in part exploratory, then developmental and now beneficial projection of good and dependable power service. The facts are impressive. The record is a challenge to accomplish substantially more for America's future as the experience gained in the past is applied to the effort exerted in the future.

About 16 million consumers have power because of this proved sound program of real consumer-government cooperation, thousands of new jobs have become available that never would have existed without this multibillion dollar new market for the goods used in generating, delivering and using power; the national wealth and economy has been substantially increased and advanced without the slightest loss of Government loan funds. This was done in the testing period behind us. The years ahead will be years in which we shall more completely than ever cooperate to the benefit of this program and this Nation. This cooperation will also exist between the rural consumers and their organizations and our Government officials in their expressed objectives of getting on with the job and making giant power do giant jobs across the total countryside of this Nation for the good of every American.

We shall not rest on our laurels, but, heeding the experience gained in the past,

we shall advance with a new and positive vigor to provide sources of supply and distribution of power and to aid in the effective use thereof—all in the Nation's interest.

To this task and objective we do subscribe and pledge our every capability, and now, in this 19th annual members' meeting, do lay out guidelines for its achievement by the resolutions herewith submitted:

"REA LOANS AND ADMINISTRATION—GENERATION AND TRANSMISSION LOAN FUNDS

"Whereas the continuing policy of REA under the Rural Electrification Act has been to make adequate loans available to borrowers to finance construction of generation and transmission projects where needed, making it possible to furnish adequate electrict service at the lowest cost consistent with sound business management to ultimate rural consumers; and

"Whereas from time to time attacks have been concentrated against the making of such loans; and

"Whereas if these attacks should be successful in jeopardizing the past prevailing policy in curtailing either the right of the Administrator to make such loans, or the past policy of the Administrator in actually making them, irreparable harm would result not only to consumers presently dependent for ultimate source of power or REA-financed generation and transmission facilities but on other consumers of REA distribution cooperative borrowers who would then be subject to increases in energy costs due in turn to unwarranted increases in wholesale rates charged by private commercial suppliers: Now, therefore, be it

Resolved, That the continuation of the established policy of REA—to make loans available for the financing of the construction of generation and transmission facilities and a continuation of the past and present policy of Congress to make available through REA of an adequate and secure source of loan funds for generation and transmission facilities—is essential to the sound and continued development of rural electrification and the attainment of the objectives of that program for the benefit of peoples in rural areas; and be it further

"Resolved, That any measures or activities designed to curtail or limit the established policies of Congress and REA with respect to generation and transmission facilities be vigorously opposed.

"LOAN AUTHORIZATIONS AND APPROPRIATIONS

"*Be it resolved*, That we respectfully request the Congress to authorize and appropriate the following amounts to maintain and carry forward the REA program during the 1962 fiscal year:

"(a) A new electric loan fund authorization of $220-million and a $60-million contingency fund which, with the expected carryover, is estimated to provide adequate loan funds to bring the electric program through the 1962 fiscal year; and

"(b) An administrative fund appropriation of sufficient size to maintain the REA staff and the legal staff at an efficient level; and be it further

"*Resolved*, That the legislative committee be authorized—as in the past—to make final adjustments in the above estimates as may be indicated when the NRECA annual loan needs survey is completed; and be it further

"*Resolved*, That we strongly support the National Telephone Cooperative Association in its recommendations for adequate loan funds which it makes on the basis of its annual survey of rural telephone systems, and that we lend our strong support to the efforts to correct the unbalanced ratio of loans between telephone cooperatives and commercial telephone companies since it is apparent a more vigorous promotion of cooperatives is needed if area coverage telephony is to be achieved.

"SECRETARY FREEMAN'S STATEMENT ON REA PROGRAMS

"*Be it resolved*, That the Secretary of Agriculture, the Honorable Orville L. Freeman, be highly commended for the excellent statement of principles with regard to the REA programs which he outlined in a memorandum dispatched February 3, 1961, to the REA staff and to the rural electric systems; and be it further

"*Resolved*, That NRECA, being wholly in accord with the policies the Secretary set forth, pledges him its full support in carrying out those policies.

"REA INTEREST RATES AND MONETARY POLICY

"*Be it resolved*, That we reaffirm our long-standing support of the 2 percent REA interest rate and REA loan terms in order that the rural electric systems and the rural telephone cooperatives may be able to carry out the purposes of the Rural Electrification Act, as amended, in building a better rural America; and be it further

"*Resolved*, That we reaffirm our position taken at previous regional and annual meetings in support of a sound Federal monetary policy and an abandonment of the high-interest and tight-money policies which have added to the burdens of the residents of rural America during the last several years.

"TELEPHONES—TELEPHONE PROGRAM

"Whereas it is recognized that the original purpose and intent of the Rural Electrification Act, as it applies to the telephone program, was to provide telephone service to rural America on an area coverage basis; and

"Whereas in recent years the area coverage basis appears to have been disregarded; and

"Whereas some commercial interests are attempting to use the REA telephone program as a vehicle to purchase rundown telephone companies, rehabilitate them with REA loans and then reap a financial harvest by disposing of them at lucrative profits: Now, therefore, be it

"*Resolved*, That the present administration be advised of this situation and that we request that REA practices conform to the purpose and intent of the act and that REA promote, aid and assist telephone cooperatives in accomplishing this original purpose to a greater degree; and be it further

"*Resolved*, That electric cooperatives also be urged to promote, aid and assist the telephone cooperatives to do this job."

Ancient Lesson

EXTENSION OF REMARKS

OF

HON. ROBERT H. MICHEL

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, April 10, 1961

Mr. MICHEL. Mr. Speaker, the following editorial in the April 4, 1961, issue of the Wall Street Journal by William H. Chamberlain is an excellent accounting of how Roman fiscal policy brought the downfall of that great civilization and an event from which we all can learn a lesson. The editorial follows:

A BURGEONING CENTRAL AUTHORITY PRECIPITATED ROME'S FALL

(By William Henry Chamberlin)

The greatest collapse of a mighty state, a large society and a fruitful civilization of which we have a reasonably full record has been immortalized by Gibbon's historical epic, "The Decline and Fall of the Roman Empire."

The eternal appeal of Gibbon's classic lies not only in its factual narrative, but in its superb literary style and its presentation of the rationalistic, commonsense philosophical outlook of the 18th century. As the modern British woman historian, C. V. Wedgwood, remarks in her essay on Gibbon, the latter, although he could not understand the soul of a Christian slave, could appreciate the mind of a Roman senator.

The Canadian Prof. W. G. Hardy, of the Classics Department of the University of Alberta, recently delivered and published in paperback form a series of lectures on the Graeco-Roman world, of which one, entitled "Why Rome Fell," presents in brief compass many of Gibbon's explanations of the Decline and Fall. Gibbon designated the era of the five so-called good emperors, ending with Marcus Aurelius, who died in A.D. 180, as the happiest and most prosperous in the history of the human race.

VOLUNTARY LOANS

And yet, as Prof. Hardy notes, even in this age of internal peace and security against external attack, internal weaknesses were developing which became aggravated with the passing of time and finally proved fatal to the very existence of the empire. One early symptom of trouble was that wealthy men began to dodge the expensive honors associated with the office of local magistrate. This was because constantly rising rates of taxation were shearing them more and more closely. Moreover, they were expected to help their communities out of debt by "voluntary" loans.

By the middle of the second century there were cases when individuals had to be drafted as local magistrates. And, as cities got into financial difficulties, imperial curators were put in charge and the cities lost their self-government.

This extension of paternalism, according to Professor Hardy, was accompanied by a tremendous increase in the personnel of the imperial civil service. Every bureau expanded its field and new bureaus were constantly being added. By the third century, to quote the historian Trever, "the relentless system of taxation, requisition and compulsory labor was administered by an army of military bureaucrats. Everywhere were the personal agents of the emperors to spy out any remotest case of attempted strikes or evasion of taxes."

Another financial burden was the growing cost of the handouts of free food and the public games which were considered the best means of keeping the Roman proletariat peaceable and contended. Originally a fairly frugal allotment of food was made once a month. By the time of Marcus Aurelius there was a daily distribution of bread, pork, and oil. The expenditure on gladiatorial combats and public spectacles continued to climb, until it reached the estimated equivalent of $100 million a year.

Roman financial policy became one of creeping and not-so-creeping inflation. The most common Roman coin, the sestertius, lost about 98 percent of its value between the time of Augustus, at the beginning of the Christian era, and the reign of Diocletian, almost three centuries later.

Perhaps the principal reason for the declining state of the Roman finances was the increasing burden of the military establishment. The cost of the army, according to Professor Hardy, doubled between A.D. 96 and A.D. 180, and this rate of progression most probably increased during the later phases of the decline. The proportion of Romans or Italians in the legions steadily diminished and Hadrian and other emperors pursued the policy of recruiting barbarian mercenaries and filling up the ranks

with peasants from the more remote and least civilized parts of the empire.

The consequences, according to Professor Hardy, were as follows: "The army became composed either of ignorant countymen from the most backward parts of the empire or of foreigners. In spirit and in culture they were peasant wolves with little, if any, respect for the fat sheep they were supposed to protect. This divorce between barbarzied army and civilized but soft civilians was the immediate cause of the collapse."

MILITARY ANARCHY

A period of military anarchy, in which emperors were put up and dethroned and murdered by the legions preceded the final inundation of the western part of the empire by the barbarians.

Diocletian, who brought some temporary order and stability into the declining empire about the end of the third century, issued an edict fixing the maximum price for all goods and all kinds of labor. Death was the penalty for breaking the code. Yet prices continued to rise, and this supreme effort to enforce economic regimentation ended in a fiassco.

The more well-to-do citizens in each community were made collectively responsible for bringing in the taxes, as a result of which they soon ceased to be well-to-do. Farmers were tied to the soil; and their sons had to remain farmers. Similarly the sons of artisans had to follow their father's trade. As Professor Hardy sums it up: "There was no escape from this relentless regimentation. For regimentation was the end result of the abdication of political freedom and of the pursuit of materialism. The welfare state had become a despotism."

Ever higher taxes, an ever-increasing bureaucracy, the growth of an omnipotent state, the paralysis of local initiative, a growing reliance on a central authority that started with some features of a welfare state and ended in full-fledged totalitarianism—such was the unhappy story.

Does it require much exercise of the imagination to recognize in our own country and our own time some germs, at least, of the political diseases that first sapped and finally brought down the "grandeur that was Rome"?

Great Decisions Program Discussion

EXTENSION OF REMARKS
OF
HON. EMILIO Q. DADDARIO
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 29, 1961

Mr. DADDARIO. Mr. Speaker, across the country, many thousands of people have been engaged this past winter in the great decisions program sponsored by the Foreign Policy Association. Based on concise summaries of major international problems, these discussion groups center on what alternative policies exist for this country.

I was interested recently to receive a letter from one of these discussion groups and a consensus of opinion on major issues that resulted from that group's course. I commend the people who took part in drawing this up, and I am sure their study will help them understand better the difficult questions that face our policymakers.

I pointed out in reply to them that theories and principles drawn from such study must then be translated into day-to-day decisions in foreign affairs, and this is not the least difficult part. I want to bring the results of this study to the attention of the members by placing it and the accompanying letter in the RECORD. While any examination of politics, international or domestic, brings with it controversy, the study and analysis of all these great decisions by as many of our people as can devote the time adds greatly to public understanding of what this Nation faces:

DEPARTMENT OF ADULT EDUCATION,
West Hartford, Conn., April 1961.

Hon. EMILIO DADDARIO,
House Office Building,
Washington, D.C.

DEAR SIR: This is a rather unpolished but absolutely honest outline which was developed and agreed upon by a class in foreign policy in the West Hartford, Conn., evening school in the winter session of 1961. The guide we used in the 10-week session of presentation and discussion was from the "Great Decision" booklets, a series of eight topics on world problems issued by the Foreign Policy Association.

It was our intention on the final evening to arrive at some kind of composite score for our semester's work. It was the decision of the class to complete a simple outline of our work and to send it on to our Members of Congress. Much of what we concluded we felt was not in need of any extensive degree of elaborate amplification, because such a communication might lose its value due to sheer length and rhetoric. This is only a humble but yet vitally concerned opinion of 28 American citizens.

Sincerely yours,

JAMES MCINERNY,
ROBERT DEROSIER,
Instructors, West Hartford Evening School.

I. "Deadlock over Germany."
(a) Forget unification.
(b) Maintain strength and status quo in Berlin.
(c) Assist and encourage Bonn Government to assume role of full-fledged member of Western alliance.

II. "Soviet Challenge and World Leadership."
(a) To achieve a nondiscriminating, practical, and realistic foreign policy in order to meet Soviet challenge.

III. "France and Western Unity."
(a) Perpetuate our traditional and historical relations.

IV. "Japan—Future of an Asian Ally."
(a) Constructive, reasonable, and equitable tariff program.
(b) To become equal ally and partner in defense.

V. "U.N. in Explosive Africa."
(a) Recognition of nationalistic aspirations in Africa, even to point of disagreement with allies.
(b) Evolve a U.N. timetable for future independent states.
(c) Continue to censure South Africa on policy of apartheid.

VI. "Americas in Jeopardy."
(a) Better and increased student exchange program.
(b) Avoid identifying all turmoil in Latin and South America as Communist inspired.
(c) Equitable trade policy and strong hemispheric policy in terms of the "good neighbor."

VII. "Arms and Survival."
(a) Keep strong and alert.
(b) Continue development of nuclear power only as a deterrent.
(c) Continue disarmament negotiations on open inspection basis.

VIII. "Blueprint for the World Economy."
(a) Trade with view of progressively liberalizing tariffs.
(b) Wise development of world resources in line with the conservation of world resources.
(c) Raise the living standards of people of the world.

Los Angeles County School Superintendent C. C. Trillingham Informs Congressman Clyde Doyle, 23d District, of County Board of Education Initiating Improvement of Administration Program of Schools, and Exploration and Study of Communism as a Real Threat Today

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 10, 1961

Mr. DOYLE. Mr. Speaker, by reason of unanimous consent heretofore granted me so to do, I wish to call your attention, and the attention of my other distinguished colleagues, to a letter I have recently received from the distinguished superintendent of the Los Angeles County schools concerning their countywide approach to stimulate and assist school districts in their programs of Americanism.

His letter along with copies of various editorials illustrate what they are doing in this important project.

COUNTY OF LOS ANGELES,
SUPERINTENDENT OF SCHOOLS,
Los Angeles, Calif., March 3, 1961.

Hon. CLYDE DOYLE,
Member of Congress, 1030 New House Office Building, Washington, D.C.

DEAR MR. DOYLE: Thank you very much for your kind letter on our countywide approach to stimulate and assist school districts in their programs of Americanism.

We are at the present time inviting each school district to send representatives to a meeting which will probably result in the formation of a countywide committee to study such areas as: How to evaluate materials to determine their accuracy and value; how to develop in-service programs for interested groups of teachers; what curriculum emphasis might be stressed at various grade levels and what might be suggested as possible board policies, including public relations programs. This countywide committee will be meeting in the near future and we anticipate real progress.

Am enclosing copies of editorials and a news release on the subject and will try to send along progress reports.

Thank you again for your interest and concern.

Cordially yours,

C. C. TRILLINGHAM,
Superintendent.

SCHOOL VITAL IN RED THREAT

(While Dick Turpin, education editor of the Times, is on assignment in Europe, this column will be written by leading educators. Today's writer is Dr. C. C. Trillingham, superintendent of Los Angeles County schools)

Recent events at home and abroad have shocked many Americans into the realiza-

tion that the Communists are making good on the timetable laid out by Lenin 40 years ago.

The demonstrations in Japan by Japanese youth which led to the cancellation of the President's visit, the taking over of Cuba by Castro and his influence in Latin America, the Communist-led youth riots in San Francisco against the House Un-American Activities Committee, the continuing ideological struggles in the new and developing nations of Africa and the recent efforts of Khrushchev and his cohorts at the United Nations meeting to take over the controls have dramatized the uncomfortable fact that it is later than we think.

FACTS OF COMMUNISM

Such organizations as the Veterans of Foreign Wars and the American Bar Association, to mention only a few, are calling on the schools to teach the facts about communism—its purposes, its tactics and how it contradicts everything in which free people believe.

Some say that our best defense is a good offense. They suggest that the schools emphasize the positive by helping our youth understand and appreciate our institutions, ideals, freedoms, and opportunities that we too often take for granted. I believe that these critical times call for both treatments—an emphasis on the benefits and advantages of what we have and what we believe as well as a realization of the dangers of communism both within and without our Nation.

FOUNDATION STONES

On the positive side, the schools can teach more realistically about four foundation stones of freedom that have contributed to America's greatness. They are (1) our systems of constitutional government and the Bill of Rights, (2) our system of free, competitive, economic enterprise that has given us great productivity and increasingly high standards of living, (3) our system of universal education giving every boy and girl an opportunity for an education as long as they can profit from it, and (4) our system of Judeo-Christian religion which through the centuries has given man motivation, purpose, and direction.

All four of these foundation stones place emphasis on the importance and value of the individual. They support each other. When any one of them fails or falls, the entire structure will tumble. They are the embodiment of our great American ideals. We frequently fall short in actual practice because we human beings fail to measure up to the great promise of these foundation stones of freedom.

Under these concepts of individual freedom and responsibility, American standards of living and health and education have become the highest in all human history. Our human rights and equality before the law are without match anywhere in the world.

The world was saved from the scourge of Hitlerism by the miracles of American industrial output and technological genius, backed by American idealism. In the struggle against the present scourge of communism the United States represents the main bulwark and hope of Western civilization.

FEEDING AND HEALING

The wealth generated by our free economy and individualist philosophy is today feeding the hungry and healing the sick in vast segments of a distressed world. Millions of men and women in other countries have no higher dream than migration to the soil of the United States. Never before has a nation so powerful as the United States been less of a menace to weak neighbors or more of a hope to enslaved peoples.

Our youngsters must build a new loyalty and a new dedication based upon an awareness of the many freedoms and opportunities as well as the comfort and conveniences that are theirs.

As to the teaching of the dangers of communism, we are in the process of setting up a countywide committee that will develop a selective list of reliable instructional materials—books, reports, and films—that may be used by the schools in informing and alerting their youngsters to the fact that trained agents of the Soviet Union are working like termites everywhere, probing for our weaknesses and attempting to take us over without a fight.

PUBLIC SCHOOLS LAUNCH SPECIAL AMERICANISM PROGRAM

At its regular meeting on February 6, 1961, the Los Angeles County Board of Education authorized County Superintendent of Schools C. C. Trillingham to set up a countywide committee of school people to stimulate and upgrade the teaching of the American way of life, as well as the dangers to our way of life.

The action of the county board of education grew out of proposals of a small steering committee of school superintendents and county office staff members. This exploratory group considered all aspects of the problem and recommended that Trillingham invite the superintendents of all school districts in the county to designate one or more of their staff members to serve on such a countywide committee.

The full committee will be brought together to consider what needs to be done to improve the Americanism programs of the schools and how the job might best be done. Subcommittees would have responsibility for the review and evaluation of all types of instructional materials, including films and film strips, the development of in-service programs for interested groups of teachers with emphasis upon what Americans believe and stand for, the threats to the American way of life, the curriculum emphases to be stressed at the various grade levels, and such matters as board policy and public relations.

The superintendent reported to the board that the exploratory committee had agreed that there is a real Communist threat today, as well as other dangers, and that the schools should do something tangible about these threats, that the schools should emphasize the positive side of our way of life as well as the dangers facing it, that Americanism programs should be based upon authentic and accurate information, and that the schools are legally responsible for development of their own programs of citizenship and patriotism. The superintendent pointed out that outside groups may help but the schools are responsible to the public and must not become unduly involved in outside programs over which they exercise no control. It is anticipated that all school districts in the county will participate in this cooperative effort.

ARE WE AWARE

(By C. C. Trillingham)

The Canadian Intelligence Service has recently released some dramatic excerpts from "Brainwashing," a synthesis of a Russian textbook on psychopolitics used in training Red agents. These paragraphs appeared in the November issue of American Mercury under the heading Planned Delinquency. They were brought to public attention locally by George Putnam who read them on all of his television news reports during the week of March 7, 1960.

The Los Angeles County Board of Supervisors has urged the county superintendent of schools office to bring this message to the attention of all students in the schools of Los Angeles County. It is hoped that school district administrators and boards will cooperate by alerting their youngsters to this danger.

Here is the statement from the Russian textbook used in training their agents to take over the world.

"By making readily available drugs of various kinds, by giving the teenager alcohol, by praising his wildness, by stimulating him with sex literature and advertising to him or her practices as taught at 'Sexpol,' the psychopolitical operator can create the necessary attitude of chaos, idleness and worthlessness into which can then be cast the solution which will give the teenager complete freedom everywhere.

"If we could effectively kill the national pride and patriotism of just one generation we will have won that country. Therefore, there must be continual propaganda abroad to undermine the loyalty of the citizens in general and the teenager in particular."

This is one way the Communists are doing their part to soften the younger generation. They seem to have considerable help inside our own country. Wittingly or unwittingly, they seem to have plenty of assistance in preparing our young people for the "moral decay" that has preceded the fall of all previous civilizations, according to historian Toynbee. With alcohol, narcotics, and pornographic materials available to our youth and with much of our movie and TV fare featuring crime, violence, and loose morality, it is time that our homes, churches, schools and government combine forces to convince youth that honest and decent living represent the highest type of intelligence and patriotism.

Too many unscrupulous individuals are permitted to ply their nefarious trade for the dollars in it and do so under the guise of freedom and democracy. Without regard for the common welfare, freedom becomes license.

The high summit meeting of Communist leaders and representatives of the West is just ahead of us. Millions of people everywhere have great hope in the outcome. American visitors to the U.S.S.R. are impressed with the smiles, the handshakes, and the talk about peace and friendship.

But the declared purposes, the avowed timetables, and past records show that trained agents of the Soviet Union are working like termites everywhere, probing for our weaknesses and attempting to take us over without a fight.

Let's inform our youngsters what the Communists are trying to do to them. Then, let's review with them our many freedoms and opportunities, our comforts and conveniences that are too often taken for granted. Let's try to build a new loyalty and dedication to our Bill of Rights, our free enterprise system, our universal education, and our Judeo-Christian religion. Let's begin living up to the best promises of these great foundation stones. Let's help the youngsters see that we're in a battle of ideologies for keeps.

THE SCHOOLS AND THE COMMUNIST THREAT

(By C. C. Trillingham, county superintendent of schools)

There is evidence of increasing concern on the part of representative public groups that the schools step up their programs portraying the continuing encroachment and expansion of communism in the world today.

Not long ago any school official who suggested that we teach boys and girls about communism was under suspicion. Today responsible groups such as the Veterans of Foreign Wars and the American Medical Association are asking that the schools teach the cold, hard facts about Communist purposes and tactics.

As a means of exploring this problem, the county board of education authorized the staff to meet with a small steering committee of representative school administrators. This joint committee of school dis-

trict and county office personnel has met once and is scheduled to meet again later this month.

Thorough discussion has brought out some points of view that should be reported at this time. A full report will be given later. Here are some of the points of agreement:

1. There is a real Communist threat. A loyal American citizens who doesn't believe this today is either a confirmed optimist or a nonreader.

2. The schools should do something about the Communist threat. To acquaint boys and girls with the philosophy and strategy and the dangers and encroachments of communism is a responsibility of education.

3. What the schools do should be based upon authentic and accurate information. The schools should use materials that present incontrovertible facts. They should be concerned with sound education. This may call for appropriate inservice activities for teaching personnel.

4. The schools should be responsible for developing their own programs of citizenship and patriotism. Outside groups may help but schools are responsible to the public and must not become unduly involved in outside programs over which they exercise no control.

5. The positive side of our way of life should be strongly presented. This is basic to any consideration of the dangers of communism. There should be emphasis on what we believe in and what we stand for.

6. Each school district has responsibility for its own program. However, there may be strength in coordinating our activities on an areawide basis. It might be possible to do some things better together than to go our own separate ways.

7. There is need to keep those who support our schools fully informed concerning our programs of citizenship and patriotism. Too many times schools carry on good programs that are relatively unknown to the lay public.

One of the most difficult responsibilities is making sure that books, films, and other instructional aids—including speakers—are factual and acurate.

This is a project in survival in which all school districts can participate. It is anticipated that the next meeting of the special steering committee may result in plans for countywide efforts to deal constructively with the Communist menace on a sound educational basis.

Double Threat—Silt-Erosion Problem Greater Than Expected

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, April 10, 1961

Mr. DINGELL. Mr. Speaker, pursuant to permission granted, I am inserting into the Appendix of the CONGRESSIONAL RECORD an article which appeared in the Dickensonian, of Clintwood, Va., on March 17, 1961.

DOUBLE THREAT—SILT-EROSION PROBLEM GREATER THAN EXPECTED

The Flannagan Reservoir faces the threat both of pollution and siltation, according to surveys made recently, and reports of which have been received here. A report made by the U.S. Department of Agriculture a few days ago to Senator A. WILLIS ROBERTSON shows that the situation as regards the filling of the reservoir with silt is a more serious problem than was at first believed.

Senator ROBERTSON, in an accompanying letter, says that it is now apparent that a major reforestation program is needed, and the construction of small check dams, to prevent dangerous siltation. It was his opinion that the State water control board would take measures to prevent pollution, but that it had no jurisdiction over the damages already done by the strip mines.

The report of the Agriculture Department follows:

"Hon. A. WILLIS ROBERTSON,
"*United States Senate.*

"Dear Senator ROBERTSON: Following our letter to you of January 30, 1961, concerning the flood and sedimentation problem above the John Flannagan Reservoir site in Dickenson County, Virginia, we have obtained additional information which we are glad to present to you.

"Strip mining began in Dickenson, Wise and Buchanan Counties about 1946. At first, this type of operation was on a small scale. As the demand for coal increased, and larger and better machinery was developed, strip mining really began to expand. Since 1950 strip mining has continued to increase until now approximately one-third of the coal mined in this area comes from strip mines.

"As a result of strip mining operations, thousands of acres have been laid bare and have contributed to increased flooding, erosion, and siltation of streams and bottom land. It is a well established fact that the disastrous flood of 1957 was much worse because of the large, barren, stripped areas.

"A recent survey by the Soil Conservation Service and the Virginia Division of Forestry shows that approximately 20,000 acres of land in the watershed of the John Flannagan Reservoir have been strip mined or affected by strip operations. Land is being stripped at the rate of 700 to 1,000 acres per year within the Flannagan Reservoir watershed. About 4 weeks ago, a stripping operation was started just above and around the proposed permanent pool of the John Flannagan Reservoir. This operation is going ahead at full speed. The back slope of this operation will extend down into the permanent pool of the reservoir. As of today, it is estimated that at least 15,000 acres of strip mine spoil need vegetative treatment in addition to other control measures.

"Prior to 1953, very little attempt had been made to reforest or revegetate strip-mined areas. Through the efforts of the Lonesome Pine Soil Conservation District, organized in the fall of 1953, a planned and deliberate approach was made on the problem. Trial plantings of trees, shrubs, grasses, and legumes were made on these problem areas.

"The results were very encouraging. As a result of these trial plantings, some of the larger coal companies have initiated a revegetating program as a part of their business operation.

"At present, approximately 1,000 acres of mine spoil in the three counties are either set to trees or seeded to some type of vegetation annually. Approximately 5,000 acres have received some sort of vegetative treatment.

"The larger coal companies have been very cooperative. The big problem is trying to get private landowners, who have had their land stripped, to do something. They either can't afford to revegetate, or they don't want to spend money on such a barren, seemingly unproductive area.

"There is no law in Virginia at this time requiring coal operators to revegetate strip mine areas. Such laws are in force in West Virginia and several other States. What has been accomplished thus far in Virginia has been strictly on a voluntary basis.

"We do not have facilities to accurately measure the amount of sediment going into the streams. However, we know that many landowners have brought suit against the coal operators for damages resulting from the siltation of streams and bottom land. Most of these lawsuits have been decided in favor of the landowners. Many of the streams have silted up completely. The Virginia Highway Department has a crew of men that spends full time unstopping drainpipes and ditch lines. This is a direct result of silt from strip mine areas.

"Although the Lonesome Pine Soil Conservation District, along with all the cooperating agencies, organizations, and individuals, has the technical know-how to combat this problem, it appears that additional means and authority will be needed before a high degree of sediment control can be secured in the John Flannagan Reservoir drainage area.

"We trust that you will find this information useful.

"D. A. WILLIAMS,
"Administrator, Soil Conservation Service."

Figures Show Federal Aid to Education Unnecessary and Undesirable

EXTENSION OF REMARKS
OF
HON. ROBERT H. MICHEL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, March 10, 1961

Mr. MICHEL. Mr. Speaker, the existence of a national classroom shortage, a claim circulated by proponents of Federal aid to education, is purely fictitious as indicated in the following broadcast from the "Manion Forum." Moreover, even if these claims were true, there still would be no need for Federal action.

The claim that schools are not getting enough money serves largely as an alibi for the poor showing of many of their graduates when they reach college or start on their jobs. In addition, the popular impression that money from the Federal Government is free is fallacious. The Government first has to take money from the people before it can give any back.

These and other facts were brought out by Roger A. Freeman, a vice president of the Institute for Social Science Research and chairman of the committee on financing public education, on March 26, 1961, in a discussion with Dean Clarence Manion on the latter's weekly radio show. The discussion follows:

Dean MANION. Here, on my desk, are two big recent books dealing with the rising cost of public education and describing ways and means for raising the necessary money. At this moment, these subjects are critically important to every parent, child, and taxpayer.

These books, published by the Institute for Social Science Research, Continental Building, Washington, D.C., comprise a thorough, objective, and analytical study of the subject that is now shaking Congress and the country. ("Financing the Public Schools," 2 vol.)

It is a great tragedy that all of our Representatives and Senators will not be required to read both of these volumes before they vote on President Kennedy's recommendations for Federal aid to education.

Through his professional reputation for study and research, I have known the

author of these books for a long time. In 1953 and 1954, when I was Chairman of the first Presidential Commission on Intergovernmental Relations, this author, Mr. Roger A. Freeman, was an assistant to the Governor of the State of Washington.

At that time, he was recommended to our group as the best available man to direct the Commission's study on the relationship of our public education to the Federal Government. Mr. Freeman accepted the assignment and did an excellent job. But he went on from there to extend and elaborate upon his findings in many official and unofficial positions at home and abroad.

The first of his two volumes on "Financing the Public Schools" was published in 1958; the second appeared last December.

In addition to his assignment with the Institute of Social Science Research, this tireless and scholarly man is presently working with the Institute for Studies in Federalism at Claremont College, in California.

On this program a few weeks ago (Manion Forum Broadcast No. 328), I called attention to a pamphlet on the subject of Federal aid to education which Mr. Freeman prepared for the Citizens for Educational Freedom in St. Louis.

That reference brought such a flood of inquiries that I decided to answer them all at once by the direct presentation to this audience of the author himself. He is here with me now. By all professional standards, my distinguished guest qualifies as an expert witness on the subject of public school financing.

Mr. Freeman, I realize that you were required to write these two big books in order to give us all the answers on Federal aid to education, but I hope that you can hit some of the high spots in the course of this broadcast. For instance, do your findings reveal that Federal money is needed now to bring public school construction abreast of the increasing school population?

Mr. FREEMAN. Thank you, Dean Manion. The reports on classroom construction show that States and communities are doing very well and that they need no help nor prodding. They have built 625,000 classrooms in the past 10 years, which is over 200,000 more than would have been needed to take care of the 11 million increase in the number of children.

In 1950 Congress ordered a national school facilities survey which was completed at a cost of over $5 million and reported a shortage of 312,000 classrooms. In 1954 the U.S. Commissioner of Education said that we were 370,000 classrooms short.

Then the figures started coming down, and 2 months ago the Office of Education said that we are 142,000 classrooms short—which is 230,000 fewer than 6 years ago.

Now, most of these shortages are purely fictitious but, even if they were correct, there would still be no need for Federal action. The Office of Education, taking all of these claims at face value, has estimated that we shall need to build 600,000 classrooms in the next 10 years, or 60,000 classrooms a year.

That is the figure which President Kennedy used in his education message. But, States and communities have been building 70,000 classrooms in each of the past 5 years. So, the volume of school construction could substantially decline from its present level and still produce all the classrooms we can possibly use.

But, the year 1960 established a new all-time record in school bond approvals, which suggests that school construction will continue at a record level.

The State school superintendents reported, in a survey of the Department of Health, Education, and Welfare, that only 237 school districts, out of a national total of 40,000, were unable to build the schools they need. So, the facts don't add up to a situation which calls for action by the National Government.

Dean MANION. As far as overcrowded classrooms are concerned, are our American schools in worse shape than their opposite numbers in Europe and Russia?

Mr. FREEMAN. As far as Russian classrooms are concerned, one need only to look at Moscow schools to find the answer. The typical elementary school class in Moscow numbers 40 to 45 children compared with an average of 28 to 33 in our urban school districts. Practically all Moscow schools are on double shift while 98 percent of the American schools are not.

Many of the Muscovite teachers work two shifts, which is unknown in the United States. Russian teachers are poorly paid, contrary to some claims, and need two salaries to earn enough for a decent living. They get $100 a month or less for one shift.

The Russians have reported that they have built schools to accommodate 9 million children since World War II—and they are not likely to understate their case. American public schools have built classrooms for more than twice that many children and private schools have added space for another 1½ to 2 million. Moreover, Russian schools look like warehouse lofts to American observers who are used to our spacious well-constructed and well-equipped public schools. Similar comparisons could be made with schools in many of the other European countries.

EDUCATION COST OUT OF PROPORTION WITH RESULTS

Dean MANION. Mr. Freeman, is it true that good education is a matter of financing? In other words, does good education necessarily cost more?

Mr. FREEMAN. If the quality of education were proportionate to the amount of money going into the schools, our students ought to be doing very well, indeed. Since 1900, enrollment in the public schools has slightly more than doubled while expenditures multiplied 80 times. They jumped from $200 million to $16 billion. Cost per pupil in dollars of constant value multiplied eight times. Do children now learn more? According to many reports they learn less—at least in such basic subjects as languages, mathematics, history, or geography.

The fact is that training in mathematics or history cost less than in coed cooking or homemaking for boys and that insistence on rigorous mental discipline does not raise costs.

To be sure, the public schools need a great deal of money to give a good education to some 37 million boys and girls. A comparison with school outlays in other countries and with most private schools here—with their buildings, class sizes and teachers' pay—proves that our public schools have ample funds to provide standards of excellence second to none. But standards of learning, of promotion, of graduation in most public schools have declined or been abolished.

The most urgent need today is not so much to get more money for education but to get more education for the money.

If the available resources were fully and efficiently used, our graduates would rank far ahead of those of all other countries and we would not need to worry about them.

The claim that schools are not getting enough money serves largely as an alibi for the poor showing of many of our graduates when they reach college or start on their jobs.

Dean MANION. Would taxpayers save money by shifting the financial burden of the schools to the Federal Government?

Mr. FREEMAN. The advocates of Federal aid are promoting the idea that local support means higher taxes while Federal money comes for free. To some extent they seem to have proven their point. Over the past 10 years all Federal grants in aid to the States combined totaled $30 billion and Federal budget deficits amounted to $34 billion. So, it looks as if the money did come for free.

We know, of course, that in the meantime the dollar lost more than a fifth of its value. This means that we paid for the deficit not in taxes but by depreciation of our savings, pensions, life insurance, etc. This is a dishonest way of supporting Government which sets a demoralizing example to our youth.

If the schools or any other public services are to be supported from taxes, then they cost taxpayers at least as much if they are financed through the National Government as through State and local governments, and probably more.

The claim that Federal taxes are paid by rich people and corporations and State and local taxes by low-income people is a myth. More than five-sixths of the Federal individual income tax comes from the basic 20-percent rate and most of the corporation tax is shifted to consumers through higher prices.

The fact is that in a country in which well-being is as widely distributed as in ours, where three-fourths of all personal income goes to labor, and where taxes take about one-third of the people's income, most of the taxes must come from where most of the money goes: persons in the medium brackets.

The great mass of Americans who are neither very rich nor very poor bear the bulk of taxes no matter by what level of government and by what type of tax they are collected. The average man cannot escape his share through Federal aid and attempts to tell him otherwise is sheer demagoguery.

Dean MANION. By way of conclusion, Mr. Freeman, do you believe that we can have Federal financing for education without Federal control and what, if any, are the disadvantages of establishing national educational standards through Federal control of American education?

PROPONENTS OF FEDERAL AID UNTRUTHFUL

Mr. FREEMAN. You know, Dean, that the proponents of Federal school aid have been telling Congress and the public that there can and should be Federal aid without Federal control. They pay lip service to local control when talking for publicity because they know that the great majority of the American people want to retain power over their schools. But, when the professors of education and the school administrators talk to each other, they speak a different language.

A few months ago, Overview, the magazine of the school administrators, editorialized:

"The United States is inexorably moving toward a national system of education * * * the long-held views that education is largely a personal concern and that educational policy should be made by local units of government will have to go * * *. The national welfare demands a national system of education."

Other educators have ridiculed what they call our historical love affair with what might be called "grassrootsism" in American education and claimed that our present system of local control of education is far more conducive to totalitarianism than a national system of schools would be.

It is quite evident that the issue at stake is not so much the size of school support but who is going to run the schools and decide what to teach and how to teach it.

If it were true that the schools need more money than States and communities can raise—which it is not, but suppose it were true—then the money could be supplied through higher Federal taxes by methods that involve little or no control.

For example, it has been proposed in Congress that a percentage of the Federal income or cigarette tax collections be channeled back to the States with no strings at-

tached. The States could then use the money according to their own judgment. This proposal is being condemned and combated by the Federal school aid lobby because the funds would bypass Federal and State departments of education.

Another plan would either reimburse parents for tuition payments to public and private schools or permit them to deduct such tuition payments from their Federal income tax. That would leave the money in the communities rather than send it to Washington and back.

But, the educational bureaucrats fight such proposals violently, and thus reveal their real goal: they are not so much interested in getting more money as in wresting power over the schools from the parents and communities because they aim to reshape the schools according to their sociological theories. They want the schools to be institutes for life adjustment rather than institutions of learning.

That is the story, Dean Manion.

Dean MANION. Thank you, Mr. Roger A. Freeman. My friends, send these indisputable facts and figures to your Congressman and Senators now. Send them to your newspaper, to your local radio and television newscaster, to your local school board. You can defeat Federal control of your school with these facts and these figures if you act at once.

Timely Resolution of the Board of Supervisors, County of Los Angeles, Calif., on the Important Subject of Air Pollution

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 10, 1961

Mr. DOYLE. Mr. Speaker, by reason of unanimous consent heretofore granted me so to do, there follows for your attention and the attention of my other distinguished colleagues, a resolution recently adopted by the county of Los Angeles, Calif., board of supervisors, dealing with the very serious national problem of air pollution:

"Whereas the pollution of both urban and rural atmospheres has become a serious national problem; and

"Whereas carefully coordinated programs at Federal, State, and local levels are necessary to bring about the rapid restoration of acceptable air quality levels; and

"Whereas this need has been recognized by the executive legislative branches of the U.S. Government through the implementation of an air pollution research and advisory program being administered by the Department of Health, Education, and Welfare; and

"Whereas the required inter-jurisdictional program coordination was substantially enhanced by the National Air Pollution Conference held in Washington, D.C., November 18–20, 1958; and

"Whereas the need for another such conference has been demonstrated by the rise of new air pollution programs at all levels of government by the growth of scientific knowledge and by the election of a new national administration, since November 1958: Now, therefore, be it

"*Resolved*, That the Board of Supervisors of the County of Los Angeles does hereby join with the Southern California Air Pollution Coordinating Council in the following petition to the President of the United States and to the California delegation in Congress assembled: That a White House Conference on Air Pollution be conducted in the fall of 1961, with special emphasis on the need: (a) for new air pollution research, advisory, and control programs at all levels of government; (b) for improved methods of coordinating existing programs; and (c) for improvement in air quality levels throughout the Nation in view of current medical opinions relating to the effect of air pollution on human beings."

I, Gordon T. Nesvig, clerk of the Board of Supervisors of the County of Los Angeles and ex officio clerk of the Air Pollution Control Board of the Air Pollution Control District of the County of Los Angeles, State of California, do hereby certify that the foregoing is a full, true and correct copy of a resolution which was adopted by the Air Pollution Control Board of the Air Pollution Control District of said county on March 28, 1961, and entered in the minutes of said Board.

In witness whereof, I have hereunto set my hand and affixed the seal of the Board of Supervisors this 3rd day of April 1961.

GORDON T. NESVIG,
Clerk of the Board of Supervisors of the County of Los Angeles and ex officio Clerk of the Air Pollution Control Board of the Air Pollution Control District of the County of Los Angeles, State of California.

Hawaii Foundation for American Freedoms, Inc., Honolulu, Hawaii, Unanimously Passes Resolution on House Committee on Un-American Activities

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 10, 1961

Mr. DOYLE. Mr. Speaker, unanimous consent having heretofore been granted me, I bring to your attention, and the attention of my other distinguished colleagues, a letter I have recently received from the executive vice president of the Hawaii Foundation for American Freedoms, Inc., Mr. Lawrence V. Cott, with which he enclosed copies of the resolution unanimously passed by that organization commending the House Committee on Un-American Activities. The letter and resolution follow:

HAWAII FOUNDATION FOR
AMERICAN FREEDOMS, INC.,
Honolulu, Hawaii, March 30, 1961.

Hon. CLYDE DOYLE,
House of Representatives,
Washington, D.C.

MY DEAR CONGRESSMAN: It is a great pleasure to forward to you 10 copies of the resolution on the House Committee on Un-American Activities which passed last Monday at the annual meeting of this citizen anti-Communist educational organization.

We hope that our small gesture will compensate in some measure for the abuse you must sustain by the mere fact of membership on the committee, but more importantly we hope it conveys our gratitude for your service to the Nation.

Sincerely,

LAWRENCE V. COTT,
Executive Vice President.

RESOLUTION ON HOUSE COMMITTEE ON UN-AMERICAN ACTIVITIES

Whereas there is an international Communist conspiracy directed from the Soviet Union and dedicated, as its leaders have said innumerable times, to the complete conquest of the world; and

Whereas the United States is the avowed ultimate objective of the international Communist movement as enunciated in public documents and statements by Lenin, Stalin, and Khrushchev; and

Whereas the Congress of the United States has a duty to inform itself of all dangers to the Nation with the view to writing legislation to protect the freedoms of the American people from all enemies, foreign and domestic, including the international Communist conspiracy; and

Whereas the House of Representatives of the United States has delegated some of those duties and responsibilities to a Committee on Un-American Activities; and

Whereas the Committee on Un-American Activities, under the able leadership of the Honorable FRANCIS E. WALTER, has performed its duties efficiently, courageously and honorably and has fulfilled its mandate without deviation or temerity and with due regard for the law, the rules of Congress and civil liberties, and has accomplished its task despite the most vicious slanders and provocations by Communists and their fellow travelers, and despite little understanding of the nature or nearness of the Communist danger by some of those who should know better: Now, therefore, be it

Resolved, That the Hawaii Foundation for American Freedoms, Inc. (Imua) commends the House Committee on Un-American Activities for its signal service to the Congress and the American people and express its gratitude to the committee and to the Congress that has so recently given its own overwhelming endorsement to the committee; and be it further

Resolved, That copies of this resolution be forwarded to the Speaker of the House, Chairman WALTER, and the members of the committee and to the Honorable DANIEL K. INOUYE, Representative from the State of Hawaii.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U.S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U.S. Code, title 44, sec. 133, p. 1937).

Appendix

Cordell Hull's Historic Role in Income Tax Struggle

EXTENSION OF REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 11, 1961

Mr. EVINS. Mr. Speaker, under unanimous consent I include in the Appendix of the RECORD an article by Charles Bartlett, distinguished journalist and reporter for the Chattanooga Times, recalling events which led to ratification 48 years ago of the 16th amendment authorizing Federal income taxes.

This historic change in our national tax policy was, as the article by Mr. Bartlett notes, to a large extent the achievement of Cordell Hull, then serving in the House as the Representative from the Fourth Congressional District of Tennessee. In the long legislative struggle over this issue, Judge Hull carried to successful completion a reform battle that had been started by another distinguished Tennessean, Benton McMillin—both my distinguished predecessors—from the district which I have the honor to represent in the Congress.

Without the income tax today our Government would not have sufficient revenue to support the defense of our country.

Mr. Bartlett's article, published in the Washington Sunday Star, gives insight into some of the traits of character which contributed to Mr. Hull's success as a Congressman, as a U.S. Senator, and as Secretary of State in the administration of Franklin D. Roosevelt, from 1933 to 1944. The same qualities of foresight, dedication, and resourcefulness which earned him fame as the author of the Federal income tax law later brought him international renown as author of the reciprocal trade agreements programs, father of the United Nations, and architect of the good neighbor policy.

The article by Mr. Bartlett follows:

THE INCOME TAX—HOW WE GOT IT

(By Charles Bartlett)

The docile acquiescence with which Americans have come to pay their income tax is a pale reflection of the sharp struggle which preceded the imposition of the tax less than 60 years ago.

The public's acceptance of the tax as a fact of life is a faint echo also of the Republican platform of 1894 which warned: "In this country an income tax of any sort is odious and will bring odium upon any party blind enough to impose it."

The ultimate responsibility for the tax was bipartisan in a curious way. The Republican conservatives who hated it the most made the tax possible with a huge miscalculation.

Some Democrats, particularly the Western Populists, had pressed for many years for an income tax. Other Democrats, like President Grover Cleveland, opposed it. Cleveland was in fact instrumental in keeping the chairmanship of the House Ways and Means Committee from a Tennessee Congressman, Benton McMillin, who was an ardent advocate of graduated taxation.

In vengeance Mr. McMillin managed, as chairman of a taxation subcommittee, to force enactment of an income tax provision in 1894. It was quickly declared unconstitutional.

CORDELL HULL'S ROLE

A young farm boy, Cordell Hull, succeeded to Mr. McMillin's seat in 1907. He was deeply schooled in his predecessor's battle and impressed by the inequities of a system under which the Government was financed by duties on imports and excise taxes on items like whisky and tobacco. He set about renewing Mr. McMillin's struggle, studying nights and Sundays in his office, larding the CONGRESSIONAL RECORD with information about the tax as it was applied in other countries and in the United States during the Civil War, and pressing his views upon the legislative leaders, who came to shrink at his approach.

His issue had growing support. Theodore Roosevelt had railed at the vested interests and William Howard Taft, campaigning for the Presidency in 1908, endorsed a constitutional amendment to make the income tax legal. Mr. Hull's chance came in the course of debate on the Tariff Act of 1909, a supreme effort by the conservatives which was later known as the Payne-Aldrich Act. He proposed the inclusion of an income tax and the idea gathered momentum, particularly among the Republican progressives from the Middle West. In a last-ditch effort to defeat the tariff act, Democratic Leader Champ Clark proposed that the bill be recommitted with instructions to add an income tax. His motion fell before the Republican majority.

A CASUAL CONVERSATION

But as the powerful Republican majority in the Senate, led by Nelson Aldrich, of Rhode Island, was preparing to take up the tariff bill, Mr. Hull fell into conversation on a train with Senator Joseph Bailey of Texas, a Democrat who had been part of the 1894 fight for the income tax. Mr. Hull brought him up to date on developments and interested him in the plan of adding an income tax amendment to the tariff measure. Mr. Bailey's move was quickly joined by Senator Albert Cummins, Republican, of Iowa, and the momentum began to mount.

Mr. Aldrich, whose attention was centered completely on the bill to raise tariffs, did not like the menace of the Bailey-Cummins move. Aware of the strong possibility that it might pass, he coolly determined to enact a constitutional amendment, get the issue out of the way, and rest comfortably upon his estimate that the State legislatures would never ratify an amendment to make the income tax legal.

UNANIMOUS PASSAGE

The amendment passed unanimously after 2 days of mild discussion in a Senate that included 23 millionaires. Mr. Aldrich's strategy was expressed by Senator H. D. Money, Democrat, of Mississippi: "We can feel quite sure that an act of such far-reaching importance, that touches the pockets of very many rich people, is not very likely to become a part of the organic law of our Republic or of our Confederation."

Seven days later the House passed the amendment 318 to 14 with Mr. Clark asserting that the amendment "is simply a scheme to keep Congress from passing an income tax now." Mr. Hull and others continued to press for direct congressional enactment of an income tax as the amendment began its rounds of the State legislatures.

Four years later on February 3, 1913, only a month before Woodrow Wilson's inauguration, Wyoming became the 36th State to approve Aldrich's amendment and it became the 16th amendment to the Constitution.

Please Send Check

EXTENSION OF REMARKS
OF
HON. JOHN M. ASHBROOK
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 11, 1961

Mr. ASHBROOK. Mr. Speaker, I wish to call to the attention of the Members of the House of Representatives a very fine editorial which was published in the Mansfield News-Journal, an independent daily newspaper at Mansfield, Ohio, on Thursday, April 6, 1961. I am sure that the message it conveys will come through clearly to the reader and I know you will agree that it represents more that the satirical quality which obviously commends it well. It pierces with clarity the illusion of "something for nothing" which seems to be a major national pastime for some of our citizens and indicates the real fallacy of the welfare state.

The editorial follows:

PLEASE SEND CHECK

The SECRETARY,
Department of Agriculture,
Washington, D.C.

HONORED SIR: I understand you pay people for not growing things. How much will you pay me if I do not plant my garden this year? Usually I have a dozen tomato plants, some sweet corn, a row or two of beans and peas. I've had pretty good luck with squash, too, but my potatoes are generally just mediocre.

I'll be glad to discontinue this effort. I began it during the war when it was considered patriotic. Now I can see how it adds to our national surplus and cuts the market for what other people grow.

If you pay me enough so I can buy these things I usually grow, why naturally I'll be happy to collaborate. As my uncle says, it's silly to work for something when you can get it for nothing.

You will have no problem with me. Just write out a check for what you think my vegetables would be worth and I'll put the garden in the soil bank or let my wife put

it in flowers. (She won't sell any, but she'd like to know if it's all right to give some of the glads to the neighbors? If they are sick?)

Where you may run into trouble is with my cousin. He's a knucklehead. He says he never did grow anything and never got paid for it either. He threatens to stake out a garden and start growing things unless you pay him to not.

Somebody told him you get the best deal for not growing rice, cotton, and wheat and he would like you to please advise if this is correct so he'll know which seed not to buy.

It has been carefully explained to my knucklehead cousin that he can get paid for growing things as well as for not growing them, if he'll just go along with your regulations.

He says this sounds like an even better deal.

So please send the regulations on how to get paid for growing things as well as for not growing them.

That is for my cousin, you understand.

All I want is one check for my nongarden.

Sincerely,

E. G. R. BEAVER.

P.S.—Would I also be entitled to compensation for not working in my garden? I'm not pressing you. It's just a thought.

Field Day for Sharpies

EXTENSION OF REMARKS

OF

HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 11, 1961

Mr. DERWINSKI. Mr. Speaker, the other day the House passed the so-called distressed areas bill and except for the neccesary adjustments to be made in conference, it will soon be the law of the land. However, the Chicago Sun-Times in an editorial entitled "Field Day for Sharpies," on April 3, 1961, offered some sobering thoughts to those who advocated this latest brazen raid of the Treasury at the taxpayers' expense:

FIELD DAY FOR SHARPIES

When President Kennedy proposed, shortly after his inauguration, that Federal money be spent in economically distressed areas we commented:

"If an area has economic potential, business can be attracted without Federal help. If the area is hopeless, Federal efforts to pump private enterprise life into it will provide only a field day for politicians, bureaucrats, and business sharpies out to make a quick buck."

We had in mind coal mine ghost towns or rural areas that have no appeal for business investment because of location, lack of raw materials, or other reasons.

Republicans obviously had this thought in mind when they tried to squeeze the pap out of the administration's distressed areas bill in the House last week. They were willing to make Federal loans available to areas with economic potential and to provide funds for retraining unemployed workers in distressed areas, but they drew the line at providing $100 million for industrial loans and $75 million for public facility grants for rural depressed areas, virtually all in the South or border States.

The Republicans called this fund a "bribe and a boondoggle." Pouring money into rural areas that are not suited for economic or industrial development won't hasten the end of the current recession or promote national prosperity.

Representative ALBERT RAINS, Democrat, of Alabama, frankly admitted that the money for rural areas was included in the administration bill to get votes of Southerners for it. And that's the way it turned out. A GOP substitute minus the Southern comfort was voted down and the bribe and boondoggle bill was passed.

Since the Democratic Senate has already passed a similar bill and President Kennedy is ready to sign the measure, a raid on the Treasury in the name of helping the unemployed will soon begin.

We suggest that the Members of Congress with respect for the taxpayers' dollars scan closely each proposal to lay out Federal money in backward areas. It should be possible to put the finger on the politicians, bureaucrats, and business sharpies out to make a quick buck.

In the long run, of course, prosperity is promoted by individual effort and private enterprise, as Representative LESLIE C. ARENDS, Republican, of Illinois, tried to tell the House in reciting the bootstrap accomplishments of Danville, with a long history of being a distressed area. But the House wasn't interested in how private enterprise built up Danville and how it can help other communities willing to help themselves; it was hellbent for a Treasury raid and it voted one.

Pennsylvania School Study Council Signally Honors Dr. A. Bruce Denniston, Superintendent of the Altoona, Pa., Public Schools

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 10, 1961

Mr. VAN ZANDT. Mr. Speaker, at a recent meeting of educators at the Pennsylvania State University, the Pennsylvania School Study Council honored its retiring president, Dr. A. Bruce Denniston, superintendent of Altoona, Pa., schools, by selecting him as recipient of its first award as "Administrator of the Year."

Dr. Denniston is completing 42 years of dedicated service in the field of education and has richly earned the great honor bestowed upon him because of the indelible imprint he has made as an educator in the Keystone State.

Altoona, which is my own hometown, has benefited greatly the past 11 years from the progress made in the public school system during Dr. Denniston's tenure as superintendent. He is recognized as an able administrator with the happy faculty of being able to inspire initiative and leadership in his associates. The result is that members of the staff and faculty have evidenced their great respect for Dr. Denniston and their wholehearted desire to emulate him in his dedicated efforts to advance the best interests of the Altoona Public School system.

Dr. Denniston, in addition to being elected recently as president of the Altoona Rotary Club, has long been active in civic affairs among the most outstanding citizens of Altoona, and one whose exceptional ability and sincere efforts have touched many facets of community life.

In extending my sincere congratulations to Dr. Denniston, I wish to include in my remarks the following editorial from the March 25, 1961, issue of the Altoona (Pa.) Mirror as it is a deserved tribute to an outstanding educator:

DISTINGUISHED HONOR

A most appreciative honor, a brandnew title and a laudatory acknowledgment of extraordinary service in the field of education came to Dr. A. Bruce Denniston, superintendent of the Altoona schools, this week and this community is rejoicing, along with the recipient, in the award of the designation "administrator of the year," bestowed at a meeting of educators at Penn State University.

Dr. Denniston so richly deserves the distinction designated by the Pennsylvania School Study Council. The award has an added interest in that it was the first ever presented by the council and selection of the Altoonan is highly complimentary and greatly valued as an endorsement of the educational advancement as promoted by the superintendent.

The award carries with it a bronze plaque and, in addition, provides financial aid by a scholarship to a graduate assistant in the field of educational administration at Penn State.

Dr. Denniston's career in education covers 42 years, classroom teaching, director of secondary education at Slippery Rock and 12 years as superintendent of the Greenville schools and 11 years as superintendent in Altoona.

His accomplishments as a leader in professional and lay groups has been noted, his long-range improvement of the Altoona School District being lauded. He has also given of his time for various community enterprises and his service as president of the Pennsylvania School Study Council the past year was highly praised as he was designated an inspirational leader, a dedicated schoolman and educator.

The Altoona School District, the community and teachers generally, most cordially congratulate their educational head for the high honor attained, being profound in their thanks for the excellent services, which reflect most encouragingly the high standard of the schools and the city generally. Altoonans are most grateful for the action by the council, which certainly made no mistake in honoring Dr. Denniston and recognizing his vast abilities.

Hope for the Sick

EXTENSION OF REMARKS

OF

HON. SILVIO O. CONTE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, April 10, 1961

Mr. CONTE. Mr. Speaker, as a member of the Massachusetts Committee for Project Hope, I respectfully request your attention to the following editorial:

"HOPE" FOR THE SICK

The floating medical center *Hope*, dreamed up in a great splash of publicity, has gone about its business in the Far East in a quiet and effective way. The *Hope* is a World War II Navy hospital ship, refitted as a floating

clinic and instruction center, and operated by the American President Lines for the People-to-People Health Foundation that runs it as a privately financed undertaking.

The ship has been serving in the ports of Indonesia. It carries some 15 doctors, 20 nurses, and 30 medical technicians, and is outfitted with closed circuit television and classrooms, as well as 3 operating rooms and 230 beds, so as to give instruction to native medical personnel. But despite its up-to-date facilities, the *Hope* often sends its staff ashore to set up what turn out to be primitive clinics. News of the ship's arrival travels fast, and the sick are brought from far inland.

It costs $3½ million a year to keep the *Hope* running, and it is expected that eventually other ships can be sent to Africa and South America. The *Hope* itself is going to spend the summer along the coast of South Vietnam.

Those who have worked on the *Hope* report that the people it has served in Asia are deeply impressed to learn that it comes, not from the U.S. Government, but from the private effort of American people. This allays suspicions of political motives in areas still very sensitive about colonialism and subject to steady Communist propaganda.

In emphasizing medical instruction over stopgap medical services the *Hope* leaves a continuing service behind to a certain extent, whenever it leaves an area. Any such program that encourages the self-sufficiency of people in various kinds of need deserves applause.

Student Returns From Year in Brazil

EXTENSION OF REMARKS
OF
HON. JOSEPH M. MONTOYA
OF NEW MEXICO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 11, 1961

Mr. MONTOYA. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article. I believe that in view of the President's recent statements regarding the need for the revamping of our policy toward Latin America in general, this article would be of some interest not only to the Members of Congress, but also to the policymakers of our Government. I am therefore delighted to submit this article for the RECORD:

LOCAL STUDENT RETURNS FROM YEAR IN BRAZIL

(By Clayton Willis)

A University of New Mexico graduate just back from a year in Brazil has great hopes that new Brazilian President Janio Quadros will do much to curb inflation there.

Jan Smith, 23-year-old daughter of Mr. and Mrs. Mike Smith, 3124 San Pedro NE., said she thinks President Quadros is going to help the economy of Brazil because of the austerity program he has outlined.

"As Governor of Sao Paulo State, Quadros was very successful with his austerity program," Miss Smith said.

She was in Brazil on an Inter-American Cultural Convention grant which is given for study and research.

"When I left Brazil in early February the cost of living and the inflation was going up so much that I didn't see how the lower class could live," she said.

The 1959 University of New Mexico graduate says education is the thing Brazil needs most. She said that only 52 percent of the population is literate.

"I don't think the lower classes are going to be able to better themselves without education. And education is too expensive for them," the former University of New Mexico major in inter-American affairs said.

"And the upper classes don't care whether the lower classes educate themselves or not," Miss Smith observed.

She said that there is little public school type education in Brazil. What education there is is mostly of the private school kind, she noted.

The attractive Albuquerquean attended classes on a noncredit basis 5 months at the National University of Brazil in Rio de Janeiro. She also lived in the Atlantic coastal port city of Salvador 5 months.

Miss Smith spent the remaining 2 months of her year in the Portuguese-speaking country traveling through the interior of Bahia State. There she recorded folk music and visited several cattle ranches in this northeastern part of Brazil.

Four other observations she made in an interview at her home:

1. Communism is practically nonexistent in the part of Brazil she saw;

2. Students at the National University of Brazil gave her a somewhat cool reception as an American. But the university's professors were very helpful;

3. The Brazilian sees the typical American as someone with a lot of money who drinks and smokes and goes to a lot of parties (the impression they get from third-rate American movies they see, she said);

4. Brazilians were surprised that she spoke Portuguese. "But when the merchants found out I was an American, you could see the dollar signs lighting up in their eyes," Miss Smith said.

A Sensible and Timely View of a Certain Constitutional Question

EXTENSION OF REMARKS
OF
HON. JOHN H. RAY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 30, 1961

Mr. RAY. Mr. Speaker, under leave to extend my remarks, I take satisfaction in presenting in the CONGRESSIONAL RECORD a few passages from "The Life of Col. David Crockett," by Edward S. Ellis, published in 1884. Colonel Crockett's treatment of the constitutional question involved in congressional appropriations for charitable purposes is, I submit, both valuable and timely today.

A SENSIBLE AND TIMELY VIEW OF A CERTAIN CONSTITUTIONAL QUESTION

From time to time, Congress has appropriated money for charitable purpurposes. The following account of Crockett's experience, while in Washington, is in that line, and is therefore timely and instructive. The narrator says—

While Crockett was in Congress I had business which required me to spend several weeks in Washington City. Waiting upon one of the departments, or rather one of the chief clerks, for my turn, I had much leisure upon my hands; for, though my business might have been dispatched as well in 2 hours as in 2 months, yet I had to wait. I had made up my mind that I would not leave until my business was settled. My only regular employment was to go every day to the office to learn that it could not be attended to that day.

Crockett was then the lion of Washington. I was a great admirer of his character, and, having several friends who were intimate with him, I found no difficulty in making his acquaintance. I was fascinated with him, and he seemed to take a fancy to me.

I was one day in the lobby of the House of Representatives when a bill was taken up appropriating money for the benefit of a widow of a distinguished naval officer. Several beautiful speeches had been made in support, rather, as I thought, because it afforded the speakers a fine opportunity for display than from the necessity of convincing anybody, for it seemed to me that everybody favored it. The Speaker was just about to put the question, when Crockett arose. Everybody expected, of course, that he was going to make one of his characteristic speeches in support of the bill. He commenced—

"Mr. Speaker, I have as much respect for the memory of the deceased, and as much sympathy for the sufferings of the living, if suffering there be, as any man in this House, but we must not permit our respect for the dead or our sympathy for a part of the living to lead us into an act of injustice to the balance of the living. I will not go into an argument to prove that Congress has no power to appropriate this money as an act of charity. Every Member upon this floor knows it. We have the right, as individuals, to give away as much of our own money as we please in charity; but as Members of Congress we have no right so to appropriate a dollar of the public money. Some eloquent appeals have been made to us upon the ground that it is a debt due the deceased. Mr. Speaker, the deceased lived long after the close of the war; he was in office to the day of his death, and I have never heard that the Government was in arrears to him. This Government can owe no debts but for services rendered, and at a stipulated price. If it is a debt, how much it is? Has it been audited, and the amount due ascertained? If it is a debt, this is not the place to present it for payment, or to have its merits examined. If it is a debt, we owe more than we can ever hope to pay, for we owe the widow of every soldier who fought in the War of 1812 precisely the same amount. There is a woman in my neighborhood, the widow of as gallant a man as ever shouldered a musket. He fell in battle. She is as good in every respect as this lady, and is as poor. She is earning her daily bread by her daily labor, and if I were to introduce a bill to appropriate $5 or $10,000 for her benefit, I should be laughed at, and my bill would not get five votes in this House. There are thousands of widows in the country just such as the one I have spoken of; but we never hear of any of these large debts to them. Sir, this is no debt. The Government did not owe it to the deceased when he was alive; it could not contract it after he died. I do not wish to be rude, but I must be plain. Every man in this House knows it is not a debt. We cannot, without the grossest corruption, appropriate this money as the payment of a debt. We have not the semblance of authority to appropriate it as a charity. Mr. Speaker, I have said we have the right to give as much money as our own as we please. I am the poorest man on this floor. I cannot vote for this bill, but I will give 1 week's pay to the object, and if every Member of Congress will do the same, it will amount to more than the bill asks."

He took his seat. Nobody replied. The bill was put upon its passage, and, instead of passing unanimously as was generally supposed, and as, no doubt, it would, but for that speech, it received but few votes, and, of course was lost.

Future Homemakers of America Look Toward New Horizons

EXTENSION OF REMARKS
OF
HON. WILLIAM H. NATCHER
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 11, 1961

Mr. NATCHER. Mr. Speaker, the period of April 9 through 15 has been set aside this year as National Future Homemakers of America Week, and it gives me a great deal of pleasure at this time to commend the over 500,000 members of this fine organization. They fully deserve our recognition for the outstanding job they are doing in preparing themselves for the vital role they will have in the future of this Nation.

The Future Homemakers of America, which is a national organization for high school students studying homemaking, was organized in June 1945 and now has 10,000 chapters throughout the United States, Puerto Rico, and the Virgin Islands. Cosponsors for the organization are the Home Economics Branch of the U.S. Office of Education and the American Home Economics Association. The Commonwealth of Kentucky was the first State to charter the Future Homemakers of America, and in the Second Congressional District of Kentucky, which I have the honor to represent, members of local chapters of the FHA are extremely active and well organized. Their participation in civic projects, their willingness to be of assistance at all times, the skills they have acquired through FHA activities, and their sense of good citizenship make them highly valuable members of their community. These young women are ably assisted in their endeavors by their home economics teachers and other interested women who appreciate and understand the importance of training these girls in the art of homemaking.

Members of the Future Homemakers of America through their chapter and individual activities work toward four objectives: To develop potential abilities; to develop a better understanding of family members and to contribute to their well-being; to interpret the value of home economics as a basic part of total education; and to promote good will through getting to know neighbors at home and abroad. It can readily be seen that concentration on these four objectives will ultimately bring the girl to the maturity required of a successful wife and mother.

The young woman's innate abilities and talents must be recognized, encouraged, and developed so that she will be able to contribute the full potential of which she is capable to her family and community.

By learning early in life to be aware of others and their problems will enable the future homemaker to care for her family with an understanding and intelligence she might otherwise lack.

Certainly the value of a thorough knowledge of home economics as a basic part of total education has been well established as evidenced by the many courses offered in this subject at our colleges and universities. No longer is the modern wife and mother considered simply a household drudge concerned only with the traditional duties of homemaking such as marketing, cooking, cleaning, and child raising. The American housewife is now expected to be an accomplished hostess, chauffeur, nutritionist, educator, psychologist, practical nurse, and efficiency and budget expert. While all these skills are important to the smooth functioning of the modern home, the most essential quality of a successful homemaker is the ability to bring love, harmony, and a knowledge of God to the family unit.

In order to promote better understanding with young people of other nations, FHA'ers read books, entertain foreign visitors, hear guest speakers and exchange letters with youth overseas. In addition, they make contributions to other nations directly and through other agencies which give material and technical aid.

Mr. Speaker, the members of this national youth organization deserve our commendation for preparing themselves to be better citizens of tomorrow, and not only do the Future Homemakers of America look "toward new horizons," but they "face the future with warm courage and high hope."

Reality and the Electrical Company—Sherman Act Cases

EXTENSION OF REMARKS
OF
HON. CLEM MILLER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 11, 1961

Mr. CLEM MILLER. Mr. Speaker, the electrical company conspiracy cases have been somewhat in the news of late. Not nearly enough, however.

For years we have been submitted to an unrelenting barrage about the glories of the competitive price system. In every book on economics, every financial page, the marketplace has been extolled as the all-inclusive answer to our economic ills.

Yet, for anyone with a grain of curiosity the fact is that there has been no price competition in many key industries for a long, long time. Competition, in the public understanding of that term, has been an old wives tale, suitable for sophomore textbooks. What is so astonishing about the electrical cases is the open mouthed outrage expressed in periodicals like Life and Time. Where have they been since Mr. Luce went to Yale?

Administered prices have been part of the game for many years. The trial and conviction of a few electrical executives is not going to halt the trend either. In one guise or another the noncompetitive price is the order of the day, and will continue to enlarge throughout a broader and broader spectrum of American industry.

This is the reality of modern corporate life. The moralizing on the subject is well-nigh insufferable.

In many ways the real censure belongs not to those benighted officers who were punished with jail sentences, but the highly placed critics who refuse to look the facts squarely in the eye.

We cannot live in a hypocritical world which deals with facts as though they did not exist. Citizens cannot come to any meaningful decisions if they are given only half the basic presumptions. Congress cannot function when it must deal in terms of unreality, the nonexistent world of price competition, for example.

The real conspiracy is not a few electrical executives meeting clandestinely in hotel rooms. The real conspiracy is a continuing one of long standing—the reluctance of Time, Life, U.S. News & World Report, and the other mythologists to start giving people the facts of life.

I include an article by Bernard Nossiter appearing in the Washington Post:

LEGAL PRICE FIXING NEW SHOCK THERAPY
(By Bernard D. Nossiter)

Some business leaders have found a new answer to the electrical machinery price-fixing scandal which would drastically alter traditional American ideas of a competitive economy.

At this point, most businessmen make conventional remarks about the meaning of the case. They talk of the need to take a closer look at what their subordinates are doing to insure that they are complying with the law.

But another idea is growing among a few business leaders. It is based on a much more realistic image of how the economy works. To be sure, this image is not cast in terms of a chamber of commerce speech. It would also disturb the mythmakers who picture ours as an essentially competitive economy.

In blunt terms, here is the solution some businessmen have suggested to the problems raised by the electrical machinery case: Let us legalize cartels, making lawful the very price fixing and market sharing for which the seven electrical machinery executives went to jail.

Most executives, toying with this idea, would simply let each industry on its own agree on prices and division of the market. A few acknowledge that token Government supervision would be a political necessity.

The historian will find nothing new in this. It has echoes of syndicalism, the corporate state and the techniques of much modern business in Europe. The New Deal's brief experiment with the NRA was a conscious effort to fix prices and allocate the market with Government sanction.

But for those who think there are values in a purely competitive economy or those who believe that competition is the dominant mode of the American economy, such an idea is repugnant.

Nevertheless, it is very much in the air as this reporter, an occasional visitor to executive suites, can testify. A knowledgeable vice president of one big corporation was thinking out loud the other day about the electrical case.

"Suppose," he said, "that unrestrained competition prevailed in the heavy equipment industry. What do you think would happen? It wouldn't be long before all the smaller, weaker companies fell by the wayside and one strong dog ate up all the other dogs.

"What is the end result? The very pursuit of unfettered competition would lead to one

firm in the industry or monopoly. Isn't this a paradox?"

The Trade press has been voicing this same theme with increasing frequency in recent weeks.

Item: A cement company publicly deplores plans of a rival to build a new plant. The venture, said the Marquette Cement Manufacturing Co., could lead to "an unrestrained competitive scramble for business in the Northeastern States along with severely reduced prices."

Item: A shipping news writer notes that some Congressmen are taking a dim view of steamship conferences—a device which enables competing lines to fix prices legally. "To the confirmed steamship conference man," the knowledgeable writer says, "the absence of a conference means rate wars and chaos."

The frankest expression of the renewed interest in legal cartels comes from a sophisticated investment advisory service called the Value Line. Published in New York by Arnold Bernhard, it sells for $144 a year. This price alone means that it would be inelegant to call it a stock market tip sheet.

From time to time the Value Line runs Bernhard's analyses of current problems. His views deserve attention on two counts:

His service is held in high esteem by Wall Street and reaches an influential investing audience.

His statement of the meaning of the electrical machinery case has been reprinted by one of the largest of the convicted firms for distribution to selected offices.

Bernhard's thesis is comparatively simple. It parallels the ideas quoted above and runs like this: If laws against price fixing were enforced to the hilt, they would "actually bring about monopoly." Large firms generally have lower unit costs of production than small ones. The big firms could continue to cut prices until the small firms in their industry disappeared. Even if the small firms were more efficient, they couldn't sustain an unlimited price war.

"The big corporation, like General Electric, can sustain a loss in one of its many divisions and offset this loss against the profits of its other divisions, thus reducing its taxable profit." The corporate tax rate is 52 percent, so, the U.S. Government assists the big fellow by absorbing half his loss while the little fellow engaged in only one particular business sustains his full loss without offsetting profits from other divisions (which he simply does not have)."

In fact, the analysis goes on. "The free enterprise system in which prices are free to fluctuate without restraint has not existed for a couple of hundred years." Typically, Bernhard says, price leadership (or administered prices) prevails. That is, the biggest producer in an industry announces or confirms a price and the smaller companies follow its lead. The price is an umbrella held high enough to permit the least efficient produced to make a profit.

This technique sets prices, Bernhard observes. But if products and prices are identical, how do you assure each producer a share of the market?

"Here is where the conspiracy comes in, and in practice has got to come in," the analysis says. "It usually works out that definite percentages of the market are allocated to particular companies by the sellers themselves; they make their bids in such a way as to assure the division of the market according to the prearranged agreement."

While deploring the methods of the electrical machinery makers ("their conspiratorial practices were carried on with the sophistication of teenagers"), Bernhard argues that they had some unique and sticky problems.

He contends that they sell to informed customers—utility company purchasing agents and governments—who would quickly catch on and object to ordinary price leadership. The fact that so many didn't catch on to identical bids for so long makes this a dubious contention, however.

More importantly, perhaps, is that much of the machinery is tailor made for a unity or a government power company. You can't post a uniform price on a product that is changed for each order. So, in effect, the electrical machinery makers were driven to their teenage conspiracy methods.

Bernhard also observes that fixed prices operate legally in many areas of the economy. Floors are set under the price of labor (minimum wage), farm products (price supports) and some retail products (fair trade laws).

Unions are a legal device to fix labor prices, specifically exempted from antitrust laws (unless they are engaged in collusion with employers).

Bernhard argues that there is a contradiction between a government putting a floor under labor's price and prosecuting business for doing the same thing—a point some alerted editorialists are beginning to make.

For now, the argument is left at this point, but its logic is clear: Let us permit market-sharing and price fixing to avoid chaos, rate wars, and the destruction of smaller firms.

Left unanswered is the question of power. Who is to decide what prices shall be and how markets are to be allocated? An instinctive industrial reaction would be, Why us, of course. But this is political fantasy. If cartels were legalized, the cry would inevitably follow that the public interest must be protected, that the Government must have veto power at least over cartel decisions.

Calling the Turn

EXTENSION OF REMARKS

OF

HON. J. ARTHUR YOUNGER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 11, 1961

Mr. YOUNGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the April 3 issue of Barron's entitled "Calling the Turn" by Dr. John H. Hoagland, associate professor of management, Graduate School of Business Administration, Michigan State University:

CALLING THE TURN

(By Dr. John H. Hoagland)

EAST LANSING, MICH.—Purchasing surveys now indicate that the business upturn will begin before mid-1961. A business recovery should begin within a few months and the current recession should prove to be relatively short and mild, according to the latest monthly change in indexes of purchasing business surveys. These were the salient conclusions of reports on the January and February surveys made by the National Association of Purchasing Agents. As expressions of confident forecasting, they ran well ahead of most official and private analyses of leading economic indicators. That confidence, in turn, rested securely on the knowledge that for a decade or more, NAPA's surveys successfully have called the turn on the ups and downs of business.

For example, in early March NAPA indicated that order backlogs were shrinking substantially less than in the preceding 6 months; new orders were declining less than in the 1957–58 recession; curtailment in output remained relatively mild; declines in employment were slackening in most areas; industrial inventories were being liquidated at a slower rate; prices remained fairly stable; sellers were offering somewhat faster deliveries; and buyers were tending to stabilize their forward commitments.

At first sight, such developments might seem difficult to appraise. In recent years, however, NAPA data have yielded a gage which, instead of trying to weigh the aggregate of a large number of business indicators, focuses on the changes. For example, the surveys ask purchasing agents to state whether inventories, new orders, production and employment are higher, lower or unchanged; NAPA then tabulates the responses in percentages of the total number of those surveyed.

By easing an index on the monthly changes in such seemingly simple data, a first-class forecasting device has emerged, the usefulness of which has been affirmed time and again. For example, monthly change indexes, based on NAPA reports, clearly revealed the presence of the 1951–52 recession, which was known to every businessman but ignored by official observers. Similarly, early in 1953, these indexes pointed to the subsequent recession. They also indicated that the 1957–58 setback, which followed the 1955–56 recovery, represented a reaction which was delayed by the Suez crisis of 1956–57.

Contrariwise, in the bleak winters of both 1954 and 1958, the monthly change indices suggested the likelihood of recovery, just as they proceeded to do again early this year. Successful experience thus appears to justify the confident conclusions stated in the NAPA reports of early February and March.

A major reason for the conviction carried by the surveys, and the indices based on them, is the honesty and seriousness with which purchasing executives provide accurate information. Moreover, since NAPA conducts its surveys during the third or fourth week of each month, and tabulates and publishes the results by month's end, its data lead all other indicators by weeks and even months.

In the latest recession, according to the monthly change indices, the business decline reached its peak rate in the final quarter of 1960. The slope started flattening in December, and subsequent trends point toward a general upturn in the near future. Whether the indices supply clear evidence in that respect for March or April matters little besides the discovery that recovery clearly is in sight.

The NAPA business surveys thus have proved to be helpful tools of business analysis. Beyond this achievement, they have given rise to useful observations regarding the business cycle generally. For example, in determining business trends, industrial purchasing agents often carry more weight than consumers' demand. Purchases, after all, are the largest cost element in the industry; manufacturers on average spend twice as much for goods as for wages and salaries. By their decisions and their policies, purchasing executives exert an important influence on their firms' profits. Their combined actions, in turn, have a major impact on the business cycle.

As intermediate consumers, industrial purchasers in the aggregate commit their employers to outlays of $10 to $15 billion a month. Changes in such commitments clearly carry great weight. Between periods of business expansion and contraction, the average forward commitment of industrial purchasers has varied by as much as 1 month, thereby shrinking, or adding to, order backlogs by $10 to $15 billion per year. On certain occasions, the shifts have been much greater.

Business sentiment, in turn, usually reflects rational considerations. When vital channels of supply are threatened, for instance, purchasers of necessity will seek protection for their concerns. Thus, in

anticipation of the 1959 steel strike, some purchasing executives in the fall of 1958 began accumulating inventories. In the winter of 1959, steel buying swelled to such dimensions that order taking became chaotic, and many buyers did not know when to expect delivery. As a result, they resorted to duplicate or multiple ordering, in the process building up a very large inventory of metal in the first half of 1959. Moreover, in advance of the shutdown, steel parts and products also were hoarded.

Thus, the anticipation of a strike pushed business activity to unprecedented peaks. Owing to the purchase and inventory imbalances, moreover, the effects of the strike carried beyond the settlement. In 1959, when the impact of the strike on delivery schedules and prices was uncertain, many purchasers placed large steel orders for post-strike delivery; indeed, most steel shipments made last winter filled orders of this kind. Such prior commitments, then, prevented purchasing executives from shifting their policies quickly.

By last April, however, many firms found themselves with excessive stocks of steel. Drastic shifts in buying policy and substantial reduction of steel inventories proved necessary. As these shifts persisted through 1960, they made a major contribution to the recession.

The latter also reflected a widespread misunderstanding of the "strike anticipation boom" of 1959, which caused excessive optimism for 1960. After the strike, the reasoning seemed to run, business will take up where it left off in mid-1959. This author, however, forecast a recession starting during the second quarter of 1960. He had noted that within 12 months of the steel strikes of 1952 and 1956, a business recession developed, and he expected history to repeat. By the same token, it now seems likely that a strike threat in steel for mid-1962 will stimulate business activity late this year and through the first half of next year.

From a study of the monthly change indices of the NAPA business surveys, it thus is clear that major strikes, and threats of strikes, have affected both the timing and the magnitude of business ups and downs. Obvious though it is, however, few economists have studied or even recognized the effect of strikes on the business cycle. Moreover, since strikes upset long-range business planning, they also tend to interrupt economic growth.

It surely is no accident that these insights have resulted from a close study and analysis of NAPA's monthly business surveys and the monthly change indices. While most official statistics are collected and interpreted by agencies subject to political influence, the NAPA is interested only in supplying its members with a tool for understanding business conditions. Like many disinterested intellectual efforts, the NAPA's surveys have succeeded in achieving more than their primary aim. As a byproduct, they have furnished the Nation with a reliable gage of the business cycle and its turning points.

Just To Be Friendly?

EXTENSION OF REMARKS

OF

HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 11, 1961

Mr. DERWINSKI. Mr. Speaker, the Soviet Reds and the Chinese and other participating governments are pursuing the cold war with all their normal vigor. A pertinent commentary on the dropping of espionage charges against a Red official is appropriately discussed in the March 28, 1961, issue of the Chicago American:

JUST TO BE FRIENDLY?

As explained by Attorney General Robert F. Kennedy and the State Department, the Government's decision to drop espionage charges against Igor Y. Melekh makes no sense at all. Since they're not normally given to talking nonsense we conclude, hopefully, that the official explanation isn't the real one.

Melekh, a Russian employee of the United Nations, and his codefendant, Willie Hirsch, were accused of trying to obtain aerial photos of Chicago, presumably for potential use by Russian bombers.

Friday, on orders from the Justice Department, U.S. Attorney Robert F. Tieken moved to dismiss the charges against Melekh, on condition that he gets out of the country. Federal District court Judge Edwin A. Robson had no choice but to let Melekh go.

Robert Kennedy explained that Secretary of State Dean Rusk had urged this move in the hope that it would "contribute toward improving our position as regards the protection of U.S. citizens in Russia." If Rusk genuinely believed that freeing Melekh would somehow make the Russians feel obligated to do something for us in return, he is astoudingly naive.

Soviet foreign policy is not run on the basis of vague impulses toward charity. The Russians will offer us concessions when and if they consider it advantageous to them, and for no other reason.

Frankly, we're unwilling to believe Rusk and Robert Kennedy are such innocents as their explanation makes them out. We assume that something concrete was gained through this move; possibly a break for U-2 pilot Francis Powers. Whatever the trade may have been, it's a shame that justice for Melekh had to be short-circuited for it, but in any deal with the Russians justice usually is the loser.

Symbolism and the Eagle

EXTENSION OF REMARKS

OF

HON. SILVIO O. CONTE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 11, 1961

Mr. CONTE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following speech given before the Fraternal Order of Eagles in North Adams, Mass., Saturday, April 8, 1961, praising the Eagles and giving the historical origin and the symbolic importance of the eagle:

It gives me great pleasure to be here this evening. It is always a particular source of gratification, and an honor, for me to address a group of those with whom I share common ideals. In this case as a brother Eagle. Therefore, you will appreciate that I am going to speak in a fraternal manner, because we understand and believe in the great ideals and noble goals of this organization.

While I was contemplating what I was going to say this evening, an interesting thought crossed my mind. I thought of the name and symbol of our order—the eagle. My meditations took me back through history, some ancient and some quite recent. I began to consider the many different meanings which this great bird has represented to many people at certain periods of recorded time.

The eagle was used as an art symbol by the early Assyrians and Egyptians. The Persians used the eagle on their ensigns. The armies of Rome carried the eagle as their standard, and so, the legions were known by that name. During the Roman Empire, the eagle was used to represent the deification of the Roman emperors. In ancient times, too, the eagle was often considered as a symbol of the soul's flight after death. Christianity uses the eagle to represent the evangelist, St. John. In this case it symbolizes his wonderful divine vision and spiritual flights. In the days of chivalry and knighthood, heraldry employed the eagle as a symbol used on coats of armor, shields, or standards.

Napoleon Bonaparte used the eagle as a symbol of his empire and his armies carried it into battle on their uniforms and flags. The Austrian Empire of the Hapsburgs, and the German Empire under the Kaisers used an eagle with twin heads, which referred to their assumption of power both east and west. In recent times, this noble bird had come to have even another and more sinister meaning. The Nazis adopted the eagle, clutching a swastika in its claws, as the national emblem for Germany. Mussolini too, hoping to imitate the ancient Caesars in his dream for empire, had the eagle holding fasces in its talons.

But throughout the years in which man has often seen the eagle stand for alien ideologies, we have also had our proud American eagle—a symbol of hope and not despair—a representation of freedom not oppression—the manifestation of right rather than might. Indeed, for us and for free men everywhere, the eagle is a noble bird and not one which means hate, fear, or tyranny.

If I may, I would like to give you a brief account about our adoption of the eagle which is the central figure of the Great Seal of the United States.

The Founding Fathers, feeling that the new Nation needed a symbol to express its sovereignty, adopted a resolution providing "that Dr. Franklin, Mr. John Adams, and Mr. Thomas Jefferson be a committee to bring in a device for a seal for the United States of America." Six years were to pass and two more committees were to work on the job, however, before the Congress, on June 20, 1782, approved the design of the Great Seal.

As you know, for the central figure of the seal, the designers chose a bird. Not just a bird, but the American bald eagle—the mightiest of birds, a high-flying bird that overcomes all obstacles for its young or dies in the effort.

As I mentioned, throughout history, the eagle has been used to denote strength and power. Since the hopes and aims that the men who planned the Great Seal had for our Nation have been borne out, they could not have chosen a more apt bird to express the ideals of this country. We soar high in ambitions and intentions, and our history has shown that we fight not so much for ourselves as for the rights and freedoms of others.

Another interesting fact you might not know. In the eagle's tail the designers placed nine feathers, not because this is the actual number of feathers in an eagle's tail, but because of the meaning of the number nine. Nine is the square of three, the Trinity of the Christian God. Nine would thus indicate a super accentuation of God, indicating that the very foundation of our Nation is God.

So far, I have discussed with you the symbol of the eagle. But a symbol is important only insofar as it represents something. It can speak for an entire philosophy of life or government, as well as particulars.

It is not the physical appearance of the symbol itself which has any merit or value for it does not live, does not believe nor act. What is important, however, is the philosophy which lies at the very fundamental cause for its existence. This is a fact which we as Americans and Eagles must always bear in mind. We have used the noble eagle to represent those ideals and goals in which we believe—we have stated our purpose quite clearly under this symbol for all to see—but it remains a dead symbol unless those who use it translate its philosophy into positive action.

Our order, for example, is called "fraternal." The word itself means "brotherly" and that we are bound together in mutual respect for one another and for our fellow men. This forms the basis for the eixstence of our organization. But while we all subscribe to this lofty ideal, we will be judged, nevertheless, only as to how we place it into practice.

As Americans, we know that we are faced with the symbols of a new tyranny—the Red star and the hammer and sickle. We know exactly what they stand for. But we must also remember that millions of human beings are dedicated to the advancement of the philosophy and way of life they represent. All over the world, in every field of human endeavor and activity, they are putting their corrupt beliefs into action. They are willing to make any sacrifice, even death, to achieve their objective of world domination. They will not cease in their efforts until the hammer and sickle have replaced the cross, the star of David, and our bald eagle as the universal symbol to be worshipped and to represent the sole hope and aspiration for all mankind.

True, you might say, but then ask the question about the many millions more for whom this symbol of communism represents terror and slavery—what about those poor helpless people? How can their example, strong and powerful that it is, still not deter others from accepting the doctrines of the Reds? Because, there are still those who have faith in the perverted ideals of communism. Despite this inhumanity, for all to see, these apostles and disciples are willing to give of themselves totally to its worship and practice. It is this dedicated mass of people, burning with the fervor of faith, carrying their symbol and their bibles by Marx and Lenin who are presenting to we, who live under the noble eagle, the serious and great challenge.

The lessons which we can draw should be quite clear—we must not only match their devotion and their willingness for action, but we must surpass them. There are millions of humans, some free and others in bondage, who look toward our American eagle as the symbol for their hopes on earth.

As members of this great fraternal order, we already know the true meaning of brotherhood. We are conscious of the noble ideals which are the objectives and which afford us guidance. In other words, by belonging to this organization, we have the great foundation from which we can spring into action. We are, in this respect, very fortunate indeed.

Having such a firm basis, assisted by our belonging, we are better able to understand our responsibilities and to appreciate the rights and privileges which our way of life guarantees. Therefore, to counteract the evil force pitted against us and dedicated to our destruction, we must first practice our high ideals among ourselves and our fellow men. And, second, we must always keep in mind that our actions must be related directly to our faith. By so doing, we shall have strengthened our position from within our minds and hearts, and we shall have also dealt apathy and indifference, our own worst enemies, a crushing blow.

Then, without any fear of failure whatsoever, we can present a solid wall of power which no enemy can breach. At the same time, we shall have carried our symbol forward, in progress and action, to hold its virtues before all men.

If we belong to the Fraternal Order of Eagles keeping this in mind, and if our organization fulfills this need as it certainly does, then availing ourselves of its sources for guidance and strength, we can contribute them to our national life—in our community and State—bringing new vigor and power of conviction. Thus, we shall be performing our duty to our great Nation and shouldering our share of the responsibilities. Being true members of this order is synonymous with being good American citizens. By doing all these things, men the world over will have cause for continued hope and faith that they, too, may someday enjoy the same freedoms and way of life, which is our good fortune to have as members of the Eagles living under the bald eagle.

Multiple Benefits on the Shakopee

EXTENSION OF REMARKS

OF

HON. H. CARL ANDERSEN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 11, 1961

Mr. ANDERSEN of Minnesota. Mr. Speaker, the following article by Robert S. Anderson, of the Soil Conservation Service, Montevideo, Minn., points out the many benefits which are becoming evident from the Shakopee watershed program in Minnesota. This article appeared in the April 1961 issue of Soil Conservation:

MULTIPLE BENEFITS ON THE SHAKOPEE

(By Robert S. Anderson)

Shakopee Creek is a principal tributary of the Chippewa River in western Minnesota. The Shakopee watershed, which includes about 205,000 acres of farmland, is part of the Chippewa tributaries and Hawk Creek pilot watershed protection project.

Flood prevention, erosion control, and reduction of sediment damages to farmland were the principal objectives outlined in the work plan for the Shakopee watershed. But developments have proved that waterfowl, upland game, and other wildlife also are principal beneficiaries of the watershed program as it nears completion.

Structural measures, including two floodwater retarding structures and 25 miles of floodway improvement, have been completed on the Shakopee. Land treatment measures in the upper part of the watershed are being applied by farmers at a stepped-up pace and are proving effective in controlling runoff and erosion. Flood and sediment damages to the lowlands were practically nonexistent in 1960.

The floodway, completed in 1959, not only controls flooding of adjacent farmlands, but also provides an outlet for farm drainage ditches. The two large floodwater retarding structures have, up to now, kept floodwaters down to the capacity of the floodway; and, in addition, they have created permanent lakes from formerly intermittent lakes and greatly enhanced their value to waterfowl and other wildlife.

The storage reservoir in the upper floodway is Swan Lake in Kandiyohi County. It has a surface area of approximately 700 acres and temporary storage capacity of 3,000 acre-feet. The storage reservoir in the lower floodway is Shakopee Lake in Chippewa County. This lake has a permanent pool of about 300 acres and has a temporary storage capacity of 2,000 acre-feet with a surface area of approximately 500 acres at flood stage.

The water control structure at the outlet of each lake consists of an earthfill dam and a concrete drop spillway. They contain neither gates nor valves. These control structures maintain a stable pool level in the lakes throughout the summer. The water rises only during periods of heavy runoff from heavy rains in the watershed.

In the fall of 1958, there was less than 5 acres of water in Shakopee Lake. The control structure, completed just before freezeup that winter, maintained a constant water level in the lake throughout 1959 and 1960. Even with less rainfall in 1959 than in 1958, there was 300 acres of surface water in the lake that fall.

There is a small local hatch of ducks, mostly teal, in both Swan and Shakopee Lakes. The chief advantage of the lakes to waterfowl is a stopover or resting area during the spring and fall migrations. In the falls of 1955, 1956, and 1957 there were up to 5,000 mallards feeding out of Shakopee Lake during the migrations. Needless to say, duck hunting was tops in the lake and the surrounding cornfields.

In 1958, due to the drought, there was only 5 acres of water left in the lake and this was used only by a few great blue herons and wilson snipe.

In 1959 the big northern mallards returned. Again thousands of them used Shakopee Lake as a stopover during their southern migration. The 300 acres of shallow water provide just the spot for the ducks to use as headquarters between their daily trips to the neighboring cornfields. They remain here until the lake freezes, then take off for the South. Escape cover and nesting areas plus winter protection are provided for pheasants all along the shoreline of the lake. This makes the area ideal for the permanent production of pheasants and other wildlife.

Wildlife enthusiasts and sportsmen are happy with the new Shakopee Lake. The farmers in the watershed benefit from the controlled water and managed soil. The people in the cities downstream on the Chippewa River know that their flood problem has been greatly decreased.

Only the United States Has Power To Stop Reds in Asia

EXTENSION OF REMARKS

OF

HON. CLARK MacGREGOR

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 11, 1961

Mr. MACGREGOR. Mr. Speaker, in view of the gravity of the present situation in Laos, I should like my colleagues to have the opportunity to read the following excellent article from the Minneapolis Star of April 7, 1961:

ONLY THE UNITED STATES HAS POWER TO STOP REDS IN ASIA

(By Keyes Beech)

SAIGON, SOUTH VIETNAM.—"If I were a Communist general I would be celebrating right now. Why wait?"

This statement, by a three-star Western general, underlines something of more than passing interest—the Communists are rapidly taking over southeast Asia.

The United States, and only the United States, has the power and prestige to stop them.

Whether the United States, or more specifically the Kennedy administration, is willing to take the risks and pay the price is the key to whether the Communists succeed or fail.

For it seems clear that the United States must commit American troops to check Communist ambitions in this part of the world. Whether the Americans will have to fight depends on the Communist response.

But they must be prepared to fight. The time for bluff is past. The most potent weapon in the Red arsenal today is Western fear of war, even a limited war.

The thought of American boys slogging through the jungles of southeast Asia and dying for places with names like Sala, Phou Khoum, Ding Dong or Binh Hoa is far from agreeable to a peace-loving and affluent society.

But it's a project, if not yet a reality, that must be faced. If it comes to that, Americans will not fight alone.

Thailand will fight. It's generally forgotten now but Thai soldiers died on Pork Chop hill in Korea.

With Communist lapping at their borders in neighboring Laos and their very survival threatened, the Thais have all the more reason to fight again.

The South Vietnamese would fight. They are fighting right now less than 30 miles from the air-conditioned hotel where this is written.

The Philippines will fight.

The Laotians won't fight but they might if they knew the Americans were willing to fight alongside them.

Britain, although London denies it, has pledged a brigade if the worst comes to the worst.

Australia will fight because its own security is at stake.

Massive intervention on the Korean scale isn't considered necessary at present by qualified military men. It might come later. That would depend on Communist response.

However, a landing of battalion or regimental size combat units in northeastern Thailand, near the Laotian border, might give the Communists cause for reflection.

There are obvious hazards to this sort of operation, not all of them military.

Screams of "American imperialism" would reverberate through the Communist world. They already reverberate.

A bold, determined American stand—backed up by American troops as well as arms—might conceivably reverse the tide in southeast Asia.

Burma has necessarily made its peace with Red China because it must get along with China the way Finland gets along with Russia.

Roughly the same thing can be said of neutralist Cambodia.

Cambodia's shrewd Prince Sihanouk made his peace with Peiping because he believes the Chinese will ultimately dominate, if not occupy all of southeast Asia.

A stiff American stand might cause him to change his mind.

Certainly nothing else worked.

The Russians and their puppets were notably unimpressed by the landing of a marine helicopter unit in Thailand.

Nor did they recoil in terror from the paper missile hurled at them by the Southeast Asia Treaty Organization during its recent Bangkok conference.

Nor did they cringe with fear at all the tough talk relayed by the U.S. State Department through gullible correspondents, including this one.

Unless the Russians agreed to a cease-fire in Laos in 3 days, newsmen were told, the United States was going to move for immediate military intervention.

The Russians went blithely ahead with their airlift, refusing the United States even a crumb of satisfaction.

They agreed to a cease-fire in their own good time on their own terms—a 14-nation conference which will include Russia and Red China.

There isn't much time.

The Communists already own or control roughly half of Laos. Neighboring South Vietnam is being bled to death by Red subversion and warfare.

Whatever happens at the 14-nation conference, one thing seems reasonably certain. The Communists aren't going to give up what they have.

A neutral sovereign Laos, primly aloof from either side in the cold war, is fine in theory and dear to the hearts of the good-natured, peace-loving Lao.

But it won't work. When American officials talk about Austrian-type neutrality for Laos, they omit two vital factors: Laos isn't Austria and Lao aren't Austrians.

In the opinion of most competent observers, a neutral Laos will inevitably mean a Communist Laos.

With all or most of Laos in Communist hands, South Vietnam will be isolated from anti-Communist southeast Asia.

Neighboring neutralist Cambodia offers no comfort.

On the contrary, it shelters Communist guerrillas when things get too hot for them in South Vietnam.

With Communist cadres assured of free passage through Laos, it is difficult to see how South Vietnam can long stand under the battering it is already getting.

From this point, it's only a matter of time before Thailand begins to make its own arrangements with Red China.

Physician Cites Medicine's Challenges

EXTENSION OF REMARKS

OF

HON. KENNETH A. ROBERTS

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 11, 1961

Mr. ROBERTS. Mr. Speaker, an address recently was printed in the Bulletin of the Academy of Medicine of Cleveland which was delivered by Robert A. Hingson, M.D., professor of anesthesia at the Western Reserve University School of Medicine, and director of anesthesia at the University Hospitals of Cleveland, Ohio.

This is an outstanding statement of the challenges facing medicine today, and under unanimous consent, I include it at this point in the RECORD:

CLEVELAND MEDICINE CHALLENGED BY OUR CITY, OUR COUNTRY, OUR CHANGING WORLD

The 2,300 physicians within the Cleveland Academy of Medicine, and the 1,300 dentists in the Cleveland Dental Society, have through the years rendered a service to the scores of thousands of our citizens in the metropolitan area and also through the city's outstanding clinics and hospitals to additional thousands referred for diagnosis and treatment from the entire Midwest. This service involves medical, obstetrical, surgical, and dental treatment of almost a million patients annually, of which almost 200,000 are for surgical operations, 40,000 obstetrical deliveries; several hundred thousand for medical, diagnostic, and dental problems. Of equal importance has been the application of preventive and public health medicine in millions of immunizations against poliomyelitis, the childhood diseases, and the fast disappearing contagious diseases. Outstanding among the medical accomplishments of the area has been the development of unexcelled facilities for the treatment of the chronic debilitating diseases of the aged in our world-renowned Highland View and Sunny Acres Hospitals.

Even though the U.S. Public Health Service Section on Vital Statistics has reported that for the Nation as a whole the Negro maternal mortality is 3.9 times that of the white, Cleveland with its 20 percent Negro population, from its largest general hospital, was able to report between the years 1954 through 1957, 5,000 consecutive deliveries of Negro mothers without a single maternal mortality from any cause during the hospital stay. Significantly, this occurred in a series of 12,000 births to mothers of all races without a death.

For the national and world community Cleveland's Western Reserve University trains approximately 100 medical school graduates and 80 dental school graduates annually. Its 30 hospitals provide advanced training for more than 1,000 interns and residents and research fellows. These physicians supply much of the required medical demands of Ohio's other cities and smaller communities and also those throughout the entire Nation. At least 20 physician graduates of Western Reserve University are serving as medical missionaries in many of the underprivileged countries of the world. Other scores of Cleveland citizens and graduates of other medical schools are serving in similar capacities. The Frances Payne Bolton School of Nursing and other nurse training programs have sent hundreds of nurses to mission hospitals and to International Cooperative Administration projects in major capacities of responsibilities.

At the present time more than 500 physicians from other countries are completing advanced graduate training in Cleveland's hospitals and from them the scientific and technical advances of Cleveland medicine are being daily used around the world. In 1958 in Moulmein, Burma, our interdenominational medical mission survey team for Asia and Africa found 12 Cleveland doctors and nurses on duty in one city.

This type of dedicated medicine has been a major factor in expanding the longevity of the U.S. population to its all-time high of 70 years, and in making Cleveland one of the most efficient health centers and one of the healthiest cities of the world.

These are our resources—the safeguards of our city for its future.

NOW THE CRISIS

In these days, still under the shadows of the summit collapse, at the time when the world's eyes too frequently focus on the "ugly American," Cleveland medicine has an opportunity to strike a real blow for world betterment and world peace through medicine. This is in complete accord with former President Eisenhower's people-to-people program, and President Kennedy's plan for using a professional youth army for world peace through service. Our Academy of Medicine has in action a committee to consider specifically what can be offered and delivered immediately in alleviating medical disasters, and perhaps through an alert forward-reaching program in preventing medical disaster.

This committee under the chairmanship of Dr. Robert A. Hingson, with Drs. Eugene Ferreri, Leon Dembo, and John Dingle, has at its fingertips the facts of two recent world medical surveys in Asia, Africa, and South America. It combines the abilities of both clinical and academic medicine in several fields. From its contacts in these areas it is able to develop recommendations for Academy approval, where requested, both con-

sultation and active direction in recruitment of supplies and personnel in international emergencies.

The committee believes that this assistance should be integrated properly through a nonsectarian, humanitarian plan in the highest American tradition, and offered as a part of an American Medical Association cooperative program with our State Department's consultation and channelled as indicated through the World Health Organization. The American Medical Association in its November 1960 Washington mid-year clinical meeting supported this view and is developing a foreign division for consultation and education. It furthermore approved the Oregon resolution to implement this program, under Dr. Frank Yoder, as follows:

"RESOLUTION 9

"Resolution by American Medical Association on emergency medical services to foreign mission fields

"Whereas the house of delegates of the American Medical Association at its 1959 clinical session declared itself to be in sympathy with resolution No. 9 introduced by the Oregon State Medical Society to help American physicians serving abroad in mission hospitals; and

"Whereas the past three presidents of the American Medical Association have recognized and made it a principle of their tenure of office to increase the influence of American medicine abroad; and

"Whereas the mission hospitals are established in every uncommitted country in the world; and

"Whereas they have established a good base in every country in which American medicine can work, even in the presence of political unrest; and

"Whereas the vacuum created in the Congo by the flight of 420 out of 441 physicians has created a desperate need for medical care; and

"Whereas our mission physicians in the Congo have developed plans for using the services of volunteer physicians to meet this need; and

"Whereas we believe that there are American physicians who would be willing to volunteer for such service; therefore be it

"*Resolved*, That the American Medical Association shall immediately investigate the feasibility of developing a mechanism whereby members of the association may serve in the foreign mission fields on a temporary basis when emergencies arise and shall then seek volunteer physicians to serve in such capacities."

One example of such a need was transmitted to the committee from Dr. Glen Tuttle, director of an international pioneer project in the new nation of the Congo. Dr. Tuttle indicates that as many as 200 volunteer doctors are needed immediately. Since the withdrawal of the Belgian doctors who had just completed last year the splendid buildings for a modern medical school, a standard equipped 200-bed tuberculosis hospital, and a general hospital of major proportions with 15,000 obstetrical deliveries each year. The latter ranks as the world's fifth largest. Significantly when our medical survey team held a clinic there in 1958, there were 12 Cleveland-made incubators in the pediatric nursery. Modern X-ray equipment, laboratory facilities and huge modern diet kitchens and tremendous wards were observed by us. Now the entire medical staff has left en masse, leaving almost only the outer shell of a university medical school temporarily in the hands of Dr. Tuttle, from Minnesota, who had to leave his own tremendous medical mission center 160 miles away at Kimpese in the hands of assistant doctors (practical nurse technicans). In 1 day last month these workers performed two cesarean sections in lifesaving emergencies.

Already the Cleveland Academy has through this committee distributed 6,000 syringes and 12,000 needles from the 1958 polio program to Dr. Tom Dooley and Medico, to the Congo, Nigeria, Korea and Burmese interdenominational missions.

The auxiliary of the academy with Dr. Hingson collected and distributed to oversea missions 600 pounds of drugs and medical instruments in 1959.

The Negro physicians of Cleveland and their wives provide Dr. Hingson with 200 medical texts, already received and in use in an interdenominational center in the Congo.

There are three influential and most significant groups in our population who could without challenge or obstruction negotiate the majority of these steps now because they speak the universal language in which people in all countries are in universal agreement. These groups are: (1) Our physicians, (2) our educators, and (3) our women. They are capable of supplying man's most basic needs through improving his health, education of his mind, and maintenance of his inner security and nutrition in his home.

First, let us look at the Nation's doctors: More than 240,000 of them, representing in America's 6 percent of the world's population more than 20 percent of the world's physicians. They are banded together in more than 1,800 county medical societies and through their efforts have extended our health and longevity for the first time to 3 score years and 10 in our most recent estimate from the Bureau of Vital Statistics of the U.S. Public Health Service. This is a striking achievement, in startling contrast to the average longevity of 29.3 years in the nation of Burma; 27 years in Korea; and 22 years in the villages of central Africa. Our doctors through their medical societies at the county, State, regional and national levels within the framework of the American Medical Association and the World Medical Association, and within the framework of each specialty, have a definite responsibility, a challenge and an opportunity toward the alleviation of the world's suffering and in making the most meaningful contribution toward world peace.

As a start, each local county medical and dental society (there are more than 100,000 dentists in the United States, constituting more than 30 percent of the world's total) could adopt one single medical mission or foreign national clinic or hospital and supply it with continuing provisions of medical texts, instruments, and drugs. The immensity of the task should not ensnarl us in the whirlpool of attempting too much through dispersion of our efforts too far, too soon. There are 2 billion people in Asia and Africa and South America, or more than 10 people in urgent need for every single person in the United States. The majority of these people are under the domination economically or politically of "enlightened" European powers. A tremendous and dangerous vacuum is developing with almost one-third of Negro Africa achieving independence this year. In these nations there is only an average of 1 physician for each 30,000; one dentist for each million; and less than 100 college graduates per country among the native population.

As America tackles the problem of the world in such projects as the Great White Fleet of mothball hospital ships privately manned, with the initial ship *Hope* already in Indonesia, in peoples' to peoples' programs, with Medico, with the foundations, and with denominational missions (even though each of these is important in the long-range ultimate objectives), there should be established first certain priorities and proving grounds and trial flights for reassessment and planning additional phases in the light of developing world events. These are just as necessary on the world scene as the steps in our space program have been in Cape Canaveral.

There is a developing resource within our medical profession capable of reinforcing any significant world health program. It is represented by our Flying Physicians' Association, in which there are already 3,500 physician pilots who own their own plane. These physicians have offered themselves to our Government and to the Red Cross for sudden national disasters and catastrophies from natural causes such as floods, fires, earthquakes and attendant epidemics, and in industrial blasts. From my own experience in the bush and jungles of Africa and from making a few flights with members of this association, I know that this association could be of inestimable value in ridding these developing countries of endemic diseases through mass inoculation programs and therapy excursions. For example, through cooperation exercises with such friendly nations as Liberia in West Africa, where English is understood throughout even the villages, as few as 40 volunteer flying physicians over this little country, no bigger than Ohio and with only a few more than a million citizens, could be freed from both smallpox and yaws by total inoculation and simultaneous penicillin injection at the village level, within a short 2-month period. Fortunately, already Liberia under President Tubman's leadership has constructed small and usable airfields in all parts of a little country whose natural resources of rubber and iron are contributing so much to the economic health of America. The needleless jet injector in its present form is capable of innoculating 1,000 people per hour per instrument. For 15 years I have tested this instrument in more than a quarter of a million injections against diphtheria, leprosy, tetanus, tuberculosis, typhoid, cholera, poliomyelitis, and influenza. With one physician assistant I inoculated 90,000 as only one part of our service in Asia and Africa.

Second, let us examine the field of education. At the present time there are more than 200 million children of school age who have never learned to read and write. In Liberia from the Secretary of Education we learned a new term "the functional illiterate," of the child who has been attending school for 5 years who is still unable to read or write. So inadequate has been the number of available teachers in this and many other countries that even where compulsory education is in effect there are insufficient teachers to do the job effectively. Most American teachers would be excluded from their profession in most countries by language barriers. However, there are thousands of capable teachers of retirement age in America who would be welcomed for short- and long-term assignments in the Philippines, Burma, British Africa, and Liberia, where English is the prevailing language in the schools. In the field of education, the greatest needs and the greatest opportunities I observed in the world to offset the Communist dynamic foreign Leadership University being developed and already in operation in Moscow for Asian and African nationals, who can attend tuition free, would be the development of two Government-supported universities and medical schools to offer educational scholarships for Asian, African, and South and Central American students.

One of these for Africa and Latin America should be built in San Juan, P.R., which is ideally situated as 1,000 miles nearer these areas than most of our American centers. The other, for Asia, should be erected in Honolulu, in a city and State long recognized for its wholesome and unprejudiced acceptance and assimilation of all races, with predominant proportions already familiar with the languages and customs of all these people. The ideal climate, the friend-

liness of the inhabitants, the economic and geographic advantages of these two welcome mats to continental America in such a field of host educational centers would become invaluable assets in a most needed area.

Finally, the third group of Americans with the largest numerical strength and with the greatest combined influence is 50 million women with the key to standards of living—the home. Stuart Cloete, the British journalist and novelist, declared by Time magazine to be the man "who probably knows more about black Africa than any other white man alive," has written in the African Giant: "The civilization of the women with the corollary that a civilized man must come from a civilized home. This is the key to all African progress." In other words Africa, regardless of medicine and missions and education, will remain backward and substantially savage as long as young Africa grows up at a savage mother's knee. Perhaps, it is the American women with the most sensitive outreach toward our neighbors. In the past 2 years I have addressed more than 250 groups of them in study and mission organizations. They know the stakes are high—that a political vacuum is developing and that the future of the developing countries must be bound to the West at the fireside of the home if it is not to pass into the hands of the Communist East.

Hospitalization for Alaskan and Hawaiian Veterans

EXTENSION OF REMARKS
OF
HON. RALPH J. RIVERS
OF ALASKA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 29, 1961

Mr. RIVERS of Alaska. Mr. Speaker, it is my privilege to speak of much needed veterans' legislation now pending in this body, which is couched in general terms, but which would have specific application to America's veterans living in Alaska and Hawaii. Since these veterans have come from all our States and fought for all of us, I seek the consideration and support of my colleagues for my bill, H.R. 2923.

This legislation, with regard to which I have already testified before the Subcommittee on Hospitals of the House Committee on Veterans' Affairs, would allow the Veterans' Administrator to make contracts with private hospitals for the treatment of veterans with non-service-connected disabilities, if said veterans reside in States not having a Veterans' Administration hospital or in States not having such facilities within 500 miles of their borders. In practical effect, this bill, if enacted, would apply only to the States of Alaska and Hawaii.

It is the purpose of this legislation to effectuate a simple and inexpensive solution to a defect in the Veterans' Administration program, having to do with Veterans' Administration facilities in Alaska and Hawaii.

Let us start with the fact that there is no Veterans' Administration hospital in Alaska and none in Hawaii, and there never has been. During the years when Alaska and Hawaii were territories, this situation was no problem because existing law—section 601(4) of title 38, United States Code—then authorized and still authorizes the Veterans' Administrator, among his other functions, to contract with private hospitals for the care of veterans with non-service-connected disabilities or ailments in a territory, commonwealth, or possession. Now that Alaska and Hawaii are States of the Union, however, the Veterans' Administration has lost its general authority to provide contract hospital care in Alaska and Hawaii in such cases.

Admittedly this authority so exercised by the Veterans' Administrator in a territory, commonwealth, or possession, and which he previously exercised in Alaska and Hawaii, is an exception to the general rule allowing hospital care for non-service-connected disorders only in Veterans' Administration or other Federal hospitals on a beds available basis. The reason for the exception is stated in the Administrator's report on the legislation now before you, as follows:

> Historically, the exception to permit hospital care in private facilities for war veterans with non-service-connected conditions in a territory or possession was based upon special considerations. These apparently included the factors of great distances from the mainland, difficulty in transferring patients to the States, and the relatively small volume of patient demand in the territories and possessions.

These words are well spoken and they apply to Alaska and Hawaii today as much as they did during the days of territoriality. Alaska and Hawaii are just as far away from the other States as they were then, transportation difficulties still persist, and the patient demand is too small to justify the great expense of constructing and operating a VA hospital in Alaska and one in Hawaii. Since neither Alaska nor Hawaii have sought VA hospitals, and are not about to become that kind of a burden on the General Treasury, I am offering and urging the simple, equitable, and comparatively inexpensive solution contained in my bill, H.R. 2923. I also point out that the savings in transportation which would be effected by my bill would constitute a substantial offset to the cost of hospital care in private local hospitals.

May I now speak of that portion of the Administrator's report which says:

> We have beds allocated for VA beneficiaries in hospitals of the Department of Defense and the Department of Health, Education, and Welfare. In Hawaii beds are allocated for our use by the Defense Department in Tripler General Hospital. We believe that the needs in both Alaska and Hawaii are being met to a reasonable and proper extent by the use of these Government facilities.

This statement sounds good on its face, but does not work out in practice in Alaska. To be sure, there is a military hospital at Elmendorf Air Force Base near Anchorage and one at Fort Wainwright near Fairbanks, which meet the needs of the veterans in the rail belt.

The Health, Education, and Welfare Hospital at Anchorage plays little part in this picture because it duplicates the care available at the Elmendorf Air Force Base Hospital in the cases with which we are presently concerned. Since the rail belt is about midway between Ketchikan near the southeastern extremity of Alaska and the most westerly part, the problem still remains as to the greater part of the great area of Alaska. Veterans in Ketchikan and Juneau and other communities in southeastern Alaska are an average of about 1,000 miles from Anchorage at the southerly end of the rail belt and a like distance from Fairbanks at the northerly end. In other words, they are as far away from the hospitals on the rail belt as they are from the VA hospital at Portland, Oreg. Veterans at Nome are 500 miles from the rail belt and those of Bethel, Dillingham, and other places farther west a comparable distance, but with less frequent plane service. Right at hand in the communities I have named are good local hospitals where the lives of our veterans can be safeguarded instead of jeopardized by waiting for the next airplane departure, and then suffering the rigors of getting to the plane, aboard the plane, and disembarking therefrom in all kinds of weather.

Some of the private hospitals with which the Veterans Administration made contract arrangements during the days when Alaska was a territory are at such widely scattered locations as Ketchikan, Juneau, Sitka, Wrangell, Petersburg, Cordova, Glenallen, Anchorage, Seward, Kodiak, Palmer, Nome, and Fairbanks.

Because of the vastness of Alaska and its great distance from the nearest State, it is apparent to me that for the welfare of the veterans involved these cases arising in communities distant from the rail belt should be cared for locally in private local facilities. I also suggest that because of these great distances and transportation difficulties, Alaska can readily be distinguished as a State apart from the usual situation in the southerly 48 States, and that the Administrator may forget the fear he has expressed that this legislation, if enacted, might become a precedent for extending the idea to all the States. I sincerely urge that this legislation be considered on its merits.

To strengthen the statement which I made to the subcommittee, I submitted for the record of the hearings supporting documents which I recommend to your attention. These documents consist of a strong statement of Alaska's Governor, William A. Egan, an urgent joint resolution of the Alaska Legislature, detailed facts and figures provided by Ernest E. Lincoln, manager of the VA regional office at Juneau, and statements and telegrams from veterans' organizations throughout Alaska.

I trust, Mr. Speaker, that Alaska's veterans, numbering approximately 15,000, who are so far away from VA hospital facilities but who did so much for America in times of national peril, will be granted the benefits which would be authorized by my bill.

Mrs. Nellie M. Thomas

EXTENSION OF REMARKS
OF
HON. ABNER W. SIBAL
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 11, 1961

Mr. SIBAL. Mr. Speaker, on March 31, my home city of Norwalk, Conn., suf-

fered a very great loss in the death of Mrs. Nellie Thomas, president and publisher of the Norwalk Hour. She was a lady of countless charities whom a grateful community will sorely miss. In tribute to her I should like to have the obituary and editorial on her that appeared in her paper, the Hour, printed in the RECORD:

MRS. NELLIE M. THOMAS

Norwalk today mourns a leader in philanthropy and the Norwalk Hour its owner, president, and publisher in the death this morning at the Norwalk Hospital of Mrs. Nellie M. Thomas.

Mrs. Thomas' death came as a terrific shock to the community. She had fallen at her home, 17 Berkeley Street, Wednesday and was admitted to the hospital Thursday with a fractured arm and hip.

Mrs. Thomas had directed the Norwalk Hour since the death of her husband, Edward J. Thomas in 1933 and under her guidance the Hour grew steadily and prospered.

Mrs. Thomas took an active interest in community projects and was a generous contributor to the Norwalk Hospital, churches, and scores of charitable projects. Only recently she made a substantial gift toward the furnishing of the recreation room in the new police building at Veterans Park. At the Norwalk Hospital there is a room called the Nellie M. Thomas Room, honoring her for her substantial contributions to the institution.

The host of Norwalkers and others who knew of Mrs. Thomas' philanthropic deeds sadly mourn her passing.

MRS. NELLIE M. THOMAS DIES—OWNER, PUBLISHER OF THE HOUR; ALSO WAS PRESIDENT OF NEWSPAPER; NOTED FOR HER PHILANTHROPIES; FUNERAL SERVICES TO BE HELD 11 A.M. MONDAY

Mrs. Nellie M. Thomas, owner, president and publisher of the Norwalk Hour, died suddenly at 9:30 this morning in Norwalk Hospital.

Mrs. Thomas was admitted to the hospital Thursday morning, after suffering a fall in her home Wednesday night in which she fractured a wrist and her hip. Mrs. Thomas resided at 17 Berkeley Street.

Mrs. Thomas, noted for her support of civic and church endeavors, had been directing the activities of the Hour Publishing Co. since the death of her husband, Edward J. Thomas, in 1933.

AIDED MANY CHARITIES

After the death of her husband, who purchased the Hour in 1901, Mrs. Thomas took over direction of the newspaper. Mrs. Thomas' brother, the late Charles E. Kellogg, joined the newspaper in that year as a bookkeeper.

He served in several capacities with the paper, advancing to advertising manager and later general manager. As general manager, he carried out the operation of the paper under his sister's direction after the death of Mr. Thomas. When Mr. Kellogg died, Sidney A. Bedient, then managing editor, was named editor and general manager by Mrs. Thomas.

Mrs. Thomas took a keen interest in many community activities. Although many charities were the beneficiaries of her generosity, she was particularly interested in the benevolent funds of the police and fire departments, and recently aided in a financial campaign to furnish the dayroom in the new police building at Veterans Park.

Her interest in the two municipal departments was stimulated by her late brother's activities as a fire commissioner and later as police commissioner.

For many years, her support was vital to the success of the kiddies' Christmas party for the benefit of the city's less fortunate children.

A member of Norwalk Methodist Church, to which she gave substantial support, Mrs. Thomas also was generous in her assistance to other churches in the community, regardless of faith.

The Nellie May Thomas room in the new community pavilion at Norwalk Hospital stands as a reminder of her unflagging support to that institution.

Mrs. Thomas is survived by a niece, Mrs. Marjorie Kellogg Mather, a grandniece, Mrs. Donald Sala, the former Melinda Kellogg Mather; a great grandnephew, Mark Mather Sala, and two cousins, Miss Beatrice Hunt, who lived with her in Berkeley Street, and Mrs. Lou Strauss, of Long Island.

Mrs. Thomas was the daughter of the late Martin and Jennie Pooley Kellogg. Her father was Norwalk's street commissioner.

Funeral services will be held at 11 a.m. Monday in the Norwalk Methodist Church, with Rev. Barton Boyce, pastor, officiating. Interment will take place in Norwalk Cemetery, Union Avenue. Friends may call at the Raymond Funeral Home, 5 East Wall Street, Sunday, from 3 to 5 p.m. and 7 to 9 p.m.

The Russian Beachhead in Berkeley

EXTENSION OF REMARKS
OF
HON. J. ARTHUR YOUNGER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 11, 1961

Mr. YOUNGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Lucius Beebe which appeared in the San Francisco Chronicle of April 3, 1961:

THIS WILD WEST: THE RUSSIAN BEACHHEAD IN BERKELEY

(By Lucius Beebe)

A good deal of comment has been accorded in recent weeks to the uncommonly handsome issue that Holiday magazine devoted to San Francisco, and to the fidelity of its overall picture to the image San Franciscans like to believe the city projects. Seldom has such an ornately framed and flattering mirror been held up for a community's self-admiration, which is a very abundant quality indeed around the Golden Gate. That Holiday may have painted so rhapsodic a picture as to oversell the town is a hypothesis that can be pretty well discounted. As the late Arthur Brisbane used to say, "repetition is reputation."

Quite aside from its joyous impact on San Francisco itself, this is even more of a promotional triumph if it is widely accepted as the veritable likeness of San Francisco and northern California generally, for, whether or not folk hearabouts realize it, the nationwide image of San Francisco isn't as favorable and gracious as it might be.

In an age of rapid communications and detailed news analysis of matters that a few years back would have been strictly parochial, San Francisco in recent years has acquired a celebrity that is quite as unwholesome as that of Little Rock, albeit of a different sort.

Its reputation outside of the West is that of a nest of subversionists, pacifists, defeatist whiners and Communist fellow travelers. It has the name of being a haven for crackpots and agitators of every hue and complexion and a sounding board for every degree of defeatism, treason, and Red-petting. Its universities have a name as campus cells for the expression of Russian ideologies and its press and some of its legal practice as apologists for Communist tendencies under the tiresome and by now putrescent banner of liberalism.

The rest of the country knows, even if self-satisfied San Francisco does not, that open hostility to the House Un-American Activities Committee, and the activities of liberal subversionists, influential publicists whimpering over atomic annihilation, and self-styled legal luminaries championing everything Russian, are not just playing along with the enemy. They are devised and implemented by the enemy. Liberalism has long since in the United States ceased to mean anything but active treason. The Russians took it over long ago.

This unfavorable image of San Francisco had its inception back in the thirties and if San Franciscans are prone to forget the general strike of that period and condone Harry Bridges as a tame Communist, the rest of the country doesn't go along with it. The Chessman business, which through the chemistry of subversion somehow turned from a case of legal jurisprudence into a liberal cause with anti-American demonstrations in places that had no least imaginable concern with the matter, marked the image still further.

Chessman's advocates and supporters locally were recruited from one of three categories—professional exhibitionists, professional crackpots, and professional subversionist agitators, with the latter predominating. So far as the rest of the United States is concerned the Chessman agitation was simply additional proof of the overall Red infiltration of the California consciousness. It wasn't his crime, but his friends that made his elimination mandatory.

The current tendency of completely irresponsible publicists to condone the recent Communist-led, Communist-organized, and Communist-conducted riots at city hall and to disparage the official films documenting them as such doesn't speak well for the San Francisco press.

Neither does the much-publicized stand of the president of the University of California permitting the appearance on his campus at Berkeley of a well-identified Communist agitator sit well with what remains of the responsible element in the California community or with the country at large. It's all very well to invoke the memory of President Lowell of Harvard in retaining German in his curriculum in 1916. Harvard and President Lowell enjoyed a secure position in the community not shared by President Kerr or the University of California.

These are elements in the San Francisco image outside of San Francisco that don't jibe with the stately pleasure dome devoted to the abundant humanities depicted by Holiday's word painters. There is a fairly widespread belief that behind its affluent front San Francisco harbors a tainted core of ideological putrescence, a whited sepulcher with treason nesting in its vitals. Fellow traveler college presidents, student subversives, and the American Civil Liberties Union do not, in any realistic appraisal, add up to the Augustan Age of music, fine art, bountiful gastronomy, and suburban splendor that San Francisco likes to imagine for itself.

As the multiple crises of Russian devising build up to the inevitable open conflict that Russia wants, these people and attitudes must be identified for what they are: Subversives, Communists, defeatists, and the enemy. The University of California campus, as long as President Kerr traffics in fraudulent "liberalism," is as much an outpost of Russian aggression as Laos or the Congo. So is the Governor's mansion in

Sacramento. There is no room in the world any more for the obsolete thesis of "liberalism." You are on the side of civilization or on the side of Russia, and the Russians long ago made what may once have passed for "liberalism" part of the apparatus of world conquest.

Federal Controls

EXTENSION OF REMARKS
OF
HON. JACK WESTLAND
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 11, 1961

Mr. WESTLAND. Mr. Speaker, there are many ramifications to the problem of Federal controls. The problem raises many questions. Should there be more control? Or, should there be fewer controls by the Federal Government in its relationship with the various States? These are questions that are difficult to answer. In my own mind, I feel that the Federal Government should operate with as few controls as possible.

Under leave to extend my remarks in the RECORD, I want to include an editorial that was published April 1, 1961, in the Port Angeles Evening News, entitled "Fund Control." This newspaper is published daily at Port Angeles, Wash., in my district and often presents editorials that give new outlooks to old problems. I believe this editorial is worth reading and presents a conclusion that deserves study.

FUND CONTROL

Important examples are turning up which indicate that the various States have recently been more successful than some of us realize in resisting Federal control in aid programs.

A prime instance is the interstate highway program, where the States put up 10 percent or less of the money but dispense 100 percent of it.

Some veteran observers of U.S.-State relations see this as an open invitation to carelessness, if not deliberate waste and corruption. Inquiries by a congressional group and others found exactly this, on an astonishing scale.

Fear is now being expressed in some quarters that another big door may be opened to trouble if the aid to education program retains its present control features. As drafted, it gives the States the option whether to spend aid money on school construction or teachers' salaries.

Since school buildings are more enduring monuments to the particular State governments involved, the feeling is that many will succumb to the temptation to weight construction heavily, even though salary needs may be acute.

On top of that, they will be subject to the same sort of pressures from potential political contributors that appear to have brought scandal to the highway program. The bright chance for private gain is thoroughly clear.

The whole issue is delicate. The danger of the Federal Government overstepping reasonable bounds of authority is always present. But knowledgeable men in the intergovernmental field believe that lawmakers and Federal officials in recent years have leaned too far backward in an effort to avoid this peril.

One experienced official, whose sensitive position limits him to private comment, thinks it is always a grave mistake to dispense large sums of Federal money with loose strings on it. He believes that control and responsible use of funds go together.

Where State resources do not permit a matching of U.S. funds, as in the interstate highway program, this theory inevitably leads to a larger Federal say in matters.

But in this official's view this need not be destructive of State rights and interests. He believes experience shows that the technicians who carry out these joint programs work in a cooperative spirit respectful of both U.S. and State concerns.

The question deserves a fresh review. For it seems obvious we must somehow find a narrow path between too much Federal control and too little.

Automakers' Switch of Car Window Glass Touches Off a Feud

EXTENSION OF REMARKS
OF
HON. KENNETH A. ROBERTS
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 11, 1961

Mr. ROBERTS. Mr. Speaker, during hearings recently before the Interstate and Foreign Commerce Committee on my bill, H.R. 1341, testimony was given relative to the type of glass used in automobile windows.

An article of interest on this subject appeared in the Wall Street Journal recently, and under unanimous consent I include it in the Appendix of the RECORD:

[From the Wall Street Journal, Apr. 7, 1961]

AUTOMAKERS' SWITCH OF CAR WINDOW GLASS TOUCHES OFF A FEUD—GLASS DEALERS CONTEND NEW CHEAPER GLASS IS UNSAFE; AUTOMEN DENY THE CHARGE

(By Jack Hanicke)

DETROIT.—Harry A. Pratt, a 170-pounder, suspends a square-foot sheet of automobile glass between two boards, steps on it and jumps up and down—without effect on the glass.

Stepping off, he picks up the glass and strikes it with a sharp steel punch. It shatters completely into small fragments—leaving several small cuts in the palm of his hand.

Mr. Pratt, sales manager of the Glass Division of Shatterproof Glass Corp., a Detroit manufacturer of replacement auto glass, is trying to prove a point: That the type of glass that goes into the side windows of nearly all new automobiles is unsafe. This charge is hotly denied by the carmakers.

THE BIG SWITCH

Until recently, laminated safety glass, made by sandwiching a plastic sheet between two plates of glass, was used in most car windows. The plastic is used as a binder to prevent shattering. However, for their 1961 models, all car makes except Cadillac have adopted solid tempered, or hardened, safety glass in car side windows although they continue to use laminated glass in windshields.

The tempered glass now being substituted is akin to that used in the heavy, frameless all-glass doors used in many stores and offices. Typically, such glass is formed into the desired shape and then hardened by first subjecting it to heat and then to a blast of cold air. This gives the glass an extremely hard surface, much as in metals that are case hardened. It also has tremendous strength against blows from dull objects.

But such glass also has the characteristic of breaking up into small pebble-sized pieces, once the hard surface has been penetrated. The pieces either remain in place, making the glass opaque, or fly out with considerable force. Automakers claim these small pieces do not have sharp edges and are less dangerous than the large chunks into which laminated safety glass divides when it is broken.

This is disputed by companies such as Shatterproof and trade groups such as the National Auto and Flat Glass Dealers' Association, which represents many of the Nation's 10,000 glass dealers. In addition to tempered glass' alleged greater vulnerability to flying stones, they say this glass' toughness against blunt objects greatly increases the danger of head injuries to auto passengers and makes escape difficult for them if they are trapped in a car.

A WIDENING CONTROVERSY

The clash between the automakers and glass dealers is rapidly widening to include Congress, State legislatures, labor unions and a large number of trade associations. Here are some of the developments so far:

Bills that would ban tempered glass in side windows have been introduced in a number of State legislatures. The States include California, Kansas, Massachusetts, Missouri, Ohio, Pennsylvania, and Washington.

A congressional committee is pondering a proposal that automakers be required to use laminated glass in side windows. The proposal is part of an overall auto safety bill that has been under consideration for some time, and also is included in a bill setting up safety requirements for cars purchased by the Federal Government.

The American Standards Association, which serves as a clearinghouse for many industries and Government agences by establishing uniform national—and industry-wide—standards that guide both manufacturers and lawmakers, in currently reviewing its code on automobile glass. Sighs Cyril Ainsworth, its secretary, "There is a tremendous controversy going on."

The switch to tempered glass was made by the auto manufacturers with little of the fanfare that usually accompanies such changes. Chrysler Corp. was the first to use tempered glass on all side windows of all cars; the change was made on its 1958 models. American Motors Corp. made the change a little later. Ford Motor Co. and General Motors Corp., however, did not use tempered glass extensively until the introduction of their 1960 compact models. By the time the 1961 models were introduced, however, all major U.S. makes, except Cadillac, had made the switch.

The automen claim both types of safety glass, while having different characteristics, are equally safe. They also claim tempered glass gives more mileage to auto owners because of its greater hardness. This is disputed by critics who insist that tempered glass loses much of its strength with aging.

Automakers don't deny that one of the main advantages of tempered glass is its lower cost. According to one estimate, tempered safety glass is between 10 cents and 15 cents a square foot cheaper than laminated safety glass. This means a minimum manufacturer's saving of about $1.50 a car. This is a sizable saving when spread over the millions of cars built in the United States each year.

The economics of the change can have a major impact on the profits of glass dealers, who supply replacement windows for autos. Laminated glass side windows can be cut from standard sized sheets according to easily stored patterns. But tempered glass must be formed before it is heat treated. Dealers fear that within a few years they will have to stock different sizes for each year and make of car, much as they do windshields now. At present, most tempered glass win-

dows can still be replaced with laminated, but dealers say automakers are beginning to attach parts, such as lock devices, directly to holes drilled in the glass before it is treated. Laminated glass cannot be used to replace such windows.

Suppliers to auto and glass companies also have an interest. Monsanto Chemical Co., a major producer of the plastic used in laminated glass, has made a movie showing what it considers the advantage of laminated glass. Du Pont, another maker of the plastic, also has published studies on the merits of this glass.

Major glassmakers, caught in the middle of the squabble, have been largely silent. However, Libbey-Owens-Ford Glass Co. has announced it will lay off more than 1,000 workers in Toledo, partly because of the switch to the automakers' glass preferences. In its 1960 annual report, Libbey-Owens-Ford Glass Co. blamed lower sales in part on the growing use of the cheaper glass.

American Bourbon Whisky

EXTENSION OF REMARKS
OF
HON. JOHN C. WATTS
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 11, 1961

Mr. WATTS. Mr. Speaker, under leave to extend my remarks, I wish to bring to the attention of the House the following article:

At a time when few international meetings result in accord and agreement, I should like to bring to your attention an occasion when representatives of Old World nations paid their respects to a tradition of the New.

At the annual meeting of the Federation Internationale des Vins et Spiriteux in Paris, this distinguished body of recognized authorities of wines and spirits gave international testimonial to a tradition as old as our country's Constitution—American Bourbon whisky.

In adopting a resolution proposed by the Bourbon Institute, representatives from 14 European nations granted the "Appelation d'Origine" to this historic American spirit. The name "Bourbon" can be applied only to whisky produced in the United States under U.S. Government standards.

Unfortunately, there have been several attempts by foreign concerns to apply the name to certain spirits produced abroad in hopes of marketing them here and capitalizing on Bourbon's trademark. The agreement binds members of the federation to assist the Bourbon Institute in protecting the name of "Bourbon," should the institute take legal action against overseas distillers who would attempt to thus mislabel their products.

The resolution should dissuade any firm from attempting to deceive that most abused figure—the American consumer.

We live in an era when international travel and trade restrictions are subjects of great concern. In this instance, however, the American traveler has been afforded protection. During his visits to European nations requests for Bourbon will be answered through service of the same whisky he consumes at home.

As a Representative of the State of Kentucky, which has given this product to the world, I note that the official body of the great wine and spirit houses of Europe has given Bourbon whisky the same recognition accorded to the Scotch whisky of the United Kingdom.

I should like to commend the Bourbon Institute and its president, Vice Adm. William J. Marshall, U.S. Navy (retired), a native of Henderson, Ky., for taking the lead in establishing this international protection for American distillers. As the representative member from the United States, the Bourbon Institute is the spokesman for the American distilling industry in the Federation Internationale.

By proposing the resolution and pressing for its adoption, the Bourbon Institute proved that a responsible presentation of evidence can still result in agreement among the international trade community.

The Federal Excise Tax on Jewelry

EXTENSION OF REMARKS
OF
HON. WILLIAM H. AVERY
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 11, 1961

Mr. AVERY. Mr. Speaker, the following is a resolution passed by the Kansas Retail Jewelers Association in convention on March 18 and 19, 1961, in Wichita, Kans. I commend this resolution to the attention of all Members of Congress.

The resolution follows:

Whereas the 180 members of the Kansas Retail Jewelers Association request that the Federal excise tax on jewelry be transferred from the retail to the manufacturers' level in order that they may eliminate the unfair competition and discrimination against the products they must sell to sustain a livelihood.

Whereas there is a definite relationship between those taxed products which the jeweler sells, competing with other items sold as gifts in substantial quantities which are untaxed, and taxed at the manufacturers' level. These items, therefore, discriminate against the jeweler. This tax acts as a deterrent to sales. The effect of the increase of the cost of the taxed article to the consumer, acts as a brake on sales. This was, in fact, the original purpose of the tax. That is, it was intended to cut down the sales of certain items in a wartime economy. The need to curtail sales has long passed—the present need is for more production and consumption to fit the needs and to expand our economy. This tax acts in exactly the opposite way.

This tax is difficult and costly to administer. Not only is a hardship placed upon the small retail jeweler who ordinarily does not have a complete accounting department to calculate, collect, and remit this tax on behalf of the Government; but it is extremely costly for the Government to administer this tax since there are so many outlets from which this tax must be collected. Manufacturers ordinarily have complete bookkeeping departments to calculate, collect, and remit. Therefore, transferring this tax to the manufacturer's level would not only grant relief to the small jeweler, but would also simplify collection on the Government's behalf because of the relatively small number of retailers and so-called wholesale retailers from which this tax is collected. Therefore, this would not only reduce the costs substantially, by saving the Government money administering the tax, but would plug many loopholes on the literally thousands of items where the tax status is doubtful, and the collection of the tax often has led to arbitrary practices. This would also increase revenues by plugging the loopholes in tax collection by taxing the article at its source—the manufacturer's level, thereby eliminating many items sold through certain outlets, etc., on which the tax is overlooked: Now, therefore, be it

Resolved, That the Kansas Retail Jewelers Association and its 180 members respectfully request and urge the Honorable Congress of the United States of America to take immediate action toward transferring this 10-percent Federal excise tax on jewelry at the retail level to a 10-percent Federal excise tax at the manufacturer's level thereby:

1. Eliminating unfair and discriminatory competition.
2. Removing sales deterrents placed in wartime for the duration and 6 months, to discourage sales of jewelry; thus fulfilling a need for more production by encouraging consumption, providing a much-needed expansion and employment in our economy.
3. Lowering administrative costs to the Government, giving needed savings of tax dollars.
4. Removing loopholes to increase revenues by taxing the article at its source.
5. Relieving the hardships placed on the small businessman by removing from him the responsibility of calculating, collecting, and remitting this burdensome tax.

Time Saved for What?

EXTENSION OF REMARKS
OF
HON. PAUL B. DAGUE
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 11, 1961

Mr. DAGUE. Mr. Speaker, the caption given these remarks has been taken from an editorial which appeared in the Philadelphia Bulletin on April 7, 1961, and poses a question that has always inrtigued me; namely, "What use are we making of all the leisure time we are supposed to accumulate through a shortened workweek and the supersonic speeds that are now being reached in air travel?"

The editorial properly underscores, in my opinion, some skepticism as to just what real benefits will accrue to humanity from the exploration of outer space, save perhaps the satisfying of our curiosity. But the real issue raised by the editorial cneters in, Just what do we plan to do with all of the time we will have saved when it becomes possible to span the continent in an hour and a quarter or perhaps circumnavigate the globe in half a day?

We are told that aerial transportation has shrunk the world to half its original size and all I can do is to plaintively ask, "And in what way has that benefited humanity or improved international relations?" As a matter of fact the closer we come in hours to our global neighbors the more our friendship worsens, and we have largely ignored the old axiom that "strong fences make good neighbors" with the result that we are increasingly getting into each other's hair.

In my opinion we would be a happier people if we were all back on the 44-hour week which is routine for most Congressmen. And most of my congressional colleagues would be a lot happier and live a lot longer if their districts were not so readily accessible via the airplane. In the old days of rail travel, which is still my favorite mode of transportation, the home folks in the districts remote

from Washington did not expect to see their Representative until the Congress had adjourned, whereas now they expect him to return for each clambake regardless of the fact that it means neglecting his strictly legislative duties, to say nothing of the out-of-pocket cost of his airplane fare. Instead, from that standpoint most Congressmen would be doing a better job and saving a bit more out of their annual stipend if the Wright brothers on the day that they invented the airplane had simply "stood in bed."

Too much spare time, too much saved time, too many opportunities to get into trouble and spend money we do not have. Instead of increased speed, instead of engines with greater thrust, instead of missiles with greater reach, what is needed is increased attention to the braking system, the development of measures that will slow us down. Life can be beautiful if we will only take time to look at it. But assuredly we cannot appreciate nature or our own capacity for brotherly love if we continue to hurtle through space at 2,000 miles an hour.

The article that prompted this outpouring is appended to and made a part of these remarks and I hope that you will agree with me that the writer makes a lot of sense.

The editorial follows:

TIME SAVED FOR WHAT?

Scientific curiosity motivates plans to investigate the Moon, Mars and other occupants of limitless space. But what is the urge behind plans to build a plane that can fly between New York and Los Angeles in 76 minutes, with corresponding schedules to foreign airfields?

When man is able to travel at 3½ times the speed of sound—the objective of planning due for fruition by 1970—what is he going to do with the time saved? Is it really so desirable—for other than military objectives—to knit the world's centers of population still closer together? Recent years have disappointed many hopes that closer contact would bring greater understanding.

We are no better off in our relations with other countries than we were when, by the clock, they were much more distant. To point this out is not to decry the merits and gains of present-day air travel. But is there to be no limit?

If time saved were sure to be put to productive uses we could justify our yearning for speed, speed, and more speed. But will it be? What does the officeworker-commuter do with the few seconds saved by standing up in the aisle of his suburban car long before it reaches the station, so as to be among the first off the train? Do we not save time largely to waste it?

The Peace Lobby and the Russians

EXTENSION OF REMARKS
OF
HON. JEFFERY COHELAN
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 10, 1961

Mr. COHELAN. Mr. Speaker, in the court of world opinion American disarmament proposals often have seemed to pall when compared to Russia's.

Jerome Spingarn, in a recent article appearing in the Washington Post, has astutely pointed out that this has important implications both for our Government and the American peace movement.

Disarmament is certainly one of the vital issues of our time, and this well-balanced analysis of one important aspect of this problem deserves the attention and consideration of my colleagues.

A new U.S. Disarmament Administration is now functioning in the State Department, John McCloy is serving as the President's disarmament adviser, and in the Pentagon an elaborate pattern of offices deals with disarmament for each of these segments of the Defense Establishment.

Concomitant with this growth of governmental competence has been a parallel growth of concern with the disarmament problem in private centers and graduate schools of international affairs.

What does all this activity mean? Is the rose of arms control about to be plucked from the thistle of H-bombs?

It would be rash to predict this, but it is clear that defense, peacekeeping, and the leashing of armaments are receiving more serious and more sustained attention here in the United States than they have ever received anywhere before.

Jules Moch wrote the famous Anglo-French disarmament proposal (which Nobel Prizewinner Philip Noel-Baker characterizes as the great "moment of hope" in the search for peace and disarmament) in a London hotel in one evening in 1954. It was still a collection of jottings on hotel stationery when it was passed around a breakfast table and received French Cabinet approval.

The Quai d'Orsay has been content to give Jules Moch wide powers because "he makes beautiful music." The Kremlin apparently feels the same way about Nikita Khrushchev. And music—the appeal to the minds of men—has always been a very important aspect of arms control proposals.

The chances are that a highly organized, well-staffed (American) program will not make good music, which is almost always a matter of individual, rather than staff, effort. The products of the new and highly organized effort may seem uninspired and overintellectualized. But they will be more carefully designed to serve the common needs of competing nations.

The disturbing factor in the present picture is the fact that there is no evidence whatever of parallel activity in the Soviet Union.

They refuse, even in off-the-record conversation, to talk in realistic terms about existing weapons systems, about the specifics of warning and detection systems, and about initial measures to frustrate surprise attack. They feign horror when it is proposed candidly to discuss evasion techniques.

The Americans, on the other hand, discuss gory details quite openly. Just as medical students, who are devoted to a life of healing, traditionally indulge in a gay and macabre humor, so arms control strategists use military jargon in a clinical manner which often disguises their genuine zeal for peace.

The public, unfortunately, does not always see this as candor versus deviousness. Too often it just sees nice Russians speaking about brotherly love and sunlight, while Americans talk about sneak attacks, thermonuclear destruction, military strategy, and clandestine tests in dark caves.

The result is that thousands of well-meaning people demonstrate for unilateral disarmament in England and many Americans, in churches, in universities, and elsewhere, while mistrustful of the Soviets, believe that the Soviet complete disarmament proposal is sound and honest. They demand policies that reflect Western hopes for the perfectability of man. And they denounce as bloodthirsty ogres those who try to make an objective analysis of thermonuclear strategy.

When the Kremlin can get so much mileage on a vague and superficial proposal for complete and general disarmament, it feels little pressure to come to grips with Western first-step proposals for inspection or for surprise attack prevention. Why should they bother?

There is a lesson in this for the American peace movement, and there is also one in it for the American Government. The peace movement must remain aware of the fact that the Russians are an indispensable party to arms control, and that it is just as important to place pressure on the Kremlin as on Western governments, more important, in fact, because there are no local peace movements to do the job in Russia.

For the new administration there is also a lesson in the need to season highly technical and intellectualized proposals with an appeal to deeper aspirations.

We will know that we have turned the corner when the Soviets begin to talk more candidly about the modern weapons that must be controlled, and when disarmament talks are moved out of conferences where there is no temptation to grandstanding.

Dollar Devaluation?

EXTENSION OF REMARKS
OF
HON. EDGAR W. HIESTAND
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 11, 1961

Mr. HIESTAND. Mr. Speaker, some time ago, an abortive gold speculation on the London market did not worry some of us much for what it actually was, but for what it indicated. It could not have helped but reflect a questioning of confidence in the dollar. It resulted in a rash demand for devaluation of the dollar by marking up the price of gold. We were happy that the administration stood firm and the threat evaporated.

However, recent events have rather shocked us into an appreciation of the seriousness of the situation regarding confidence in the dollar. We had been accustomed to believe that evaluation is a matter that we ourselves could control. The marking up of the German mark, vis-a-vis the dollar, and the probability of the readjustment of the Dutch guilder and, perhaps, the Swiss franc and others in dollar revaluation rather startles us.

To be learned again is the lesson of fiscal responsibility and fiscal sanity. Thereby, and only thereby, can we retain the confidence of the other 47 nations—those are pegged to the dollar which means to the price of gold. For as long as we remain firm on the price of gold, so long will the dollar be the measure of the value of world currencies. A most interesting article by J. H. Kelleghan appeared in Money Trends the financial bulletin published by Money Research Associates of Chicago which by unanimous consent is inserted herewith:

THE DOLLAR PROBLEM THAT WON'T SHOO AWAY

(By J. H. Kelleghan)

The new administration in Washington, like the one it succeeded, refuses to face up to the realities of the persistent dollar problem. Like the dog that followed the little

boy to school, it just won't shoo away. The dog's name, by the way, is Dollar Devaluation.

President Kennedy and his financial advisers have been throwing sticks and stones at the little beast, insisting that the doggy dollar problem really isn't as bad as it looks, but the pesky animal simply retreated a respectful distance waiting to continue its pursuit when the administration turned to other problems.

Hence, it was not a little startling when the canine turned up in West Germany and was firmly tied up there.

The dollar problem which Washington chose more or less to ignore, was not treated so casually in Europe. When West Germany and Holland raised the par value of their respective currencies in relation to gold and the dollar, they officially recognized the devaluation that has taken place in the dollar in relation to the mark and the guilder.

It now takes only 400 marks to buy 100 U.S. dollars, whereas it previously required 420 marks, a devaluation of the dollar amounting to 20 marks per $100. This, moreover, represents a permanent change in the "parity" value of the mark in relation to the dollar, recognized by the International Monetary Fund. A similarly permanent devaluation of the dollar in relation to the guilder has been established by Holland. In fact, most of the European currencies, except the British pound sterling, are showing strength against the dollar, indicating that there may be further currency "revaluations."

Apparently most of us Americans are still under the impression that dollar devaluation must take place as it did in the past with a reduction of the gold content of the dollar. Actually, we now have to look for evidence of dollar devaluation in the relative values of foreign currencies with respect to the dollar.

What we Americans have failed to realize is that the postwar arrangements entered into with other nations through the International Monetary Fund have completely altered the nature of dollar devaluation. It is no longer necessary or possible to accomplish devaluation by changing the gold content of the U.S. dollar. That is permanently fixed. Devaluation is now accomplished by altering the gold content of the currencies that are presently tied to the U.S. dollar, the only major currency in the world that remains freely convertible into gold at a fixed price.

Instead of having 48 free currencies, each tied independently to a free gold standard as in the past, we now have 47 nations tied into a planetary system of parity values around the U.S. dollar as the base and anchor. In this system the U.S. dollar is not free to change its base in any degree with respect to the other 47 nations, but these 47 nations are free to change their parity relationship with the U.S. dollar if they do it through the International Monetary Fund.

This is what has happened. The dollar is tied to a fixed gold price under international agreements and, therefore, its value is no longer free to fluctuate except in terms of other currencies. Foreign currencies, however, are free to fluctuate within stated boundaries with respect to the dollar (1 percent upon or down from "parity"). Foreign nations may change this "parity" relationship to the dollar by clearing the change through the International Monetary Fund.

This all sounds quite complicated and, in fact, it is. Nevertheless this does not diminish its importance. We Americans on the whole have not paid much attention to the dollar shenanigans taking place outside the United States. The postwar monetary arrangements which this Nation entered into with the International Monetary Fund with the approval of Congress replaced the old arrangements completely. At the time, in 1945, it all seemed too complicated and remote to merit attention. Now we suddenly find that these new arrangements have an immediate bearing on the soundness of the U.S. dollar and therefore on our national welfare and can hardly be ignored any longer. We find the dollar being devalued in a way we do not understand and had never expected.

As a people we do not realize apparently that devaluation of the dollar is rarely a deliberate decision on the part of any monetary authority as it was in Franklin D. Roosevelt's administration. Such authorities do not deliberately adopt a course that is certain to downgrade a monetary medium. A debased dollar is the involuntary consequence of abuses of long standing. The monetary authorities officially recognize the fact and reality of dollar devaluation only when it has become so obvious it can no longer be denied. The U.S. dollar has already been devalued by excessive issues but the authorities are not yet being forced to acknowledge it.

So it has become apparent that if we Americans are going to save the U.S. dollar from ultimate ruinous devaluation we had better make up our minds to keep informed of what is going on.

It is difficult to describe the structure of the postwar world monetary arrangements in simple terms. The International Monetary Fund was set up to facilitate the rehabilitation of foreign currencies after the war and to provide the means of maintaining sound and stable currencies when restoration had been achieved.

The International Monetary Fund consists essentially of an agreement signed by 48 nations to establish a parity value for their currencies in terms of gold and dollars binding for their foreign exchange as well as their gold transactions. The U.S. dollar is the only one of the 48 currencies that is directly convertible into gold. The par values of the other currencies are expressed in terms of gold or in terms of the U.S. dollar and its fixed price in gold.

Foreign central banks are free to exchange their currencies into dollars which they can use to buy gold from the U.S. Treasury at its fixed price. The U.S. Treasury has agreed to sell or buy gold on demand from the other 47 nations. By the same token the 47 nations are required to buy dollars when the value of their currencies rise one percent over parity value in dollars or sell dollars when values decline one percent below parity value in dollars. The dollar is thus used as a leverage by other nations to raise or lower their currency prices in foreign exchange markets. Each nation, of course, acts separately and independently.

Operating within the narrow range of two points, this arrangement assumes an impregnably strong dollar and vulnerable foreign currencies. Hence, it is easy to imagine the consternation of the world's money managers when the gold price of the dollar began to fluctuate wildly on the free London gold market. It was immediately attributed to the work of nasty old speculators, but the evidence of dollar weakness was too strong and too sustained to give this smoke screen much substance.

The 48 central banks of the various nations each with its separate and complete banking system, are tied together through the International Monetary Fund to what has been called a gold exchange standard. This means that these 48 nations have returned to the gold standard but in a modified structural form. Gold for the most has been made captive by the central banks which use it as bank reserves. It is estimated that 90 percent of the world's gold is held by the central banks. The ordinary citizen is no longer able to use gold as a monetary medium. Actually gold does not sell at a genuinely free price. The price of gold has been fixed by one government and then another for more than a century and a half; first by the British and then by the United States. The gold price in the free market in London fluctuates only in terms of the fixed dollar price. The bank reserves of international Monetary Fund member nations may also include United States dollars and British pounds known as international reserve currencies.

Until the explosion of gold prices in the London market made the dollar's decline agonizingly clear, its steadily depreciating value was concealed by the huge dollar purchases in foreign exchange markets made by West Germany, Holland, Italy, and other nations.

A major part of these huge dollar acquisitions was converted into gold and accounted for most of the heavy loss of gold by the United States in 1959 and 1960. A central bank bearing the responsibility for the banking welfare of its nation could hardly be expected to retain large balances of a currency that is steadily depreciating in value.

When West Germany and Holland officially raised the parity value of their respective currencies with the International Monetary Fund, they simply gave official recognition to the fact of dollar devaluation in relation to their currencies.

Thus, the pesky canine is being released and may be expected to show up again in Washington soon to pursue its worried masters.

It Should Be the Morgan Canal

EXTENSION OF REMARKS
OF
HON. KENNETH A. ROBERTS
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 11, 1961

Mr. ROBERTS. Mr. Speaker, John Tyler Morgan, of Alabama, spent several years of his life attempting to stir up interest in the need for a sea-level canal at Nicaragua.

The late Senator Morgan's proposal is as timely today as it was when he first presented it. Attesting to this is an editorial which appeared recently in the Anniston (Ala.) Star. Col. Harry M. Ayers, editor and publisher of the Star, has been a consistent promoter of the Nicaraguan route and his editorials cogently point out what such a canal could mean to this country.

The editorial follows:

[From the Anniston (Ala.) Star, Apr. 2, 1961]

IT SHOULD BE THE MORGAN CANAL

Ever since the late Walter E. Edge of New Jersey, noted as a businessman of acumen, as an editor and banker and Senator, plus Ambassador Extraordinary to France, wrote a series or articles in the Saturday Evening Post some 40 years ago in advocacy of another interoceanic canal, this paper has kept up the fight toward that end.

Senator Edge said that we might just as well have but one battleship on the high seas as to have but one canal. Sink the ship or sobatage the Panama Canal and we then would become more or less land-locked, and without the military and commercial value that the Panama Canal is and has been to us since 1914.

It is of interest to note, therefore, that the Kennedy administration has revived the issue of a new isthmian canal. And according to an informative article in the

March 28 issue of the Wall Street Journal, the President "is thinking of restaging a drama from the days of Teddy Roosevelt."

But as much as we admire the old Rough Rider as he is pictured to us in history, and as much as we needed a man of his courage and decisiveness during the 8 years of the Eisenhower administration, any new interoceanic canal should bear the name of John Tyler Morgan of Alabama.

But while it is true that Teddy brought to bear practically the entire U.S. Navy in order to force Colombia to release her claims on Panama and to sell her interests in the isthmus to the United States on our own terms, it was Morgan who led the fight in the Senate that made the Panama Canal possible.

Morgan did not favor Panama originally, as he fought for the Nicaraguan route and a sea-level canal. And in so doing he carried his point on the floor of the Senate four times in spite of the opposition of the railroads, the French interests, and so forth, and had to come to the rescue of the Panamanian group when they got bogged down over technicalities.

We might go further in the field of nomenclature, and state that but for the ability, courage, and pertinacity of three other Alabamians besides Morgan—General Gorgas and General Noble in the field of medicine, plus the engineering genius of General Sibert—there might not have been any canal at all.

Morgan had an encyclopedic mind, and it was after years of careful study that he saw the advantages of a sea-level canal, which would not only be safer, more economical and nearer to our coastline, but one that also would be of advantage to the whole United States, and to the entire civilized world.

The wisdom of that great Alabamian, highly acclaimed by Chauncey Depew, Henry Cabot Lodge and other great Senators who served with him in the Senate for many years, although of a different party, has been proved in many ways since his death; and it is nothing less than foolhardy that we have not followed his advice.

As to the necessity of another interoceanic waterway as advocated after Morgan's great battle, we have the example of Japan in getting England and France to cooperate during the Russo-Japanese War by the closing of Suez to the Russians, who then had to make the longest naval voyage in history, and thereby to meet with defeat by the Japanese fleet.

Moreover, still later history as to Suez should convince any doubting Thomases as to the inadvisability of having too many stockholders in any new international waterway that should be constructed. For our present experience with NATO shows how onetime friends will fall out when most needed.

A few years ago, President Figueres of Costa Rica wrote to this paper that he would be favorable to a contiguous sea-level canal, as did President LaGuardia of Nicaragua. But President Jiminez of Costa Rica is not so favorable. And we do not know just how much trouble Castro of Cuba has wrought in the last few years.

Panama, too, who is almost wholly dependent upon the Canal for her livelihood, has become infected with the Communist virus and she probably would be gobbled up by Colombia again if we should stop feeding her. Hence, it has been suggested that we give Panama the present canal in the event we should rebuilt elsewhere.

Be all this as it may, however, Gen. William E. Potter, who recently retired as director of our Panama operations, is quoted as saying that "the time is not only on us, but we're in a rush position as far as committing ourselves to building a sea-level canal is concerned."

According to information furnished this paper by Yale University experts, we are almost wholly dependent upon foreign countries for raw mineral material, most of which comes through the Panama Canal. And that which we get from Africa will hereafter become a doubtful product.

The canal originally cost $375 million, but it is not stated whether or not that included the cleaning up of the miasmic conditions then existing in Panama. It is now proposed to do the necessary blasting with nuclear charges, however, and it is believed that this can go so far down as to eliminate any recurrent danger.

All in all, it is heartening to know that we now have in the White House a man who can "see life steady and see it whole;" and one who when he takes hold of a big problem like the canal, which means so much to our lives and our continued prosperity, will not give up until a new canal is built at a cost of about $1,250 million.

The State of Washington To Oppose Northwest Railroad Merger Plan

EXTENSION OF REMARKS
OF
HON. THOR C. TOLLEFSON
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 11, 1961

Mr. TOLLEFSON. Mr. Speaker, according to reports in the press, Attorney General John J. O'Connell and Gov. Albert D. Rosellini, of Washington, have both announced that the State is planning to fight the proposed merger of the Great Northern, Northern Pacific, and Burlington railroads into a sprawling network of unprecedented size, covering nearly 25,000 miles of track. The Attorney General is quoted as saying that a petition has been sent to the Interstate Commerce Commission asking leave for the State to intervene in and oppose the application for authority to carry out the merger, which was recently submitted to the ICC by the railroads involved.

I am happy to support this action by the State of Washington, which is one of some 17 States that would be affected adversely if this proposed merger is permitted to go through. It is my understanding that other States in the areas served by these railroads also are filing similar protests with the Commission, and certainly many communities also have protested, as have a large number of civic bodies and individual citizens.

It is my sincere hope that their protests will be properly weighed by the ICC when it acts upon the merger applications. I know that the alarm and concern of the people of Washington and the other States served by these railroads is great and significant, and rests upon valid fears over the future transportation facilities which would be available to them if the merger were to be approved. Both the house and senate of the Washington State Legislature are reported to have reflected this concern by passing a resolution opposing the merger.

In order to bring before the Congress some of the reasons for the opposition of the people and State officials of Washington, under unanimous consent I include several articles which have appeared about this subject in Washington newspapers in the Appendix of the RECORD:

[From the Yakima Herald, Dec. 11, 1960]

RAIL MERGER PLAN HAS UNIONS UNHAPPY

Railroad unions are staring unhappily at a proposed merger of four northern railroad lines, especially in view of the fact that the Interstate Commerce Commission has never denied a merger application of this type.

Principally the 17 legally recognized unions are concerned with job losses, but they claim a great many communities will be "hurt irreparably by the drying up of rail services, loss of payrolls and taxes." Railroads involved in merger talks are Northern Pacific, Great Northern, Burlington Lines (C.B. & O.) and the Spokane, Portland, and Seattle system. Edward Kermit, Yakima, a legislative representative for the Order of Railroad Conductors and Brakemen, pointed out how the proposed shift may affect Yakima.

Freight shifts: Railroads which are suggesting the merger have announced that, between Spokane and the west coast, all freight traffic south of Tacoma will move over the existing S.P. & S. tracks. All freight traffic north of Tacoma will move over existing Great Northern tracks. Result: Yakima will become a branch line operation, losing all four of its daily through freights. Robert MacFarlane, president of the Northern Pacific, said passenger service via the North Coast Limited and the Mainstreeter will be as at present, and freight service will be geared to giving the best and quickest service to the shippers of the area.

Yakima loses: But Kermit noted that loss of ranking as a division point will cost Yakima financially. As a division point, traincrews on through freights lay over at Yakima. Crews beginning work at Auburn west of the Cascades end their day at Yakima; crews starting at Pasco also end their work shift at Yakima on NP's east-west route. These people eat, stay overnight, and make purchases in Yakima, Kermit said. Additionally, as a branch line, Yakima may not be entitled to as many employees or as many railroad facilities as at present although the exact changes have not yet been determined.

Trucks hurting: MacFarlane, in a statement to employees of Northern Pacific, declared, "Highway competition has been particularly devastating" to railroaders' efforts to show a profit "and with the rapid expansion of interstate highways truck competition is steadily growing more difficult to cope with." He said no important changes in passenger service are anticipated. In addition, consolidation plans do not provide for any important or substantial abandonment of freight lines. In their statement, the unions claim the railroads are better off financially than the airlines, truck lines, or inland waterways.

Profit ratios: In 1958, for instance, railways spent $16 million to gain a net income of $1 million. Airlines spent $34 million for the same profit, truck lines $71 million. Waterways had an income ratio slightly under that of the railroads, the unions declared. They said railroads had an average net income, after depreciation of $233 million a year more in the 1950's than in the previous decade, which included the war years. According to figures of the railroad companies, 8,100 jobs will be affected by the merger. In about 2,900 of these the position would remain but the place of employment might be changed from one area to another.

Few jobs: Approximately 5,200 jobs would be discontinued at some stage in the consolidation, over a 5-year period, McFarlane said. The time spread would permit the consolidated company to place men in positions made vacant by attrition or death or retirement. So, MacFarlane noted, of the men in the 5,200 jobs, some 4,250 eventually could be reemployed at the same locations as now. "This would leave about 950 men who probably would have to transfer to fill vacancies. But our studies indicate clearly that there will be jobs somewhere on the railroad for everyone presently employed," he declared. Unions believe the loss is grossly underestimated, on the basis of checking how the merger will affect individual areas. Cited as a possible big loser is the Tri-Cities area.

Impact noted: "The impact of this displacement of employees should not be overlooked, considering the fact that $3,500,000 annually in railroad wages is spent in the Tri-Cities area," the unions declared. "They [the companies] promise better service to the communities, yet they will reduce the number of through trains from Spokane to Seattle via Pasco from approximately 16 to 18 trains a day to one time freight a day in each direction. If this is better service we certainly fail to see it." And a last word from NP's MacFarlane: "From the proposed consolidation will emerge a dynamic new transportation system which is destined to provide such an improved and expanded service that it is bound to command a greatly increased volume of business, thus creating additional jobs and making an increasingly important contribution to the economy of the vast territory it serves."

[From the Tri-City Herald, Dec. 3, 1960]

IMPACT STUDY POSSIBLE

(By Charles Lamb)

Effect on the Tri-Cities of the impending railroad merger will be discussed Tuesday night by the Pasco and Kennewick city councils, the Herald learned Saturday. The discussion will lead to appointment of a committee to study the proposal of the Northern Pacific Railway and the Great Northern Railroad to merge, it was indicated. Mayors Ray Hicks of Pasco and Glenn N. Felton of Kennewick said discussion of the merger would be on the council agendas because of the possible loss of payrolls.

S. R. Bichsel, general chairman of the Brotherhood of Locomotive Engineers for the Northern Pacific and other national railroad union officials, recently estimated as many as 300 of the 750 Northern Pacific Railway jobs in Pasco would be threatened by the merger. It was said the merged lines would route most westbound traffic to Seattle over the Great Northern route, missing the Tri-Cities entirely. The unions also said the merger would result in establishment of an $11 million electronic switching yard in Spokane. Tri-City railroaders believe Pasco's $7 million retarder yard, one of the area's industrial strongpoints, then would greatly diminish in importance.

Both Mayor Hicks and Felton said they favor a special committee of Tri-City leaders to ascertain impact of the merger on the Tri-Cities and to protest to the proper agency—the Interstate Commerce Commission—which must approve mergers. "I have talked to many railroad men and they are rightfully concerned," said Mayor Hicks. "I believe the merger would be harmful to the whole Tri-City area by depriving the area of several hundred thousand dollars annually in payrolls—not to mention individual hardship to the affected employes themselves. I for one, think that Kennewick, Pasco and Richland city councils should pass a joint resolution opposing and protesting the merger." Mayor Felton said the Tri-Cities should work as hard to retain all its railway industry as it works to land a new one. "We've always advertised the hump yard and other railway facilities—even bragged about them. Now they're worth fighting to keep." He added, "Anything that hurts Pasco hurts Kennewick," and that while the majority of NP workers live in Pasco, many also live in Kennewick and Richland.

Mayor Joyce Kelly, Richland, said he would hesitate to join in a protest against the merger, despite his reluctance to see the Tri-Cities lose payrolls. "We must have the railroads and if a merger will keep them from going bankrupt, then we must live with it." He pointed out that three big rail mergers have occurred in the east and more will follow because of increasing competition, operational costs and other factors.

[From the Tri-City Herald, Dec. 11, 1960]

TRI-CITY RAILROAD EMPLOYMENT MAY JUMP FROM MERGER

(By Charles Lamb)

A proposed merger of four railroads should not jeopardize the present Tri-City railway employment level and may possibly increase it, officials of the Northern Pacific Railway said Saturday. The "trump card" in keeping local railroad employment at its present high level will be the increased use of the Spokane, Portland & Seattle Railway if the merger is achieved. Not one switch engine assignment will be pulled out of the Pasco hump yard, they declared.

The merger, which the railroads hope will go into effect in mid-1962, involves the Northern Pacific, S. P. & S., Chicago, Burlington & Quincy, and Great Northern. Assurance on the local job situation was given by N. M. Lorentzsen, Spokane, superintendent of the Northern Pacific's Idaho division, following a meeting in Spokane Friday with C. H. Burgess, operating vice president of the Northern Pacific. Burgess met with Lorentzsen and other officials of the Idaho division. One of the officials was R. C. Webb, Pasco, assistant Idaho division superintendent. Both Webb and Lorentzsen reported Burgess told them no present Northern Pacific employee in Pasco will be displaced by the merger—contingent upon satisfactory negotiations with railway management by operating and nonoperating railroad labor organizations. In addition, Webb stated that Pasco would become headquarters for a new division—to be named Pasco Division—which will be created when the 25,000 miles of mainline track under the four railroads become one major system.

Besides boosting Pasco's prestige, its division—point status would involve between 25–40 new jobs and may require a new division building in Pasco. Although Northern Pacific through traffic as it is known today would drop drastically, Northern Pacific operating crews thus affected would be picked up to operate trains over the present S.P. & S. line to Portland, Lorentzsen said. Pasco would continue as their home station. Under the merger, through trains to coastal areas north of Tacoma which now go via the Northern Pacific through Kennewick would bypass the Tri-Cities by going the Great Northern route. But, said Lorentzsen, freight to and from areas south of Tacoma will use the S.P. & S. route. This would swell Pasco traffic to commensurate for the decrease expected over the present Northern Pacific route.

Burgess' report conflicted somewhat with impressions received by union heads of all crafts on the four lines when they met in October with management of the Northern Pacific, Great Northern, C.B. & Q. and S.P. & S. Pasco railway union representatives have predicted a drop in through-train movements in Pasco to affect 102 train-crew jobs. They expect a loss of some 300 cars of freight daily, resulting in an additional force reduction of Pasco of some 150 switch crew members, carmen, clerks and others. Lorentzsen said the figures might be true on the basis of Northern Pacific mainline traffic reductions. But the increased traffic through Pasco over the S.P. & S. will balance the picture again, he said. "There will still be fruit trains, other freight service and passenger trains on present Northern Pacific tracks to Yakima and Ellensburg areas, but no more through freights," he explained. Both Lorentzsen and Webb asserted that "Not one switch engine assignment" would be pulled out of the Pasco hump yard. They said the yard will continue to make up east-bound fruit trains and will assemble freight trains bound for Minneapolis and St. Paul.

The executives' assurance of continued, or increased, Tri-City railroad employment volumes was based, however, on successful negotiations between management and the unions and willingness of present Northern Pacific crews to work on the present S.P. & S. route. "We feel the employees can do better by negotiating with management than by seeking relief through the Interstate Commerce Commission," said Lorentzsen. He added, "We know what management will do—we don't know what the ICC will do."

The merger plan is expected to reach an ICC hearing by February 1961 with a possible decision to go ahead in mid-1962. Webb said the four-system rail "marriage" will take about 5 years to implement.

[From the Columbia Basin News, Dec. 15, 1960]

ORAL COMMITMENT ISN'T ENOUGH

Oral commitment by Northern Pacific and Great Northern that Pasco would become a division headquarters has only slightly altered Tri-Cities viewpoint toward the proposed merger of the rail lines. Officials of the railroad brotherhoods would like to see a firm commitment in writing. Their fears that Tri-Cities would become a secondary rail point, causing layoff or transfer of many employees, have not been soothed even though Northern Pacific representatives said they do not anticipate that any Tri-Cities employees would be adversely affected.

Stickler in the Northern Pacific announcement was reference to the working status of operating and nonoperating crafts would need to be agreed upon. This can mean many things, and in some cases for reclassification could be a polite term of demotion. Railroad union representatives are taking a wait-and-see approach. They won't need to wait long, since the Interstate Commerce Commission is expected to begin examination of the proposal next February. A decision probably won't be forthcoming until the middle of 1962.

When it was first anticipated that Pasco would be downgraded as a rail center, Columbia Basin News suggested that railroad spokesmen make their position as clear as possible, spelling out in specific terms what the merger would mean to Tri-Cities and other communities now served by the four lines involved in the merger. Last week three top officials of Northern Pacific did dispel some of the fear that Tri-Cities would suffer drastic reduction, but they left important points open to discussion. The entire proposal necessarily will be presented in detail to the ICC in February, and naturally the railroads will be unequivocally committed to whatever plans they submit. Railroad officials have said that yard and road operations should increase as a result of improved rail service, and that this would directly affect the Tri-Cities area. But this is only speculation. Tri-Cities cannot support the merger until it has more substantial evidence that the plan would not work to the area's detriment.

[From the Tri-City Herald, Dec. 21, 1960]

RAIL UNION OFFICIAL DISPUTES THAT MERGER TO BENEFIT PASCO

(By Charles Lamb)

Sacrifices by the Northern Pacific Railway, its employees and cities along its route for the benefit of three other railways involved in a proposed merger were predicted here today by J. S. Turrell of St. Paul, Minn., general chairman of the Order of Railway Conductors and Brakemen for the Northern Pacific.

Conferring with members of local 260 in Pasco, Turrell said, "Let's face it. The Northern Pacific would become a secondary line and Pasco and a number of other traditional Northern Pacific towns would suffer. In most cases, however, the positions of the Great Northern, Spokane, Portland & Seattle, and Chicago, Burlington & Quincy railways would be enhanced," he said. His view is almost opposite of predictions made in Spokane December 9 by C. H. Burgess, operating vice president of the Northern Pacific. Turrell said his opinions are based on information, "however meager," the company has put out to employees in St. Paul. Burgess said Pasco would become a division headquarters, would lose no payroll and that "not one switch engine would be pulled out of the Pasco Northern Pacific yards." "I wish I had that in writing about the switch engines," Turrell declared. He recalled one company estimate that the merger would cancel 49 switch-engine assignments in S Paul and Minneapolis alone every 24 hours. "You say it wouldn't affect one of the 19 engines in Pasco?" he challenged.

Turrell was also skeptical about a division headquarters in Pasco. "Since 1920, railroads have been lengthening divisions. Why now would they create new divisions in between old ones?" he asked. Aside from local freight trains arriving from the Yakima-Ellensburg area, Turrell expects not more than one or two freight trains would have to stop in Pasco a day for switching. Mainline freight from Tacoma and North would miss the Tri-Cities on the Great Northern route and S.P. & S. trains going East from the Tacoma South coastal area would probably come no closer to Pasco than the roundhouse curve, Turrell said. "Why would the combined line use the Pasco hump yard when 150 miles away it will have an $11 million electric switching yard at Parkwater near Spokane?" was another question Turrell posed.

He said the mayor of St. Paul inquired if the 13-story Northern Pacific and Great Northern general offices operation would stay in St. Paul after the merger. "He was told that the company didn't know. The Northern Pacific wants the unions to 'come in and negotiate,' but it hasn't given us any information to work on." Consequently, Turrell said, "We must draw conclusions from the facts we have." Among these is that 5,200 jobs in the existing Northern Pacific and Great Northern lines will be eliminated—an 8-percent reduction. "We think that 8 percent is conservative, since history shows mergers usually affect some 25 percent of the jobs. They claim their plans are not definite enough yet to tell what categories of work the reductions will affect," he said.

Turrell and local members expect Pasco to bear its share of the announced $40 million annual cost reduction the railroads expect from the merger. "Much of this will be payrolls and taxes—both of which support communities along the Northern Pacific line," the union official said. As an example, Turrell said Mandan, N. Dak., will lose 57 percent of its present $69,000 bimonthly payroll.

He said Northern Pacific President Robert MacFarlane has predicted "everybody will have a job inside of 5 years." Turrell said, "The way that works, the 5,200 jobs being reduced will be attrition through retirement and death with no replacements." He also predicted many young railway employees with little seniority will be dropped. Turrell said MacFarlane will be chairman of the board and Ralph Budd, present Great Northern president, will be president of the as-yet-unnamed rail combine. Turrell said the stockholders of all four lines must be polled by vote before the merger can come off. "I seriously expect many stockholders to balk," he predicted, pointing out that because Northern Pacific has oil wells and timber operations in addition to rail operations, its stock is more valuable per share than stock of the other three lines. "Funny thing," Turrell concluded, "all four companies are making money and none are in financial trouble. And most of the changes being considered could be achieved without merging. Why they have to merge at all is beyond me."

Some Crimson for the Republicans Also

EXTENSION OF REMARKS

OF

HON. F. BRADFORD MORSE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 11, 1961

Mr. MORSE. Mr. Speaker, it is with great personal satisfaction that I have noted the outstanding notices being received by Advance, the journalistic venture launched in February by an up-and-coming group of young Harvard Republicans. It is high tribute, indeed, when a distinguished journalist of Arthur Krock's stature heralds such an endeavor, and I would like to share his words of praise with my colleagues. The article follows:

[From the New York Times, Feb. 14, 1961]

SOME CRIMSON FOR THE REPUBLICANS ALSO

(By Arthur Krock)

WASHINGTON, February 13.—The appearance of a periodical of opinion designed to promote the political fortunes of the Republican Party deserves the rating of an event. Among the foremost of these reasons is that for years the principal interest of many of the ablest editors and writers in the periodical field has been to promote the political fortunes of the dominant group in the Democratic Party.

But the launching of this journal of opinion has claims to being catalogued as an event beyond its general—though not undeviating—purpose to replace Democrats in office with Republicans. It has no financial backing or organization cachet in that party. It is a campus product by undergraduates. And it originates on a campus where the voice of Democratic liberalism has largely prevailed: the celebrated Yard of Harvard College.

Advance is the name the young publishers and editors have chosen for this duckling among a brood of cockerels whose ambition is one day to grow into great political gamecocks like Schlesinger, Jr., Galbraith, and Harris. It is to be published five times a year from Quincy House, Cambridge, Mass. In its first issue—that dated February 1961—Advance expresses the belief that "a new philosophy, not yet fully articulated, will mostly likely evolve within the Republican Party" and "most likely * * * will emanate * * * from the progressive Republicans." To help develop this philosophy, from that source, is its announced mission.

The psalmist has not yet made good his prediction that the meek shall inherit the earth. But the young, or at any rate the comparatively young, have certainly inherited the executive power in this Nation. And, since—without any noticeable signs of meekness—they are governing their inheritance in the name, and for the political longevity, of the Democratic Party majority, it is in the national interest of the future that other unmeek young shall arise to contest that future with them. The odds are very obvious and very great in favor of the group in power. But that is the best possible reason why the challenge, as yet so small, should be recorded.

The Harvard collegians sound it on no uncertain trumpet. "We are Republicans," they announce, with "no apology of any kind" for a party and its candidates after an eletcion in which, "though registered Democrats held a substantial majority."

Nixon and Lodge came very close to capturing the popular vote and the Republican delegation in both Houses of Congress was significantly increased. It would thus be unrealistic as well as cynical to assert that the Republican Party could profit by adopting Democratic programs or tactics. But it would be equally unrealistic to fail to reassess our position in the light of 1960 Republican defeats.

This reassessment leads Advance to the conclusion that progressive or—with important qualifications—liberal Republicans formulate any successful party program for the 1960's. And several articles which follow make clear that the undergraduate editors of Harvard identify such progressives with Senator CASE, of New Jersey, Senator COOPER, of Kentucky, Governor Rockefeller and Representative LINDSAY, of New York; and also that they are disposed to exclude Senator GOLDWATER from the category. Yet some of the lines GOLDWATER would draw to enable a bewildered electorate to differentiate between the central groups in both parties, and some on the left fringes of each, seem to appear in shadowy outlines in these extracts from the definitive editorial.

As the Democratic Party grew big it also grew ideologically flabby. Many of the Democrats who today call themselves liberals seem to equate liberalism with reckless spending and steady aggrandizement of Federal power. We are conservatives in our dedication to the traditional freedoms which permit individual realization.

On the issue of overriding certain vetoes by President Eisenhower, based by him on this same asserted dedication, several of the new magazine's preferred Republicans voted to override and GOLDWATER voted to sustain. But such crossovers occur in both parties on promptings that range from principle to pressure from special interest groups. And it is to be hoped this will not discourage the young staff of Advance in their gallant attempt to show that "atque ex Harvard semper aliquid novi."

What's Wrong With America

EXTENSION OF REMARKS

OF

HON. ROBERT F. ELLSWORTH

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 11, 1961

Mr. ELLSWORTH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following essay which was written by a young constituent of mine, Miss Linda Beatty, a student in the seventh and eighth grade class at Our Saviour Lutheran School, Kansas City, Kans. The principal of the school, Mr. Robert C. Stebbe, sent this essay to

me, saying that he thought it represented a succinct statement, from the viewpoint of a Christian child, of what is wrong with America.

WHAT'S WRONG WITH AMERICA

(By Linda Beatty)

There are many things which can be said about America that are considered wrong and yet there are many things that are said about America that aren't true.

The most important thing that is wrong with America is that there are not enough believers in Jesus Christ. Of course there are many who know there is a God, but they don't believe there is a Triune God, Father, Son and Holy Ghost; they don't believe that God the Father sent his son, God the Son, to die and save people from their sins.

There are other things wrong with America like, I think people should think more about the poor people and the needy people. People should try to get Bibles and pastors to the poor so they also can get the teachings of Christ.

Electric Power From the Pick-Sloan Plan

EXTENSION OF REMARKS

OF

HON. ROBERT F. ELLSWORTH

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 11, 1961

Mr. ELLSWORTH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Kansas City Star of March 23, 1961. The editorial speaks for itself—points to an alarming situation involving a conflict between public power interests and the Pick-Sloan program, and one which I respectfully urge my colleagues, to note by reading this editorial:

ELECTRIC POWER FROM THE PICK-SLOAN PLAN

The effort of the upstream public power crowd to blow up the whole cooperative plan of Missouri basin development comes at a time when the production of public power at Pick-Sloan dams is expanding rapidly. This is a move to destroy the plan that is showing results for the whole Missouri basin. And the most impressive gains are being made in the States that are now trying to seize all the benefits of the Pick-Sloan program except flood control.

In the early 1940's when W. Glenn Sloan of the Interior Department proposed his river plan, he suggested construction of facilities to produce 758,000 kilowatts of electricity. Today the current capacity of four big upstream dams—Fort Peck, Garrison, Fort Randall and Gavins Point—totals 905,000 kilowatts. And much more is coming.

The ultimate capacity under the Pick-Sloan plan of cooperation calls for 2,048,000 kilowatts, nearly three times the original proposal. Next year, the first units of a new 595,000-kilowatt installation will be available with completion of the big Oahe Reservoir. Big Bend, to be completed in 1964, will provide additional capacity of 468,000. It is interesting to observe that Big Bend originally was planned as a 100,000-unit operation. But changes were made and a new site selected to provide for a far greater capacity. Thus two new dams will more than double the present power output.

Of course, water is required to run the generators. It is true that for several years precipitation in the northern areas has been less than normal. Still, the reservoirs aren't about to run dry. And it isn't a case of using separate, distinct quantities of water for each dam. The same flow runs through all generating facilities. The main additions will come from more generators, not from a huge storage of water.

People up and down the river have supported power development—together with the other essentials of basin development, flood control, navigation and irrigation—for 17 years. But if the public power interests now intend to press their demand for sole benefits from the river, they can hardly expect the continuing cooperation from people interested in the industrial growth of Missouri, Kansas, Nebraska, and Iowa.

It strikes us that this is a poor time for the power group to move to wreck the very foundations of the succeeding Pick-Sloan program.

Resolution by State of New York on Trade Restrictions

EXTENSION OF REMARKS

OF

HON. CARLETON J. KING

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 11, 1961

Mr. KING of New York. Mr. Speaker, both the Democratic and Republican Party platforms of 1960 pledged to seek an end to trade restrictions, blockades, blacklists, and the cessation of discrimination against Americans on the basis of religious beliefs. In keeping with these pledges, the Senate and the Assembly of the State of New York, has recently adopted a resolution memorializing the Department of State of the United States to take steps to discourage and nullify the effects of trade restrictions and boycotts by the nations comprising the Arab League against American citizens of the Jewish faith.

Under leave to extend my remarks, I include the following resolution adopted in the Senate of the State of New York on March 24, 1961:

RESOLUTION 131

Concurrent resolution memorializing the Department of State of the United States to take steps to discourage and nullify the effects of trade restrictions, blockades, and boycotts by the nations comprising the Arab League against American citizens of the Jewish faith and against American companies controlled or managed by such citizens

Whereas Arab nations, including the United Arab Republic, Iraq, Jordan, Lebanon, Saudi Arabia, Yemen, Libya, Sudan, Tunisia, and Morocco, functioning as the Arab League, have been conducting a boycott of American citizens, business and industry; and

Whereas the Arab League has blacklisted all American ships which have touched at Israeli ports of call; and

Whereas American firms doing business with Israel are cut off from trade with Arab countries; and

Whereas most American companies controlled or managed, partially or wholly, by Americans of the Jewish faith are not permitted to establish commercial relationships with countries that are members of the Arab League; and

Whereas American service men and armed force employees of the Jewish faith are not permitted to serve at the Dhahran airbase in Saudi Arabia; and

Whereas American citizens of the Jewish faith are generally not permitted to disembark on Arab soil, by land, sea, or air; and

Whereas approximately 500 American business firms during 1960 received warnings through the U.S. mails from Arab boycott officers in Damascus and Kuwait that if Americans have commercial dealings with Israel, they must forego doing business with Arab countries; and

Whereas individual Hollywood motion picture stars have also been blacklisted; and

Whereas American citizens of the Jewish faith are generally excluded from private employment in any capacity in any Arab owned or controlled company; and

Whereas the U.S. Navy reserves the option to cancel the charter of any vessel carrying Navy cargo, if any Arab country refuses to allow the vessel to load or unload cargo, because the ship's charterers or owners have previously done business with Israel; and

Whereas with the approval of the Department of Agriculture, Commodity Credit Corporation, and the U.S. Navy, contracts for the shipment of U.S. surplus wheat to the United Arab Republic provide that the vessel may not have traded at Israeli ports; and

Whereas the Democratic Party platform of 1960 pledged the protection of the rights of American citizens to travel, to pursue lawful trade, and to engage in other lawful activities abroad without distinction as to race or religion; and has further pledged to oppose any international agreement or treaty which by its terms or practices discriminate against American citizens on grounds of race, or religion; and

Whereas the Republican Party platform of 1960 pledged to seek an end to transmit and trade restrictions, blockades and blacklists, and further pledged to secure freedom of navigation on international waterways and the cessation of discrimination against Americans on the basis of religious beliefs: Now, therefore, be it

Resolved (if the assembly concur), That the Department of State be and is hereby respectfully memorialized—

(a) To take a firm position against Arab interference in the conduct of the affairs of American citizens and businessmen.

(b) To abstain from any cooperation with Arab League boycott activities and policies.

(c) To resist any efforts by Arab nations to maintain or widen its boycott activities in the United States.

(d) To exert all possible efforts and utilize its resources to the fulfillment of the spirit and purposes of this resolution; and it is further

Resolved (if the assembly concur), That copies of this resolution be transmitted to the President of the United States, to the Secretary of State of the United States, and to each Member of the Congress of the United States duly elected from the State of New York, and that the latter be urged to devote themselves to the task of accomplishing the purposes of this resolution.

By order of the Senate:

WILLIAM S. KING,
Acting Secretary.

Concurred in without amendments in assembly:

ANSLEY B. BORKOWSKI,
Clerk.

Big Dialing Step

EXTENSION OF REMARKS

OF

HON. GEORGE P. MILLER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 29, 1961

Mr. GEORGE P. MILLER. Mr. Speaker, in my district there are new com-

munities with the same name as great cities of the world. One of these happens to be the city of Newark and recently communication history was made when a direct distance dialing system was installed in my district which allows citizens of Newark, Calif., to contact their fellow citizens in Newark, N.J. This accomplishment was highlighted by the conversation recorded in the following newspaper account which appeared in the Fremont News-Register of March 29, 1961, and I am happy to extend these remarks for your interest:

BIG DIALING STEP

Mayor Leonard Lucio of nearby Newark, sitting behind his desk last Friday helped make communications history when his telephone rang and he answered it—Mayor Leo P. Carlin of Newark, N.J., was on the other end of the line.

Their talk marked the inauguration of direct distance dialing in the New Jersey metropolis. Newark, Calif., has had it since 1958.

Students Hike Future Earnings

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 30, 1961

Mr. BOGGS. Mr. Speaker, yesterday the first of a series of newspaper articles by Mr. Robert N. Kelso, a reporter for the New Orleans States-Item, on the current federally financed student loans at New Orleans universities and colleges appeared in the RECORD. Today, I am pleased to include the second of these fine articles which describe in detail what New Orleans institutions of higher learning are doing to aid young students to continue their education through the National Defense Education Act. The second article follows:

STUDENTS HIKE FUTURE EARNINGS—LOANS HELP COVER RISING COSTS

(By Robert N. Kelso)

Educators figure that the average college graduate earns $100,000 more in a lifetime of work than a person with only a high school education.

However rough this estimate may be, it is certain that the unskilled or partially trained worker comes out at the short end of the horn, moneywise, in this world of rapidly expanding expertise, technology, and automation.

Brainpower trained in specialized channels draws the premium pay.

But it is also costing premium amounts to turn out this brainpower—in many cases more than a talented youngster and his parents can afford.

This situation was recognized by Congress in 1958 when it passed the National Defense Education Act to provide for student loans, along with specialized training and research programs, in the Nation's colleges and universities.

The act authorizes institutions to lend able and needy students up to $1,000 a year, for a total of $5,000, while they complete their training.

Some 1,400-odd institutions are participating in the national defense student loan program, enabling more than 40,000 students to continue their higher education.

In Louisiana, 15 institutions are administering such student loans. Six of the 15 colleges and universities are in New Orleans.

Approximately 1,000 students in New Orleans are now getting at least part of their college education on a learn-now-pay-later basis.

The bulk of the money for student loan programs here is that appropriated by Congress. Participating institutions put up $1 of their own money for every $9 they get from the Government.

How does a student go about getting a loan?

As far as the loans underwritten by the Government are concerned, the procedure at all schools is similar.

The procedure at Loyola University, which now disburses loans only under terms of the National Defense Education Act, is typical.

Anyone eligible to attend school as a regular-enrolled, full-time student is eligible to apply for a loan.

Special consideration, under terms of the Federal law, is given to two categories of students:

1. Those with superior academic backgrounds who state they want to teach in elementary or high schools.

2. Those whose backgrounds indicate superior capacity or preparation in science, mathematics, engineering or modern foreign languages.

Such students have loan priority.

But so long as the priority groups are taken care of, loans are also available for other capable students who can demonstrate financial need.

Demonstrating need requires the applicant to supply detailed information on his own and his parents' financial resources.

This information, which is held in confidence, includes items on the net taxable income of the father and mother, or guardian, along with the value of their bank accounts, investments and real estate holdings.

Allowance is made for obligations and special situations—such as sickness—which may be a drain on the family income.

University authorities administering student loans want a clear idea of what the family can reasonably afford to contribute, and the families are expected to come up with their fair share.

The applicant himself is asked to supply a proposed budget for the duration of his loan.

This is to compare his anticipated expenses with his available resources—his personal savings, estimates of his earnings during vacations, part-time earnings during the school year, aid he expects from his parents, guardian or relatives, and any financial help he will get from scholarships, veterans' benefits, or other sources.

He is also required by Federal law to sign a loyalty oath.

This requirement created a furor when educators learned it had been tacked onto the congressional bill authorizing student loans. Campus critics contended it was a blow to academic freedom.

Several institutions—among them Harvard and Yale—pulled out of the loan program when congressional opponents of the requirement (one was the then Senator John F. Kennedy of Massachusetts) failed to get this restriction lifted.

The loyalty oath, as such, was not the chief target of the critics.

It merely required the applicant to swear he bears true faith and allegiance to the United States of America, and will support and defend the Constitution and the laws (of the United States) against all its enemies, foreign and domestic.

What really irked campus critics was an accompanying affidavit the applicant also has to sign.

It requires the applicant to swear:

"I do not believe in, and am not a member of and do not support any organization that believes in or teaches the overthrow of the U.S. Government by force or by any illegal or unconstitutional methods."

Faculty members on many campuses bridled at this, perhaps because they were still smarting from a postwar campaign to get college teachers themselves to sign loyalty oaths or be fired.

But prospective borrowers from the Federal student loan fund have been less antagonistic to the requirement.

No student seeking a loan at Loyola University, says Father Robert L. Boggs, dean of students and loan administrator, has balked at signing the oath and affidavit.

At Tulane University, Dr. Joseph E. Gordon, associate director of admissions and loan administrator, declared:

"Our experience has been that no borrower has complained or refused to sign the oath.

"We officially registered our unhappiness with the requirement, but have not chosen to deny students the benefit of the Federal loans, because we object to the oath."

Tulane has disbursed $500,000 from the Federal student loan fund in the 2 years since the program got into full swing. Loyola has parceled out $203,000.

Other New Orleans institutions participating in the national defense student loan program include Dillard and Xavier Universities and St. Mary's Dominican College.

Louisiana State University in New Orleans, which charges no tuition and fees of only $80 a year, has participated in only minimal fashion through its parent institution at Baton Rouge.

Few students are allowed to borrow more than tuition costs at their schools, because of the relatively high number of applicants.

Tulane and Loyola set no maximum to tuition, but other participating schools here do.

How many New Orleans students are getting their education with the help of pay later loans underwritten with Government funds?

Here is a rundown on the figures, compared with full-time enrollment at the school and its tuition charges.

Tulane: 550; enrollment, 4,500; basic tuition, $990.

Loyola: about 100; enrollment, 1,600; tuition, $600.

Xavier: 101; enrollment, 850; tuition, $400.

Dillard: about 100; enrollment, 900; tuition, $450.

Dominican: 21; enrollment, 309; tuition, $600.

LSUNO: about 15; enrollment, 1,805; no tuition.

This total does not include students receiving financial assistance through other loan programs conducted at the schools.

Tulane, for example, has another 100 students getting aid from the university's own loan funds.

The tabulation shows that from 11 to 12 percent of students enrolled full time at Tulane, Xavier and Dillard have gotten loans through the Federal loan program.

The percentage at Loyola is 6 percent, at Dominican 7 percent, and at LSUNO, less than 1 percent.

This is by no means the percentage at each school who are receiving some kind of financial aid, however.

Scholarships and part-time jobs provided by the institutions are assisting hundreds more.

An estimated one-third of Tulane's 4,500 full-time students are getting financial assistance through loans, scholarships and part-time employment.

Amounts disbursed this year under the national defense student loan program were:

Tulane, $250,000; Loyola, $100,000; Xavier, $40,000; Dominican, $29,707.

Authorities at Dillard declined to reveal the total of Federal funds disbursed. The figure at LSUNO, which doesn't do its own bookkeeping on the program, was not immediately available.

Institutions are permitted to apply for Federal loan money totaling up to $20 per full-time student enrolled.

They may ask for more, but must give justification on such grounds as the high cost of tuition and fixed expenses to students on their campuses.

Figures on the total amount spent in the Federal program this year aren't yet available, but the tally last year hit $58,340,000.

New Orleans administrators of Federal loan funds say they could use more money. A majority of them expect prospective borrowers to show up in greater numbers next fall.

An Open Letter to the President in Response to His Housing Message

EXTENSION OF REMARKS

OF

HON. J. ARTHUR YOUNGER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 11, 1961

Mr. YOUNGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter addressed to the President by the editors of House & Home magazine following his housing message. It points up the problems connected with the housing goals so "devoutly to be wished."

The letter follows:

AN OPEN LETTER TO THE PRESIDENT IN RESPONSE TO HIS HOUSING MESSAGE

DEAR MR. PRESIDENT: House & Home could not agree more wholeheartedly with all the objectives urged in your eloquent and moving housing message—the strongest, longest, and broadest message in many a year.

Like you, we find it shocking and shameful that in the richest nation on earth so many families are still ill housed. Like you, we want a good home for every American, poor or rich, city or farm, young or old. Like you, we deplore urban slums and suburban sprawl.

We agree that the Federal housing program should put more emphasis on urban needs. We share your wish for better planning on an area scale. We share your desire and impatience to remodel our cities, to improve our patterns of community development, to provide for the housing needs of all segments of the population. Who could question your statement that "meeting these goals will contribute to the Nation's economic recovery and its long-term economic growth. * * * A nation ill housed is not as strong as a nation with adequate homes for every family. A nation with ugly, crime-infested cities and haphazard suburbs does not present the same image to the world as a nation characterized by bright and orderly urban development."

And of course we welcome your concern for the depressed state of homebuilding (which is America's biggest industry) and the effect of the depression on all the industries dependent on homebuilding. We welcome your concern for its high rate of unemployment—the highest rate of unemployment in any major American industry. We welcome your call for a steady and progressive increase in the rate of homebuilding, beginning now. And we are more than pleased that you believe a construction rate of at least 2 million new homes a year will soon be required.

You first made manifest your deep concern for better homes and better communities by the high caliber of the public servants you chose to work and advise with you on these needs. You made your concern manifest a second time by your prompt attack on mortgage interest costs, for last year's tight money hit housing first and worst of any industry. Now you have emphasized your concern by making housing needs the theme of your most far reaching special message to Congress on any strictly domestic problem.

Because we share your housing hopes and purposes so deeply, because we welcome your concern for housing and homebuilding so gladly, and because we regard your housing advisers so highly—for these very reasons we are all the more disappointed to find that, although many suggestions in your message are indeed very important (like speeding up urban renewal processing, developing new tools to finance home improvement, providing better statistics on the market), the multibillion dollar program you propose is far too small to cure the vast needs you state.

If, as you say, 14 million families (26 percent of the Nation) are still ill housed, your plan to subsidize another 100,000 public housing units would meet just two-thirds of 1 percent of their needs; and giving Fannie Mae another $500 million for special assistance loans to consumer co-ops, nonprofit associations, and limited dividend corporations could barely rehouse even one-third of 1 percent.

If, as you say, we must provide good homes for millions of elderly couples living on less than $3,000 a year and for still more millions of widows living on less than $2,000, your plan to earmark another $50 million for direct loans to the aged and to reserve 50,000 of the added public housing units for their use would meet less than one-half of 1 percent of the old folks' need you dramatize.

If, as you say, almost one-fifth of the occupied houses in rural areas (they totaled 14,300,000 in 1950) are so dilapidated they must be replaced and if hundreds of thousands of others are far below adequate standards, extending the $200-million-plus unexpended balance of the 1956 farm housing credit as you suggest would meet hardly 2 percent of the need you state. It would provide less than a $75 loan toward the cost of each needed replacement, even if nothing at all is spent on the other substandard homes.

And if, as you say, we need a broader and more effective program to remove blight, your plan to spend another $2.5 billion to buy up slums at prices three and four times their reuse value would not go very far. New York City alone might need every cent of that money to reclaim its 7,000 acres of blight and decay, for New York slum prices are so inflated by overcrowding and undertaxation that redevelopment purchases have averaged $481,000 an acre.

As for your other two major proposals—selective credit controls to induce builders to build low-priced houses and Federal funds to buy land reserves now for future suburban development—we are sorry to have to say we believe these two programs could do as much harm as good, because:

First effect of no-down, 40-year financing for new homes priced under, say, $13,500 might be to break the price or weaken the market for 22 million reasonably good existing nonfarm homes now priced below the ceiling (not counting 6.7 million that are dilapidated or lack a private inside bath). This in turn would make it difficult or impossible for owner-occupants to sell their under-$13,500 homes and so get their equity out to buy the better homes many of them can now afford. So the more cheap new homes are sold to first-time buyers by the no-down financing you propose, the fewer better homes can be sold to second-time buyers trading up.

As the shelter shortage disappears, used-house prices are falling, so low income buyers in more and more markets are finding they can get more for their money in existing houses than in new homes built at today's costs and today's wages. In these markets the No. 1 reason why lower income families still buy new homes when they could get more house for the same money second-hand is that the new homes (which are financed wholesale) can be bought for $300 or $400 cash, whereas existing homes at the same price (which must be refinanced one at a time) are likely to require $2,000 or $3,000 cash.

Concluded Dr. Louis Winnick's excellent research report to Action on rental housing: "The problem is not likely to be solved with making the trade-up process work better." Your proposal would almost inevitably make it work worse.

First effect of Government spending to buy land reserves at today's sky-high prices might be to bid suburban land prices still higher, thereby driving builders further out into the orchards and cornfields to find land they could afford to build on. This would spread suburban sprawl and premature subdivision over added miles of open country.

Stockholm's land-reserve plan worked so well mainly because the land was bought with pre-World War I kroner before the automobile started suburban land prices soaring. That is something quite different from starting to buy reserves at the peak of today's land inflation.

Combined cost of the programs you propose has been estimated at more than $5 billion for open or concealed subsidies. If $5 billion can meet only 2 percent or at most 3 percent of the need you dramatize so eloquently, what clearer demonstration could there be that America's need for better homes can never be satisfied by subsidies?

This is a very tough problem, for which there is no quick or easy solution. It cannot be solved by a liberal program (meaning, by today's definition, liberal with the taxpayers' money). It can be solved only by a radical program (meaning, literally, a program that attacks the problem at its roots).

So we wish your message proposed to attack basic causes instead of relieving symptoms.

We wish you had said even one word questioning why slums in so many places are still spreading faster than new homes can be built to replace them, why private enterprise cannot meet the need of better housing for low and middle-income families in big cities, why cities are disintegrating in suburban sprawl instead of expanding in a plannable way, why good new housing costs too much and why home improvement costs still more, why, slums are the most profitable property anyone can buy, why urban expansion consumes four times as much land as it uses, why homes that cost $12,000 around some cities cost $18,000 to duplicate in others, why city planners and regional planners are so often helpless and frustrated, why the profit motive is harnessed backward to better land use in cities and suburbs alike, why cities subsidize slums by undertaxation and penalize improvements by overtaxation.

Or perhaps it would be better to combine all these questions into two: (1) What are the roadblocks and impediments that still make it impossible for the dynamics of private enterprise to meet all our needs for better housing (just as the dynamics of private enterprise meet our needs for almost everything else); and (2) what can and should be done to remove those roadblocks, so private enterprise can do the job.

We believe there are five major roadblocks. All of them are caused or perpetuated by some Government failure at the Federal, State, and/or local level. Your help is urgently needed to attack them. They cannot be removed by bigger subsidies or more liberal spending, but they can all be eliminated or minimized at no cost to the taxpayers by new fresh thinking and new vigorous leadership—the kind of new thinking and new leadership you promised us when you proclaimed the New Frontier.

1. THE HIGH COST OF CODE CHAOS

Conflicting and archaic building codes add a thousand dollars to the cost of a small house, partly because so many of their requirements are as useless as they are costly, partly because their differences frustrate the vast economies offered by standardization and industrialization. Around Washington, for example, some builders have to build under 12 different local codes and find their costs varying from jurisdiction to jurisdiction by as much as $1,000 per unit, with even the lowest cost inflated by the impossibility of standardizing their production.

Under our form of government, code responsibility is delegated to the local authorities, but it is wishful thinking and close-to-nonsense to expect local authorities to meet this responsibility without Federal help. They cannot afford the testing needed to keep their codes abreast of new products and new technology. They are not strong enough or informed enough to stand up against the powerful interests—local and national—that profit by code confusion (including the sponsors of the proprietary model codes that have to be kept different to be salable). And how can any local government bring its code in line with national standards when there are no national standards to get in line with?

Canada has shown the way to solve this problem by buttressing local authority with Federal assistance. Through the Canadian counterpart of FHA (the Central Mortgage and Housing Corporation) Canada is preparing a domain code for housing—a code all local governments will be urged to adopt by reference, a performance code that will meet every local requirement (just as the New York State code provides for tropical hurricanes on Long Island and Arctic snows in the Adirondacks).

By instructing FHA to prepare, service, and promote a similar national code recommended for coast-to-coast adoption by reference in every U.S. community, you could lay the foundation for cutting the cost of building better homes by more than a billion dollars a year—at a yearly cost to FHA of less than a million dollars.

2. THE HIGH COST OF REAL ESTATE TRANSFERS

Archaic closing costs (not including prepayments) cost the buyers of new and existing houses more than a billion dollars a year. They discourage new-house sales by often taking more cash than the downpayment. They choke used-house sales by almost doubling their selling cost (trade-ins usually mean accepting 15 percent less than the appraisal value of the house). They thereby create the illusion that lower priced homes are in short supply, whereas the Census Bureau's housing inventory indicated that there are far more reasonably good nonfarm housing units priced under $12,400 than there are nonfarm families who could not qualify FHA to buy a more expensive home. The No. 1 reason more low-priced units seem to be needed is that so many millions of low-priced homes are still occupied by families who could afford to pay an average of 71 percent more.

Our whole system of real estate transfers and title searches is a hangover from the days when all land was royal (i.e., "real") property. The king has been gone for 185 years next July 4, but we still perpetuate the legal fictions of feudal tenure. This archaic system of real estate transfer may have been good enough in the days of the old homestead passed down from generation to generation. It is too costly an anachronism now that homes are resold once every 7 or 8 years.

What we need is a new legal fiction to make house transfers as quick and inexpensive as car transfers or security transfers. And the precedent of cooperative housing with proprietary leases backed by stock ownership or trust certificates of beneficial interest suggests how this need might be met if you provide the leadership and enlist the constructive cooperation of the American Bar Association.

Cooperative housing units can be sold and resold without a penny wasted in legal fees, title searchers, and closing costs because, like stocks and bonds, they are transferred as personal property instead of real property. Nominal ownership in the actual land and buildings remains unchanged in the proprietary corporation or trustee, so the real estate title and the all-important title insurance are not affected by the sale.

Project homes are already being sold as cooperatives under FHA section 213. Next two steps to make a new legal fiction workable might be: (1) A new FHA title to insure chattel mortgage loans backed, not by real estate, but by the security of stock ownership and proprietary leases, and (2) similar authorization from the Home Loan Bank Board to let Federal S. & L. S. lend on this type of security.

As you know NAREB has long advocated FHA insurance for individual mortgages inside cooperatives.

3. THE HIGH COST OF UNDEPENDABLE FINANCING

Ever since 1951 homebuilding and homebuilders have been tossed from boom to bust and bust to boom by the alternation of too easy and too tight money (which inevitably hits homebuilding first and worst). This uncertainty about money makes it dangerous if not impossible for builders (and others) to make the long-range investment in equipment and personnel needed to rationalize homebuilding costs at a lower level.

The need for a bigger and better central mortgage facility to help stabilize the flow of mortgage money has been clear as far back as the presidency of Herbert Hoover, who sponsored the establishment of the Federal home loan bank. So here we will only say we were disappointed that your long message included no mention of this need and no proposal to meet it.

4. THE HIGH COST OF LAND IN CITIES

This is the No. 1 reason (and perhaps the only reason) why private enterprise cannot meet the need for good low-income housing and good middle-income housing in big cities. A builder who pays too much for city land is then forced to compound his problem by building high rise to spread his land costs—and building high-rise costs twice as much as building walkups or townhouses.

The No. 1 reason city land costs too much is that city land is so underassessed and undertaxed. So the owners (including, most notoriously, the slumlords) can capitalize the too big spread between the rents they can collect and the taxes they must pay, translating the spread into too high prices.

Said the 1960 report of the mayor's special adviser on housing in New York: "The $2 billion public housing program here has made no appreciable dent in the number of slum dwellings. No amount of code enforcement will be able to keep pace with slum formation until and unless the profit is taken out of slums by taxation."

5. THE HIGH COST OF LAND IN THE SUBURBS

Since 1950 building material prices have risen 24 percent, building trades wages have risen 60 percent, but suburban land costs have risen an average of at least 300 percent. High land costs are now the No. 1 problem of the homebuilding industry, the No. 1 factor threatening to price new houses out of the market. Home buyers balk at paying $2,000 more and $3,000 more when all they get for the higher price is a higher price tag on a farther-out lot.

Once again the No. 1 cause is undertaxation, which makes it easy for land speculators to hold millions of acres off the market, including much of the close-in land that should be developed first. This creates an artificial shortage which sends prices skyrocketing and sprawls the suburbs farther and farther afield as builders move out to find land that is still cheap enough to build on.

Local governments subsidize land speculation by underassessing and undertaxing underused land; States encourage land speculation by setting low limits on land taxes; the Federal Government subsidizes land speculation by letting speculators deduct their costs from ordinary income taxes and then cash in their profits as capital gains.

Land-price inflation inside the cities and outside the cities is no longer a local problem. It is a nationwide and a national problem, for land prices are now swollen to the monstrous total of nearly half a trillion dollars ($500 billion)—much more than the national debt, much more than the resources of all our financial institutions. They threaten not only the building industry, but the whole national economy as well.

If local governments are powerful to meet the problem, it is high time the Federal Government took a hand. A stiff Federal tax levied ad valorem on today's market price of land (like the land tax levied five times in the first 100 years of the Republic) would almost certainly be constitutional if the receipts are prorated back to the States. This levy would offer the two fold advantage of (1) deflating land prices before they are too deeply involved in the Nation's credit structure, and (2) providing more than enough money to minimize the need and pressure for further financial assistance to State and local governments.

A land tax is almost the only practical tax that can be counted on to lower prices and stimulate consumption instead of raising prices and inhibiting production.

Whatever you may decide to do or not to do about the five basic impediments that make it hard for private enterprise to assure every American a much better home at a price he can afford, we wish your program for tomorrow's housing were aimed at tomorrow's needs—not yesterday's.

We are disturbed that your message talks and plans so poor about housing when you talk and plan so rich for the economy.

You have criticized the Eisenhower administration again and again for not expanding the economy faster; you have undertaken to double this rate of growth. But if incomes rise throughout your administration no faster than they rose under your predecessor, the entire net increase in nonfarm population from now to 1965 or 1969 will be families who could qualify FHA to pay at least $17,500 for a good house, and more than half the increase will be families who could pay at least $23,000. Conversely, by 1969 there would be 4 million less nonfarm families than there were in 1957 who could not afford to pay more than $13,500.

Why then do you say that the great need is for still more cheap houses? Why do you say "selective credit devices must now be used to encourage private industry to build more housing in the lower price range"—a price range whose upper limit you set far lower than the new ceiling your administration has just set for subsidized public housing for the very poor?

You cannot raise the American standard of living by forcing more new housing into a low-price market that would already be oversupplied if so many millions of families were not underliving their incomes by staying on in homes much cheaper than they can now afford.

The New Frontier for housing is not the minimum house; we have already built too many minimum houses since the war.

The New Frontier for housing is the quality house—a house so much better than yesterday's best that yesterday's best is as obsolete as yesterday's car. The New Frontier for housing is a home that takes all the drudgery out of housework, a home that is cool in summer and warm in winter, a home that is well lighted day and night, a home with big enough rooms and ample storage, a home that costs much less to heat and much less to maintain, a home planned for more enjoyment of the land, a home in a better planned community.

And if you will help the housing industry save the money now wasted on the chaos of codes, the money now wasted on closing costs, the money now wasted on the discounts necessitated by uncertain financing, and the money now wasted on land-price inflation, the housing industry can build and sell those quality homes at prices so attractive that millions of families will want to buy them and housing can once again be a great growth factor in our expanding economy.

Criticism of House Un-American Activities Committee Rules Invited

EXTENSION OF REMARKS
OF
HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Monday, April 10, 1961

Mr. PELLY. Mr. Speaker, I hope the statement made yesterday by our distinguished colleague from California [Mr. DOYLE] did not escape the notice of the six Members of the House, who voted a month or so ago against the resolution to allow funds for the House Un-American Activities Committee.

This statement was to the effect that all Members of the House are invited to make suggestions as to changes in the committee rules which will govern the operation of the committee.

Mr. Speaker, I believe the rules of this important committee protect witnesses who appear before the committee and that every precaution has been taken to safeguard those whose names are mentioned in committee hearings.

Mr. Speaker, it is my understanding that great care has been exercised in these matters and that a committee of the American Bar Association, after studying certain hearings in which the House Un-American Activities Committee was engaged, reported favorably as to the conduct of hearings during the period of study.

However, I doubt if the public recognizes the fairness of these rules or knows of the careful screening and annual review of Congress that has been practiced each session by the committee so as to avoid any basis of criticism.

As pointed out by our colleague [Mr. DOYLE], for several terms of Congress the committee rules have not only been studied and appropriate changes made, but these rules are printed so every witness or his attorney can have them.

Certainly it is a good time, when these rules are being reviewed, for critics of this committee to suggest to Members of Congress any improvements to protect individual rights as guaranteed by our Constitution. I do not know of any changes I would make recognizing the responsibility of Congress to investigate internal subversion.

However, I think any Members who disagree should speak up now, rather than saying later on that witnesses before the committee were not treated fairly.

Physican and Burning of Rome

EXTENSION OF REMARKS
OF
HON. KENNETH A. ROBERTS
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 11, 1961

Mr. ROBERTS. Mr. Speaker, in the magazine American Practitioner and Digest of Treatment, volume 10, No. 10, there appeared an editorial by Dr. Robert A. Hingson, who is professor of anesthesia at the Western Reserve University School of Medicine, and director of anesthesia at the University Hospitals of Cleveland, Ohio.

It is entitled "The Physician and the Burning of Rome," and I think Members will find it interesting and informative. It is exceptionally well done.

Under unanimous consent, I include it at this point in the RECORD:

THE PHYSICIAN AND THE BURNING OF ROME

(By Robert A. Hingson, M.D.)

In the first century A.D., a Roman emperor with a callous conscience observed the collapse of the acme of civilization in the burning of the Eternal City. Historians record that Nero fiddled as the flames consumed Rome.

During the past year, in a 45,000-mile journey a periglobal survey of medical missions and national hospitals of many faiths and sects was completed. Our team of 16 specialists in medicine, nursing, and nutrition, with hospital supply executives, paused in 32 countries of the outer rim of Asia and Africa to observe and record; and in some instances to render medical treatment. We found a world in which more than one-third of its occupants were being destroyed by the flames of disease. We knew that the world was sick—but it was much sicker than we thought.

As we, representing the specialties of anesthesia, medicine, obstetrics and gynecology, pediatrics, public health, and surgery, examined the hospitals, clinics, public health stations, and schools manned by the thousands of selfless and dedicated missionaries as our most tangible and consistent examples of concern for our neighbors, we came face to face with mankind's greatest enemy, disease. We observed its vectors, its tragic onslaught upon the economy of many nations, and its devastating and paralyzing effects upon men of all races. We who had observed the effects of World War II at close range became convinced that war ranks a poor third behind famine and disease in its destructive force.

After conferences with ministers of health and government officials in each of these nations; after study of the health statistical reports of each; after seeing the patients in the overpopulated city slums, in the villages, in the jungles and in the bush of these countries of more than 2 billion human beings; after immunizing 90,000 of them by American gift vaccines against poliomyelitis, cholera, or typhoid, we tabulated and estimated the disease problem in these nations. The 10 major diseases as we found them were:

1. Malaria, 200 million new cases each year.
2. Tuberculosis, 75 million cases.
3. Malnutrition, including severe anemia, Kwashiorkor, starvation, 50 million cases.
4. Intestinal diseases of cholera, typhoid, dysentery caused by bacterial flora and amebas, 50 million cases.
5. Intestinal parasites and worms, 150 million cases.
6. Trachoma, affliction of eyes, 50 million cases.
7. Bilharzia or snail disease, 50 million cases.
8. Infectious diseases of the skin, yaws, jungle rot and smallpox, 50 million cases.
9. Severe mental apathy inconsistent with self-sustenance, 25 million cases.
10. Leprosy, 20 million cases.

One of our surgeons remarked to the writer after participating in this experience: "To consider one of the world's major health needs as surgery would be the same as fiddling while Rome burns." Indeed, in these days when many plans are being proposed by statesmen, physicians with limited experience in only one or two countries, neophytes of problems of monsoon, jungle and desert, specialists who plug a hobby, and textbook specialists in disease and international politics, we are getting ahead of reason in translating our emotions into action.

First there is a need for factfinding surveys in bilateral concert with the agricultural, educational, medical, engineering, sociologic and political leaders of the indigenous peoples toward whom we are directing our assistance. Only then can we tie man's resources intelligently to man's need in an acceptable form. Educational assistance can be offered when we are ready to carry through a continuing plan. The exchange students now in most of these countries and our country can pave the way.

The physician who has rendered such a creditable service in making America the healthiest Nation in the World has much to share through coordinated effort, but he has much to learn too. Our medical schools which have geared their training to combating the diseases of our prosperous country to Main Street, U.S.A., can learn too through sending members of their faculties in rotation to assist in neighboring, friendly, and receptive underdeveloped countries. Teams of medical students in their free elective quarter, and young physicians in training, can be taught the principles of vaccination and immunization, and loaned to a specific area in which there has been prearranged transportation, sustenance and supervision and planned direction. Such would be a rewarding experience for the medical student, the physician in training and the responsible medical faculty as well. Such experience would enrich the institution and personnel who sponsor it toward becoming important factors in a world community. This loan of personnel could be effectively correlated with the splendid lifesaving gifts of supplies and food through our national philanthropy of CARE and our Christian medical mission programs.

The medical society at the county, State, regional, and national levels within the framework of the American Medical Association and World Medical Association, and within the framework of each specialty, has a

definite responsibility, a challenge, and an opportunity toward the alleviation of the world's suffering and in making the most meaningful contributions toward world peace. As a start each local county medical and dental society could adopt one single medical mission and supply it with continuing provisions of medical texts, instruments, and drugs. The immensity of the task should not ensnarl us in the whirlpool of attempting too much through dispersion of our efforts too far, too soon. There are 2 billion people in Asia and Africa alone or more than 10 people in urgent need for every single person in the United States. The majority of these people are under the domination economically or politically of enlightened European powers. As America tackles the problems of the world in such projects as the Great White Fleet of mothball hospital ships privately manned, in people-to-people's programs, with the "Medico," with the foundations, and with denominational missions (even though each of these is important in long-range ultimate objectives), there should be established first certain priorities and proving grounds and "trial flights" for mastering the same lessons that have been learned at Cape Canaveral, in the World Health Organization, in the United Nations, and in the historic contacts with the recipient nations themselves.

The Philippines, our most tested and trusted ally in the Pacific and a courageous lighthouse for democracy there, is in great need from a public health, educational, and economic viewpoint—particularly in the southern islands. The West African nation of Liberia under the forceful and statesmanly leadership of President Tubman, which had its origin and its recent stimulus for development in the American system of freedom for the individual and for progressive enterprise of industry, at present contributes significantly to our rubber and steel requirements. Liberia's health needs were greater per capita than those observed in any other nation in our survey, exclusive of Korea. Liberia furnished an essential landing field for 170,000 military flights during the launching of attack through North Africa into the captive citadel of Europe in World War II. Liberia would welcome our professional and our cooperative denominational help. With concerted action on the agricultural, educational, economic and health fronts we could immediately achieve the lasting friendships of people in great need in these countries in which there are no entanglements in European politics. Our present very laudable point 4 programs in southern Asia, in Indonesia, in the vacuum of India, are achieving commendable results on an unprecedented scale through multimillion-dollar Federal assistance programs.

As we preach democracy and salvation we should keep our eyes on the fundamental health needs of Asia and Africa (all beginning with the letter S): (1) Sanitation, (2) sewers, (3) sprays, (4) screens, (5) schools, (6) soup, (7) shots, (8) shoes, (9) self-respect, and then only (10) salvation. We should first demonstrate in two areas mentioned above with 20 million in the Philippines and a possible 2 million in Liberia that we can be faithful in a few things before we become ruler over many things. Indeed, the needs of the world are primarily public health and nutrition.

The development and application of the Salk vaccine has taught us the lesson that with all of our propaganda, all of our medical and scientific knowledge and skill of our physicians, we have protected only less than one-half of our population. Our needles, syringes, sterilization, transportation processes, and available personnel were simply not enough to tackle the social impediments of our well organized America. Twenty-six preparation minutes per injection through this approach has not eliminated poliomyelitis in America, now in its worst outbreak in 6 years, nor will it eliminate the millions of other pestilences which beset the world. For the past two decades the author of this editorial has developed the principle of jet inoculation, and now adapting the repeat jet principle from immense reservoirs we proved in inoculating 41,000 children and employees of the U.S. post office in Cleveland, and 90,000 on our world journey within a space of 4 months, that we can deliver one immunizing injection each 6 seconds without resterilization.

It will take such total mobilization of planned effort and mass volunteer teams of indoctrinated physicians who will donate their time to join other concerned Americans and world citizens of many nations and of all religious faiths who can provide transportation, equipment, diplomatic international contacts, education and simultaneous agricultural and engineering assistance, to make lasting contributions in the vital field of world health and world peace. To dissipate effort in tackling all the world's problems at once is competition and out of step with the British and the French and the Belgians and the Dutch and the Russians, would be the equivalent of "fiddling while Rome burns."

Public health, improved nutrition, and education are the basic needs which must be supplied before the medical specialties of surgery, radiology, anesthesia, pathology, and physical therapy can be intelligently and effectively developed in these countries. Never before has the welfare of two continents presented itself before such a capable and scientific medical profession with such a limited timetable. We, the physicians, can and must extinguish the flames of mass disease and suffering in the vanguard of civilization's most promising era.

Massachusetts Port Authority Recommends Creation of Office of International Travel in Department of Commerce

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Monday, April 10, 1961

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the statement of Frank E. Hickey, Washington representative of the Massachusetts Port Authority at Boston, before the Subcommittee on Commerce and Finance of the House Interstate and Foreign Commerce Committee, relating to several pending bills to establish an Office of International Travel in the Department of Commerce:

STATEMENT BY FRANK E. HICKEY

The Massachuetts Port Authority has directed that I submit the following statement to your committee in support of H.R. 4614 and related bills, and to present some facts relating to the progress that has been made in expanding the various transportation facilities under its jurisdiction.

The enabling act that created the Massachusetts Port Authority is covered by the following: chapter 465 of the Acts of 1956; as amended by chapter 599 of the Acts of 1958 and chapter 476 of the Acts of 1959 and chapter 525 of the Acts of 1960:

"An act * * * creating the Massachusetts Port Authority and defining its powers and duties; providing for the issuance of revenue bonds of the authority, payable solely from tolls and other revenues, for * * * refinancing * * * the Mystic River Bridge and refinancing and improving the State-owned airports and Port of Boston facilities; and providing for the transfer to said authority of said * * * bridge, airports and port facilities."

Under this trusteeship the authority sold on February 17, 1959, a revenue bond issue of $71,750,000. These funds are to be used for operating expenses and the expansion of facilities at the Port of Boston, Logan International Airport, Hanscom Field and the Mystic River Bridge.

Boston is one of the oldest ports in the United States. However, the facilities and equipment have been maintained and modernized to meet the technical and physical requirements of our expanding economy.

After World War II the taxpayers of the Commonwealth invested approximately $30 million for the improvement of the Boston waterfront. In addition there was expended $70 million for the construction of airplane, automobile, and truck facilities at the Logan International Airport.

At the present time the passenger accommodations and facilities in Boston are adequate to meet the present demands. However, new construction is now being completed and additional contracts will begin in the immediate future and will be sufficient to handle the program that is planned under H.R. 4614.

The Logan International Airport is considered one of the finest airports in the country. It is adequate at the present time to handle the largest jetplanes. Plans have been in progress for an additional passenger terminal at a cost of $6 million. It will accommodate 49 new plane positions close to shelter areas. Work is now in progress on four finger piers, to be air conditioned and will include several lounges to accommodate approximately 100 people each awaiting departure of their planes, and removed from the congestion of the ticketing area. This construction includes a $1,500,000 International Terminal, consisting of 98,533 square feet which is more than three times the present area. The International departure area will include 27,414 square feet, and the International arrivals area, a total of 36,305 square feet. The finger pier to serve International passengers will have 34,825 square feet of floor area.

From July 1, 1959, to July 1, 1960, the total of international plane arrivals and departures was 8,152, and 127,435 International passengers. At the present time there are approximately 4,000 employees at this airport, with an estimated annual payroll of $18 million.

Commonwealth pier, designed to accommodate passengers as well as cargo, is a 2-story steel and concrete structure with access to both levels direct from main highways. This pier is considered to be one of the finest of its type in the world. It is approximately 1,200 feet long and is capable of accommodating the largest passenger ships afloat. This present year there are approximately 40 scheduled sailings from this pier.

If passengers bring their automobiles for the purpose of touring the country, they would have easy access to highways north and south, as well as the Massachusetts Turnpike which connects with the New York Thruway. There are continuous superhighways as far west as Chicago. These are intersected by numerous highways north and south. Massachusetts has a large construction program in progress at the present time, to augment the existing highways systems.

Boston is a natural port of entry, being the nearest port on the Atlantic coast to European ports and the east coast of South American. Traffic can be easily funneled through New England and all points to the Middle West and the Pacific coast.

There are many attractions in Metropolitan Boston and the whole New England area, having great appeal to foreigners coming to this country. In addition to the natural scenic beauty, it has an abundance of historical attractions and is known also for its educational and cultural centers. During the past generation it has been referred to as one of the world's great medical centers. Students come to this area from all over the world, and attend Harvard University, the oldest in the United States, and one of the world's greatest technological institutes, Massachusetts Institute of Technology. To name a few, of the universities in this area, there are Yale, Amherst, Williams, Boston University, Boston College, Tufts, Dartmouth, Wellesley, Radcliffe, Smith and Mount Holyoke, all having an international reputation. There are many other internationally known educational institutions with many international exchange students in attendance.

During the last 20 years there has grown up a concentration of research organizations which draws from the various technical schools in this area. Located in Massachusetts are the largest electronics manufacturing and research industrial developments in the country. Another interesting development in modern science is the atomic powerplant which has recently been placed in operation in western Massachusetts.

The aforementioned are only a few of the interesting attractions for the foreign tourists, many of whom combine business and pleasure on trips to the United States.

The Massachusetts Port Authority is continually planning for the anticipated increase in transportation of freight and passengers by plane, ship, rail, truck and bus, and is prepared to take any additional action necessary to cooperate in making this international tourism a success.

The Massachusetts Port Authority strongly supports and recommends the passage of this proposed legislation to create an Office of International Travel in the Department of Commerce, for the purpose of strengthening foreign and domestic commerce, the improvement of the foreign payments position, and to facilitate international travel.

An Unfortunate Action

EXTENSION OF REMARKS
OF
HON. AUGUST E. JOHANSEN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 11, 1961

Mr. JOHANSEN. Mr. Speaker, on Thursday of last week Governor Swainson of Michigan, issued an order forbidding the Michigan State police to continue public showings of the film "Operation Abolition."

While I do not question the authority of the Governor to issue this order, I do very seriously question his judgment in acquiescing to pressures from persons and groups who vehemently oppose anyone showing the film.

I reject completely the charge that the film is a distortion of the events which occurred in San Francisco last May during the hearings of the subcommittee of the House Committee on Un-American Activities, and I deeply regret that the Governor of Michigan accepts this view of the film.

The Governor's action is all the more unfortunate because he has given no specifics as to the alleged distortions and because there is no evidence that members of his staff who recommended the action had at any time consulted with any member of the committee, any member of the committee staff, or with the Federal Bureau of Investigation regarding the happenings at San Francisco.

Fortunately, there are numerous individuals and organizations throughout the State of Michigan, as elsewhere in the Nation, who are continuing to make the film available to citizens interested in learning about this Communist-organized and Communist-led attack on a committee of Congress.

The finest comment on the Governor's unfortunate action which has come to my attention is an editorial which appeared in the April 8 Battle Creek (Mich.) Enquirer and News. Under permission to extend and revise my remarks, I include the full text of this editorial:

A QUESTIONABLE ORDER

Governor Swainson's order prohibiting the Michigan State police from showing two controversial films on communism is open to considerable question. There is no doubt but that the Governor's motives were well intentioned, but this does not preclude the belief that he could have been mistaken in his judgment.

The Governor's action is disturbing in his admission that he, personally, had not seen the films—"Operation Abolition" and "Communism on the Map"—before he issued the order. Instead he acted on the advice of several staff members who, according to Mr. Swainson, "confirm criticism that the films are inaccurate and distorted and thus harm, rather than advance, the purpose of an intelligent anti-Communist campaign."

Mr. Swainson further said that his order to State police was issued after many people in the State brought the films to his attention.

From all these facts, we can only infer that Mr. Swainson has succumbed to pressure from certain groups that appear to be as ill-informed as he about one film in particular. We, personally, have not seen "Communism on the Map," therefore we are in no position to comment on it. But, we have viewed "Operation Abolition," which is a documentary film on the Communist-instigated student riots at hearings by the House Committee on Un-American Activities in San Francisco last year. Admittedly, the movie has been edited to depict precisely what it is intended to show—howling mobs of misguided young people swarming through the San Francisco city hall and disrupting not only the House hearings, but regular court proceedings as well.

In some strange manner, which we strongly suspect was an outgrowth of ultraliberal attacks on the House committee, itself, many intelligent people who normally would refuse to accept such reports without first-hand confirmation, have eagerly swallowed the charge that the film is distorted. Few among this group could have possibly witnessed the riots. How can they, in justice to their own consciences, charge inaccuracies and distortions in something of which they have only hearsay knowledge?

On the opposite side of the issue, we have the word of Representative AUGUST E. JOHANSEN, who was at the San Francisco hearings, that the film is not distorted. In his support we offer the report of J. Edgar Hoover, Director of the Federal Bureau of Investigation, which confirms that the students did cause a riot and that they were led by known Communists.

We prefer to accept the latter statements, rather than those of people who were not at San Francisco or who have not even seen the film.

"Operation Abolition" was prepared to show how Communists have tried to destroy the committee and to portray how the Reds can infiltrate American college campuses. It, therefore, does serve a valuable purpose in helping to inform the public of how the Communists work. For the first time, the average citizen has had a chance to see Communists in action in America, and he is rather appalled by what he sees. And, the Communists, themselves, know that the film is making their work harder.

Under Governor Swainson's order, however, the security investigation squad can no longer show the movie. Thus, the State's "little FBI" has lost a valuable instrument in the fight against subversion. While private groups can continue to show it, the Governor's order is certain to cast a shadow over its value.

We recommend that if Governor Swainson has not already persused the Hoover report on the San Francisco riots, that he do so forthwith. And if he has, we call on him to explain how he can accept charges of distortion in the film against the facts offered by Mr. Hoover.

We earnestly urge the Governor to reconsider his decision in this matter.

Crash Program Needed To Save Waterfowl Wetlands

EXTENSION OF REMARKS
OF
HON. LESTER R. JOHNSON
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, March 27, 1961

Mr. JOHNSON of Wisconsin. Mr. Speaker, if our dwindling duck population is to be saved, Congress must act soon to speed up the purchase of lands for migratory bird refuges and waterfowl nesting areas. In 1954, I exposed the diversion of the bulk of income from Federal duck stamp fees to purposes other than wetlands acquisition, for which purpose hunters had voluntarily accepted the fee in the first place. During the next 4 years, I battled for legislation to insure that all income from the stamps would go to provide more refuges for migratory waterfowl. This legislation was enacted into law in 1958.

However, even though all duck stamp money is now earmarked for the purchase of wetlands, it will take years for the program to reach the anticipated goal of 4,500,000 acres. Meanwhile, many areas marked for acquisition will have been drained or converted to other uses, and land prices will most likely have become prohibitively high. The next 10 years are the critical period. Wetlands must be acquired now, or it will be too late to save continental flights of waterfowl.

As every duck hunter knows, waterfowl hunting has grown poorer in recent years, and fewer hunters have taken to the field. As a result, duck stamp sales have lagged. During the 1960 fiscal year, only 1,628,365 Federal duck stamps were sold. This figure is 741,575 below

the number sold during the peak year of 1955.

Mr. Speaker, with fewer duck stamps being sold, less money has been available for purchase of new refuges. This, in turn, has resulted in poorer hunting, fewer hunters, smaller duck stamp receipts and a further lag in the acquisition program.

In order to break this vicious circle, I have joined my colleagues, Congressmen HENRY REUSS and JOHN DINGELL, in introducing a crash program for wetlands acquisitions. The measure authorizes a loan of $150 million over the next 10 years to purchase the needed property. Starting in 1971, the money would be repaid to the U.S. Treasury from duck stamp revenues.

This buy-now, pay-later plan will enable the Nation to safeguard its valuable wetland resources during the critical decade of the 1960's. Thereafter, full repayment of the loan will be made from funds contributed by the duck hunters themselves. By creating the wetlands, we shall also be creating the means to repay the purchase-loan money.

Matzke Claims Africans Need Aid From United States

EXTENSION OF REMARKS
OF
HON. ROBERT F. ELLSWORTH
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 11, 1961

Mr. ELLSWORTH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following news article from the Lawrence Daily Journal-World of March 31, 1961, telling about a talk given before the Lawrence Kiwanis Club by Dr. Howard Matzke, professor of anatomy at Kansas University, and one quite familiar with the African continent and its people. In his talk, Dr. Matzke pinpointed several situations and problems with which the United States is confronted, and with which we must deal, concerning Africa and her quest for independence. Because Dr. Matzke favors real and vital help for Africa, and because his considerations make a great deal of sense to me, I am pleased to call this article to the attention of my colleagues:

MATZKE CLAIMS AFRICANS NEED AID FROM UNITED STATES

"Africa needs our help, not American companionship," Dr. Howard Matzke, Kansas University anatomy professor, said Thursday in a talk to the Lawrence Kiwanis Club.

Dr. Matzke, who returned in January after completing a research project in the Congo region, viewed America's volunteer Peace Corps—which he labeled Kennedy's Kiddie Corps—as an impractical attempt to help the Africans.

He also termed a recent utterance by G. Mennen Williams, new U.S. envoy in Africa, of the slogan "Africa for the Africans" as "one of the most stupid statements ever made."

The word "Uhrhu"—Swahili for independence—is on the lips of many Africans now. Yet few Africans understand what independence means, Dr. Matzke said.

"I asked some of my African medical students what independence means to them," he said. "They replied, 'freedom'—but they did not know freedom from what. They are not aware of the increased responsibilities of independence."

Dr. Matzke said that America can best help Africa by sending doctors, engineers, teachers, and other capable persons to Africa, to work with Africans on the spot in order to best learn their needs. He cited mass illiteracy, strong tribal loyalties, and a lack of public moral concepts as Americans understand them as major obstacles to African self-government. At best, he envisioned a loose federation of tribal states, with most of the governing power remaining in local hands.

"We must be very patient, and help as much as we can," he said. "We must not just send money, we must send real help for the African people."

Migrant Farm Labor Problems and "Harvest of Shame"—III

EXTENSION OF REMARKS
OF
HON. PAUL G. ROGERS
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 11, 1961

Mr. ROGERS of Florida. Mr. Speaker, this is the third in a series of articles presented in the public interest by the Palm Beach Post-Times to show the Members some of the progress being made in Florida to solve problems relating to migrant farm labor which were left out of the television presentation "Harvest of Shame." The omissions of all that has been, and is being done in this field did a great injustice to the Floridians who have given their time and efforts to these problems over the years. It is hoped that by reading these articles and the ones to follow the Members and public will have a better understanding of this important matter.

The article follows:

ALL COUNTY HEALTH SERVICES ARE USED BY MIGRANT WORKERS

"What happened to your foot Jerome?"

"I give it a little down by the washhouse."

"I see, you drove a nail in it down by the washhouse. What did your mother do for that?"

"Put some alcohol on it."—"Harvest of Shame."

Belle Glade physicians, aware of the needs of the community, soon will open their third clinic for indigent persons.

A spokesman for the doctors said a new "morbidity clinic" might be put into use this week or next.

"It will be free for all indigent patients, including migrants," the doctor said. "Patients will be examined at Belle Glade Memorial Hospital from 12:30 to 2 p.m., Mondays through Fridays."

Actually, he said, migrants are expected to make up the largest number of the patients.

"They may report for treatment of anything not covered by our two other clinics," he said. "It might be pneumonia, tonsilitis, ear disorders, or even surgery. Nobody who is indigent will be refused treatment."

The doctor said physicians of the area are concerned that "Harvest of Shame" producers saw fit to show only the negative side of the migrant health picture.

"Much has been done for the health of Palm Beach County's migrants," he said. "As a matter of fact, our county was one of only two in the entire Nation to receive commendation from the President after a national study was made of migrant health."

Working at Memorial Hospital, the physicians maintain cardiac and obstetrical clinics for the indigent.

"The hospital provides its equipment free of charge—including the electrocardiograph apparatus—and medicines are supplied by the Palm Beach Heart Association," the doctor said.

The cardiac clinic functions once each 2 weeks. Up to 20 patients report for aid each day.

"Some are required to attend each day. Others report in every 3 or 4 months," the doctor said. "There is no charge."

The obstetrical clinic is open each Wednesday and provides a low-cost maternity plan. For $80, the patent is provided both the physician's services and the hospital's facilities.

Laboratory work is done by the Public Health Service. Physicians rotate to deliver the babies. Up to 30 patients per week are handled.

"It is not necessary for the patient to pay anything at the time of enrolling," the doctor said. "That can be arranged later."

Actually, migrants receive considerable medical aid outside the clinics, the doctor noted.

"A tremendous number report to the hospital to have wounds and lacerations patched without cost," he said. "There always is a physician on call or present at the hospital to care for these people, and we are proud that nobody ever must wait more than 5 minutes to have a doctor's service in an emergency."

Who began the service?

"Nobody in particular wants credit for it," the physician said. "It is just something that developed to meet the needs of the community."

Palm Beach County's migrants also have access to other free or low-cost medical service and advice.

The county maintains health centers at 1024 Northwest Avenue D in Belle Glade and 612 East Main Street in Pahokee.

Dr. C. L. Brumback, who is in charge of the centers, said money for emergencies has been made available through voluntary contributions in addition to governmental appropriations and other sources.

"Continuous efforts are being made to adopt services to the special conditions of these people. Over a period of years, certain clinics have been held at night in order to be available for migrants after working hours," he said.

"Mobile clinics and other programs have been taken out into migrant areas. Free transportation has been provided to clinics not available in rural areas."

If migrants can't afford private medical care, they are eligible for low-cost maternity programs, immunizations, well-baby conferences, tuberculosis and other communicable disease services, and consultation or referral for many other health problems, Dr. Brumback said.

Hospital care also is available, he indicated.

Physicians and dentists work unselfishly in behalf of the indigent, Dr. Brumback reported.

"This is a county where our physicians have provided care to indigent patients in hospitals without remuneration," he said.

Many hours of service have been given, too, in various outpatient clinics such as obstetrical, well-baby, dental, pediatric, orthopedic, tuberculosis, venereal disease, cancer,

heart, and general illness by private physicians and dentists, Dr. Brumback said.

The State as well as the county maintains special services in Palm Beach County, Dr. Brumback noted.

In addition to providing bedside nursing care, the nurses refer patients to appropriate agencies for care, school health programs, mental health nursing service and communicable disease services, the physician said.

"Welfare workers offer consultation and referral services and assist in obtaining medical care. Nutritionists give advice and help toward obtaining an adequate well-balanced diet within financial resources," he added.

A number of other services for migrants are provided in this county by the Florida Vocational Rehabilitation Service and such voluntary agencies as the Visiting Nurses Association of Palm Beach County, Tuberculosis and Health Association, Heart Association, Cancer Society, and Mental Health Association, Dr. Brumback pointed out.

"A big problem in providing health services is lack of understanding of the need for these services or sufficient motivation to seek help when problems arise," the physician said.

"The solution lies in appropriate education, and this has been the subject of considerable study and research with some hopeful results," he added.

Research by the Belle Glade Chamber of Commerce shows the community during a 5-year period charged off a $318,777.81 hospital bill accumulated by indigent patients.

"Most of this was for migrants who did not qualify for county welfare aid," the chamber reported.

At Belle Glade, the chamber said, seven persons in public health service work are employed at the health center with county personnel.

And from 1957 to 1959, the two groups examined in family clinics about 850 patients. Of these, more than half were migrants, the chamber found.

In 1958, the chamber said, about 7,000 migrants were given blood tests and chest X-rays and provided with health records.

"We are cognizant of the health problems of Palm Beach County, and progress is being made," the chamber said. "We shall continue to direct our efforts toward the protection and promotion of the health of all people in our county."

The Shame of Poor Government Rests on Voters Themselves

EXTENSION OF REMARKS
OF
HON. F. BRADFORD MORSE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 11, 1961

Mr. MORSE. Mr. Speaker, my hometown newspaper, the Lowell (Mass.) Sun, has been performing an outstanding service by editorially tapping the knuckles of citizens who are inclined to let the reins of good government slip through their hands. One of the Sun's recent editorials, which appeared on Easter Sunday, particularly merits the attention of the House of Representatives. Under leave to extend my remarks, I now insert it in the RECORD:

THE SHAME OF POOR GOVERNMENT RESTS ON VOTERS THEMSELVES

On this Easter day as the Christian world is observing the joy of the resurrection of Christ, it is fitting that the people of Massachusetts should give some thought to the problems besetting the Commonwealth and the low ethical standards of too many of our elected officials.

Ethics has to do with the science of moral duty, and one of high ethical standards is one who lives up to the best in exercising his moral duty, be it in politics, in business or in the home.

On the Friday before His resurrection Christ gave to the world the best possible example of ethics when His moral duty compelled Him to suffer death on the cross rather than to yield to the easier way out of His problems—and His example has come down through the ages as a guide to mankind.

We do not expect our elected officials to have the courage or the moral stamina of Christ, but neither do we expect them to stray so far from existing ethical standards as to jeopardize the continued success of the Commonwealth for the sake of a mess of pottage.

Regardless of how an elected official votes on any proposal, so long as he is voting according to the dictates of his own conscience, he is exercising his prerogative as it should be exercised.

By the same token, when an elected official allows material or any other gain to influence him to vote other than his sense of right dictates, he is not living up to the ethical standard which we should expect of all who take public office.

The Democratic or Republican officeholder who bows to the dictates of his party leadership to vote for any issue which he honestly believes is not in the interests of good government is violating the self-same code of ethics of which we are writing, for he is acting not according to his sense of moral duty but merely to win for himself party support when the next election comes round, or for personal advancement within the party.

That there should be any talk of a need for a legislated code of ethics in this or any other State is in itself a confession of moral weakness, for there are few in or out of public office who do not recognize right and wrong, and this can be the only true guide.

But it is not sufficient to hold only elected officials to a code of ethics, or rather to ethical behavior in their public office.

We must remember at all times that all elected officials are selected by the voters—by you and by me—and their continuance in office depends entirely upon the will of the voters.

If we, as members of the electorate, would base our selections at election time on the simple fact that we believe the one we vote for will serve in the best interests of the town, city, county, State, or Federal Government, we shall have accomplished more than all the codes of ethics written in the lawbooks ever shall accomplish.

If we, at election time, close our ears to the blandishments of the skilled orator and weigh only what he offers against what we believe the office he seeks requires in order to raise the level of government, we again shall have done more than such a code could ever hope to accomplish.

Each and every elected official is answerable at election time to the people who have sent him into office, and if we would turn thumbs down on the man who has played politics regardless of the good of the city, town, or State, we would have done more to elevate the level of government than anything else could accomplish.

We as citizens have the answers right in our own hands.

If we live up to a decent sense of moral standards at election time, and let our conscience rather than anything else dictate our choices, we would not have to hide our faces in shame when questionable practices in Government rise into view.

Good government rests with each individual voter. We can have good government without a legislated code of ethics if we, ourselves, would exercise the same sense of moral duty at election time which we want our elected officials to exercise when they are serving in our town governments, in our city governments, or at the county, State, or Federal level of government.

That there is any need for a code of ethics regulating our lawmakers is more a reflection on us, the voters, than on anyone else.

Salem Editor Charles Sprague Urges Community College Program

EXTENSION OF REMARKS
OF
HON. AL ULLMAN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 21, 1961

Mr. ULLMAN. Mr. Speaker, in a recent column which has been reprinted in the Bend (Oreg.) Bulletin, Editor Charles Sprague of the Oregon Statesman urged action in our State to expand the system of community colleges. Although Editor Sprague was primarily concerned with proposals before the Oregon State Legislature, the points which he makes regarding the need for an expanded community colleges system are not relevant only in Oregon. They are basic points and indicate some of the reasons for my sponsorship of H.R. 16 to provide Federal assistance to States such as Oregon which are attempting to meet the pressing need for additional education beyond the high school level through the community college institution. I believe that the following excerpts from Editor Sprague's column will be of interest to my colleagues:

[From the Bend (Oreg.) Bulletin, Mar. 16, 1961]

SALEM EDITOR CHARLES SPRAGUE URGES COMMUNITY COLLEGE PROGRAM

(EDITOR'S NOTE.—The following commentary on junior colleges was written by Charles A. Sprague, editor and publisher of the Oregon Statesman, in his page 1 column "It Seems to Me." Mr. Sprague is a former Governor and former educator who is eminently qualified to speak on education.)

(By Charles A. Sprague)

The community college idea has been kicked around a lot in Oregon, especially at the legislative assembly. It isn't just an Oregon problem; other States are wrestling with the same thing. In California the community college program has grown like Jack's beanstalk. Most everywhere the idea originates at local levels, in cities which have no institutions of higher learning, yet feel the need for providing education beyond high school.

In Oregon the idea of local 2-year colleges has had more kicking than action. The only city which has experimented with such a college is Bend where it is administered by the school board. That college has survived for over a decade, but not without struggle—and its struggle wasn't ended with provision of State aid for one-third the operating expense. Other cities which have had some aspirations for a community college are Coos Bay and Astoria. It happens that there are three separate bills in the present legislature dealing with community colleges, each

having as chief sponsors, legislators from Clatsop, Coos, or Deschutes Counties.

There is a pressing need for additional education beyond the high school level, and this justifies a community college system. First, there are many youth whose interests and capabilities do not run to those best served in the 4-year colleges. Second, there are many youth who can't afford to go away to college but who would profit from another year or two of instruction. Finally there is the very real need for upgrading the preparation of young men and women for the world into which they will enter. This means more of elementary science and mathematics and English and social studies. It means more, much more in vocational guidance and training. I am not limiting this to trades. Trades are still important, but with advancing mechanization, old trades suffer from declining demand. This mechanized age calls more and more for those with mental alertness and manual dexterity to run and service machines. Vocational training should include courses enabling youth to adapt themselves to varied employment situations. Statistics show that the ratio of common labor to all labor is declining. As a result those who lack qualifications above the common labor level are apt to be surplus save in times of full employment.

SUGGESTS THE ANSWER

How can we get these community colleges or educational centers? The extension division of the State system of higher deucation is providing many and varied courses all over the State. They are mostly part time, and are not usually oriented to vocations. We can have community colleges either by joint local-State support or by having the State assume the burden. The system just can't exist with only local property tax support plus tuition, or even with one-third support from the State. The best plan would be for the State board of education to set up and run the schools, at State cost over tuition. For the intermediate period local government with State support of at least one-half or two-thirds may have to serve.

Sure, the system is going to cost—but, if these institutions are infected with a serious purpose and well staffed, they will pay rich dividends in the later attainments of their students. This legislature should face right up to the problem, for time is wasting for hundreds of Oregon young men and women.

Traffic and Transportation

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, April 10, 1961

Mr. MULTER. Mr. Speaker, I am pleased to commend to the attention of our colleagues the following excerpt from the April 10, 1961, issue of City Club Comments, a publication of the City Club of New York. Traffic, particularly commuter traffic, is an increasingly difficult problem for the city of New York. The problem we face and some suggestions as to possible solutions will be found in this article. It should be particularly interesting to those concerned with urban planning and mass transportation:

TRAFFIC AND TRANSPORATION—COMMUTATION AND FRUSTRATION

When William Reid, who has served our city well in such top administrative posts as deputy mayor, city treasurer, chairman of the board of transportation, and now, chairman of the housing authority, received our club's award of merit last month, his response stressed that "a more perfect city" must be based on a solution of the transportation problem.

Commissioner Reid praised the planning commission for its decision not to build parking garages in the already congested central business district of Manhattan and criticized the Port of New York Authority and the Tri-Borough Bridge and Tunnel Authority for their narrow interest in revenue-producing vehicular traffic without regard to its effect upon the city.

(We regret that we were not able to get sufficient copies of the planning commission's report, "Proposed Municipal Garages for Midtown Manhattan," to mail one to every member but copies may be obtained by writing direct to the commission, 2 Lafayette Street. We think every serious student of municipal problems will want to read this paper.)

Councilman Stanley M. Isaacs, who also was honored by the club, commented that our city needs plans of a size and scope to capture the imagination. He cited the fact that the planners of our subway system, starting 60 years ago, boldly extended it into the far-off Bronx, Brooklyn, and Queens, into areas where few families and fewer industries were located, confident that the existence of adequate transportation would assure growth.

Both men taxed as timid souls those who today build bridges to Staten Island and New Jersey for automobiles only, because they believe only the automobile driver will pay the cost.

Unfortunately, it is easier to agree that automotive transportation is inefficient in New York than it is to figure out how to organize and pay for a more efficient system.

In connection with the troubles of the New Haven Railroad, the suggestion was made by a Federal official at a recent public hearing that the road go into bankruptcy as a preliminary to reorganizing on a more efficient basis. Later someone offered the corollary suggestion to place all commuter railroads serving New York under a Federal court receivership, throw in the New York subway system, the Port of New York Authority, the Tri-Borough Bridge and Tunnel Authority, the commuter buslines, the city and State park departments, and the New York City Planning Commission.

Laugh all we want, that's the true size of the commuter problem, and all the engineering schemes ever dreamed of will never mean much until there is a way of coordinating the businesses and agencies which must work together if the problem is to be solved. Most of the previous, ballyhooed studies of transportation and traffic problems have been designed to serve one or another of the competing transportation interests or have been simply expensive political boondoggles with various lawyers and engineers filling paper to justify fees. Obviously, few politicians would turn the job over to those not identified with their political persuasion, and no business group would hire a consultant who wasn't precommitted to support its financial interest.

THE PROBLEM

Simply stated, the transportation problem is that travel by any means into New York City, especially Manhattan, is becoming slower and more expensive. At the same time, automotive traffic within New York City has become denser and slower, as more large trucks and private cars seek to use the city's streets, not only to move on but to park on. The more efficient forms of transportation are losing out to the less efficient forms. The enormous growth of auto ownership and use has had the effect of slowing down movement within the city and raising the cost of numerous city services. However, because no one wants to get rid of the automobile, an effort must be made to effect a satisfactory accommodation to it.

THE OBJECTIVES

The objectives of a program for traffic and transportation should be:

1. To provide for rapid, economical mass transportation from all existing commuter areas and from new centers of population, such as Staten Island and northern New Jersey, into New York City and efficient distribution of commuters within the city.

2. To provide adequate offstreet parking at reasonable prices both convenient to commutation facilities and in peripheral areas within the city.

A POSSIBLE PROGRAM

To achieve these objectives, most or all of the following ideas may have to be used:

1. Coordination of all existing commuter rail facilities into an effective system, tying in at logical crossings or transfer points with the subway system serving New York City.

2. Construction of new rail facilities to serve areas not now adequately served. This might require provision for suburban transfer points from rubber to rails and use of the George Washington and Verrazano-Narrows Bridges for rail as well as automotive traffic.

3. Use of major parkways, now closed to bus traffic, for higher speed, longer haul bus transportation. If busses ran on the parkways, more cars could be left at home.

4. Tolls on present free crossings to discourage casual auto traffic into Manhattan and to help provide revenue for the rest of the program.

5. Construction of large scale public garages in renewal areas outside the central core of Manhattan to be rented at very low cost, and, if necessary, subsidized, in order to permit the city to enforce stricter no-parking regulations. Such garages should be large enough to accommodate, on a permanent basis and at a modest price, everyone who owns or operates a car in Manhattan. The problem is too big for the city to be greatly concerned with the matter of competition with the commercial garages, which will, in any event, have the advantage of better location.

6. The strict requirement of off-street or night loading in congested areas, with strict enforcement of no-standing regulations for trucks as well as private cars.

The relocation of whole industries into renewal areas where traffic control can be planned.

DIRECTION AND PLANNING

Although we suspect that such a program, considering its scale, would not be too expensive and might come near paying for itself, we somehow doubt that it will ever be undertaken on a realistic basis without Federal intervention, or at least Federal leadership. It seems to call for a scale of thinking and coordination of which cities alone, or even cities, States and private industry working together, have not been capable. But if man is capable of recognizing a problem and visualizing a solution, it should not be impossible to carry out a program.

In Washington today, urban problems are being considered really seriously for the first time. Can cities be made more livable? How shall we handle the complex jurisdictional questions which arise when cities spill out in all directions, across State lines and other lines of political jurisdiction and must still somehow be served as if they were single political organisms?

We must welcome the growing interest in urban problems. Some day, soon we hope, there will be a need for gigantic peace programs. Compared to our present socially wasteful expenditures for military purposes, the cost of properly renewing our cities, even if expressed in billions, will be insignificant.

We emphasize, for the benefit of any Federal planners and thinkers who may read this comment, that the transportation and traffic problem in the New York area is no petty problem. We are talking about 16 million people, 10 percent of the Nation, possibly 20 percent of the Nation's productive capacity.

Socialism Would Be a Strange Export for the United States

EXTENSION OF REMARKS
OF
HON. J. ARTHUR YOUNGER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 11, 1961

Mr. YOUNGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorials from the Saturday Evening Post of March 25, 1961:

SOCIALISM WOULD BE A STRANGE EXPORT FOR THE UNITED STATES

In announcing the appointment of a new member to the Board of the Tennessee Valley Authority, President Kennedy urged that organization to "study ways in which the lessons it has learned in the Tennessee Valley may be exported abroad." While few dispute the accomplishments of TVA as an engineering achievement, it would be less than accurate to send abroad the impression that only by tax-consuming, semisocialistic projects have we taken long leaps forward.

Actually, the most striking progress in this industry, as in most others, has been made by private-investor companies. Despite taxes and interest rates which favor public power, with more to come in the new administration, at least 80 percent of our electric power is produced by private-enterprise companies. The Idaho Power Co.'s Hell's Canyon dams add enormously to the power resources of the area and, incidentally, pay $10 million in Federal, State, and local taxes. Experimentation in the use of nuclear fuel for electric-power production is being carried on—with the money of American savers and investors—by a number of power companies. Seventeen nuclear plants are in construction at a cost of about $700 million.

Obviously a vast publicly financed and virtually tax-exempt enterprise like TVA can produce electricity, but the message which one might expect an American Government to send abroad is the fact that the most significant American economic progress, including that in the electric power industry, has been made by private corporations and individuals. Sometimes one is tempted to believe that many American politicians have forgotten this fact. On the other hand, it is difficult to find much public support for socialized industry. Last November in the so-called public-power States in the western part of the country—despite the effort of Democratic candidates to make public power an important campaign issue—Republicans won in most of these States. It is not insisted that efforts to plug public power account for the defeat of Democratic candidates in these States—only that the alleged issue did not generate enough steam to elect them.

It is curious that politicians should place so much emphasis on public power and public projects generally when in other countries the passion for Socialist adventures is fading Great Britain's exercise in denationalizing its formerly nationalized industries has given that country a new birth of economic freedom which has left the Labor Party with no issue worth fighting for except getting the Americans and their Polaris missile off the island. New Zealand has retired its Socialist regime of many years' standing, and West Germany, whose prosperity is driving the Communists crazy, is well launched on a series of privatizations of its government-owned industries including Volkswagen.

What the West Germans have been doing ought to be of great interest to Americans, because it suggests a page out of our own "people's capitalism." In the recent denationalization of Volkswagen, investors were limited to those with incomes of no more than $3,200 a year. They were encouraged to hang onto their stock by promise of a big dividend after 2 years. The program, worked out by Economic Minister Ludwig Erhard, is called Eigentum für Federmann (property for everybody) and up to now has been an enormous success. Already some 216,000 Germans own pieces of Preussig, a mining-and-smelting firm long owned by the government. They bought the shares for $34 each and, according to the Wall Street Journal, the recent price is about $75. The Volkswagen deal went through in January and resulted in the distribution of ownership of Hitler's prize state corporation among probably 500,000 people. This, of course, isn't everybody, but after all, investing isn't compulsory.

Coming soon will be a public offering of stock in Prussian Electric, the nearest thing in Germany to our TVA. A few years back former Senator Edward Martin of Pennsylvania proposed a similar disposal of TVA, arguing, among other things, that this would give the Government and local authorities a chance to tax TVA revenues and properties. The German Government appears to lack that reason for denationalizing Prussian Electric, for that power complex in 1958 paid 37 percent of its gross revenues in taxes. This compares with an average of 23 percent paid by American investor power companies and, of course, distances TVA completely.

If the New Frontier wants to do something handsome for other countries, why not let them in on some of the things our people have been doing for themselves without bureaucratic interference? Actually delegations from all over the world visit our private powerplants, as well as TVA, to get ideas on engineering, management, and finance. It looks as if some other countries have done their homework on this subject and may wonder why the capitalistic United States should attempt to educate them on the virtues of socialism.

SECONDARY BOYCOTTS HAVE BEEN A HEADACHE; NOW THERE'S A MOVE TO MAKE THEM LEGAL

The beginning of an effort to whittle away the legal protection against secondary boycotts by labor unions takes shape in the introduction in the House and Senate of bills which would legalize common-situs picketing by building-trades unions.

What this amounts to is that, if a subcontractor on a building job in New York were involved in a dispute with a union, say, in Pittsburgh, perhaps as the result of an effort to pressure workers into a racketeer union, all the hundreds of painters, carpenters, plumbers, electricians, and so on, on the New York enterprise could be called off the job.

Under the Landrum-Griffin law such picketing is not permitted. The power the new law would give to union bosses—including some of the worst racketeers—is easily imagined. The harassed general contractor would be tempted to throw up his hands and demand that the subcontractor submit to the union demands, whatever they were. He might be compelled to force his men to join the union whether they wanted to, or whether they were satisfied with the union they already belonged to.

Secondary boycotts have already plagued our defense installations. A plumbers' union shut down Cape Canaveral for 15 days. Other secondary boycotts occurred at two Atlas bases and a Titan base in Kansas, three missile bases in Wyoming, and an Air Force base in Missouri. The new bills provide that military installations and missile bases shall be warned 10 days in advance of a strike. But there is not even this modest protection for the private contractor or the already thoroughly plucked homebuilder.

The Landrum-Griffin Act prohibits picketing for extortion, picketing which interrupts deliveries or service to an employer, and other unfair picketing. It also bars secondary boycotts. These operate to deprive thousands of the right to work, as happened in the recent tugboat strike which put thousands of railroad men off the job at the bidding of a few hundred tugboat employees who had been declared surplus.

Those who defend this change argue that it gives the building-trades unions privileges which industrial unions already enjoy. They insist that industrial unions may picket a factory site, but that construction unions cannot do so because a number of employers are involved. This argument ignores the fact that industrial unions are not permitted to impose secondary boycotts—that is to say, tie up a plant because of a labor dispute somewhere else. The real necessity is to tighten the restrictions on secondary boycotts rather than to assist the union bosses in an effort to break through existing limitations.

Migrant Farm Labor Problems and "Harvest of Shame"—II

EXTENSION OF REMARKS
OF
HON. PAUL G. ROGERS
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 11, 1961

Mr. ROGERS of Florida. Mr. Speaker, this is the second in a series of articles presented in the public interest by the Palm Beach Post-Times to show the Members some of the progress being made in Florida to solve problems relating to migrant farm labor which were left out of the television presentation "Harvest of Shame." The omissions of all that has been, and is being done in this field did a great injustice to the Floridians who have given their time and efforts to these problems over the years. It is hoped that by reading these articles and the ones to follow the Members and public will have a better understanding of this important matter.

The article follows:

[From the Palm Beach Post, Feb. 3, 1961]

GOVERNOR BRYANT WRITES

The producers of "Harvest of Shame" did a great injustice to the many Floridians who have worked long and hard to improve the lot of the migrant worker.

Local committees, leaders of the Florida Legislature and officials of concerned State agencies have done much to better housing conditions and to make available to the migrant workers who flock to Florida each year the supplies of foods and medicines which are necessary to a healthy and productive way of life.

Perhaps the greatest injustice, though, was done to the migrant workers themselves.

These individuals who for years cared as little for their surroundings or their way of life as did the majority of people with whom they came in contact, have responded to the interest taken in their well-being by concerned groups with a fine spirit of cooperation and a desire to obtain self-betterment.

They are beginning to take pride in their surroundings and in the recognition of their human worth being given them by employers, the governmental officials who seek to help them and citizens generally.

There are improvements yet to be made. There is more help to be obtained, and indeed there are the occasional tragic stories of starving and penniless families which make headlines. These serve to remind us of the work yet to be done, and the diminishing number of such headlines is a source of pride in the steps toward a better tomorrow we have already taken.

The "Harvest of Shame" is over and done with. We should look now to the day when a new documentary is prepared and produced, telling the story of Florida's migrants and their harvest with pride.

Jack Williams—Editorial Commentary for March 16, 1961

EXTENSION OF REMARKS
OF
HON. JOHN J. RHODES
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 30, 1961

Mr. RHODES of Arizona. Mr. Speaker, one of Arizona's finest editorial commentators is Jack Williams, of radio station KOY in Phoenix. Mr. Williams is a former mayor of Phoenix, and for years has been a favorite radio personality of the people residing in a large portion of Arizona. Jack Williams has always opposed bigotry of any form, and from whatever direction it might come. I think his commentary of March 16, 1961, is particularly good, and under leave previously granted to extend my remarks, I wish to share it with my colleagues in the Congress:

A friend said to us the other day, that the precise moment that the Communists take over this country—if they do—would pass unnoticed at the time.

I have pondered that remark ever since.

We are prone to think that the Communists' takeover would be to the accompaniment of guns and mobs in the street, and torches to the shops.

Actually, he who controls Washington, almost controls the country now; and with the drift toward a centralized state, will control it soon. The transition from a free republic will be accomplished by the citizens themselves who pervert the very goals that seem attractive to some today.

Through a relaxation of our freedoms, and especially our first 10 amendments, these perversions will be easily accomplished because we will be accustomed to them. All political parties will be outlawed except those we consider proper. And ultimately, there will be but one party, the union of free American patriots. Some of us will protest, but it will be too late to ask why we can't have a Republican or a Democratic Party. And a law will have been passed and properly approved to remove all firearms from citizens unless proper licenses are secured for possessing same. And only free American patriots can have guns of course.

There is a special kind of oath that everybody takes swearing not to work against the Government in any way whatsoever and by means of this oath, anybody who doesn't belong to the patriotic party is judged.

A lot of us are pretty concerned because we think that all of this is unconstitutional, but we are told that the Constitution is a flexible thing and when we protest too much we are hauled into court and following a session of brainwashing, we find ourselves admitting our own guilt by association. In fact, the infamous fifth amendment was repealed in a burst of enthusiasm; this was the amendment that all those crooks used to hide behind, and now anybody can be forced to be a witness against himself. They use this brainwashing deal but some folks say that an old-fashioned rack and thumbscrew in the basement of the White House is quicker.

Does what I say tonight sound farfetched? There isn't a thing I've discussed that hasn't been advocated and some of the actions have been already put into effect.

The freedoms our forefathers fought for, we're apt to lose simply because we have failed to read history and understand it.

Communist Hemispheric Conquest Via Cuba

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 11, 1961

Mr. FLOOD. Mr. Speaker, in numerous addresses in and out of the Congress, which are based upon careful research, personal observations, and extensive consultations with many persons of experienced judgment, I have repeatedly described the growing dangers to the south from Communist penetration, infiltration, and subversion, particularly in the strategic Caribbean.

It is indeed fortunate that we have in our country some who are endowed with the combination of ability, experience, and courage to present the picture of what now faces us with clarity and insight, at the same time outlining a course of action to meet the challenge.

In the March 10, 1961, issue of Duluth Publicity of Duluth, Minn., there appeared a highly revealing address by Hon. Spruille Braden, one of the country's leading authorities on the diplomatic problems of Latin America.

To make Dr. Braden's penetrating analysis and suggested program available to the Congress and the Nation at large, I quote the entire text at this point in the RECORD, and commend it for study by all concerned with the security of the Western Hemisphere.

THE COMMUNIST PATH TO CONQUEST OF WESTERN HEMISPHERE IS VIA CUBA

(By the Honorable Spruille Braden, former U.S. Ambassador to Cuba and numerous South American countries, in a speech delivered at the annual Founder's Day luncheon of the National Society of the New England Women, January 25, 1961)

For more than three decades, the Communists have been seizing the favorable opportunities afforded by peaceful coexistence for subversion, class struggle, and sabotage everywhere and for revolution wherever and whenever they could get away with it, as they now have in Cuba.

Eudocio Ravines, former Peruvian Communist, tells of a Moscow meeting during 1934 of several Latin American and Russian Communist leaders. It was suggested that actual insurrection might be provoked in Brazil, but that any advances in the other American Republics should be made through "popular front governments" and subversion. Ravines objected that the United States quickly would suppress by force any attempted uprising in Brazil. Dmitri Manuilsky, who was presiding, sarcastically replied:

"Our dear comrade would be right if the United States were to dispatch its ships and troops to Brazil. Clearly, we could not ask the people to fight with clubs or orchids against cannons. But, happily for us and for the luck of the world proletariat, we have resolved the problem far in advance. Comrade, the International has concerned itself not with controlling cannons and warships, but influencing and absolutely controlling the finger which would press the magic button, the one which would make the fleet sail."

Manuilsky then detailed the great Communist accomplishments in penetrating the highest, most important and powerful spheres in the United States—the fundamental positions of "the high command of capitalism."

ALARM SOUNDED

Based on several personal experiences, I can attest to the existence of this penetration.

In 1954 I testified before the Senate Internal Security Subcommittee that while serving as Ambassador to Argentina, in early July 1945 I sent two top secret cables for the President and the Secretary of State who were about to attend the Potsdam Conference. I referred to a long list of telegrams, dispatches, memoranda, and reports in person to the State Department made over a period of several years on Communist activities throughout this hemisphere. I told how Peron was playing hand in glove with the Communists. I urged in the strongest terms that Truman and Churchhill at Potsdam lay it on the line with Stalin, that these machinations and subversions must stop immediately.

As I discovered years later, someone in the State Department or somewhere along the line so contrived that those extremely urgent messages never reached the President and Secretary of State. Who pressed that magic button? The question never has been answered.

Among the many alarms I repeated through the years, both in and out of Government, as to the Communist danger in this hemisphere, I specifically warned about the Communists' attempts to control Bolivia and Guatemala—but all to no avail.

CASTRO, CHAOS, AND COMMUNISM

I testified on July 17, 1959, before the Senate Internal Security Subcommittee that on October 4, 1957, I went out of my way to warn the top echelons of the State Department that if they continued their present policies, they would bring Castro, chaos, and communism to Cuba. I was assured that my message had gone to the very top. Yet 1 month later, on November 6, the Secretary of State in a press interview, declared that the United States did not consider Communist activities in Latin America as dangerous [sic].

The time has come to find out who deceived and kept the truth from the Secretary of State. Was it only the result of stupidity, or did someone control the finger that presses the magic button?

WHAT GOES ON?

The State Department and the Central Intelligence Agency should have had far better

knowledge than I—as a private citizen—about Castro and his Communist background; what he had done and planned to do; what was happening and going to happen. If they did not, why not? Actually, we know they were informed. Why then did they fail to protect the United States? Why was aid and comfort given to Castro and the Communists?

This state of affairs is all the more shocking, because there never has been any secret about Fidel Castro and some of his government colleagues being all-out Communists.

CHRONOLOGY ON CASTRO

In early 1943, along with other young Communist league members, Fidel was known to have been put through a course of instruction by Gumer W. Bashinov of the Soviet legation in Havana. In the university, Castro was recognized by both professors and fellow students as belonging to a Communist apparatus.

In 1948 he was sent by the party on a vitally important mission in Colombia. There he may have had a hand in the assassination on April 9, 1948, of Gaitan, a leading Colombian presidential candidate.

There is positive testimony by the Colombian chief of national police and others that Castro incited, and actively participated in the rioting and looting, incendiarism, and murdering during the Bogotaza which was planned and directed by international communism, and which destroyed that capital city. There are responsible accounts that Castro boasted of having killed three priests.

When, during 1955, Fidel, his brother Raul, Che Guevara, and others were being trained for guerrilla fighting by the notorious Spanish Communist, Colonel Bayo, in Mexico, our Embassy in Mexico City officially reported to the State Department that Castro was a Communist.

SOMETHING VERY WRONG

It appears that this report and often others from the CIA, the FBI, and the State Department's intelligence staff were not even read. The officer in charge of Mexican, Central American, and Caribbean affairs in August 1959 was unaware, or claimed to be unaware, of an analysis of Castro and other Cuban Communist governmental leaders which had been prepared by the State Department's research staff.

Castro's revolution, generally called the 26th of July movement, is the direct offspring of, and includes much of the same membership as, the "Buro del Caribe" (Bureau of the Caribbean) which was a section or branch of the Comintern. This bureau was in existence when I served as Ambassador to Cuba from 1942 to 1945. Its chief, Fabio Grobart (a Polish Red who traveled under 9 different nationalities and 11 aliases) directed all Communist activities throughout the hemisphere except for propaganda aimed at the colored people around the Caribbean which was directed from Harlem in New York City.

WRONG U.S. POLICIES

Fidel's conduct of the revolution from the Sierra Maestra was characteristically Communist—typified by his kidnaping of U.S. citizens and a group of Marines from our Guantanamo Naval Base. After suffering from this indignity, we humiliated ourselves by sending two consular officers to negotiate with Raul Castro for the release of these U.S. citizens.

Instead of demanding their release, we treated the Communist bandit as if he were the head of a sovereign power. This unprecedented self-abasement reinforced the conviction—already created by previous stupidities showing utter ignorance of Cuban psychology—that the United States was backing Castro against Batista.

Of course, many Cubans who had become fed up with long years of corruption, were desperately anxious to get rid of the old type government. So, not unnaturally, they stumbled into supporting Castro. Even so, they primarily are responsible for their present desperate straits. But the U.S. Government must accept its share of the guilt. With a little commonsense diplomacy, Batista could have been eliminated and replaced by a reasonably honest, constitutionally elected, representative government. Instead, either we committed one of the most grievous and costly blunders of our history, or some finger pressed the "magic button" and thus helped to bring the Communists to power in Cuba in what may turn out to be the worst catastrophe ever to strike this hemisphere.

COMMUNIST SCOURGE

The bloodthirsty Communists have scourged and defiled Cuba, destroyed decency and obliterated every right and freedom. The extent of their property confiscations from Cubans is rivalled only in part by the more than $1 billion of U.S. investments they have seized. They have corrupted the young; set children to spy against and denounce their own parents, and condemned and punished the innocent. They have made thousands of Cubans homeless and jobless. Weeping mothers, wives, widows, children, and orphans testify to the imprisonments and slow death in the Isle of Pines and in other prisons. Worse than all these barbarities has been the searing of Cuba's soul and the scorification of her spiritual values.

It would be inhuman of us to abandon our Cuban friends to Communist slavery and Soviet-Sino domination. Over 18 months ago, at a press conference in Chicago, I said I had been praying to God that the Cubans might rescue themselves. I am still praying, although the record shows that no people ever have been able to overthrow a Communist police state without strong assistance from abroad. The Communists are entrenched so strongly in Cuba that liberation becomes more difficult with each day that passes.

The Cubans must have our allout moral support, arms, and money. To give them these things now would not be giving something for nothing; it would be self-defense.

We cannot tolerate a Communist satellite state on our very threshold, controlling the Caribbean and the approaches to the Panama Canal and the Mississippi Valley. The last bulwark in the defense of our territory and the Western Hemisphere is at stake.

WE MUST STAND FIRM

We must fight. Only by our vigorous and courageous stand can we attract other nations to our cause and induce them to make themselves strong in order to fight at our side. Such a stand will help to restore confidence in our loyalty to our friends. Too often the U.S. Government is distrusted, because it turns against friends and allies and goes along with the enemy, as in the case of Suez. Finally, resolute and brave action now will show that all our vacillations, weaknesses, and faintheartedness in the United Nations and the Organization of American States were merely passing phases in our international conduct.

Castro and his accomplices frankly proclaim their intention to become the Mao Tse-tung's of the Western Hemisphere, including the United States. They are propagating communism among the Cuban workers in Florida and appealing for Negro sympathizers all over the United States. (Witness Castro's planned hocus-pocus in moving to a Harlem hotel during his last visit to New York City.)

In recent years, the Chinese Reds have become increasingly active in the subversion of this hemisphere. They seemingly inspire more confidence among intellectuals and students, even in the secondary schools, than do the Russians, Czechs, or Poles, perhaps because the Red Chinese are not so well known.

CUBA'S RED AGENTS EVERYWHERE

Now the Cuban Government is spreading its Red agents over the entire hemisphere; they are financed lavishly and are proving to be far more effective than agents of any other nationality, including the Chinese. They travel in the garb of diplomats, cultural, trade, or labor delegations, or of simple tourists.

Cuban Communist attempts at subversion have induced Peru, Nicaragua, Guatemala, Paraguay, and the Dominican Republic to break diplomatic relations with the Castro regime. Other nations, such as Uruguay and Panama have expelled the Cuban Ambassadors and other Communist diplomats.

CARIBBEAN UNDER ATTACK

The Caribbean is in danger of becoming a Red lake. The Communist Cheddi Jagan, is top man in British Guiana. The French islands, such as Martinque, are represented in the Paris Parliament by Communists. Betancourt's government in Venezuela, while admittedly leftwing, has barely escaped from being upset by the Communists, and might fall at any time. Panama is weak, and the comrades are infiltrating there as they have been trying to do again and again throughout Central America. Trinidad grudgingly permits us to retain our military base at Chaguamaras; but other bases in the West Indies have been, or will be, abandoned.

Of all the Caribbean republics, by instinct and experience the one which should be least influenced by totalitarianism is Colombia. Yet, since 1948 it has suffered continuously from Communist inspired and directed guerrilla bands operating in outlying districts. As a result, in these areas the national economy has been disrupted and agriculture paralyzed, thus raising the cost of living.

The terrorized peasants have had to seek refuge in the cities where they can find no work. The ensuing chaos has broken down law and order and eased the way for communism. Two Red enclaves, Viota and Sumapaz, exist in the interior of Colombia. They collect their own taxes, run their own schools and fly the hammer and sickle as their flag. Colombian officials and troops must obtain permission from the Communist leaders to pass through these districts.

PROPAGANDA SHOW

Two tons of Communist propaganda are flown daily from Havana to the Cuban Embassy in Mexico City. Former President Cardenas of Mexico, always an extreme leftist, recently returned from Moscow and Peiping and again is exercising an evil and powerful influence behind the scenes.

He is organizing a Latin American Conference to condemn the United States as the despoiler of Cuban liberty, justice, and peace. In Mexico, and throughout the hemisphere, the Communists are poisoning public opinion and arousing hatred and demonstrations against the United States by every conceivable means.

They have a receptive audience among the intellectuals. For instance, there are 55,000 students in the University of Mexico, and it is estimated that 90 percent of the professors are Communists. In contrast, our propaganda and defense are insignificant and inept, dated and uninspired.

Parenthetically, I am sorry to admit that one of the largest U.S. foundations presently is financing to the tune of several hundred thousand dollars a notorious European Communist professor in Latin America.

Were Mexico to fall under Communist control, the conditions would not be within the relatively mild limitations set by President Lopex Mateos, when he declared a few months ago that his government was "of the extreme left, within the constitution."

The Mexican situation would be more serious than that in Cuba due to a population four times as large and a 2,000-mile frontier along the United States.

COMMUNIST CUBAN TACTICS

Presently, the Communists probably do not control or even have the sympathy of, more than 15 to 25 percent of the Cuban people. However, the Communists always are a small minority. Even in the Soviet Union, they constitute not more than 4 percent of the population. They hide within other political parties and are hard to detect or expose.

Communists, to gain temporary benefits, will enter into a united front with anyone—with reactionary dictators, nationalists, or sworn anti-Communists. They try to create new conflicts and to deepen those already existing. They gladly reverse themselves, sacrifice and kill their own agents, and always will go back two steps in order to take three forward. Fidel Castro could become expendable and be wiped out by his comrades overnight—just as was done to Beria in Russia.

Playing both ends against the middle, Communists often pretend to have intraparty disputes with one group supporting and the other opposing a particular government. This situation developed for a time vis-a-vis Peron in Argentina.

COURSE OF ACTION

Based on the circumstances I have described, during the last 2 years I have urged, publicly and privately, the following course of action:

1. Inform the other American republics that:

We now expect them, belatedly though it may be, to fulfill their solemn commitments in cooperation with us "to take the necessary measures to protect their political independence against the intervention of international communism, acting in the interest of an alien despotism." These words, from the Declaration of the Organization of American States, exactly fit existing conditions in Cuba and the Caribbean.

If they fail to take collective action with us against this Communist attempt to seize the Western Hemisphere, then for its own security the United States will be forced into unilateral action. The other republics and not we will have destroyed the OAS and hemisphere solidarity. The responsibility will be theirs.

Fortunately, we still retain the inherent right to collective and individual self-defense under the U.N. and the OAS charters. But, far more important, it is our patriotic duty to save our Nation.

NOT INTERVENTION

Action by the United States, strictly speaking, would not be unilateral. On the contrary, it would be at the earnest behest of all anti-Communist Cubans. It would not be intervention.

Since October we have had as Assistant Secretary of State for American Republics a man of courage and intelligence, Mr. Thomas C. Mann. Given adequate authority, he may be able to lead us out of the Cuban morass. Already Mr. Mann has brought about the break in diplomatic relations with the Cuban Communist regime. Our next steps must be:

2. Recognize a responsible Cuban government in exile, just as we recognized the Free French and other regimes in exile during World War II.

3. Give that government our full support, morally and materially with arms and money.

4. Invoke a pacific blockade of Cuba, to halt trading by the Communist nations. Incidentally, some of our NATO allies and the other American republics who want to increase or at least continue business as usual with Cuba, should be induced to desist.

5. Continue U.S. cooperation and guidance after the Communists have been driven out of Cuba in order to rehabilitate it and bring it back to freedom and constitutional representative government.

If speedily enacted, such a program could succeed. Although several of my Cuban friends insist that, in addition, the United States will have to help with its armed forces, both to throw out the Communists and thereafter, as a simple humanitarian measure, to preserve order and save Cuba from a horrible blood bath. I pray they are wrong. but I fear they are right.

Taxes and Spending Can Be Cut

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 11, 1961

Mr. CURTIS of Missouri. Mr. Speaker, under permission to revise and extend my remarks, I should like to place in the RECORD an article written by the gentleman from Texas [Mr. ALGER] which appeared in the April issue of the magazine Nation's Business. The gentleman's knowledge and interest in the field of government spending and taxation are well known. I believe that this article is well worth the attention of the Congress and the country.

The article follows:

TAXES AND SPENDING CAN BE CUT

(By Representative BRUCE ALGER)

In pushing ahead to new legislative frontiers, the Government should offer greater opportunity for the individual to improve his own condition with his own resources.

We can meet not only our goals of more economic growth and employment, but also the threat of communism, by:

1. Recognizing the need for major reform of our Federal tax system.

2. Adopting a tax program which will strengthen our capitalistic private enterprise society.

3. Enlisting the support of 60 million taxpayers in this reform through a widespread awareness of the potential savings as well as tax reduction involved.

FAULTS OF TAX SYSTEM

The present tax system stunts personal ambition by denying just rewards for individual effort.

Through capital-starvation, it has made the American dream of going into business for oneself more difficult to fulfill.

It has reduced the job opportunities which only a free flow of investment funds can make possible.

It has helped to feed inflation by smothering the rate of savings and destroying accumulated capital.

It has slowed the rise in living standards which depends on capital formation.

The cause of these national blights is the involuntary diversion of savings—the only source of private capital—from their natural flow toward urgently needed investment fund reservoirs to the Federal Treasury.

It is about time that we got tough fisted about a problem that has consistently resisted solution through a more restrained appeal.

There is no sound reason why we should accept the inevitability of the present tax system.

Even more important, we must be careful that much-talked-of future reforms are revisions that encourage private incentive.

As compelling as are the domestic reasons for tax rate reform, the situation is even more critical in view of Russia's threat to bury us in a production race.

We cannot win playing it the Communist way, the way of government control. We became the foremost Nation of the world through free enterprise and individual initiative and we can maintain our position only if we continue to grow through that philosophy.

Soviet planners are aware of the way our tax system is retarding our economic growth and they are banking more on our weakness to defeat us than on their strength.

For more than 12 years we have poured billions of taxpayer dollars into the economies of free world nations—and encouraged huge private investments—in order to build up their supplies of capital and stiffen their resistance to communism. At the same time we have ignored at home the very lesson we are striving to teach abroad, that adequate capital funds are vital to the stability and growth of a free economy.

ROLE OF BUSINESSMEN

In an international economic war, the businessman is the frontline soldier because the achievements of those engaged in commercial activities largely decide the rate of our economic growth.

Yet we are, in a sense, demanding that our business community demolish Russia's challenge without permitting it to use the only weapon that can effectively turn the tide. That is a steady flow of investment funds for starting and expanding business enterprises.

We must unshackle the business community so that it can meet the Russian thrust on more equal ground. If we are to show the world the genuine flowering of free enterprise, we must first achieve an enlightened transformation of the tax system.

How can we ever expect to get the recipients of foreign aid funds off our fiscal backs unless we demonstrate, by our own example, that the true path to the full rewards of a free economic system is a sound tax program? Failure in this could mean that we will be committed to keeping recipient nations on American taxpayer-dollar doles from now on.

The most comprehensive program for reform of Federal tax rates and methods is now before the Congress in several bills. The legislation is best known as the Herlong-Baker bills. My colleagues on the Ways and Means Committee—Representative A. S. HERLONG, JR., a Florida Democrat, and Representative HOWARD H. BAKER, Republican, of Tennessee, are the chief sponsors. After studying the Herlong-Baker bills I have introduced an identical bill. (In the House each Member has his own bills.) The legislation would reduce both individual and corporate income tax rates over a 5-year period; defer taxes for individuals on long-term capital gains as long as the taxpayer reinvests his holdings; reduce the rates of tax on estates and gifts, and establish more realistic depreciation rules.

HOW TAXES WOULD DROP

The top rate of individual income tax rates would be brought down, by the end of the fifth year of application, from 91 to 47 percent. The first bracket would be reduced from 20 to 15 percent and there would be corresponding reductions in all the interim rates.

Let me cite a few examples. The $8,000 to $10,000 bracket of taxable income would be brought down from its present 34 percent to 19 percent; the $16,000 to $18,000 bracket from 50 to 23 percent; the $50,000 to $60,000 bracket from 75 to 31 percent for single taxpayers.

The top corporate rate would be reduced from 52 to 47 percent through annual reductions of one point each year over the 5-year span. The linkage of the top rates of individual and corporate taxes is an especially enlightened move, since 85 percent of the total business population is composed of unincorporated firms. In fairness they should not be taxed at higher rates than corporations.

Over 5 years, a reduction of 25 percent would be made in the time during which businesses could charge off the cost of depreciable property. Estate tax rates would be reduced from a top of 77 to 47 percent and the top rate of gift tax from 57.75 to 35.25 percent. All lower rates of both taxes would be reduced in proportion.

These bills strike at the crux of the tax problem which is the sharp climb in the graduated rates in the middle-income brackets. This is the bottleneck that has slowed the flow of investment funds, especially the risk venture variety, since our capital availability is firmly tied to the rate at which savings can be accumulated.

None can refute that we must look to the savings, principally of those in the middle and upper brackets, for the venture funds to create jobs, start and expand businesses, make products available at prices within reach. Even though we sometimes forget or turn away from it, every material need, every benefit, every business advance, every rise in living standards has a common progenitor, and that is capital. When tax reduction is mentioned it tends, sometimes, to produce twin fears in the minds of many Americans, not excluding those who appreciate the need for action.

The first of these concerns is based on the apprehension that deficit spending would result. The second, and allied fear, is for the revenue effect of the reductions.

Our bills have provisions which completely dispel both fears.

POTENTIAL FOR SAVINGS

A built-in safeguard eliminates the possibility that the bills will cause deficit spending. This safety valve is a provision that permits postponement of rate reductions in any year in which an unbalanced budget is threatened. Certainly this should allay the fears of even the most stanch budget balancers.

As to the revenue effect, the authors of this legislation believe that any loss will be more than offset by the increased revenue resulting from the greater economic growth made possible by the unleashing of investment funds.

This appraisal is based on the calculation that each 1 percent annual increase in the rate of economic growth will produce $1 billion in additional Federal revenue. As the revenue effect of our bills would average out at less than $3.5 billion annually, or the equivalent of a 3.5-percent rate of economic growth, a 5-percent average rate of growth over the next 5 years would not only offset the revenue effect but provide an excess of $1.5 billion.

Over and above these benefits is another that could prove to be the most important of all.

This is the postponement feature, which can be the launching pad for the greatest and most dynamic offensive against Government waste that our country has ever witnessed.

Over the years the Federal Government has been growing rapidly at the expense of economic growth, upon which it depends for revenue. This process has gone unchecked because there has been no competing claims for the use of the revenue overlap. Our bills fill this void by setting up an effective counterclaim.

Every one of the country's 60 million income-tax payers would be enrolled automatically as a watchdog of the Treasury. Taxpayers are bound to insist that the Government exercise every possible economy because their anticipated tax reductions will depend upon it.

When the people have a clearly defined choice between tax reform and increased Federal spending, you don't need a crystal ball to predict which they will choose.

The collective weight of this pressure for economy is guaranteed to have a restraining effect on the size of public expenditures. As a Congressman, I know that Members of both Houses will be loath to vote for appropriations that would tip the scale of budgetary balance. The executive branch should be just as fearful.

No one would invite the wrath of taxpayers who did not receive tax reductions upon which they had counted. The economies resulting would in no way restrict military and other essential expenditures.

We have in this legislation, then, dual forces for impressive and lasting public betterment—the urgently needed tax-rate reform and a checkrein on Government spending.

The Spirit of NATO

EXTENSION OF REMARKS

OF

HON. ARMISTEAD I. SELDEN, JR.

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 11, 1961

Mr. SELDEN. Mr. Speaker, to any who may have reservations about the effectiveness or the spirit of the North Atlantic Treaty Organization, I call attention to the article "This We Will Do." Written by Adm. Charles R. Brown, the article appeared in a recent issue of the Vigilance supplement of the Fifteen Nations magazine which is published in Holland by Our Army, a Royal Netherlands association. This publication is financed entirely by the Our Army Association without assistance from the North Atlantic Treaty Organization.

The story of NATO, as presented in the article "This We Will Do," is told by an expert on the Organization. A native of Tuscaloosa, Ala., Admiral Brown is currently commander in chief of Allied Forces Southern Europe, the NATO command responsible for the defense of Italy, Greece and Turkey, the alliance's right flank. The air, sea, and land forces serving in the area are Admiral Brown's responsibility—a responsibility he has accepted with fortitude and determination. He describes his defensive bulwark as "a formidable barrier to Soviet aggression," but he adds the warning that "we must never allow ourselves to become complacent."

Recognized as one of NATO's most vigorous leaders, Admiral Brown has a long and outstanding naval career to his credit. Among other assignments, he has served as a naval instructor, held the post of deputy commander in chief of the U.S. Atlantic Fleet, and for the past 4 years he has been stationed in the Mediterranean area, first as commander of the U.S. 6th Fleet and presently in his NATO command. He holds the record for the naval aviator with the longest tour of service on flight duty, as well as the record for perfect naval aerial gunfire.

Among his decorations are the U.S. Navy Distinguished Service Medal, the Legion of Merit, the Bronze Star and the Presidential Unit Citation. In addition, he has received many honorary awards from his own country as well as from nations overseas.

I believe every Member of Congress will enjoy reading Admiral Brown's interesting and informative article which follows:

THIS WE WILL DO

(By Adm. C. R. Brown)

Living and working behind the 1,700-mile arc of rugged land masses, plains and waterways separating Resia Pass in Italy and Mount Ararat in Turkey, are approximately 84 million free men and women and their children—the latter learning to assume their future roles as responsible citizens in those portions of the world where liberty, dignity of man and the individual's choice of a way of life are still richly treasured rights.

These are the people of Italy, Greece and Turkey, 3 of the 15 nations belonging to the North Atlantic Treaty Organization. To these 84 million people the Allied Forces of Southern Europe owe two solemn obligations:

First, to prevent involvement in a war. This we are striving to do.

Second, to defend these countries if—and pray God it doesn't—aggression should occur. This we will do.

The two responsibilities I mention are common to each of the commands in our great Atlantic Alliance: to prevent war, or, if aggression occurs, to defend the NATO nations. All of us who wear the uniforms of the various NATO nations are dedicated to the accomplishment of these basic tasks.

In Southern Europe, French, Italians, Greeks, Turks, British and Americans serve on staffs or in units of the armed forces committed to the Alliance. Sharing in the tremendous responsibilities confronting us are the major army and air units of the three countries situated behind our 1,700-mile defense line; the U.S. 6th Fleet, in its NATO role of Striking and Support Forces Southern Europe; sizable elements of the U.S. Air Force; the U.S. Army's Southern European Task Force; and a component of the British Royal Air Force. Combined, they provide an overall capability ranging the entire military scale from the foot soldier to modern missiles.

Soldiers, sailors and airmen comprising these forces are imbued with high spirit and grim determination. We will discharge to the utmost of our ability the solemn obligation we owe to the men, women and children who have been entrusted to our care. This we will do.

It may be noted that no reference has been made to the navies of five of the six countries supporting the mission of my command. This is because ships and men of the navies of France, Italy, Greece, Turkey, and the United Kingdom assigned to NATO in the Mediterranean area are under the operational control of our neighbor on Malta, Allied Forces Mediterranean, whose commander in chief presently is British Admiral Sir Alexander Noel Campbell Bingley.

Joint planning between Admiral Bingley's staff and my own is carried on constantly so that cooperation, coordination, and mutual support would be effected immediately should aggression occur, and so that free use of the sealanes of communications will be maintained in the event of aggression. In time of need, too, we would have the support in this area of heavy bombers of the United Kingdom and the United States; planning is being carried on constantly to insure that

maximum utilization will be made of these units in this area. There is complete understanding between these naval and air forces and my own command. Everything at our disposal can be applied anywhere, against any aggressor who dares transgress any portion of the area.

But back to Allied Forces Southern Europe.

Direction, guidance, advice, and operational control flow from my headquarters at Bagnoli, near Naples, down through four principal subordinate headquarters. Italian Army units available to us, and the U.S. Army's Southern European Task Force are under the operational control of Land Forces Southern Europe or Landsouth, commanded by Gen. Antonio Gualano of the Italian Army, with headquarters at Verona, Italy. Greek and Turkish Armies are under the Land Forces Southeastern Europe of Landsoutheast, commanded by Lt. Gen. Harry P. Storke, U.S. Army, at Izmir, Turkey. All air elements—Italian, Greek, Turkish, British, and American—are under Allied Air Forces Southern Europe or Airsouth, commanded by Lt. Gen. Ralph P. Swofford, Jr., U.S. Air Force, with headquarters here at Naples.

The Striking and Support Force Southern Europe (Strikforsouth) is commanded by Vice Adm. George W. Anderson, Jr., who remains at sea with his fleet, but maintains a planning staff in Naples under his deputy, Rear Adm. Ralph Sperry Clarke, U.S. Navy.

Numerous and complex problems, which must be taken into account in everything we plan, confront our command as a result of geographical and other considerations peculiar to southern Europe:

The terrain requires that we provide for land operations in four distinct areas: Italy, northern Greece, western Turkey, and eastern Turkey. The Russian satellite, Bulgaria, faces two of our nations, Greece and Turkey. Albania, another satellite, is in our very midst. Soviet Russia borders directly on Turkey. Obviously, measures must be taken to protect against any enveloping movement toward the Middle East which would outflank our forces on the right.

The principal means of communication between Italy, Greece, and Turkey are the Mediterranean and adjacent waterways connecting with the Mediterranean. It is of paramount importance that the free use of these sea lanes of communication be available to us at all times to insure proper logistic support, movement of forces, and the like.

Directly facing us, too, is a large number of Soviet and satellite army divisions; thousands of modern combat aircraft of the U.S.S.R. and her satellites; and a good portion of the Soviet Navy—second largest in the world. The Soviet fleet, including that segment which is deployed in the Black Sea, is well balanced with cruisers, destroyers, and submarines. The Soviet submarine force is the largest in world history—many times the size of the German U-boat force which terrorized the seas during the two great wars. This force is the Soviet's principal offensive naval threat.

The defense of Italy's rugged mountainous northern and northeastern frontiers rests in the hands of Landsouth. The importance of Italy to the defense of Western Europe cannot be overemphasized. In the words of the then General of the Army Eisenhower, when he was Supreme Allied Commander Europe: "Italy, projecting into the Mediterranean, offers us a strong lateral position and sea and air bases of tremendous value."

Supporting the Italian armed forces is the U.S. Army's Southern European Task Force (SETAF). In time of war, this force would be responsible to the commander, Landsouth. In time of peace, it is administratively responsible to Headquarters, U.S. Army, Europe, located in Heidelberg, Germany.

Within SETAF is a missile command—the first such command organized overseas. It is a medium missile outfit, which means that it employs the Honest John rocket and the Corporal guided missile, both medium range weapons. The missile command is at Vicenza, a few miles east of Verona, where SETAF headquarters is located.

The commander of Landsoutheast is responsible to me for the overall conduct and coordination of land operations from the eastern mountains of Turkey to the western shores of Greece. Izmir was selected for reasons of its locality, communications, transportation, and weather conditions. A small advance headquarters, capable of being expanded rapidly in the event of war, is located at Salonika, Greece. In Landsoutheast, there are two assistants to the commander, a Greek general and a Turkish general.

When Greece became a member of NATO, the Western democracies plugged one of the last Balkan gaps through which communism might flow. Bulgaria and Albania were already Red satellites, but Greece's adherence to the North Atlantic Treaty Organization stalled the Soviet steamroller on her border.

Today Greece has one of the toughest armies in NATO. It is, furthermore, an army rich in tradition and esprit de corps, led by veteran combat officers who saw service in World War II, in guerrilla action, and in Korea. And it is firmly, unequivocally anti-Communist.

The hard core of the Turkish Army is composed of professional soldiers—officers and noncommissioned officers trained in leadership. But Turkish strength is in some 400,000 men, most of them hardened by the rugged life of farm and plain, who are performing their 2 years of military service. Their loyalties are unquestioned. They are steadfastly opposed to communism and Communists.

Turkey's modern armament was improved greatly last year with the completion of negotiations for construction of an intermediate ballistic missile range. The IRBM's, which have a 1,500-mile range and which can be armed with nuclear warheads, could be fired against any of the European territory of the Soviet Union and against a large part of central Asia.

In each of the three countries of the southern region is a balanced force of atomic strike, conventional fighter bombers, reconnaissance, air defense, and transport aircraft. In each zone we have also various surface-to-air missiles, the control and operation of which are integrated with that of the aircraft. These forces, assigned to Airsouth, are aircraft organized in two Tactical Air Forces—the 5th, based at Vicenza, Italy, and the 6th, based at Izmir, Turkey.

Under the 5th ATAF is the Italian 56th Tactical Air Force, at Vicenza. Under the 6th ATAF are the Greek 28th TAF, with headquarters at Larissa, Greece and, in Turkey, the Turkish 1st TAF, at Eskisehir, the Turkish 2d TAF, at Ankara, and the Turkish 3d TAF, at Diyarbakir.

The Italian Air Force was a charter member of Airsouth. Even before the formal activation of the present 5th Allied Tactical Air Force, on October 14, 1953, Italian fliers performed ATAF functions on an interim basis. Today, the Italian Air Force has reached a strength of 50,000 men, servicing and flying several hundred jets, interceptors, and fighter-bombers.

A substantial addition to the potential of Afsouth—and of NATO general—is the Italian aviation industry. The Fiat G-91R, an Italian-built jet aircraft, was selected recently to be the NATO lightweight strike reconnaissance aircraft. This was the first major item of equipment designed especially for use by NATO forces.

The Royal Hellenic Air Force has a strength of about 20,000 men. During the past 10 years, it has undergone a remarkable evolution in which obsolete propeller aircraft have been replaced by jets; new airfields designed for modern craft have been constructed; radar warning and control systems, and modern means of telecommunications have come into being.

The fighting squadrons of the Royal Hellenic Air Force are equipped with F-84 and F-86 aircraft, guided missiles of the Nike type, and all-weather fighters.

When Turkey entered the NATO alliance she committed immediately all three of her newly organized, tactical air forces to the cause of Western freedom.

Air coverage of this great land of 300,000 square miles, with its 1,000-mile land and sea border along the "Iron Curtain," is of vital importance to NATO defenses. Turkey is probably the most exposed NATO country.

The Turkish Air Force fighting squadrons are equipped with F-84, F-86, and F-100 type aircraft and Turkey has more than a dozen excellent air bases.

The sea power of this command is provided by "Strikforsouth." As I have mentioned already, Strikforsouth is the U.S. Sixth Fleet, a modern, well-balanced naval force which includes an attack carrier striking force, an amphibious landing force and a variety of auxiliary ships, which enable the fleet to operate indefinitely at sea without shore bases. It is always battle ready.

The fleet normally consists of about 50 ships, manned by 25,000 men and carrying about 200 planes.

Exercises are conducted periodically each year by these forces to insure that every available man and weapon may be brought to bear as quickly as possible to defeat any aggressor as soon as possible. This is the aim of any military commander, and, of course, it is what we are striving for, too.

Our aim is to attain perfection in operational planning—perfection in the execution of plans drafted and approved—and to test our ability to revise and improvise these plans under unexpected conditions and unforeseen developments. Our exercises are directed also toward testing the combat spirit, the effectiveness and flexibility of all units; the adequacy of supplies for any emergency; the adequacy of training; and the effectiveness of communications.

There are still problem areas, of course, for the purpose of all operational exercises is to uncover weaknesses, to reveal the needs for further training, better coordination, improved planning and further study. However, on the whole, we are gratified by the tremendous progress that has been made since this command was activated by Adm. Robert B. Carney on June 21, 1951, on the U.S.S. *Olympus*. At that time, only one southern European country, Italy, was a member of the alliance, and there were few military and naval units committed to NATO. One year later, however, Greece and Turkey joined us, and there is now a strong organization of fighting men ready and able to provide support.

During the past decade, impressive advances have been made in training, in planning, in operational readiness, communications, construction and supply, and especially in our understanding of each other's methods and in our ability to work together as a smoothly functioning organization. Our building program has included airfields, naval bases, oil pipelines, and storage systems and sites for air defense missiles. In the recent fall exercises, our performances in air defense, air support of ground forces, the operation of amphibious forces, communications, and antiaircraft and antisubmarine defense measures met, or exceeded, our highest expectations.

Much still remains to be accomplished, but the strides which have been made in southern Europe and in NATO generally are

evident. The accuracy of this statement is readily borne out by the fact that in this area, as elsewhere throughout NATO, we continue to thwart the primary objective of the Communists, which is to destroy the Atlantic Alliance. It is inescapably obvious that this is the first step in their campaign to crush and govern the world.

When NATO was established in 1949, it was an association founded largely on hope and faith. It has fully justified both. Determination, hard work, dedication and countless sacrifices have achieved a degree of solidarity within NATO never before attained by any alliance during peacetime. It is an alliance that is unique in that it possesses permanent forces-in-being as contrasted to the paper organizations of other alliances which, in the event of aggression, must first form and then act. The prospect of facing the dedicated people of NATO and our forces in being requires pause and deliberation by any would-be aggressor before he decides to trigger a war that could result in self-destruction.

Much of what takes place in the world today transpires in an atmosphere of tension created and deepened by the dangerous practices of Communist leaders' intervention and meddling in already serious situations with the ever-prevalent possibility that their tactics will incite a war of catastrophic dimensions. Their tactics are calculated to destroy everything liberty-loving people revere and represent.

However, it is my conviction that the stature of the men who represent us in the conduct of NATO business insures the greatest protection possible in these tenuous times, and that their wisdom, supported by our potentials in manpower, industry, and commerce, by our scientific knowledge and by our great spirit, will deter the Communists from intentionally inciting war. No one is going to take over the entire world, and especially that portion of it protected by our alliance. We intend to remain free and we will remain free.

It appears obvious that the determination, vigor, and spirit of NATO's people serve as a major deterrent to any overt act on the part of the Communists—determination, vigor, and spirit which have exerted a stabilizing influence not only on the Soviets but on all free nations everywhere. These free nations have taken heart as a result of our firm stand, which has not yielded 1 inch of NATO territory to Soviet domination since the signature of the Atlantic Treaty nearly 12 years ago.

Spirit is the one thing we have in abundance in Southern Europe. This is something in which we acknowledge no peer. I never cease to be moved by the great spirit I observe everywhere in my travels throughout this area. No one country and no one region of any country of the area has a monopoly on these expressions and evidences of this great spirit, but it is probably epitomized by the following remark made to me by Lt. Gen. Athanasios Frontistis, Chief of the Hellenic National Defense General Staff:

"This poor land with its many problems and difficulties is our lot and our love. We always have and we always will defend it against all aggressors. We want your help, we expect your help, and we are grateful for your help. But, with or without your help, we will always fight to defend Greece."

Despite repeated Soviet diplomatic threats, Greece has remained steadfast in its support of NATO. It is this type of spirit, prevalent everywhere in southern Europe, which convinces me that I am right when I speak of our responsibilities and our determination to defend this area, and say:

This we will do.

One of the missions of all NATO commands is to press for the victorious conclusion of any war that may be forced upon us.

This, too, we will do.

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided,* That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p.m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p.m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided,* That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided,* That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further,* That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided,* That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

Appendix

Jefferson-Jackson Day Address by the Vice President

EXTENSION OF REMARKS
OF

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Wednesday, April 12, 1961

Mr. KEFAUVER. Madam President, last Saturday, in Nashville, I was privileged to join nearly 3,000 of my fellow Tennessee Democrats in hearing a most heartening address by the Vice President of the United States and the Presiding Officer of this body, the Honorable LYNDON B. JOHNSON.

Vice President JOHNSON had just returned from a trip to world capitals in Europe and Asia; and his first public report on his tour was to the effect that the tide is running for the United States, not against it, in the hearts of the peoples of the world.

The Nashville Tennessean, published by our mutual friend, the Honorable Silliman Evans, Jr., on Sunday published the text of the Vice President's address. I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

WE MUST NOT LOSE THIS GOLDEN MOMENT

I know of no place I would rather be tonight than here in Nashville—among some of the oldest, most cherished, and most devoted friends any man ever had.

I have a story to tell. I am glad to tell it here for the first time. It is a story that will thrill and excite all Americans—as it does me—without regard to party. But remember what you will never forget of Tennessee's past 30 years ago, having seen the miracle you have seen wrought along this valley of the Tennessee, you will feel a very special enthusiasm—and a very special pride.

Only 24 hours ago I returned to the United States. For 7 days I had been flying 13,000 miles on a mission for our country—a mission requested by the President of the United States. I had flown to San Juan, Puerto Rico, to Dakar, Africa, to Geneva, Switzerland, and to Paris, France. I flew at the request of the President of the United States—to carry the message of America's determination to build strength for freedom and hope for peace.

I left with many messages. I returned home with a far greater message than I carried abroad. I came back with a message from the people of distant lands echoing in my ears—a message of a great and new outpouring of trust and enthusiasm and faith in America.

SHOWCASE FOR DEMOCRACY

It began in the Latin world of Puerto Rico—that marvelous island showcase for democracy where men who have chosen the way of freedom are surging forward to a prosperity and social justice undreamed of a generation ago. My coming was unannounced. But when I arrived, we began to visit in the humble homes of workingmen, walked through the slums they are clearing away, went through the factories of their Operation Bootstrap, visited the young people on the campus of their university.

As the car passed, men and women and children would shout "Viva Kennedy, Viva Kennedy."

The next day we flew across the Atlantic to Dakar in the proud new Republic of Senegal. Twelve hours earlier the plane bearing the delegate of the Soviet Union, Mr. Jacob Malik, had landed, and there was no greeting. We landed in the hours after midnight. There at the foot of the ramp—in long white robes—stood Senegal's brilliant Prime Minister, Mr. Dia.

HE EXTENDED HIS HAND

Behind Mr. Dia were the members of Senegal's famous Red Guard—in flowing red capes with swords drawn. The Prime Minister extended his hand and said:

"Mr. Vice President, there are kinships between the Senegalese people and the American people—the ardent love of liberty is characteristic of your people and my people. Now that we have recovered our liberty, we wish to be more than ever the champion of that liberty and democracy. We know that in this struggle we can count upon the American people with President Kennedy at their head. You are in a friendly country, among friends."

The next day day we presented our credentials to the new nation's President, Mr. Senghor. We went back to the automobile and began riding through the streets. Along the curbs thousands were gathered and as they saw the car coming—with the American flag on it—they crowded into the streets, reached out to shake hands, reached out to touch, shouting: "Long live the United States, champion of independence."

THERE IN THE DARKNESS

Three days later we landed after nightfall in the great world city of Geneva, Switzerland—far from Africa's heat in the great snow-covered Alps. There in the darkness stood a great crowd of friendly, smiling men and women—waiting patiently for hours so they, too, could cheer your country.

The next day it was Paris—and once again the same. At the headquarters of our NATO forces—our old and trusted allies from Western Europe gathered round wherever we went to express the warmth and faith they felt for the United States, and for the new administration. On the streets and along the boulevards, whenever we were identified, spontaneous cheers came forth again from our old and cherished allies, the French.

In the important and decisive duties at Paris—both as Ambassador to France and Ambassador to NATO—two great Americans of the highest intellectual abilities serve their country at great sacrifice. There are no two men of more outstanding character or higher attainments in their field than General James Gavin and Thomas Finletter, the former Secretary of the Air Force.

STRONG REPRESENTATIONS

These two men—together with General Lauris Norstad, Supreme Commander of the Allied Forces in Europe—constitute one of the strongest representations that this country has had in our old ally of France since the days of Thomas Jefferson and Benjamin Franklin.

With this strong representation America is serving notice on those who would divide the Western alliance that we are placing new and great strength at the heart of Western Europe to add new strength to the alliance on which freedom has stood for so long. With Americans leading the way, the strong democratic nations of the Western World are going to reach out to help create in new nations the rising levels of opportunity which we in these countries enjoy and want all free men to enjoy with us.

On and on I could go. What I heard from the lips of the people, I saw mirrored in the eyes of their leaders—leaders from more than 70 nations I met during the week. There was hope. There was trust. There was optimism. There was confidence, confidence in America.

THE RUNNING TIDE

I want you to know—and I want all Americans to know—that this is happening. I say to you, the tide is running for the United States, not against it, in the hearts of the peoples of the world.

The greatest and grandest opportunity to lead the world toward peace and toward freedom is opening before this generation of Americans. We must not, we shall not fail that opportunity or lose this goldern moment.

I do not say that the trials are past or that the tests are over—because I know they are not. But I do know that the world of men who want to be free—the world of men who want justice in their times and opportunity for their children—the world of men who want to build instead of bicker—that great world is looking to America with a faith not seen in many a long and barren season.

WHY IS THIS SO?

Why is this so? It is so because the world believes that America has now the leadership to bring our great strength alive once more—leadership to make America young and confident again—leadership that personifies American faith rather than preaching doubt. The world knows, the world likes, the world trusts the President of the United States, John Fitzgerald Kennedy.

That is one reason I am proud to be here with you for this first report on this first mission into the world. It was here in Nashville, 8 months ago, that the Democratic campaign began. I shall be grateful to you for that wonderful evening. Ten thousand Democrats filled the park. From throughout the South, great Democratic Governors—Hodges of North Carolina, Combs of Kentucky, Collins of Florida, Patterson of Alabama—came to stand beside your own Buford Ellington.

Together they took their stand behind the Democratic Party—and stood their ground all the way. From that night on, I never doubted that Democrats would win.

NO PARTY LINES

But feeling as I feel tonight, I do not find it in myself to speak of party concerns. For peace is not a partisan work and freedom has no party lines. The work before Americans today—the challenge before Americans today—the opportunity before Americans today knows no partisanship, gives no favors, tolerates no division.

This moment of opportunity is so great—and so rare—that unity and only unity is the response of responsible Americans.

When I was with you last summer, at the start of our campaign, I said then what I would repeat now. Wherever I go, whatever I may do, I shall never speak as southerner to southerners, Protestant to Protestants, or white to whites, but only as an American to my fellow Americans.

AS AN AMERICAN

Tonight I speak only as an American when I call to all Americans—of all regions, of all races, of all religions—to lay down divisions of past and party and take up the cause of supporting the man who speaks for America in the world: the President of the United States, John F. Kennedy.

America at this moment stands at the center of the world's stage.

The world's eyes are upon us.

The world's ears are listening to us.

Rarely have Americans had so splendid a moment to lead toward the goals in which Americans all believe.

At stake is the future of your children—and mine—and Jack Kennedy's. The world those children will live in is being determined by how Americans respond to the world of today. The burden of decision—the burden of leadership—rests upon one man: our President.

DAYS OF TRIAL

The first 75 days have proved John F. Kennedy.

These trying days have proved his capacity for greatness.

He has met the Communist threat in Laos—and all Americans approve. He has met the challenge of alliances in disrepair—and he is mastering them. He has raised the sights of Americans—and raised the hopes of the world.

Let all of us—of all parties—say now, at this hour, as our President said: "Ask not what your country can do for you—ask what you will do for your country."

AMERICANS AT WORK

I saw Americans out doing for their country this week.

I saw a quiet, modest young man living with his family in Africa—a man named Jack Vaughn—going among the people of Senegal and other lands seeking to start them up the same road to a better life men have walked here in Tennessee.

I went beside him into the village of Kyar—40 miles from the city streets of Dakar in the brush of Africa at the edge of the great Sahara. There men live their lives on $6 a month or less. There the practice of medicine is older than the birth of Christ.

There blind children play about in the mud and filth of an ancient society. There illness afflicts nearly every person, young or old—illiteracy blights their lives—and their horizon is no greater than the eye can see.

TO IMPROVE LIFE

I asked the chief of the village what he most needed—what would he like to have to make life better for his people? His answer was not a great loan or a great gift. He wanted one thing: a motor for a boat to help his tribesmen in their trade of fishing. I didn't wait to pass a bill through Congress—I told him when I got home I would send him one.

I talked to their President and he told me he was dedicating his new government not to building great arms, not to embarking upon strange doctrines and philosophies, but to one goal: putting every child in a classroom in 10 years.

I talked to their Prime Minister. He told me that his government wanted no gift, no giveaway. His government has planned an orderly 4-year program to raise the people upward—and for that program, he said, they want loans to repay, not gifts to take.

FOR HIS COUNTRY

Yes, far from Africa, in Geneva, I saw another American—a wealthy lawyer, a corporation lawyer, relinquishing his practice, relinquishing his opportunity for personal gain and even financing activities for the benefit of his country out of his own pocket.

Why was he in Geneva? For his country, for mankind. Mr. Arthur Dean is there working every day to develop a treaty with the Soviet Union to end tests of nuclear bombs—a first step toward peace for our children.

Mr. Dean is a Republican—but politics matters not to him as it should not dominate any of us. He is there to carry out the wish of your President that the United States go as far as it can go, try as hard as we can try to bring agreement on this important subject.

I want you to know that your Government will do everything—repeat, everything—that honorably can be done to make this step toward peace. If these efforts do not succeed, the failure will not be on the conscience of freemen.

THESE INSPIRING STORIES

On and on I could go with these inspiring stories of the great works being performed by responsible and self-sacrificing Americans everywhere. All these stories only underscore what I know your President believes: that this generation in this country is ready and willing to go to work proudly for their country's cause.

In this world today, the cause of your country is little different from the cause of your country 30 years ago in the valley of the Tennessee River. Over much of the world, men live now as Tennesseans themselves were living not long ago—living in poverty, living in sickness, living without schooling, living without real hopes for a better life.

But where men live in such fashion—whether in Africa or Asia or Latin America or elsewhere—there is about them the resources of nature to make their lives better as life here has been made better.

THE WORLD AWAITS

People who have done here in the Tennessee Valley Authority what Americans have done can offer to the world the leadership the world awaits. We are ready to try—and try we must.

That is the challenge of your President today.

Try for peace, try for freedom, try for a stronger alliance among free nations, try for better relations with old allies and for good relations with new nations.

We know the road is long, the way is hard, the turns are many. We know that before success is finally achieved there will be disappointments to endure. We know there are threats that will require steel nerves and opportunities that will require warm hearts—and America has both.

The times can be ours—if we are equal to them.

THE RALLYING POINT

That is the demand pressing down upon us: to see if we are big enough to lead history's biggest cause—or only so petty the cause is lost in partisanship.

As a Democratic President—Grover Cleveland—once said: "It is a condition that confronts us, not a theory." A condition confronts us in the world today—not a theory. The world needs desperately those basic things we take for granted casually, and both first and last the need is for leadership.

This administration is on the way to becoming the rallying point for freemen everywhere. For sake of country—never for sake of party alone—we must not fail.

MESSAGE TO AMERICANS

Let me conclude tonight with this message—a message not to Democrats alone, but to all Americans.

It has been said that those who would forget the past are condemned to relive it.

In our past history, our most tragic national experiences have come when partisan divisions among us were misinterpreted by those who were against us.

THE KAISER MISREAD

The Kaiser misread the close elections of Woodrow Wilson and made the move for world domination which precipitated World War I. The Japanese war lords misinterpreted the divided Government in 1930 and moved into Manchuria. Mussolini did the same 25 years ago amid a period of partisanship here and moved into Ethiopia. Hitler did the same 20 years ago and moved into Poland.

When Americans divide, the world is open to warmakers. When Americans unite, the world is open to the peacemakers.

This we must not forget. This past we must never relive.

Blind partisan divisions are a threat to the peace of our world. Blind partisanship is a folly this generation of Americans cannot afford. Such partisanship is America's greatest danger to its own peace and security today.

RAISE THEIR VOICE

Americans who love their country, love peace, love freedom, must raise their voice against the folly of those who try to tie the hands of the men who lead our own land.

I call upon you—Republicans as well as Democrats—to make it clear that the only acceptable partisanship in these times is construtcive partisanship which respects America's position in the world.

Thomas Jefferson said to his countrymen when he was elected by the smallest of margins—"We are all Democrats. We are all Republicans."

ACCEPTS NO DIVISION

As with our party's founder, so with our President today. President Kennedy accepts no division among our people—not divisions of party, of religion, of race. It is to this work of maintaining the Nation's unity that Democrats must now dedicate themselves.

If our President is to do the work American leadership must do in the world, we who are members of the President's party must do our work at home.

By our conduct in political affairs we must show the world's new nations what mature responsibility means. To keep the peace, let all of us declare war upon the partisan divisions among us and send our President into the world with the support of a fully united America.

The Practical Nurse Training Extension Act of 1961

SPEECH

OF

CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 11, 1961

Mr. HOFFMAN of Michigan. Mr. Speaker, this bill provides an appropriation of $40 million; does it not?

Mr. GIAIMO. Five million dollars per year.

Mr. HOFFMAN of Michigan. Forty million dollars; is that right?

Mr. GIAIMO. For how many years?

Mr. HOFFMAN of Michigan. This bill—this is a comparatively simple question, I hope—authorizes an appropriation of $40 million; does it not?

Mr. GIAIMO. I am under the impression it authorizes $5 million a year for 4 years.

Mr. HOFFMAN of Michigan. For 8 years.

Mr. GIAIMO. A total of $20 million.

Mr. HOFFMAN of Michigan. It provides $5 million for 8 years; does it not?

Mr. GIAIMO. Five million dollars for 4 years—a total of $20 million.

Mr. HOFFMAN of Michigan. Where does the gentleman get the four? In the bill does it not say eight?

Mr. GIAIMO. I may say to the gentleman we are asking for an extension of the program for 4 additional years.

Mr. HOFFMAN of Michigan. Section 201 reads:

There is hereby authorized to be appropriated for the fiscal year ending June 30, 1957, and for each of the next 8 fiscal years a sum not to exceed $5 million.

Mr. GIAIMO. That was the original bill.

Mr. HOFFMAN of Michigan. That is $40 million in my book. Is it the purpose to substitute the Senate bill?

Mr. GIAIMO. It is the purpose to substitute the Senate bill.

Mr. HOFFMAN of Michigan. Why?

The SPEAKER. The Chair may say that that has already been done. The gentleman from New York moved to suspend the rules and pass the Senate bill.

Mr. HOFFMAN of Michigan. Why?

Mr. GIAIMO. I cannot answer that question.

Mr. HOFFMAN of Michigan. I think that is all.

Loyalty Oath on the New Frontier

EXTENSION OF REMARKS
OF
HON. MELVIN R. LAIRD
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 12, 1961

Mr. LAIRD. Mr. Speaker, under leave to extend my remarks, I wish to insert into the RECORD an editorial from the Wisconsin State Journal, Madison, Wis., under date of April 10, 1961, as follows:

LOYALTY OATH ON THE NEW FRONTIER

Wallace L. Mehlberg, a Pierce County farmer, is new chairman of the Wisconsin Agricultural Stabilization and Conservation (ASC) Committee.

That's the agency that administers the farm programs from Washington. Its authority comes down through counties and on to the township level.

Addressing his ASC county committeemen and office managers last week, Mehlberg declared:

"The ASC is not and shall not become a political organization. However, we all realize the extreme difference of direction we are now taking in the field of farm legislation.

"We need and we shall find people who are and will be dedicated in the promotion of this new approach. Let there be no doubt about that."

He further noted that all ASC personnel had the duty and responsibility "to take a personal inventory of your activities in the past 8 years and conscientiously determine if you are an asset or liability to the progress and promotion of the liberal farm legislation which people in your offices and areas can administer in a dedicated and efficient manner."

The 8 years he referred to were those under former Secretary of Agriculture Ezra Taft Benson.

The chairman said that he contended that "ASC personnel who wholeheartedly supported and promoted the programs of the past administration owe it to themselves and the farmers of Wisconsin to step aside or do a complete about-face if they are to place themselves in a position to sell Secretary Freeman's feed-grain bill and all legislation now in the process of enactment."

The implication of Mehlberg's remarks is that a Government employee in the ASC organization could not do a job for one Congress and still carry out a program that is coming from about the same kind of Congress.

This kind of talk does not reflect the situation in Wisconsin—and does not help agriculture. ASC office managers and county committeemen have done a job that even Mehlberg should be proud to commend.

The real gain in Wisconsin's program has been the increasing cooperation of all agricultural agencies.

Mehlberg has nothing to condemn except his own political approach to a nonpolitical program.

He might recall how Wisconsin voted in the past election. And he might think twice before telling Federal employees to sell programs hatched by Secretary of Agriculture Orville L. Freeman.

Tribute to Ronald W. May

EXTENSION OF REMARKS
OF
HON. WILLIAM PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES

Wednesday, April 12, 1961

Mr. PROXMIRE. Mr. President, a moving tribute to Ron May, Washington correspondent for the Madison, Wis., Capital Times, was written by Ed Koterba, United Features Syndicate columnist Tuesday. It appeared in the Washington Daily News of April 4. May died Monday morning of a heart attack.

Mr. President, Ron May was a diligent, imaginative reporter. He was a hard, conscientious worker. He had a sensitive heart for the little people, and indignation against injustice and arrogance. His book—with Jack Anderson—"McCarthy, the Man, the Senator, the Ism," was a courageous and useful exposé. May wrote many a revealing, informative story for the Capital Times on the misuse of power in this capital of the free world. My sincerest sympathies go to Rons' lovely wife and family.

Mr. President, I ask unanimous consent that the article entitled, "There Is an Empty Space in the Gallery," from the Washington Daily News for April 4, be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THERE IS AN EMPTY SPACE IN THE GALLERY

(By Ed Koterba)

In the U.S. Senate press gallery, opposite this desk, stands an empty typewriter.

In the afternoons over the years, as I'd sit at my machine, trying to make it say something, I'd glance over at Ron May at that other machine. I envied his capacity for work, the way he poured out reams of copy hour after hour—all of it good.

The other boys marveled at his dogged, diligent attitude in digging out the "cover-up" stories. A reporter's reporter, always on the go.

BIG BREAK

His biggest break came just a week ago. Ron was vibrating with wound-up emotion. "Life magazine," he said, "is planning to buy my story." He had been working on it for a year. "I'm meeting with their people tonight," he said.

Hard work paid off for young May. He had just moved into a new home in suburban Maryland (at 4809 Middlesex Lane, Bethesda), then he and his wife were blessed with their second child.

Ron, tall and lean, had been saying he was going to spend more time with his kids. It was amazing how he was able to keep so many news irons going in his never-ending blaze of journalist endeavors. He corresponded regularly for a half-dozen newspapers. Then he freelanced for others. He was always pounding away.

HAD TIP

Last weekend, he bubbled over to my desk. "I have a terrific tip for a column for you," he said. He spelled out the story and was to supply a key name from his files at home.

"I'll have it to you first thing Monday morning," he said. If it all checked out, it would make a fascinating story.

Monday morning, I was at this desk, scanning the CONGRESSIONAL RECORD, awaiting young May's breezy entrance. Instead, Joe Wills, superintendent of the gallery, came up from behind. He said:

"Ron May just died at his home—of a heart attack."

(Services will be held tomorrow at 2 p.m. at the Ft. Myer Chapel. Burial will be in Arlington Cemetery.)

PENALTY

This fine young lad, though his name had not yet carried the fame of an O. O. McIntyre, Arthur Brisbane or Ernie Pyle, had paid the penalty too often assessed against our world of promising, hard-working newspapermen.

My friend, Ron May, had, in death, kept his promise to me. Among his last words to me were: "I'll give you a column to write." I wish it hadn't been this one.

The Duties of Citizenship

EXTENSION OF REMARKS
OF
HON. JOEL T. BROYHILL
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 12, 1961

Mr. BROYHILL. Mr. Speaker, a young student at Washington-Lee High School in Arlington, Va., Mr. Jay Kelly Wright, has been declared winner of the American Legion high school oratorical contest in my 10th Congressional District.

I have read Mr. Wright's oration and think it excellent. I am proud, indeed, to present it for inclusion in this RECORD so that my colleagues can have the benefit of the sincerely patriotic reflections of a fine northern Virginia youth:

THE DUTIES OF CITIZENSHIP

(By Jay Kelly Wright, winner, 10th Congressional District of Virginia American Legion high school oratorical contest)

On September 17, 1787, the Constitution of the United States was submitted by the Constitutional Convention to the 13 Original States for ratification. After nearly 4 months of considerable disagreement among the delegates, sharp debate, and compromise, the honorable statesmen who were delegates to the convention agreed upon a plan for the establishment of a new Government for the United States. The document they produced was a blueprint of the structure of this new Government. It divided Federal governing authority among three branches, defined and limited the powers of the Federal Government, and clarified the position of the State governments. It provided for its own enforcement, interpretation, and amendment, so that it might have the proper amounts of both rigidity and flexibility necessary for it to be effective as the Supreme Law of the Land not only at the time it was written, but also in the years to follow. The Constitution was, in short, a plan to secure permanently for the citizens of America the inalienable rights and privileges with which all people are endowed. In the words of the preamble, it was designed "to secure the blessings of liberty to ourselves and our posterity."[1] The Constitution, then, in defining clearly and precisely the powers of the Government, insured the protection of the rights of each American citizen.

Today one hears a great deal about the rights granted by the Constitution. There are arguments concerning the relative rights of the Federal and State Governments and, more often, disputes involving an individual's rights in relation to those of the higher governments. Most American citizens seem to know something about their constitutional rights. Although they are not students of the law they nevertheless have some knowledge of their basic liberties, such as freedom of speech or the right to assemble. At any rate, they are quick to sound off about their rights and profess such knowledge, especially when they feel they have suffered infringement of their legal privileges. Unfortunately, much of the citizens' comment about rights is misdirected, for although many Americans are very concerned about the rights which the Government grants them, they have little thought for their responsibilities, in return, to the Government.

It is possible that some Americans have never considered their responsibilities to their Government. Perhaps they do not know that the Constitution not only grants rights but also imposes upon each individual certain obligations—the obligations of good citizenship. But here again, the many Americans are somewhat confused, for they are not certain of the meaning of the term "good citizenship." Perhaps they have always defined a "good citizen" as a law-abiding man. If so, they have been mistaken, for good citizenship involves more than mere obedience to the law. The democracy which the Constitution established is based on the sovereignty of the people, and its strength therefore depends upon an active, interested populace. If the people exercise their rights vigorously and intelligently, self-government is effective; but if the people neglect their government and allow it to deteriorate, poor government is the result. It is obvious, then, that the success of any democratic system requires that the citizens take an interest in their Government. It is also evident that a good American citizen is one who demonstrates such interest.

The good American has been generally defined as one who is interested in his Government. But what does this mean? In practice, what is a good citizen?

First, he is one who learns what is happening in his country. In America there are many media through which citizens can become informed about current events. The responsible citizen takes advantage of them. In newspapers and magazines, through radio and television he can learn about news event. In our modern world there is indeed little excuse for any citizen's ignorance about current happenings.

Second, a good citizen forms his opinions intelligently. After learning about controversial issues, the good citizen carefully weighs and considers the facts, then develops his opinions. He makes his own decision upon the facts, independent of the views of others. He does his own thinking, rejecting conformity, prejudice, or tradition as bases for judgment. His views having been formulated, the intelligent citizen constantly reexamines them in the light of new ideas or more recent evidence. His is a continual process of challenging his own views, then defending or rejecting them. He is always prepared to reverse his opinions should new evidence prove them incorrect. He never stubbornly clings to outmoded beliefs which have been discarded. He is prepared to move with the growth of his country.

Third, a good citizen is one who works to see that his ideals are carried out. He expresses his will through the ballot, or he participates in civic organizations to help to bring about implementation of his ideas. He works to campaign for the political candidate of his choice or he supports a community reform project in which he believes. He does not watch others take care of his responsibilities.

There are, then, three general duties of good citizenship which the Constitution, in granting rights, has placed upon every American. These are, becoming informed, formulating opinion, and carrying out ideals. The citizens who do not fulfill these are obstructions to effective democracy. The man who reads only the comic or sports sections of his newspaper, the man who is too busy with his business affairs to attend an important school board hearing, the man who is afraid to be the sole member of his community to speak for integration, the man who believes that America should return to the doctrine of isolationism, the man who votes a straight party ticket simply because his father and grandfather did so, the man who couldn't choose between Mr. Nixon or Mr. Kennedy, the man who feels that his vote simply doesn't count—all of them are detriments to democracy.

Today, as perhaps never before, it is vital that the citizens of America take a continuing interest in their Government. Without such interest our individual and collective security is threatened. America is engaged in an arms race and a cold war. At a time when the formidable bloc of Communist countries threatens the security of every free nation, America must be able to give undivided attention to maintaining her high position among the world powers. This she cannot do if she is plagued by the indifference, the lack of interest, and the unconcern of her citizens. Americans all must work with and give support to the Government if our country as we know it today is to survive.

One hundred and seventy-three years ago our forefathers established this democracy. Today it is the responsibility of each one of us, the citizens of America, to guard this gift and to keep it functioning. Indeed, it is the solemn duty of every American to meet fully his obligations of citizenship. If each of us will take the time and effort throughout our lives to study the issues, to keep an open mind, to express our views, to cast our votes, then we can be more assured that "government of the people, by the people, for the people shall not perish from the earth."[2]

Canada and the United States—A Traditional Friendship

EXTENSION OF REMARKS

OF

HON. FRANK J. LAUSCHE

OF OHIO

IN THE SENATE OF THE UNITED STATES

Wednesday, April 12, 1961

Mr. LAUSCHE. Mr. President, the week of April 23–29 has been designated by Kiwanis International as United States-Canada Good Will Week. The forthcoming observance of this week has been noted by the Kiwanis Club, North Ridgeville, Ohio, of which Mr. John C. Vopat is president. Kiwanis Clubs throughout the world, especially in Canada and the United States will emphasize the traditional friendship between these two neighbor countries.

It is appropriate, therefore, Mr. President, that there be given broad recognition of United States-Canada Good Will Week. A review of the long and unbroken period of peace and friendship between these two neighboring countries stands out in today's troubled world as a lesson, a guide—yes, an example—that should enlighten all nations.

Mr. President, I ask unanimous consent that my further comments on this subject be printed in the Appendix of the RECORD.

There being no objection, the comments were ordered to be printed in the RECORD, as follows:

CANADA AND THE UNITED STATES—A TRADITIONAL FRIENDSHIP

The traditional friendship which exists between Canada and the United States cannot be too often emphasized. Since the United States first emerged from the Revolutionary War there has been a mutual effort to promote good will and cooperation between the two countries. These efforts must never flag. The good relations must never be taken for granted. No condition remains static.

Before the eyes of the world our two countries have set an example of peaceful boundaries, happy relationships, and a common effort at understanding. We must not let that image fade. Complete accord is not always possible between two sovereign and independent nations. No two friends are constantly likeminded but differences of opinion need not alter friendly relations; indeed they may enhance them. For a willingness to arbitrate differences, and a distinct effort at mutual understanding may weld loose ties of acquiescence into strong bonds of cooperation.

The mutual desire of Canada and the United States to cooperate is evidenced by the fact that they have concluded nearly 200 treaties and agreements on a variety of subjects ranging from amity to weather.

Basic to our mutual good will and most renowned of our treaty arrangements is that

governing the boundary between the United States and Canada, the unfortified frontier. Provision for the abolition of armed forces on the Great Lakes and along the land frontier stemmed from the peace negotiations following the American Revolution. Effected by the Rush-Bagot Agreement of 1817–18, the undefended border by a series of treaties has been extended from the Atlantic to the Pacific, a stretch of almost 4,000 miles (3,987). Added to this are 1,540 miles of boundary between Canada and Alaska—a total of over 5,500 miles bearing witness to a mutual desire for friendship and understanding.

Another milestone in the history of the good relations between the United States and Canada was the treaty of 1909. By this agreement all of the waters along the international boundary were to be used for the benefit of both countries. The import of this provision may be inferred when one considers what a large proportion of the boundary consists of water. Of the 3,987-mile stretch from the Atlantic to the Pacific only 1,789 is land, and 2,198 is water. Another 183 miles of water and 1,357 of land mark the Alaskan boundary. In order to insure the effectiveness of this arrangement the treaty also provided for a permanent International Joint Commission—United States and Canada. It was established and has operated harmoniously for over five decades, resolving the innumerable problems which inevitably arise when the peoples of two great nations share the thousands of miles of water resources along the common border.

More specific arrangements concerning the use of particular bodies of water along the boundary have also been momentous in the development of mutual benefits and understanding. The treaty relating to the uses of the waters of the Niagara River, signed in 1950, took the place of earlier ones and provided for a vast increase in the power output of the Niagara River, but with safeguards to preserve the scenic beauty of the famous falls. An equal diversion of the waters available for power, without disturbing the unbroken crestline of the falls, made it possible for both countries to provide for large areas of their population a source of cheap power and development, at the same time preserving for posterity the world-renowned grandeur of the natural scenery.

The culmination of decades of effort to resolve the question of the joint use of the whole of the great St. Lawrence was realized finally with the signing of the treaty of 1954. It provided for the construction of facilities for navigation which were to open up to ocean-going liners passage through the giant seaway stretching from the mouth of the St. Lawrence to the westernmost tip of Lake Superior. This massive cooperative project was also of immense importance to the future development of electric power. Above all, however, the significance of the treaty lay in the fact that the United States and Canada, looking together toward the protection of world peace, and with mutual concern for any situation that might arise, gave evidence of a really effective working partnership between two independent and sovereign nations.

The most recent treaty between the United States and Canada is likewise a momentous one. On January 17, 1961, the two countries signed the Columbia River Treaty. It represented the solving of difficult and complex problems by resourceful collaboration. At the signing ceremony the Prime Minister of Canada, Dr. Diefenbaker, said, "[It] is more than a blueprint for technical and economic cooperation. * * * It is a symbol of intelligent partnership. * * * Indeed, there could be no more impressive evidence of the capacity of the United States and Canada to pioneer in new methods of cooperation to their mutual advantage." [1]

The magnitude of this vast cooperative undertaking can be only faintly conceived when one considers that of some 24 separate projects listed in the treaty, one alone involves the mighty Grand Coulee and another the enormous Bonneville Dam, and that there are multiple aspects to each project of collaboration.

The opening up of the St. Lawrence Seaway has already meant that the ports on either side of the Great Lakes have had a phenomenal increase in exports. They have set records for oversea and total tonnage. In the harbors, docks and facilities are being rapidly expanded to keep pace with the Seaway traffic development.

Canada and the United States are the greatest trading neighbors in the world. Not only are they each other's best customers, the volume of trade is such that the United States is the third largest and Canada the fourth largest of the trading nations around the globe.

This large scale contact in business and commerce bears witness to the good relations between the United States and Canada in the economic field. There must be both mutual understanding and forbearance between countries to maintain good will. For joint economic, commercial and business interests not only create benefits. They promote rivalries and create problems as well. We find Canada and the United States making definite and concrete concessions in order to insure that the relationship is not only pleasant but mutually beneficial. There is vigor in the effort of the two countries to find solutions to difficulties; and this effort engenders approval and appreciation.

The volume of travel between the United States and Canada is tremendous and constantly increasing. Of the 27,329,000 persons traveling from Canada in 1957 (the latest available figures) 99.6 percent went to the United States. The total number of Canadians crossing to south of the border was 27,209,000. 26,619,000 citizens of the United States went to Canada that year. This figure represented 97 percent of all of Canada's visitors in 1957.

The expenditure of these U.S. citizens in Canada during that year was $325 million. That of the Canadians in the United States $403 million. The latter figure represented an increase of about 400 percent over the previous 10 years.

Travelers to and from Canada and the United States went by automobile, rail, boat, aircraft, international bus, local bus, and on foot. By far the greater number, about two-thirds, traveled by auto on short-term visits, under 48 hours.

Travel facilities between the two countries are well coordinated. The courtesy with which Americans are treated while traveling in Canada is memorable for those of us who have been there. The customs officers perform their tasks with tact and the minimum of inconvenience to the visitor. It is to be hoped that our Canadian visitors are equally happy with the treatment they receive at our hands.

The coordination of transportation between the United States and Canada is a matter of great importance to the vital field of defense, in which the two countries are inevitably and inextricably associated. In the realm of defense Canada and the United States have gone even beyond cooperation. There has been voluntary integration of many defense measures.

What is known as Norad—North American air defense—was formally established in 1958. Many cooperative steps in defense were already under way. Not since the first coordination in 1941—for World War II—had there, in fact, ceased to be consultation and preparation for joint defense. The present setup of Norad is, however, on a more extensive and more closely integrated scale than ever before. It includes the DEW line, a joint radar system for distant early warning. It stretches for 3,000 miles, across northern Canada to the Aleutian Islands, Alaska, and the Baffin Islands at the Northwest Passage.

Norad includes also the mid-Canada line, the Pinetree system, a number of radar extensions and observation posts, and SAGE. SAGE—semiautomatic ground environment—is an information-gathering system for air defense purposes. Eventually the entire United States and the more densely populated areas of Canada will be linked in one defensive network.

There is the Ground Observer Corps, made up of Canadian civilian interceptors, spotting planes that might fly too low for radar warnings. From the hilltops and the valleys they act as air-defense protectors.

There is coordination of defense production on a scale which would astonish the rest of the world, could the full story be told.

In the matter of civil defense there are regular exchange visits between the U.S. Office of Civil and Defense Mobilization and the Canadian Civil Defense authorities.

There are many fields of cooperation between the United States and Canada which I have not even touched upon. Of enormous importance and of as long standing as the two countries have been cognizant neighbors are their combined and adjusted fishing arrangements. Both bilateral and international agreements involving other countries such as Russia and Japan have been in effect since the 19th century and earlier, to regulate, preserve, and coordinate the various fishing interests of joint concern. There are many other economic as well as social and cultural fields of endeavor in which the Canadians and their American neighbors south of their border have combined their forces and their wits.

Good relations between the two countries cannot, however, rest upon the laurels of past peaceful policies. Nor can they be complacently regarded as permanently established, even in view of the many gratifying evidences of current collaboration. The maintenance of good relations for which these neighbors, Canada and the United States, are justly famous is dependent upon continuing effort, understanding, and initiative on the part of both.

To this end there has recently been established another very important bond between us. It is one of tremendous significance and potential efficacy. It is the Canada-United States Interparliamentary Group, composed of a number of the representatives of the people of both countries. It has been in existence about a year and a half and has periodic meetings to further cooperation, to discuss the common problems and means of settling inescapable differences with amity, mutual trust, and constructive understanding. One commentator has spoken recently of the treasured partnership between the United States and Canada. Another has said, "The unity, fellowship, and common dedication to the heritage of freedom is to the peoples of the United States and Canada a living thing." [2]

United Nations Military Aggression Against Katanga Government in the Congo

EXTENSION OF REMARKS
OF
HON. HOMER E. CAPEHART
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Wednesday, April 12, 1961

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "We Knock Ourselves Out," by Eugene C. Pulliam, publisher of the Indianapolis Star, which appeared in that newspaper on Sunday, April 9, 1961.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WE KNOCK OURSELVES OUT

Criminal folly—that's the only way to describe the United Nations military aggression against the Katanga state government in the Congo. The most alarming feature of the aggression is the fact that it has been made possible only because of U.S. Government support. This means that the United States in actual fact now is engaged in aggressive military operations against the constitutional and legal government of a nation which has done no harm to America and whose government is one of the very few African governments that openly proclaims its friendship and loyalty to the United States and the West.

Katanga is the southern, richest and best governed state, or province, of the Congo confederation. It is the only part of the Congo which never suffered any serious internal disturbances. The ruler of Katanga, President Moise Tshombe, is a well-educated, moderately conservative leader who has organized an efficient government and a small but well disciplined national army. He is supported by a democratically elected parliament and has not had any serious opposition to his regime since the Congo became independent in the summer of 1960.

Tshombe is, however, intensively hated by the Communists as well as by the "neutralists" represented in the Congo by the United Nations overlord, Dayal, an Indian Government official. Tshombe was the driving force behind the formation of the Congo confederation, proclaimed last month by all Congolese national leaders, but not yet recognized by the United Nations.

Tshombe never asked for United Nations troops to be sent to his country. He never asked for any U.N. military or financial assistance. He is on good terms with the former Belgian authorities in Katanga and has retained the services of about 600 Belgian and other European government financial and business experts. Tshombe's government is one of the few African regimes which shows amity toward the white man.

Yet Katanga has now been chosen by the United Nations Secretary General, Dag Hammarskjold, as the victim for "an impressive show of force." Without asking Tshombe's consent, the United Nations has sent several strong army detachments to occupy, by force, strategic points in Katanga, including the important airport of its capital, Elizabethville. Hammarskjold officially boasts in New York that his plan is to send, within the next few days, a total of 7,000 Indian troops to Katanga.

Hammarskjold makes no secret of the United Nations aims in Katanga—he wants the so-called foreign element in Katanga withdrawn. In practice, this means the forceful expulsion of the 600 Belgian and European military experts. But such an expulsion is sure to bring the downfall of the Tshombe regime which badly needs the services of these Western experts. Katanga would then certainly become the center of serious internal strife, after which, presumably, peace would have to be restored by the U.N. Indian troops.

We must also remember that the Indian troops were airlifted to the Congo by the U.S. Air Force at, of course, the expense of the American taxpayer. While in the Congo the Indians are officially paid, fed, and supplied by the United Nations. But, as Uncle Sam foots most of the United Nations Congo bills, it can be said without exaggeration that the American taxpayer is responsible for the operational costs of the Indian troops in Katanga.

The United States has thus been put in a truly fantastic situation. It pays for and supports aggressive military actions aimed at the overthrow of a foreign government friendly toward the United States. The troops engaged in these aggresive moves are under the direction of a "neutralist," Dayal, who hates America and is known to be "neutral" in favor of Moscow. And the political control of all these military operations is in the hands of an anti-American group of states—the so-called Afro-Asian group, which is led by such states as Ghana, Guinea, Mali, Indonesia, and Yugoslavia.

The United States is thus actively involved in aggressive military moves which are directed against America's own interests and which can only harm the cause of freedom and democracy throughout the world. To top it all, these incredible operations are supervised by an organization which has its headquarters in the center of New York and performs its anti-American activities largely with American financial support and in full view of the American people.

Federal Aid to Education

EXTENSION OF REMARKS
OF
HON. ANCHER NELSEN
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 12, 1961

Mr. NELSEN. Mr. Speaker, in recent weeks a good deal of discussion has centered around the very controversial issue of Federal aid to education. Many of us have received a good deal of mail with opinions for and against this measure and of recent date I received a communication from Sisters M. Derwa and M. Cyril, associated with the Holy Trinity School at Winsted, Minn. This school has performed a very fine job of providing education in the Winsted community and I represented this area in the State senate for many years, beginning in 1935. With the communication that I received was enclosed an article by Don Raihle, which appeared in a recent issue of the Wanderer, a Catholic publication with wide circulation in the State of Minnesota. This article, in my judgment, presents some very pertinent points and I believe that Members of Congress should have the opportunity of examining in detail the points set forth in this very well prepared article.

The article is herewith appended in full:

WHAT THEY'RE TALKING ABOUT
(By Don Raihle)

"Ribicoff at the outset sought to allay fears that the legislation might lead to Federal interference with the schools. He said a Federal role has been legitimate and accepted since 1790 and these programs he said, have 'been administered without evidencing one shred of Federal control.'"

Background: The foregoing is quoted from a news story in the Minneapolis Morning Tribune on March 9, 1951. Federal rule book—page 4—says: "Administration of Vocational Education: Each State is required to submit a plan which must meet the approval of the Federal Office of Education."

Allen P. Burkhardt, superintendent of schools at Norfolk, Nebr., commenting upon his own experience with Federal money in the field of vocational agriculture and home economics, said this:

"To get this money we have to accept and adopt the course of study outlined and specified by the Federal Government through the State department of education. We have to permit inspection by State employees who receive part of their money from the Federal Government.

"We have to hire teachers whose qualifications are approved by the same groups. We have to send our teachers to conferences designated by those authorities.

"Because we get Federal support for agriculture and home economics, we have to accept courses of study worked out by other people.

"We are told how long our periods of recitation have to be. * * * We are told how large the classrooms and the shops have to be, what type of equipment we have to have, even the type of floor in the rooms. We are told about how much money to spend per student. We are not allowed to use the teachers in those departments in any other fields. If we do, we lose our Federal money.

"If this doesn't constitute control from Washington, then at least it's a reasonable facsimile."

Federal aid-to-education legislation is almost always prefaced with a disclaimer of Federal control as was the National Defense Education Act of 1958. It said: "Nothing in this act shall be construed to authorize any department, agency, officer, or employee of the United States to exercise any direction, supervision, or control over the curriculum, program of instruction, administration, or personnel of any educational institution or school system."

In spite of this, the act goes on to set forth numerous regulations, requirements, and directives which local school systems must meet and observe in order to qualify for Federal funds under the act.

About a year ago I talked before a group of parents at Hamel, Minn. A high school teacher told me they had obtained an adding machine under the National Defense Education Act of 1958. A short time later a Government employee dropped in to look around. The high school teacher told me that he was advised that the adding machine was to be used only in the teaching of science and if it was used for any other purpose—at any time—the Federal Government would take the machine away. That is Federal control.

When Secretary of Health, Education, and Welfare Ribicoff appeared before the House Committee on Education and Labor on March 8, 1961, and said that present Federal aid-to-education programs have "been administered without evidencing one shred of Federal control," he either lied or was totally ignorant of the facts. He certainly was not speaking the truth. In either instance he seems to be lacking some of the necessary qualifications for the high office that has been handed to him by the President.

You cannot have Federal aid to anything without Federal control. The U.S. Supreme

Court has said so. The Court says that with every Federal subsidy must go some Federal control. Secretary Ribicoff should know that, and the President should know it very well. To say that we can have Federal aid to education without Federal control is just about the most misleading statement that has ever been concocted for public consumption.

Michael J. Wargovich—Noted American Slovac Fraternalist

EXTENSION OF REMARKS
OF
HON. HUGH SCOTT
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Wednesday, April 12, 1961

Mr. SCOTT. Mr. President, all of us who knew Michael J. Wargovich mourn his recent death. He was one of the great leaders of the American Slovak movement which has made many contributions to American life. Mr. Wargovich was also active in politics throughout his lifetime and served in a wide variety of important poses with the Republican Party.

I ask unanimous consent to have printed in the Appendix of the RECORD an article on this noted American which appeared in the Good Shepherd, official publication of the Slovak Catholic Federation of America.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MICHAEL J. WARGOVICH, NOTED AMERICAN SLOVAK FRATERNALIST

(By John C. Sciranka)

On Tuesday, January 17, 1961, the American Slovaks lost a noted fraternalist and a leader, Michael J. Wargovich, who died in McKeesport, Pa., after a brief illness at the age of 65.

The name Wargovich is known throughout the world where the Slovak people live. He was born in Slovakia and brought to this country as a mere child. His parents after a brief stay in Brooklyn, N.Y., settled in Pennsylvania. McKeesport was the city where the late fraternalist learned his ABC in fraternalism. And since McKeesport has the distinction of being also the domicile of the first American Slovak newspapermen and organizers of a fraternal society—Ján Slovensky and Julius Wolf, who settled there in 1879, "Big Mike," as he was widely known, followed in their footsteps. But his inspiration came from the late pastor of the Holy Trinity Slovak Catholic Church, Father Panuska. Here Mike served as an altar boy 55 years ago to a noted priest during the national convention of the First Catholic Slovak Union of United States and Canada, which is the largest Slovak organization in the world and which the late Michael J. Wargovich headed as supreme president for 20 years. Praiseworthy is the fact the junior order of the union was established then. The priest to whom Mike served was the Reverend Stephen Furdek, known as Father of American Slovaks. This meeting with the famous priest inspired the late Michael J. Wargovich to the dedication of his life to the American Slovak fraternalism.

The writer had the pleasure to attend the first national convention of this the largest Slovak fraternal organization in the summer of 1922 in Bethlehem, Pa., with late Wargovich. It was the first national convention for both of us. Shortly after this convention, the writer became assistant editor of Jednota (Union), published in Middletown, Pa. Michael waited for his chance until 1926, when he was elected supreme auditor at the national convention in Scranton, Pa. This was followed by chairmanship of the board of auditors. Then in 1940 during the Pittsburgh national convention he was elected supreme president and reelected at every national convention, which grew steadily under his leadership. The organization's headquarters are in Cleveland, Ohio, where it was founded in 1890 but it maintains a printery, orphanage and an old folks home at Middletown, Pa., on a large farm near Harrisburg. Pennsylvania has over 60 percent of the organization's membership.

OFFICER OF NATIONAL FRATERNAL CONGRESS

During the past 20 years, Mr. Wargovich attended all the conventions of the National Fraternal Congress of America in which he served on various important committees and also as member of its executive committee. He was also president of the Pennsylvania Fraternal Congress and treasurer of the Slovak Catholic Religious Association, which raised a quarter million dollars under the auspices of the Slovak Catholic Federation of America and the National Catholic Welfare Conference during World War II for the war-torn Slovakia.

He attended and served on the important committees of the Slovak League of America and the Slovak Catholic Federation of America. During that period he visited every State in the Union and all the principal cities of the United States and Canada at various celebrations and functions of his organization.

SERVED UNDER FIVE GOVERNORS

Mr. Wargovich was a stanch Republican and took active part in all Republican activities from the time he started to vote. He served on local and county, as well as State committees. The Republican National Committee recognized his services and he served on its advisory board. He was also national chairman of the Slovak Division of the Republican Party for several years and took part in various campaigns, visiting many States as a speaker. His voice was heard over the air during the last presidential campaign in English and Slovak languages. During the 1960 Republican National Convention in Chicago, Ill., he had the honor to serve as one of the assistant secretaries of this historical conclave, which he considered one of the highest honors. Mr. Wargovich served as district representative of the Pennsylvania State Workmen's Insurance Fund under five Governors. He also served as the treasurer of the Pittsburgh Fraternal Societies.

He was active in civic affairs and served as officer of the local branch 60, of the First Catholic Slovak Union, also was member of the National Slovak Society Assembly 31, which is one of the oldest Slovak societies in America. Also the Knights of Columbus, Council 955, the Slovak Gymnastic Union Sokol, Assembly 46, and the Serra Club.

Under his leadership the organization had youth conferences in the principal cities of the United States and Canada and the last such conference was in August 1960 in Washington, D.C., with a solemn mass at the National Shrine of the Immaculate Conception. He arranged the programs for these conferences and the national conventions of the organization which he headed. The writer had the privilege to be temporary chairman of two such national conventions in New York City, the first one in 1928, when the late Patrick Cardinal Hayes greeted the convention and second in 1952, when Francis J. Cardinal Spellman presided at the pontifical Mass in St. Patrick's Cathedral. Similar conventions with solemn pontifical Masses were held during his tenure of office in Chicago, Ill., Youngstown, Ohio, Milwaukee, Wis., New York City, Reading, Pa., and Detroit, Mich., with Cardinals Stritch, Mooney, and McQuigan pontificating and preaching.

The most impressive celebration under Wargovich's presidency was held on Labor Day 1955 in Cleveland Public Auditorium in honor of the centennial birthday of Father Furdek, founder of the union. The late Cardinal Stritch preached the sermon and some 30 American archbishops and bishops took part in the picturesque celebration with many monsignori, priests and all American Slovak fraternal leaders present.

He was in midst of gigantic preparations for the national convention to be held in August 1961 in Pittsburgh, Pa., when death put an end to his prolific fraternal career. He is survived by his widow, Mrs. Mary Lucanish Wargovich; two sons: Dr. Raymond Wargovich of McKeesport, Pa., active fraternalist and Matthew Wargovich of Bel Air, Md., also two daughters, Miss Dolores Wargovich at home and Mrs. Mildred Coffman of Akron, Ohio; two brothers, Joseph and Andrew of McKeesport and a sister, Mrs. Anna Evans of Munhall and seven grandchildren.

In spite of inclement weather, all American Slovak fraternal organizations were represented at his funeral on Saturday, January 21. Rt. Rev. Msgr. Clement J. Hrtanek preached the eulogy and represented Most Rev. John J. Wright, bishop of Pittsburgh diocese and Rt. Rev. Abbot Theodore G. Kojis, O.S.B., celebrated pontifical Mass of Requiem, assisted by local pastor, Father Edward J. Duwell, who officiated at the Calvary Cemetery, Port Vue, Pa.

Msgr. Andrew Biros, supreme chaplain; Msgr. Michael Shuba, organization's supreme chaplain for Canada; Very Rev. Canon Joseph S. Altany, LL.D., editor of Slovak Catholic Federation; Rev. Martin B. Rubicky, former supreme president of the Slovak Catholic Federation; Rev. Louis P. Hohos, supreme chaplain of the Slovak Catholic Sokol and many priests attended funeral. The fraternal leaders were led by John A. Sabol, supreme executive vice president of the organization and the successor of late Michael J. Wargovich from Phoenixville, Pa.

Mr. Wargovich was lifelong resident of Allegheny County and great citizen of Pennsylvania, who preached and lived as a true American Slovak fraternalist, aiding his fellow men for a better tomorrow.

He will always be remembered by his countrymen as a typical American Slovak fraternalist.

National Transportation Week

SPEECH
OF
CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 11, 1961

Mr. HOFFMAN of Michigan. Mr. Speaker, reserving the right to object, will the gentleman give consideration to the bill I sent over last week?

Mr. CELLER. I do not recall the nature of the bill.

Mr. HOFFMAN of Michigan. I did not think you would.

Mr. CELLER. If the bill has merit I am quite sure the gentleman will receive every consideration.

Mr. HOFFMAN of Michigan. Will you give it long consideration?

Mr. CELLER. I do not know about long consideration; we will give it earnest consideration.

Mr. HOFFMAN of Michigan. Will you give it any consideration?

Mr. CELLER. We certainly shall.

Mr. HOFFMAN of Michigan. Mr. Speaker, I withdraw my reservation of objection.

The Program for Educational Leadership

EXTENSION OF REMARKS
OF
HON. MELVIN R. LAIRD
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 12, 1961

Mr. LAIRD. Mr. Speaker, under our free-enterprise system many business concerns are providing effective and worthwhile aid to our educational system. Oftentimes the educational aid programs financed through business in our capitalistic system are overlooked.

Recently there was called to my attention the outstanding work of the Procter & Gamble Manufacturing Co. in support of education. The Procter & Gamble Co. is currently supporting 240 4-year scholarships; certain technical scholarships totaling about 30; payments to all of the 40 State and regional associations of colleges, including approximately 475 different colleges; $20,000 each year to each of the 10 large universities, to be used as the universities may choose; and certain special grants to such organizations as the National Fund for Medical Education and the United Negro College Fund. The total being contributed has now reached $1,100,000 per year.

Recently this concern has embarked upon a new educational program in support of graduate schools of education.

Under unanimous consent I include in the RECORD excerpts from the statement of this company setting forth their new program for educational leadership. This kind of voluntary private support of education is about the finest aid to education our free system can produce. Excerpts from the Procter & Gamble statement covering their new graduate program follow:

THE PROGRAM FOR EDUCATIONAL LEADERSHIP

The newest phase in our program of aid to higher education is grants to support graduate schools of education. Beginning in 1961, we are providing $15,000 per year to each of the following graduate schools. We hope to be able to continue this level of support for a total of at least 5 years.

Graduate School of Education, University of Chicago.

Teachers College, Columbia University.

Graduate School of Education, Harvard University.

Graduate School of George Peabody College for Teachers.

Graduate School of Education, Stanford University.

These grants are in special recognition of the fact that the quality of education depends on the quality of teaching—on the knowledge held by the teacher, on his ability to impart this knowledge to others and on his capacity for stimulating thought. As these areas of teaching capability are expanded, education itself is moved forward. Advances here come principally as a result of research and of sharing the results of this research throughout the broad spectrum of the educational system. There are relatively few graduate schools in the country which not only train teachers but which also, through research, advance the art of teaching. The institutions named above are among those which are providing outstanding leadership in advanced education. On a highly selective basis they train those who are to teach and those who are to teach others to teach. In addition they carry on broad programs of educational research, the results of which are available to all other educational institutions. Thus, in supporting these graduate schools, an important measure of support is provided to all education throughout the country.

These graduate schools have another claim to the name of "national" educational institutions. They select their students from all parts of the United States and from an impressive part of the rest of the free world, returning them after training to schools, colleges, and universities throughout this country and abroad. For this reason also, it is appropriate that support of these graduate schools of education should come from organizations which are, themselves, national or international in character and outlook.

Finally, our support of these graduate schools is impelled by the absence of well-to-do alumni of schools of education. In some other fields, successful alumni are in a position to make substantial contributions to the institutions which provided their education. With only a few exceptions, this is not the case with those in the teaching profession, whose earning power is relatively restricted. Unfortunately, this is true not only for the alumni of these graduate schools but teacher-training institutions throughout the country. This fact opens a special opportunity and justification for the exercise of corporate support.

As stated with respect to large universities on our university program, we do not suggest that only these five graduate schools of education are worthy of corporate support. Many others also make heavy contributions to teaching and to the improvement of learning methods. Many others, which do not do extensive educational research themselves but which translate the advances of others into better education of teachers, also deserve financial assistance. It is our hope that other organizations, believing as strongly as does our own in the essentiality of meeting the Nation's need for more and better teachers, will compile their own lists of deserving institutions and provide to them the support they richly deserve.

Wisconsin Backs Resources Plan

EXTENSION OF REMARKS
OF
HON. WILLIAM PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES

Wednesday, April 12, 1961

Mr. PROXMIRE. Mr. President, on March 21 I invited the attention of the Senate to the text of Gov. Gaylord Nelson's message on the State's natural resources to the Wisconsin Legislature. The New York Times for Sunday, April 2, reported on the forward-looking program which the Governor is proposing and on the broad bipartisan support it has already received. Governor Nelson is to be congratulated on the leadership he is offering in this vital area.

Mr. President, I ask unanimous consent that the article from the April 2 New York Times entitled, "Wisconsin Backs Resources Plan," be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WISCONSIN BACKS RESOURCES PLAN—NELSON WINS BIPARTISAN AID FOR PROGRAM TO ENLARGE ENDANGERED OUTDOORS

(By Austin C. Wehrwein, special to the New York Times)

MADISON, WIS., March 31.—Gov. Gaylord A. Nelson has won bipartisan support for a broad, coordinated 10-year program to save and enlarge Wisconsin's vast but endangered outdoor resources.

In terms of need he called it a "crash program" crying for "dramatic and decisive action." But the remedies he has designed suggest more of a "prudent investment" for the future.

He urged that the State be empowered to use easements on a far broader scale than any State has used them. An easement is the right to use a privately owned land for various purposes while the title to the land stays in the hands of the original owner.

Thus, the Governor explained, the State could buy the right to prevent unsightly billboards, or to have access to a lake stream or a beauty spot.

Buying an easement would be cheaper than buying the land outright and in the meantime the land would stay on the tax rolls.

WIDER ZONING SCALE

The Governor could also use zoning on a broader scale to achieve some of the same purposes and, if necessary, purchase land outright.

In general the Wisconsin program is in line with New York State's $75 million park land purchase program but it is broader in concept.

In broad outline, the Wisconsin program would enlarge State park and forest recreation and camp site areas, improve and increase fish and game habitat, set up a youth conservation corps, protect landscapes, build new lakes, aid cities in creating parks on their edges and promote tourism.

The vacation-recreation business is worth $600 million to Wisconsin annually but the Nelson program is directed more at preserving the State's natural beauty than at exploiting it. Nevertheless, it was generally agreed in the areas where the vacation business means dollars in the bank that such a broad program in the long run would be very much worthwhile.

TAX-RISE FINANCE

Long-range plans have been lacking both at the State and National level, Mr. Nelson declared.

To be financed by a 1-cent increase in the cigarette tax, the Nelson program stresses "additions to capital assets" rather than additions to the State payroll, the Governor went on.

It would jibe with existing fish and game programs. But the key to his concept is that the State must plan ahead for the needs of everybody—the birdwatchers, the campers, the family vacationers, and the canoers.

Traditionally, too, conservation programs have been largely paid for from license fees from users. The Nelson program, drawing on a special excise tax, would break new ground in this regard. Fish and game license fees would be restored to fish and game activities exclusively.

TO BE SUBMITTED SOON

The Governor's bill was being drafted by his lawyers this week for submission within a week or two to the legislature.

Mr. Nelson is a second-term Democrat and both houses of the legislature are Republican controlled. Nevertheless his proposed

measure has won stout bipartisan support and chances of passage appear bright.

Secretary of the Interior Stewart L. Udall, wrote to the Governor this week that his Department regarded the program as one of the boldest and most comprehensive put forward by any State. Similar praise came from Francis W. Sargent, executive director of the Outdoor Recreation Resources Review Commission, a special Federal body created by the Eisenhower administration under the chairmanship of Laurence S. Rockefeller.

Address by Secretary of Agriculture Orville L. Freeman

EXTENSION OF REMARKS
OF

HON. LEE METCALF

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Wednesday, April 12, 1961

Mr. METCALF. Mr. President, on March 29, Secretary of Agriculture Orville L. Freeman addressed the National Water Research Symposium here in Washington. I was impressed and encouraged by the Secretary's remarks. I will willingly support the program he has set forth for watershed, woodland, forest land, and research development.

I ask unanimous consent to insert the text of Secretary Freeman's address in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY SECRETARY OF AGRICULTURE ORVILLE L. FREEMAN BEFORE NATIONAL WATER RESEARCH SYMPOSIUM, WASHINGTON, D.C., MARCH 29, 1961

I feel honored to have the privilege of speaking to this National Water Research Symposium. May I congratulate the National Association of Soil Conservation Districts and the National Reclamation Association for their foresight in organizing this very impressive event.

I think you will understand when I say that I feel a little hesitant in talking about conservation to such a group as this. Some of you were probably actively concerned with conservation before I was born. And I know very well that when the Senate confirmed me as Secretary of Agriculture it did not thereby confirm me as an authority also on conservation.

Nevertheless, I do have some basic ideas on the subject. I firmly believe that conservation is something that happens not only to resources—conservation happens to people. Conservation is for people. It has both intimate and far-reaching effects upon their prosperity, their jobs, their diets, their health, their recreation, their culture; in short, their lives.

As Governor of Minnesota I saw this many times. A year or so ago I went with a party of about 25 Minnesotans who share a deep interest in conservation programs on a 3-day tour of conservation installations and projects around that State. While on the southern leg of the tour we drove through farm areas where some of the tree farms this organization has helped to form are located.

I was amazed to learn that with the help of some very simple management practices, one farmer had sold nearly $2,000 worth of timber from a hardwood tree lot on his farm. He will do this once every 5 years or so. This section of his farm until very recently returned nothing of value.

Now there is a specific case of what I mean in saying that conservation happens to, and is for, people.

You have assembled an impressive team of land, water, and other resource experts, some of them members of the USDA. Their job is to go into the technical aspects of how best to use that drop of water. My task as Secretary of a department with paramount responsibility for much of the Nation's renewable natural resources is to discuss in broad terms the wise use and conservation of soil, water, and related natural resources.

The theme of your meeting—"Better Use of Every Drop of Water Through Research." is most appropriate. It stems from a growing awareness that water is scarce, and that in many regions lack of water has become a limiting factor to further agricultural and industrial development.

Most people think of water as something to drink and as something to bathe in. They would be surprised to learn that only 10 percent of the water used in this country is employed for domestic purposes.

Fifty percent is utilized for agriculture and 40 percent for industrial purposes. When we realize that 9 out of every 10 gallons of water used in this country enter into the production of food, fiber, and manufactured products, we begin to see water as a key factor in further economic development as well as in the production race with the Communist nations. Our watersheds have become a vital element in our national defense.

President Kennedy has made it very plain that we shall attack our natural resource problems with renewed vigor. The challenge he has placed before us, and specifically before the Congress and the executive departments of Government in his messages on natural resources and on agriculture, is loud and clear.

We are a fast-growing Nation. Our national population is rising at the rate of 340 persons per hour, 8,000 per day, 3 million per year. This is a faster rate than that of any major industrialized nation and faster than many underdeveloped countries. Our families today are larger than they were half a century ago—3.2 children as against 2.4 in 1910. As of noon today our estimated population was close to 183 million. If present trends continue, just 39 years from now we will have to provide for twice as many people as we now do.

But the demand for water is growing even faster than population. Now in 1961 we use about 300 billion gallons of water per day. In 1980—only 19 years hence—we will require 600 billion gallons of usable water per day.

That's the size of the problem.

The renewable resources conservation job is tremendous. Congress has charged the Department of Agriculture with the major share of the leadership required to get it done.

Fortunately, our renewable natural resources are also vast.

The land area of the 50 States comprises almost 2.3 billion acres. Prior to the time Alaska and Hawaii jointed our Nation as States our land area was about 1.9 billion acres.

We have, in addition to urban lands, 460 million acres of farm cropland, 630 million acres of grazing lands, 500 million acres of commercial forest land, and 155 million acres of noncommercial forest land. Everyone of these roughly 1,750 million acres is to some degree watershed land.

The responsibility of the Department of Agriculture in providing conservation leadership encompasses more than half of all these lands.

We will work through every appropriate channel to achieve a common goal of abundant water, stable soil, and plentiful renewable resources.

Now what is it going to take to get the job done? The detailed answer to that question you probably know far better than I. But there are, I believe, three elements that are absolutely essential.

First, we must approach this problem with an overall point of view. Water, soil, agricultural crops, forage, timber, wildlife, and outdoor recreational opportunities are all members of a closely knit resource family. What happens to one affects the others for better or for worse.

The day when the forester, the biologist, the soil conservationist, the agricultural extension agent, the hydrologist, or the recreation planner could go it alone is long gone. The only way the conservation job can be done is by cooperation, understanding, exchange of information, and genuine teamwork between State, Federal, and private land resource people working in all areas of conservation.

We must look at conservation in the light of the interdependency of all programs, whether they be in water, forestry, game and fish, soil conservation, mineral development, or recreation.

Second, we must impress upon the citizenry that if conservation is for people, then people have a responsibility to be for conservation.

Resource management, therefore, is an inescapable responsibility of each citizen, as well as of the community, the State, and the Federal Government.

If we, as a heavily industrialized Nation, are to build a civilization which is in harmony with nature, we will have to take from the earth the pure, the useful, and the valuable and return to it the pure, the useful, and the valuable.

The third essential is that we shift without delay from the remnants of the old concept of conserving resources to the new concept of building and improving resources.

Not too many years ago when Gifford Pinchot succeeded in illuminating President Theodore Roosevelt with the magnificent concept of conservation, the primary concern then was to protect natural resources from the destructive wastefulness of people.

The maturing of thought and action in conservation since that time is apparent in the growing recognition that conservation's primary challenge today is to protect man from the consequences of entrapping himself in a self-built jungle of concrete and brick.

What began as a program to protect the forests and the land has now become a program to protect the quality of our way of living.

And if we do not encourage and foster this concept, the grim appraisal of Gen. Omar Bradley may well be realized.

"Year after year," he wrote after a penetrating appraisal of his country, "our scenic treasures are being plundered by what we call an advancing civilization. If we are not careful, we shall leave our children a legacy of billion-dollar roads leading nowhere except to other congested places like those they left behind. We are building ourselves an asphalt treadmill and allowing the green areas of our Nation to disappear."

We in the Department of Agriculture pledge that we will do our part in the immense job of building up natural resources adequate to all foreseeable needs.

We will revitalize the Nation's small watershed program to get more rapid action in meeting future water needs.

We shall accelerate the work of our Soil Conservation Service in providing basic land use practices on farm crop lands.

We shall take strong and positive steps to achieve better management of small privately owned woodlands.

We shall rejuvenate the Forest Service's long-range program for the development and improvement of our national forests.

We shall help develop a sound and full body of scientific data to guide us in soil, water, forest and range conservation programs. While the Department's resource program is a vigorous one, basic research data in this field still fall short of needs. I have directed that we review the requirements and fill in the gaps. This review is now underway.

These are some of the things government can do. But I do not need to tell you government cannot do the job alone. The task of building our resources is a task for everyone—the farmer, the rancher, the woodland owner, the agriculture extension agent, the forester, the soil conservationist, the biologist, the hunter, the fisherman, the hiker, the industrialist, the city man—for all the millions of Americans who use our natural resources and who conscientiously accept the responsibility of leaving to their children a land better, richer, and more livable than they found it.

National Transportation Week

SPEECH
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 11, 1961

Mr. VAN ZANDT. Mr. Speaker, reserving the right to object, and I do not intend to object, I would like to ask the chairman of the Committee on the Judiciary if it is now the policy of the committee to approve 2 special days on one date. To illustrate, Congress several years ago approved a bill, which is now a law, designating May 1 as Loyalty Day, and this day is observed throughout the Nation based on sponsorship by hundreds of posts of the Veterans of Foreign Wars of the United States. Now I understand a bill is at the White House designating May 1 as Law Day.

Mr. CELLER. It is not the purpose of the committee to duplicate days for commemoration. The particular bill that the gentleman has in mind was approved by all members of the Supreme Court and the various bar associations throughout the Nation. They recommended it.

Incidentally, I have the pen with which our distinguished President signed the bill, so the bill has been signed and is now law. We do not deliberately set more than one commemoration on a particular day.

Mr. VAN ZANDT. Did the gentleman's committee take into consideration the fact that May 1 is already Loyalty Day and observed nationwide in accordance with sponsorship of the Veterans of Foreign Wars of the United States?

Mr. CELLER. These bills create a great deal of difficulty for the Committee on the Judiciary. We have a plethora of these bills, and we are at our wits end at times as to what to accept and what to reject. We hope the gentleman will be charitable.

Mr. VAN ZANDT. Therefore, I am to assume the committee will follow a policy of duplicating days for commemoration?

Mr. CELLER. No; that is not our purpose.

Address by Hon. Frank P. Graham at the Dedication of the Elizabethan Garden, Roanoke Island, N.C.

EXTENSION OF REMARKS
OF
HON. HERBERT C. BONNER
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 12, 1961

Mr. BONNER. Mr. Speaker, at Fort Raleigh, N.C., on Roanoke Island, the Garden Club of North Carolina has sponsored the establishment of the Elizabethan Garden. At the dedication services Hon. Frank P. Graham, United Nations representative to Pakistan and India, delivered the dedication address, which I insert in the RECORD under leave to extend my remarks:

We especially salute today the four State chairmen, Mrs. James Tyler, Mrs. Roy Homewood, Mrs. Glenn Long, and Mrs. Corbett Howard and through them the generous benefactors and coworkers. Their devoted leadership and hard work resulted in this fitting memorial of the gallant women who shared in the great adventure which led to the founding of the British Empire and the American Union.

The Elizabethan Garden, planted and nurtured by the Garden Club of North Carolina, is the precious alabaster box of love and beauty laid in tribute at the feet of the British-American cultural heritage planted on these original shores 373 years ago. From this garden the women of North Carolina wave their flowers of friendship across the seas from the America of Elizabeth the First to the Britain of Elizabeth the Second. These flowers are the symbols of the ties which bind together in freedom the English-speaking nations in our imperiled world.

The birthday of Virginia Dare, which is annually celebrated by Paul Green's majestic symphonic drama, we join in celebrating today. Virginia was conceived in England and born in America. This child became symbolic and prophetic of the spiritual flowering of her heritages and her hopes. She is the symbol of Britain, mother of parliaments, civil liberties, the common law, and a commonwealth of free nations on four continents. She is prophetic of America, mother of religious liberty in the separation of church and state, of a commonwealth of States in a Federal structure on a continental scale, and of the great American dream.

As symbol and prophecy, we see people, with an old courage and a new hope in their hearts, cross dangerous seas, become lost on these rugged shores, and rise from the dead all the way from Maine to Florida. With axes, muskets, and Bibles in their hands and with an unconquerable and sometimes too ruthless will in their souls, they cross a continent and build a more humane America out of the spiritual stuff of their revolutionary, unresting, and immortal dream, unfulfilled but ever unfolding in this age of hazard and hope.

For these men and women and their children, was made the revolutionary American Declaration, the first universal declaration of human rights ever adopted by the delegates of the people. The words of the American Declaration, which, on that memorable day in July 1776 gave birth to a revolutionary political faith, went ringing around the world and down the centuries and are still singing in the hearts of the people in two hemispheres. Across the years we hear the great Virginian, Thomas Jefferson, as he declares for America and all the world the still revolutionary ideas that "All men are created equal and are endowed by their Creator with certain inalienable rights, that among these rights are life, liberty, and the pursuit of happiness, and to secure these rights, governments are instituted among men, deriving their just powers from the consent of the governed." We respond deeply to another noble flowering of the British-American heritage, Robert E. Lee, also grown in the garden of Virginia, brilliant in victories and sublime in the duties of defeat, as his spirit worked mightily for the reconciliation of people in the reunited States. In these perilous and tyrannous times of hydrogen bombs, intercontinental missiles, and outer space, we highly resolve, with the wisely magnanimous and the nobly great Abraham Lincoln, that, "This Nation, under God, shall have a new birth of freedom and that government of the people, by the people, and for the people shall not perish from the earth."

Of such faith and purpose are the soil, the fruits, and the flowers of our Hebraic-Christian-Greco-Latin-European-American Western culture, which, together with the ancient spiritual heritage, the cultural flowers, and the fresh democratic hopes of the great Eastern peoples, make up the foundations, purposes, and programs of the United Nations. In this turbulent world the United Nations by its organic growth, increasing wisdom, and moral power is working against the self-annihilation, East and West, of all civilization.

In this age of engines and gadgets, alarms and perils, the women of the North Carolina Garden Club would remind us that man cannot live by bread and bombs alone. They would teach us that love and reverence, work and worship, truth, goodness and beauty, are the enduring ways to the good life of the great society of the unfolding American Revolution to whose survival and fulfillment for all people on the earth we must again "pledge our lives, our fortunes, and our sacred honor."

The Elizabethan Garden and the gardens in all our towns and cities have already given spiritual reenforcement to your sisters on the farms in their home demonstration clubs. These women, also under gallant leadership, work together to make their clubs not only clubs for growing, canning and marketing fruits and vegetables, but also clubs for growing flowers in their gardens and nurturing flowers of the mind and spirit in their homes, churches, schools, and rural neighborhoods, with all their meaning to the State, Nation, and world community, as ways of making living on the farm a productive, satisfying, and beautiful way of life in our sometimes too strident, modern industrial society. These women bring us back to the beauty and the ways of nature, the good earth, the fields, forests, spacious vistas, and the cooperation of sun and soil, air and rain, toward providing the food, clothing, shelter, and flowers for people in all lands.

In the fulfillment of the meaning of the ideas planted in this place, the people of America and the freedom-loving people of both hemispheres, hopefully stand together today. With the reverent faith of their spiritual heritage and the dynamic hopes of their democratic commitments they struggle for equal freedom and enduring peace among all peoples on the earth.

In this world of the precarious peace of deterrent terror, with the alternative between the drift toward universal annihilation and the struggle toward more effective cooperation of nations through a more adequate United Nations, may this commemoration of the pioneer women of Roanoke in a century long gone and the pioneer women on the go in the North Carolina Garden Club today, mean the rededication of us all to things of their venturesome human spirit. May we variously commit ourselves not only to the cultivation of flowers of the earth and of the spirit but also to the cooperation of governments and peoples for equal justice under law and human brotherhood under God in this time of mortal peril and immortal hope for all mankind.

Standards for Movies

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Wednesday, April 12, 1961

Mr. JAVITS. Mr. President, there has always been an important place in the motion picture industry for the experimental film as well as the film that deals courageously with current social issues. In the past some of these films have met with success at the box office, more often they have not. Nevertheless their value at home and before foreign audiences has repeatedly been demonstrated.

The place of such films in the public arena is cogently discussed by the well-known producer and playwright, Dore Schary. I ask unanimous consent to print in the Appendix of the RECORD his address on this subject at the 13th Annual Conference of the National Civil Liberties Clearinghouse, March 24.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY DORE SCHARY

The title for our panel discussion seems to be somewhat abbreviated. It occurred to me that it should be "Mass Communications Media and the People's Right To Know—What They Want To Know." This elongation hits at the nub of the problem which is, "What is it that they want to know?"

From the diet of pap served to them in television; from the vast amount of yellow journals still in existence and from the violence, sex and spectacle being bought in huge colored gobs on movie screens, one could conclude that the public is getting what they want and it serves them right.

But such a point of view would be far too cynical for the temper of this meeting. After all, the National Civil Liberties Clearinghouse is an agency with faith in man and it is armed with purpose to help make this place a better haven for all men. To have worked in this field of civil liberties is not only a tribute to their high goals but also to their dogged determination.

Some creators who work in the field of motion pictures have this same high purpose and some also are blessed with the same dogged determination—and, believe me, the livin' ain't easy.

There is an ebb tide and flood tide in audience response to pictures that deal with some brutual realities—and the failure of one film that reaches out to touch the conscience of man stultifies the ambition and closes the checkbook. Forgotten are the commercial successes such as "Crossfire," "Pinky," "Gentlemen's Agreement," "The Defiant Ones," "Trial," "On the Beach," and others. If one labors long in the field of pictures that aim for the objective of man's mind—he is likely to be dubbed a maker of "message pictures." You see, a "message picture" is any picture with a point of view which is a failure. If it succeeds, it becomes a "picture of content."

This ebb and flow is the first barranca and of course it involves audience indifference. During my tenure of over 8 years at a major studio, the boldest film made was one called "Intruder in the Dust." It was beautifully directed and written and expertly played. The critics were ecstatic—the public couldn't have cared less—and in some areas of the country it could not even get bookings. Public indifference murdered it. The fact that William Faulkner wrote the novel probably was one reason we weren't accused in some quarters of being pro-Communist.

This then leads to the second barranca, which is pressure from certain groups and certain areas. A studio or releasing company will in these days of "jackpot" motion picture making view with intense dismay the making of a film that may not be able to play in the South—or may offend someone in the Government—or may provoke the Catholics or the Jews or the Protestants. The sensibilities of national groups such as the Irish-American, Italian-American, German-American, Japanese-American, Polish-American, must also be reckoned with—and I have had letters of concern from architects, lawyers, doctors, Indian Chiefs, motel owners and hearing aid manufacturers. I once had a sharp letter of protest from some society organized to protect the reputation of German police dogs because in one film a dog of this breed bit an actor. As a consequence, films began long ago a basic and theatrical right—the right to offend. Becoming frightened of everything, they decided to be all things to all men—and only the bold and responsible picture maker—with enough bargaining power to overcome some failures—was willing to stick out his jaw—which was instantly clouted by some one.

This circumstance has now been aggravated by the economic pressure on film companies. With television income from sale of old films carrying a major source of profit—the companies are producing huge mammoth films that will stun the audiences with length and breadth and width and height and color and sound. The major promotion is once again related to how much did the picture cost, how long does it run, how long did it take to make and how many stars decorate its main title.

Too often everything is accounted for except the plot. But the audience apparently couldn't care less—they go to the big ones—occasionally to the freak little one—but many pictures of leisurely pace and serious content with some degree of nobility are quietly ignored and quickly hidden away.

There are good pictures finding their way into the art houses and in some big cities they are commanding real attention. That's a good sign. Perhaps soon films in America will again be searching for the special picture—the good little picture—but usually if those stories are submitted today they are brushed off as being "good for a TV show," which is the faintest praise with which one can damn.

Another problem to consider: the foreign market. What image will be exhibited to the world away from the United States of the American personality? I don't dismiss this as an issue—but again, what image do we want to present? Do we stop, or prevent, or inhibit, the production of powerful pictures of protest that might give to the world a view of Americans as a people still in revolt against injustice? Do we inhibit or prevent pictures that would prove that our Nation is so strong, so secure, that absolute freedom of the screen is still a sacred civil liberty?

Or, are we naive enough to feel that vapid pictures that glorify violence and reduce sex to moronic vulgarity are really doing us no harm? Do we really believe that just because the good guys always win (be they cowboys in white hats or policemen or G-men or private detectives), that we can show men and women slapped, raped, slugged, shot, knifed, burned and drowned without damaging our national image?

There is no way to censor bad taste and if there was I'd be against it—but somewhere there must be a way of creating a jury of peers who will judge what is shown abroad not by what the film says or doesn't say—but rather by a standard of whether it's a good picture or a lousy one.

And what's wrong with the concept of making films purely for American exhibition? Nothing, except—it isn't profitable in a complex world that demands that pictures get bigger and wider and are seen by more people than ever before. Someone—some day—will break the trend—but it will need cooperation from creator, financier and exhibitor. Sometime, in the future, major companies and major talents will be willing to spend some effort and time in exploring the fields that present no financial bonanzas of good will and good deeds—the field of educational films, for instance. It would be something to see if skilled craftsmen teamed up with brilliant teachers and started to create a backlog of films for our schools and colleges. Hollywood did a magnificent job in making training films during the war—they could do a magnificent job in peacetime.

But once again—perhaps petulantly, we have the right to ask—what is it that the public wants to know? Even during the war, great documentaries such as "The True Glory" went begging for audiences. Truth was not a good enough substitute for fiction. For the record, I'm not arguing for the abolition of entertainment. I'm arguing that if the public is surfeited with some of the junk that comes under that loose heading of entertainment that they kick up a fuss. Let them besiege the sponsors of TV programs; let them berate the publishers of bad books; let them stay away from the theaters exhibiting tripe—as soon as they make bad taste unprofitable it will cease to exist. And let the devoted worker in all creative fields also try to clean his own house; if he does not he will find himself fighting the battle against censorship in the wrong place, at the wrong time, against the wrong odds.

I'd like to find myself fighting for freedom of the screen by defending the right of someone to make a picture about the bigots in New Orleans, rather than for some cheap, obscene film that might be called "I Was a Teenage Werewolf Who Ate Marihuana in a House of Shame."

But if it comes to that— we will have to fight I suppose. The tragedy will be that the fight will be lost—because the theater will be burning and someone will have the right to yell, "Fire!"

The very term "mass communication" makes a clear definition. A communication aimed at or reaching the mass. Let the masses declare what they are for and what they are against—and let up hope that the tenor of their demand will uplift us and not disillusion us.

They, the people, have the right to know everything—it's a right they can exercise if they choose to and I, for one, hope they do—and I, for one, believe that they, in time, will alter the shape, the sound, the size, and the soul of all our communications.

Thank you.

Address by Hon. John E. Fogarty, of Rhode Island, at Dedication of the Maurice L. Briedenthal Laboratory, Kansas City, on April 5, 1961

EXTENSION OF REMARKS

OF

HON. ROBERT F. ELLSWORTH

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 12, 1961

Mr. ELLSWORTH. Mr. Speaker, last Wednesday, April 5, I welcomed to my district a large number of distinguished visitors who had come to Kansas City to dedicate the Maurice L. Briedenthal Laboratory, a field station Laboratory of the Communicable Disease Center, U.S. Public Health Service. The laboratory is located on the campus of the University of Kansas Medical Center and has been and will be instrumental in forging the essential link between fundamental research and the frontline battle against fungal and viral diseases in the entire Missouri River Valley. We were greatly honored and, indeed, thrilled, to have Congressman JOHN E. FOGARTY, of Rhode Island, address the hundreds of people gathered there in Kansas City for the dedication. Congressman FOGARTY, in a very stirring address, challenged all of us in America to become concerned with environmental research. But this magnificent speech stands on its own, Mr. Speaker, and I commend it to my colleagues in the Congress:

REMARKS BY HON. JOHN E. FOGARTY, OF RHODE ISLAND, HOUSE OF REPRESENTATIVES, U.S. CONGRESS

This is the second time within the past 6 months that I have been privileged to attend the opening of a new research facility of the Public Health Service. The first was your parent agency, the Communicable Disease Center at Emory University in Atlanta, Ga., a facility in which you and the Nation can take justifiable pride.

We can be equally proud of the field station we are opening today. Like the center's headquarters, it is located on the campus of one of the Nation's great universities—an ideal place for research. The building and the equipment in this station have been designed and selected to give our scientists every advantage in their search for answers to the still unsolved problems of disease.

The university and its friends, whose great generosity brought this building into being, and the people of the Nation who will pay to keep it operating—we all expect great things from the studies that will be conducted in this new research facility. And I know that the men and women who will labor here will do their utmost to see that we are not disappointed.

The study of virus and fungus diseases for which this station was established demonstrates the importance of a much broader research area that we are only beginning to explore; namely, the whole relationship of man's modern environment to his health.

It was at this station, in its old makeshift quarters, that one of the truly great research breakthroughs of this cenutry occurred. I refer, of course, to the work done here on histoplasmosis. Thousands of patients were erroneously treated in tuberculosis sanitaria, tens of thousands of dollars were wasted on such treatment, before your work here revealed that it was a fungus in the soil, not the tubercle bacilli, that was rotting the lungs of so many people in this section of the country.

In the dramatic story of histoplasmosis research I believe there is a lesson that we as a nation will do well to heed.

It was when our scientists began to look for factors in the environment, rather than within man himself, that they found the source of histoplasmosis in soil rich in bird droppings. Isn't it also possible that more intensive study of our environment will yield clues to the prevention of other diseases?

I ask, is it just a coincidence that lung cancer, emphysema, and other respiratory ills are increasing in the areas where there is most air pollution? What is the connection between hepatitis epidemics, broken down sewage systems, septic tank suburbias? Why are heart disease and mental ills such big problems in the urbanized parts of the world and almost unknown in the so-called underdeveloped countries? We can't expect our doctors to give us all the answers. We must study the environment itself.

We are not doing this. Worse, we are not even doing the simple ordinary things we already know we ought to do to protect ourselves in this fast changing world.

Within the next 15 years, we are going to build the equivalent of 12 cities as large as Chicago to take care of our increasing population. If we follow our present pattern, we will do it in a day by day, hit or miss way. Invade more and more farmlands with housing developments and shopping centers. Add new highways when the old ones can't bear any more cars. Bulldoze down more forests to make room for more industries. Sewage and refuse will be handled in whatever way seems easiest and cheapest at the moment. Maybe heavy chemical dosage will keep our drinking water safe.

The only comfort we can take in this hodgepodge is that, because each day's changes are slight, we are saved from the shock of the sum total of change that results in a year, or a decade. The impact of the whole horrible mess we are creating never really hits us.

Yet we have warning signs aplenty that we are following a dangerous road.

In a certain section of Tennessee, you can see a strange sight—a gray, desolated wasteland right in the midst of an area of green flourishing forests. There isn't a bird, or a blade of grass, or any life at all in the wasteland. Why? Air pollution—smoke and fumes and an industrial plant miles away. Is this the air you want to breathe?

That's the effect of air pollution you can see. But there's another kind you can't see and it may be the most dangerous of all. It spouts from the tailpipe of your car. It spouts from 70 million other cars. And you breathe this devil's brew. When a snowstorm hit New York City last February and cars were barred from the city for 2 days, air pollution dropped 60 percent. The auto industry has been mighty enterprising about getting us pushbutton windows and tailfins and a lot of other gadgets we could do without. But what about devices that will stop air pollution? What about the seat belts that would prevent fatal accidents?

It is time and overtime for the auto industry to show that it cares as much about our health and safety as it does about our comfort.

Other industries also are big, are growing, are polluting air, land, food, water. Must these industries pollute as fast as they grow?

Thousands of entirely new chemicals are being used every year with no study of the possible effect of lifetime exposure to them. One of the few chemicals that has been thoroughly studied is the fluoride used in drinking water to prevent tooth decay—a measure found to be entirely safe and beneficial. Ironically enough, this measure has encountered public opposition while, at the same time, there is virtually no public concern over the thousands of unstudied chemicals we are absorbing into our bodies every day.

Radioactivity is another hazard we know little about. The more we learn, the more we realize how careful we must be to cut down unnecessary exposure.

But we aren't doing it. The medical and dental uses of X-ray have increased over 300 percent in the past 20 years. But how many communities have any regular system for checking whether the X-ray machines in doctors' and dentists' offices are operating properly? I know of just one—New York City—and it's just getting started. In 17 States, shoe stores can still use fluoroscopic shoe-fitting machines—machines that are giving hundreds of children unnecessary doses of dangerous radiation.

The Atomic Energy Commission is promoting more use of atomic energy and radioactive materials in industry. That's fine. That's progress—provided it can be done safely. But what worries me is that this same AEC, which is responsible for promotion, is also responsible for protection. That's like putting a wolf to guard the sheep. I, for one, don't like it. Last summer, when a spillover from a uranium plant in New Mexico poured a quarter of a million gallons of radioactive stuff into the San Juan River, the health authorities didn't even know about it until citizens 65 miles downriver reported dead fish floating by. I say our health agencies, Federal, State, and local, should have clear-cut responsibility for the health and safety factors of radiation. But along with that responsibility must go the funds and the personnel to do the job. Most State and local health departments today are doing so little in radiation control it is hardly worth mentioning. I also think the Federal Public Health Service program is too little and too late.

Water pollution is another environmental hazard—an old story to those of you who live along the Missouri River, sometimes called the "thousand-mile sewer." I understand, however, that both Kansas City, Kans., and Kansas City, Mo., have done their part to give the old river a better reputation. Kansas City, Mo.'s overwhelming vote last fall of over 4 to 1 in favor of the bond issue for sewage treatment facilities is an inspiring example of enlightened citizen action. It was almost as impressive as the 6 to 1 vote Kansas City, Kans., gave its bond issue in 1954.

Those were battles well won, but the big war for water is still ahead. Within two generations, there's been a radical shift in our living patterns. Families who used to have five rooms and a path now have five rooms and a bath—or even two or three baths. They also have dishwashers and clothes washers and air-conditioning systems—all taking water. And at the same time that we are using more water, we're polluting more water. Housewives are using millions of pounds of detergents. If you draw a glass of water from the tap on wash day in some communities, it foams like a glass of beer. Industries are using 10 times as much water as they did 60 years ago. We still have some pure streams—but they're pure chemical, not pure water.

My own State of Rhode Island, along with 22 other States, has a big shellfish industry. This industry has been outstanding in its insistence that its fish be raised in wholesome waters. It is proud of its record. But that record is getting more and more difficult to maintain. Even the ocean is getting polluted as we dump more and more radioactive and other waste into it. Recently, down in Mississippi, some shellfish poachers took their crop from a polluted area. This

was quickly discovered and action taken—but not before over one hundred people got hepatitis. As water gets scarcer, the temptation to use unsafe water grows. Last month it was a shellfish poacher in Mississippi. Next month, it may be a farmer, or an industry, and you and I may be the victims.

Where are the health officials, the food and drug inspectors and all the other people we pay to protect us from such hazards? They are on the job, I can assure you. But there aren't enough of them and the problem is growing so fast both in size and complexity that they can't keep up with it.

Maybe you've noticed—I have—the deterioration in the food served on planes, trains, and buses. Maybe you've noticed—I have—that there have been a number of cases of food poisoning on these carriers. There were two or three on airlines last fall; a big one on a railroad in Washington, D.C., a couple of years ago. It's the job of the U.S. Public Health Service to see that passengers get safe food, but how many inspectors do they have? How many to protect the millions of people who are traveling every day? I'll tell you. They have exactly 31. Is it surprising that the food service is deteriorating? I'm surprised that it is safe to eat at all when you travel.

What can you and I and every other American do to make this modern world safe and to keep it that way? What can we do about air pollution, radiation, water pollution, food poisoning and all these other hazards?

One thing we can do is use our specialists, give them a chance to apply their knowledge of how to control pollution and create safer cities. To do that, we must recognize that, for the better or for worse, most of us, and those who come after us, are going to live in about 200 densely populated areas. This means that we must think, plan and act in terms of a whole metropolitan complex, not in terms of each separate city and suburb. No part of the complex can hope to wall itself off from the problems of the other parts. Build a fine home in the suburbs if you want to, but remember you can't shake off the big city and its problems. It is still your city—you couldn't live without it.

So, whatever town or suburb you call home, be prepared to pay for metropolitan living—one way or another. You can pay for it by damage to health, by inconvenience, by ugliness and increasingly unpleasant living conditions if you continue to let matters drift. Or you can pay for programs that will give you and your descendants a decent place to live. The choice is still ours, but we'll have to make it soon, because once buildings are up and pavements are down, it's too late.

The second thing we can do is expand our research program. We need to know the precise effect our rapidly changing environment is having upon our health. We need to find better and cheaper ways of building health protections into our environment.

To get research of the scope needed and at the speed needed, I have proposed that a National Environmental Health Center be established, comparable to the National Institutes of Health, the world's greatest medical research center.

This ceremony, marking as it does the opening of a new facility for studying two hazards of the environment (viral and fungal diseases), seems to me an appropriate time to announce that my proposal for a National Environmental Health Center has now reached the blueprint stage.

This center should have many buildings as fine as this new field station. It should have over 30 different types of laboratories where physicists, chemists, radiologists, biochemists and other scientists would do research. The problems they might solve by such research would help all communities to have better and cheaper control of their environment. The center should be equipped with greenhouses and with a farm of experimental animals so that, by testing pollutants on lower forms of life, we could learn more about their effect on man. Scientists from all parts of the world should be trained in this center.

Like the National Institutes of Health, the Environmental Health Center should be the hub for an expanding national program. It should provide grants to universities and other research installations in all parts of the country. It should serve as a clearinghouse and coordinating unit to prevent duplication of effort and to see that every promising clue is being followed.

The Nation's most productive years of medical research came with the development of our National Institutes of Health. It spurred on the whole medical research movement, producing results far beyond those that can be directly traced to NIH resources.

Similarly, I predict that, if we can develop a great national center for environmental research, it will mark the turning point from neglect to aggressive attack upon the health problems of the modern environment.

Before such a center can move from the blueprint to the brick and mortar stage, however, we must know whether the American people want it. There is no use perfecting our ability to create healthful, beautiful, and convenient cities if we are going to ignore this knowledge and go on creating ugly, ferry-built, traffic-jammed urban sprawls.

The Congress of the United States, responding to the will of the people, took medical research out of the doldrums. Surgery is safer; diseases and disabilities that used to be hopeless are now curable because we've gone all out for a big national medical research program.

We can do the same to make our environment safer. President Kennedy, in his message on natural resources and on urban affairs, pointed out the danger of neglect. He called for more action on air pollution, water pollution, metropolitanism. But he hasn't spelled out his proposals. Will they be big enough? Will they come fast enough?

We stand at a turning point right now. We can silently accept a future of cancer-laden smog and sewage-burdened waters or we can rise up and demand action, big action, fast action throughout the length and breadth of the land. The choice is ours, but time is running out.

Some of us, some of our children, may already have absorbed the posions that, working slowly in our bodies, will find their fatal targets 10 or 20 years from now. That's how modern pollution works—slow, but deadly.

In this field station we dedicate today, we have taken one step in the right direction. Let us follow it with the giant stride that will enhance the potential of this and of every other center for genuinely productive research.

We Arm Our Enemies

EXTENSION OF REMARKS
OF
HON. HOMER E. CAPEHART
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Wednesday, April 12, 1961

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "We Arm Our Enemies" by Eugene C. Pulliam, publisher of the Indianapolis Star, which appeared in that paper on Sunday, April 9, 1961.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WE ARM OUR ENEMIES

A victory of some significance was won a few weeks ago when the Department of Commerce, after second thought prompted by congressional inquiry, canceled an export license which had been issued for the sale of American-made ball-bearing machines to the Soviet Union. But this victory only scratched the surface of the problem of arming the enemies of the United States with American tools and American money.

Within the last few days it was brought out that an American firm, on American tax money under the foreign aid program, has been building a steel plant in Poland. Let's say that again.

The United States is building a steel plant in Communist Poland.

It takes a while for the full significance of that to sink in. The threat of war with the Communist empire has hung over the United States continuously since the end of World War II. There were the years when the war was not just a threat but a reality in Korea. Of late there has also been considerable talk of economic war.

Whether the war threat is military or economic, steel is one of its basic sinews.

Poland is a captive nation of the Soviet empire. All the production of all the parts of the Soviet empire goes into the universal program of building the strength of the empire and serving its military, economic, and political objectives.

What this all adds up to is that the U.S. foreign aid program has been used, with the American people's money and with American equipment, knowledge, and skills, to build a direct addition to the war potential of the Soviet conspiracy, directed against the United States as its major ultimate target.

Forestry History Is Made in North Carolina

EXTENSION OF REMARKS
OF
HON. A. PAUL KITCHIN
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 12, 1961

Mr. KITCHIN. Mr. Speaker, for the second time within the past decade forestry history has been made in the Eighth Congressional District of my State.

In both instances the Seaboard Air Line Railroad Co., through its forestry division, has led the way. General Forestry Agent Robert N. Hoskins, directing the Seaboard's forestry program, was in charge of both of these cooperative forestry demonstration field meetings.

As a direct result of the first forestry meeting held in my home county of Anson nearly 10 years ago a tree planting machine was given to the landowners by the banks of Wadesboro, N.C. Recognizing the importance of putting their land back into a productive crop, the landowners planted over a million trees, thus making Anson County the first "million tree" county in forestry history in North Carolina.

On Wednesday, March 29, 1961, a new chapter in forestry was written in the Eighth District, particularly Moore County, as well as in the State of North Carolina and the Nation. A special train was run by the Seaboard Air Line Railroad Co. from Raleigh, N.C., to Southern Pines, N.C. This was a seven-car special train with six coaches and a dining car. Included in the distinguished group boarding the train at Raleigh were: 75 members of the North Carolina General Assembly, State cabinet officers, and 180 business and industrial leaders from Raleigh and such outside points as New York City, Washington, D.C., Richmond, Va., and Atlanta, Ga. Upon arrival in Southern Pines this group was welcomed by the top business leaders, Seaboard officials headed by John W. Smith, president of the company, and by one of the fine high school bands in my district—the Southern Pines High School Band.

This assembled group was then taken to the field forestry program in activity buses provided by the Moore County School Board through assistance of Mr. Louis Scheipers, town manager of Southern Pines.

Upon arrival in the woods at W. O. Moss's Mileaway Farm, about 1½ miles east of Southern Pines, one of the most complete forestry demonstration programs ever held in my district was carried out. Joining the 250 passengers from the special train, were 650 other farmers, business leaders, and future farmers.

At this great forestry field meeting the following persons spoke briefly during the morning session: State Representative Clifford Blue, from Aberdeen, N.C.; J. M. Osteen, district supervisor, vocational agriculture, Rockingham, N.C.; Fred H. Claridge, North Carolina State Forester, Raleigh, N.C.; and Douglass A. Craig, assistant regional forester, U.S. Forest Service, Atlanta, Ga.

Following the early morning speakers, Robert N. Hoskins, the Seaboard's general forestry agent, directed the overall field program which consisted of the following demonstrations:

Station 1: Cone collection and nursery production; Floyd M. Cossitt, U.S. Forest Service, eighth region, Atlanta, Ga. Forest genetics; Dr. Bruce Zobel, School of Forestry, North Carolina State College, Raleigh, N.C.

Station 2: Mechanical tree planting and hand planting; Russell K. Hallberg, Bowaters Carolina Corp., Jamestown, N.C. Fire control; James A. Pippin, district forester, North Carolina Department of Conservation and Development, Rockingham, N.C.

Station 3: Insect and disease control; H. J. Green, forestry division, North Carolina Department of Conservation and Development, Raleigh, N.C. Markets and marketing of creosoted wood products; Robert S. Speicher, United States Steel Corp., Pittsburgh, Pa.

Station 4: Hardwood control; Sam Hughes, Riegel Carolina Corp., Bolton, N.C. Service forestry; H. J. Anderson, Halifax Paper Co., Roanoke Rapids, N.C.

Station 5: Fence post treatment and pole barn construction; Johnnye U. Foster, Atlantic Creosoting Co., Savannah, Ga. Pulpwood production and paper manufacturing; J. P. Harper, International Paper Co., Raleigh, N.C.

Station 6: Sawmilling; D. W. House, Southern Wood Preserving Co., Atlanta, Ga. Seasoning of lumber; Ernest E. Graham, tie and timber department, Seaboard Railroad, Jacksonville, Fla.

Station 7: Pole production and classification; Alton H. McCullough, Koppers Co., Inc., Florence, S.C. Cross tie production; E. L. Kidd, tie and timber department, Seaboard Railroad, Jacksonville, Fla.

Following the field portion of the meeting, the group reassembled at which time the Honorable Terry Sanford, Governor of North Carolina, spoke briefly and said:

Forestry is extremely important to the full development of North Carolina's resources. We want to take full advantage of all our possibilities. I am proud of our work in forestry, but we are not using even 50 percent of our possibilities. We can more than double what we have done.

The principal speaker of the day was John L. Tower, vice president, International Paper Co., New York City, who was introduced by Warren T. White, assistant vice president, Seaboard Air Line Railroad Co.

Mr. Tower said:

Over 5,000 different wood products are needed to keep our vast American economy moving and to meet our daily needs. He said the Nation requires 2½ acres of trees per person just to keep us going and demands will increase as the population soars to an expected 300 million by the year 2000.

The wood-using industries of North Carolina employ 18 percent of the State's labor force and annually turn out products with a value of over $750 million.

No other region approaches the South in forest resources. Sixty percent of the Nation's tree farms and 66 percent of its tree farm acreages are in the South. Two-thirds of the wood needed to feed the Nation's gigantic appetite for pulp and paper is supplied by the South.

The State's wood-using industries have provided jobs and income where they are needed most, in rural areas, and on a non-seasonal basis.

After Mr. Tower's speech, airplanes of the North Carolina Division of Forestry gave a spectacular aerial demonstration of the newest methods of controlling forest fires by water bombing with chemicals.

Cooperating on the special train project were the nitrogen division of the Allied Chemical Corp., West Virginia Pulp and Paper Co., Union Bag Camp Co., International Paper Co., Halifax Paper Co., and Regal-Carolina Paper Co.

In recognition of this great educational contribution to forestry in North Carolina, the following resolution was presented by State Senator Henry Gray Shelton, chairman of the senate agriculture committee, and by State Representative J. Raynor Woodard, chairman of the house agriculture committee, and passed by the 1961 general assembly of my State:

JOINT RESOLUTION EXPRESSING APPRECIATION FOR THE HOSPITALITY AND CONSTRUCTIVE PROGRAM PRESENTED BY THE SEABOARD AIR LINE RAILROAD CO., THE FEDERAL AND STATE FORESTRY DEPARTMENTS, AND THE FOREST PRODUCTS USERS AND MANUFATURERS TO MEMBERS OF THE GENERAL ASSEMBLY

Whereas the forest products of this State are an important economic asset to North Carolina and the potentials of this crop have not been realized or fully developed, and it is recognized by the members of the General Assembly that the cooperative efforts of the Federal and State forestry departments and the forest products users and manufacturers have accounted for progress in both technological and economic fields relating to forestry, thus greatly augmenting the income of this State and its people through their combined efforts, research, and in the dissemination of information regarding production, handling, usage and marketing of this valuable crop; and

Whereas to further promote sound forestry management in North Carolina, the Seaboard Air Line Railroad Co., in association with the aforementioned Federal and State agencies and companies, provided a special forest field day train and program, in which members of the General Assembly of North Carolina participated, giving to the members of the general assembly much valuable information through demonstrations and discussions provided for their benefit and entertainment: Now, therefore, be it

Resolved by the house of representatives (the senate concurring):

Section 1. That the general assembly does hereby extend this expression of thanks and appreciation to the Seaboard Air Line Railroad Co. and to the Federal and State agencies and companies for the hospitality, efforts and demonstrated concern for continued progress in the fields of forestry management and development and for the many courtesies extended at the forest field training program.

Sec. 2. A copy of this resolution shall be transmitted to each agency and company taking part in the program.

Sec. 3. This resolution shall become effective upon its adoption.

The Communist Bargain

EXTENSION OF REMARKS
OF
HON. F. BRADFORD MORSE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 12, 1961

Mr. MORSE. Mr. Speaker, the Woburn Daily Times, an outstanding newspaper in the Fifth District of Massachusetts, which I have the honor to represent, recently ran an editorial which succinctly sums up the latest stratagems of the Soviet Union to ease world tensions. Under leave to extend my remarks, I include this editorial:

COLD WAR TACTIC

The Soviet Union has dropped its demand that the United Nations hear its complaint concerning U.S. plane flights over Soviet territory.

The Commies then suggested that the United States might agree to drop its request for U.N. discussion of Hungary and Tibet.

All this would be in the interest of improving Soviet-United States relations.

The comparison between what the U.S.S.R. is giving up and what it would have the United States concede in return evidences again the brazenness of the Red regime.

We are forgiven the flight of the U–2 spy plane if we will absolve the Kremlin of the rape of Hungary and Red China for its overwhelming of Tibet.

The Soviet objective—easing of world tensions and the establishment of better relations with the administration of President Kennedy—is a praiseworthy one.

But what a bargain the Reds offer.

The Constitution and What It Means

EXTENSION OF REMARKS
OF
HON. TOM V. MOOREHEAD
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 12, 1961

Mr. MOOREHEAD of Ohio. Mr. Speaker, next week 12 young Ohioans will come to the Nation's Capital to visit the historic shrines of the city and to witness the operation of the Government in this Federal City. Each has carefully studied the meaning of our constitutional processes and has expressed conclusions in written form. They are the 1961 State winners of the American Legion Essay Contest.

For the first time in the 27 years this contest has been conducted, two of the winners are students of the same high school. I am very pleased that such distinction has been accorded two young people in my congressional district. Their pride in achievement can be shared by their parents, teachers, and the principal of the Marietta, Ohio, High School, Mr. Fred H. Manning. The essays are by Tim Nice, son of Mr. and Mrs. James C. Nice, now in his sophomore year at Marietta High School, and Beth Wolford, a member of the senior class and daughter of Mr. and Mrs. D. M. Wolford.

I should like to call to the attention of the Congress these two award-winning essays. What these young people are saying as they speak for their generation is a refreshing appraisal and appreciation of our constitutional guarantees and the fabric of American society this living document enriches.

THE CONSTITUTION AND WHAT IT MEANS

(By Jim Nice)

"Divine inspiration" englightened the Founding Fathers at the Constitutional Convention in Philadelphia, in 1787, and a nation found itself.

The growing pains of this new country pointed to the need for a "more perfect union." This Nation was without government—the empty shell of a loose union. The people had joined together to fight for their independence, but as always happens, they found that war had profoundly altered their lives and their thinking.

This drastic change notwithstanding, America hoped to become a great nation. From a population just twice the size of Los Angeles today, came 55 men whose character, ability, and broad mental attainments caused them forever to remain a most distinguished group. The talk of the people everywhere was the need for a workable plan of government. Though his spelling and English left much to be desired, a New England farmer wrote, "We do not need any Goviner but the Guviner of the universe and under him a states Gineral to consult with the wrest of the united states for the good of the whole."

With similar comments for background, and with many misgivings, these men set forth to accomplish their big task. After 3 months of deliberation, the document was complete—the first written Constitution offered to any nation. The American dream was now beginning to come true. These new principles by which the Nation agreed to govern itself were put into effect, and a way of life that granted freedom to the individual citizen was now being achieved by slow and certain growth. In this present age we are still "trying" this new form of government as it stands the test of our times.

The Constitution is the basis of government by which we, the people of this country, live. The first and fifth amendments, sometimes called the "soul" of the Bill of Rights, give us the freedom to make choices and assure us that we may not be deprived of life, liberty, or property "without due process of law." This integral part of the Constitution shows its significant value to us, and when truly obeyed, promises the accomplishments of justice, and liberty, and peace at home and abroad.

A great power stems from our Constitution. It not only insures my rights as an individual, but provides for the orderly function of the executive, legislative, and judicial branches. This great system, when contrasted with other governments, is like comparing *Old Ironsides* with the *Guerrier*. Under the Constitution, the powers are divided between the State governments and the National Government, thereby creating a Federal system. Clearly defined are the actions each may take.

The Preamble states at the outset that the Constitution is explicitly a "creature of the people." These words are very important ones, for they establish beyond doubt that this document is not of any one faction, party, or group. Our Government belongs to the people, is administered by the people, and exists for the good of the people.

The glory of our system distinguishes it from every other government in the world. With the needle of dauntless courage, our forefathers wove together a governmental fabric for our freedom and protection. To the degree that we today interpret and adhere to the meaning of the Constitution—to that degree will be seams of its fabric hold firm and fast.

OUR CONSTITUTION AND WHAT IT MEANS

(By Beth Wolford)

The Constitution has a different meaning for every generation, every family, and every individual. When our forefathers founded this country and raised it from a land of forest paths and log houses to cobblestone streets, brick homes, and towns, they proved the Constitution was a working form of government. Every generation since then has had to prove the Constitution would work for them also.

What is this document which has meant so much to so many Americans? It is a manuscript now yellowed with age, carefully placed in a glass-covered case in our Nation's Capital, but it is also a living force in our daily lives. It is the Pilgrims crossing the Atlantic Ocean in the Mayflower; the heritage we have received from them; a group of American patriots who "sounded the shot heard 'round the world"; the men who died during the Revolutionary War that we might be free. It was written by the actions of these early Americans, more than by the goose-quill pen of Thomas Jefferson as he sat in a candle-lit room, putting down the ideas of early Americans.

It was made sacred 100 years ago by the blood of brother fighting brother to keep that Union "one Nation, under God, indivisible, with liberty and justice for all."

Today, in that indivisible Nation, this masterpiece is the symbol of all that is dear to the hearts of Americans.

It is our family sitting in church on Sunday morning, helping with the worship service, planning the activities of the church youth group, attending a summer church camp, and learning to know those from other churches.

It is written in the headlines of our newspapers, the chapters of our books, and letters to Congressmen, telling them of our problems and asking for help in finding the solution.

It is paid for when we fill out the income-tax forms to give a certain amount of our earnings to keep the Government going.

It is spoken in the United Nations headquarters when we oppose a program that would hurt another nation and its people, as well as when we propose a plan beneficial to the whole family of nations.

It is "shot off" with every rocket we send to further our knowledge of outer space and with every plane we send on a trial flight.

It is spoken in Congress and whenever the people gather to talk free from the fear of being arrested or otherwise punished. We can discuss dates, teachers, the President-elect, the answer to segregation, and a better foreign policy.

It is freemen working at the trade of their choice, buying the products they make, selling our own goods, and opening bank accounts to keep our money working.

It is engraved on the hearts of men whenever they hear Lexington, Gettysburg, the Battle of the Bulge, or Heartbreak Ridge.

It is found in the heart of a mother as she holds her infant son in her arms and dreams that he may grow up to be the leader of this country.

Look around you, America, and see what this "piece of yellowed paper" has given you. Then thank God that you were born in America.

The Future Role of Agriculture

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Wednesday, April 12, 1961

Mr. MUNDT. Mr. President, because of the prevailing interest in the problems and the future of agriculture, I ask unanimous consent to have printed in the Appendix of the RECORD excerpts from a talk given by Sam H. Bober, of Newell, S. Dak., at the soil conservation award dinner held in Buffalo, S. Dak., on March 23. These excerpts are taken from the Bober speech as it was reported in the Valley Irrigator, a leading South Dakota weekly newspaper, published in Newell, S. Dak.

Mr. Bober is one of South Dakota's most successful farmers and businessmen. He has devoted a lifetime to studying agricultural problems and needs. Presently and for some years back, Sam Bober serves as an outstanding member of the Federal Farm Credit Board. I believe my colleagues in Congress will be interested in his experienced observations.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BOBER DISCUSSES FUTURE ROLE OF AGRICULTURE

The lifestream of a nation is its agriculture. The management of soil is among the oldest of the arts, but none is changing more rapidly than it. We know more about taking care of soils and conserving water than our fathers and grandfathers did; there is much more that we should know.

Agriculture is the business of clothing and feeding humanity. Our immediate business is to furnish 540 million meals for 180 million Americans to eat every day.

At the moment our farms seem too productive, and some of us wish that our Government would stop spending money improving efficiency while we are producing more than we can use, and instead help us in marketing and disposing of the surplus food where there is an urgent need for it in other parts of the world where people go hungry part of the time.

Surpluses are not necessarily an indication that our techniques are always the best. Egypt raises more cotton, Britain more wheat, and Japan more rice per acre than we do.

Our specialty is raising more food and more fiber per man. Research helped us in this, and no other nation has introduced mechanization into agriculture like the United States has. We have substituted capital for labor in the form of labor-saving machinery.

At the moment we have more land than we can use, and some of the unneeded cropland shuold be retired until needed. Our granaries are overstocked with surplus crops, even though our per-acre yields are low. It's because we have a higher percentage of arable land than most countries.

But let's talk about explosions in today's world. Not about nuclear bomb explosions, but about population explosions. At the beginning of this century we had a population of 75 million people in these United States. Now in 1960 we have 180 million people and in 40 years more, barring wars, we are likely to have to feed 320 million people in this country of ours.

Look at the world. In 1830, only 130 years ago, there were a billion people on this planet. In 1935 the world population had increased to 2 billion. Today, in the year of 1961, the population is 3 billion, and in only 5 years more the population of the world will reach 4 billion people. We are increasing at the rate of 2½ million every 10 days. Think of the increased food we will need to produce for the fast expanding population.

Now we use the production from 3 acres per capita. At the rate we are increasing, it is probable that we will have only 1½ acres per capita available in 30 years from now. The surplus food problem is not likely to continue to be a distressing problem for long.

We can fly satellites to the moon, but we cannot control weather. We cannot prevent a cycle of drought any more than the Egyptions could 4,000 years ago, nor could we our own drought cycle in the thirties.

We have a choice of fostering a healthy growing agriculture or stifling it. For the Nation and the individual, it is cheaper and better to be assured of too much, rather than face the risk of too little. The whole problem of our ability to produce in the future rests primarily with our water and land resources, and our ability to use them wisely.

In the combination of research and field experimentation, and group cooperation from folks like you, lies the hope of meeting the Nation's agricultural needs of the future.

Reality Versus the Myth in Monopoly Pricing

EXTENSION OF REMARKS
OF
HON. CLEM MILLER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 12, 1961

Mr. CLEM MILLER. Mr. Speaker, in recent weeks there has been a great deal said about the electrical antitrust cases. For a frank discussion of what many are really thinking about pricing policies in many industries I commend the "Commentary" from the March 13 issue of the Value Line Investment Survey. It goes far to separate myth from reality.

UNITED STATES VERSUS ITSELF—THE ANTITRUST CONVICTIONS IN THE ELECTRICAL EQUIPMENT CASE

On February 6 and 7, 1961 Judge J. Cullen Ganey of the U.S. District Court for the Eastern District of Pennsylvania, imposed fines of $1,787,000 on 29 electrical equipment manufacturers, most prominent among which were General Electric and Westinghouse, and sentenced seven executives in the industry to prison for conspiring to violate the antitrust laws against price fixing. Twenty-three others received suspended sentences. The executives sentenced to prison, until then respected senior citizens of their communities and Nation, were thereupon manacled like common felons and led off to jail in full glare of the publicity that passes for journalism these days.

Judge Ganey said, "Before imposing sentence, I want to make certain observations * * * what is really at stake here is the survival of the kind of economy under which America has grown to greatness, the free enterprise system. The conduct of the corporate and individual defendants * * * has flagrantly mocked the image of that economic system of free enterprise which we profess to the country and destroyed the model which we offer today as a free world alternative to State control and eventual dictatorship."

General Electric, although it found itself compelled to plead guilty to some of the indictments as a matter of practical expediency, vigorously and on the whole successfully, disassociated itself and its chief officers and directors from its guilty agents in the lower echelons, and clearly proved that it had honestly tried to enforce its own regulations against price fixing upon the executive heads of its more than 100 departments and 20-odd divisions, which regulations were even more stringent in certain respects than the antitrust laws themselves. (The Government brought no charges against the Westinghouse directors and upper echelon executives.)

The whole country was immediately aroused to a high pitch of moral indignation, sensing as it did, that the very soul of America, its free enterprise system, the bulwark against communism and the only alternative to State control and dictatorship, to use Judge Ganey's words, had been betrayed.

The Attorney General, Mr. Robert F. Kennedy, writing on this case in Life magazine under date of February 24, 1961, said, "Our antitrust laws were written in an attempt to control business monopoly * * * but in * * * earlier trust cases the punishment was usually in the form of fines, and after it was over, business went on as usual. The businessman who participated was not treated as though he had really done anything wrong. He was just following the accepted practices of big business in the 20th century, U.S.A. He was accepted as usual at the country club, he was appointed as usual to be the chairman of the community charity drives * * * more and more often, corruption and dishonesty have been excused because 'everyone does it' * * * Judge Ganey's decision had great impact because it showed that somebody is willing to say 'I am not going to accept this. We can do better.'" In the same tone, Life magazine declared in its editorial columns, "* * * The crooks in the electrical industry have set back the progress of the modern corporation toward public acceptance of its claims to wider social responsibility and a quasi-political role"; and then, in a burst of sadistic exultation, published a picture of one of the condemned executives behind prison bars, his downcast, bald head and spectacled eyes a portrait of shame; and it pilloried the other condemned by publishing their pictures for public recognition.

What is the truth of the matter? Were a few little fellows thrown to the wolves to protect the higher ups? Has America's image of a free economy been betrayed by crooks? What about the laws that were so long breached in 20th-century United States without meaningful penalty, thus ascribing to them the sanction of custom?

Unprejudiced examination of this case will, we think, reveal the following:

(1) The condemned did indeed conspire to violate the law against price fixing.

(2) General Electric did, indeed, make every effort that a big company could make at the top to prevent violation of the antitrust laws in its decentralized subdivisions. Westinghouse also had directives designed to achieve compliance with the antitrust laws.

(3) The method by which businessmen attempt to carry out the purpose of the antitrust law, which is to prevent monopoly, and to do so without creating monopoly, draws such a fine line between legal and illegal price stabilization, or price fixing, as to be impracticable in the workaday world.

(4) The Government and the consumers of this country were not, in any meaningful economic sense, defrauded by being sold goods higher in price than would have been paid had the guilty practices to which the defendants pleaded guilty not been committed.

(5) The free enterprise system, in which prices are free to fluctuate without restraint, which is the system that Judge Ganey says America professes to its people and the model which it holds up as a free world alternative to state control and tyranny, has not existed for a couple of hundred years.

(6) There is a large body of law and a long political and economic tradition that not only permits, but even requires, control over price fluctuations.

(7) Finally, and here is the heart of the problem, the law against price fixing through which the Government attempts to control or prevent monopoly, would if enforced to the letter, actually bring about monopoly.

Let us examine these conclusions one by one:

(1) The condemned did indeed engage in a conspiracy to violate the antitrust law. Their conspiratorial practices were carried on with the sophistication of teenagers and the Government investigators had little trouble getting the evidence on them, cold. No need to discuss this further.

(2) General Electric's top management did indeed make vigorous efforts to prevent such violations as the Government charged. It has, and had, a company regulation (20.5) which specifically prohibited illegal price fixing and the head of the company frequently stressed to subordinates the impor-

tance of observing this regulation. In fact, a number of General Electric executives had, previous to the trial, been demoted for breach of directive 20.5. But General Electric is a company whose greatness was built very largely upon a policy of decentralization of managerial control. Its hundred plus departments enjoy a large measure of autonomy making it difficult for top management to police every detail of each division's business. The remarkable thing about it all from this standpoint is that among the hundreds of executives who might have violated directive 20.5 of the General Electric Co. and the antitrust law of the United States, there were only a handful who could be found indictable.

(8) Business leaders in their effort to abide by the law and also by the intent of the law, which is to prevent monopoly, find themselves compelled to stabilize prices in certain of their markets. Had General Electric's directive 20.5 been followed to the letter and had General Electric and Westinghouse exercised their competitive strength to the full, marginal producers in the electrical equipment industry might have been driven out of existence. The big companies could have cut prices below the costs of their smaller competitors and thus forced them to the wall. Although General Electric and Westinghouse then would have avoided violating section I of the Sherman Act, which prohibits conspiring to fix prices, they would have been guilty of violating section II of the same Act, which makes it a crime to "monopolize or attempt to monopolize." And the latter possibility has and does now appear to be the more imminent.

There is a practical and legal way to set prices in industries where the product is standardized. The industry leader, usually the lowest cost producer, publishes a price list based on his own costs and analysis of the market. Usually the prices are high enough to let the highest cost marginal producer (of significant size) break even. If—in the press for business during cyclical slumps in demand—the marginal producer cut his price, he could be sure that the leader would cut prices also—and still make a profit—so that price cutting would not win the additional sales volume the little fellow desperately needed to absorb his overhead costs. The price cutter would simply get the same share of the market but at a lower price. Under this system of price stabilization or fixing, the industry leader "holds an umbrella" over the marginal producer, and thus protects the small businessman from exploitation and itself from violation of section II of the Sherman Act.

However, this method, although it can legally set a price, cannot effectively divide up the market among competitors who charge identical prices. Where everybody's price is identical and the quality of the product uniform, who is to get what share of the business? Here is where the conspiracy comes in, and in practice has got to come in. It usually works out that definite percentages of the market are allocated to particular companies by the sellers themselves; they make their bids in such a way as to assure the division of the market according to a prearranged agreement. Thus, they deprive the buyers of an opportunity to buy below standard, or fair, price.

This part—the conspiratorial agreement to divide the market—is illegal. But how do you get your share of the business if your price and product are identical with the other fellow's, except through allocation? In actual practice it would be almost impossible to avoid carving up the market. Were the industry leader to take advantage of his lower costs and underprice his competitors, he could increase his volume, lower his unit costs still further, and increase his total profit. Thus, he exercises restraint by pricing at a level above that which would maximize his total profit. Perhaps the most frequently cited example of this pricing policy in action is the automobile industry. As the largest volume, lowest cost producer, General Motors could quite readily force the marginal companies (themselves giants of industry) to the wall and thereby considerably enlarge its already superior profits. An immediate result, of course, would be that the Justice Department would seek to break up GM, a move which the company's management would obviously prefer to avoid. Hence, GM exercises restraint in its pricing policies. Competition in this industry takes the form of quality, styling, accessories, etc., where the size of the manufacturer is not the determining factor.

The advantage that the big producer has over his smaller competitor derives in the first instance from the fact that his actual costs are usually lower. But there is a tax aspect to this problem, too: When the Sherman Act was passed, there were no income taxes on corporations. Today the corporate income tax rate is 52 percent. The big corporation, like General Electric, can sustain a loss in one of its many divisions and offset this loss against the profits of its other divisions, thus reducing its total taxable profit. In that way the U.S. Government assists the big fellow by absorbing half his loss while the little fellow engaged only in one particular business sustains his full loss without offsetting profits from other divisions (which he simply does not have).

Now, why was the presumably legal way of stabilizing prices (by publishing the standard price list of the industry) not used in the heavy electrical equipment markets? For one thing, the dominant factor in the industry, General Electric, has publicly disavowed any intent to exercise price leadership (a stand for which it has been roundly criticized by many executives of its smaller competitiors). General Electric's top management has said, in effect, that its department general managers are not to attempt to "hold an umbrella" over the marginal producers. The company's directive 20.5 is but one manifestation of this attitude. (This directive, and its enforcement, were obviously prompted, too, by the realization that GE is, and long has been, a prime and popular target of the antitrusters.)

As a practical matter, moreover, price leadership in this particular area might well prove impossible. The product mix is far from homogeneous. Posted prices are even more meaningless than those in an automobile showroom. In practice, virtually every item of heavy equipment (as opposed to the many smaller standard items) is sold at a discount from "book." The amount of the discount is quoted in discussions between the manufacturer and the customer (although it will quickly become known, via the grapevine, to other manufacturers and customers). In any case, it would be extremely difficult for GE, or any other company, to meet lower prices immediately on every piece of equipment on which purchase negotiations are in progress. Secondly, the customers for the equipment here referrred to are the Nation's Government-owned and investor-owned utilities—a limited number in comparison to, say, car owners, or even steel buyers. The utility purchasing agents are sophisticated and well informed. Moreover, they are themselves primarily concerned with the prices they pay and, if they grow somewhat lax in this regard, are quickly prodded by their regulatory commissions. Thus, they would be much more likely to press for elimination of the higher prices resulting from price leadership (regardless of the impact on marginal producers) than would the average industrial customer. For these and other reasons, price leadership to "hold the umbrella" over the marginal producer would be very difficult even should GE attempt to exercise it.

Moreover, even if price leadership were possible, we do not believe it would necessarily assure the economic survival of the little fellow. Reason: styling, appearance, extras, etc., have little influence on utilities. If the prices on competitive models are the same, the purchasing agent will buy based on a thorough analysis of the technological advantages, services available, product guarantees, etc. And, in these attributes, the size of the manufacturer is almost as important as are the prices. Thus, stabilized prices would not necessarily assure the small producer of a share of the market as they do in many other industries.

General Electric's corporate policy on these points is quite clear. It believes in free competition and directs its operating managers to exercise its competitive advantages to the full. But, out on the firing line things may look different. For, if an operating manager realized that compliance with policy would force a smaller competitor out of business, would he risk bringing the Justice Department down on GE for violation of section II of the Sherman Act? Moreover, what if the small competitor pointed out his danger and added that his only recourse was an appeal to Washington? We do not imply that this was the case; obviously, the motives of the conspirators were complex and, possibly, conflicting. We simply wish to point out that full compliance with GE's emphatically promulgated corporate policy and with section I of the Sherman Act might well have put the company afoul of section II. Perhaps the latter seemed the more imminent possibility to the operating executives. If so, as explained above, the nature of this industry is such that the only way to "hold the umbrella" was by agreeing (i.e., conspiring) not only to set prices, but to allocate shares of the market.

Despite the conspiracies in the electrical equipment industry, the statistical evidence indicates that the prices of electrical equipment have risen no more—indeed less—than the prices of other equipment in industries where no violations have been charged.

Here, by way of example, are the trends of prices in (a) construction machinery and equipment, (b) metal working machinery and equipment, and (c) electrical machinery and equipment. Prices in the electrical lines went up less than in the others, indicating that the consumer was not disregarded nor the Government defrauded in this market.

On the other hand, consider the violence of the cycle in the electrical equipment industry—a typical "prince or pauper" business, despite the fact, as this chart also shows, that its customers, the electric utilities, have an exceptionally stable sales trend. Were the strong companies to take full advantage of their power to cut prices and survive, the little fellows in the industry, who had less strength and less ability to pass 52 percent of the loss to Uncle Sam, would obviously be forced out of business during the "pauper" period.

Did Judge Ganey in making his observations on the vital issue at stake, namely America's image of a free economy, and did the editors of Life in their denunciation of the "crooks" who have set back the American corporation in its progress toward a more responsible role in social and quasi-political life, take into consideration the fact that a perfectly free price economy, in the Adam Smith sense of the word, has not been in existence for over 200 years? Has our leadership forgotten that America imposed tariffs upon imports long, long ago, for the express purpose of protecting, or putting a floor under, the prices of our manufactures? Are they unaware that we have a law fixing the minimum wage for labor, regardless of supply and demand, and that the present administration, with the assistance of the Attorney General, is trying very hard, and right now, to fix the price higher than before? Is it possible that the editors of Life

are ignorant of the laws to keep up, or raise, the prices of agricultural products, thus defrauding the American public of billions of dollars a year? Has the administration forgotten its avowed purpose of manipulating the short-term interest rate upward while rigging the long-term rate lower?

But hold, you may say. These interventions are Government interventions into the free market. They are sanctioned by law and executed in the public interest. The antitrust laws are designed to control or prevent monopoly precisely because monopolistic control would enable private interests to set prices just as the Government sets prices but without the Government's responsibility for the consumer's interest. Therefore, monopoly and price fixing by private interests cannot be tolerated nor judged on the same basis as price control by Government. Corporations that, to use Life's language, are to progress toward "social and quasi-political responsibility" must have a conscience about these things. They must avoid monopolistic abuses, which means, apparently, that they must permit prices to fluctuate without restraint in the private sectors of the economy.

The first point to recognize here is that because of Government intervention in the markets, especially in such critical sectors as wages, agricultural prices, interest rates, and manufactured goods prices, the free economy that Judge Ganey says America professes to believe in and holds forth as a model to others is a myth. What we mean by a free economy, in reality, is a market economy in which prices are allowed to fluctuate within socially tolerable limits.

What are the socially tolerable limits?

The classical example of free prices that went beyond the socially tolerable limit and also failed to perform their function as a regulator of supply and demand is agriculture, especially during the late twenties and thirties. According to theory, agricultural production should have diminished from 1925 to 1932 because agricultural prices were falling during those years. But wheat, corn, and other agricultural products were not produced in diminishing quantities; they were produced in increasing quantities between 1925 and 1932, not despite falling prices but because of falling prices. The farmer who had debts to pay and an accustomed standard of living to support, worked harder to grow bigger crops in order to compensate for the lower price he was receiving. (The prices he paid for manufactured products, although they too declined during these years, did not fall so rapidly as farm prices, partly because of tariff protection for the manufactured goods.) Now, in time, the lower prices would have liquidated a large portion of the farm population and farm production. Such liquidation would have been in conformity with the law of supply and demand as it expressed itself at the time—and it might have been wise. But it might also have proven unwise in the long run, and besides, the farmer who was about to be liquidated, had no place to go. If he surrendered his farm, he had little prospect of getting a job in the city which was then crowded with unemployed. So the farmers simply refused to allow the mortgage companies to foreclose on their farms. They defied the orders of the court with arms. Their insurrection in 1933 was, in fact, a revolution against constituted authority and an act of open rebellion. Rightly or wrongly, the Government (Franklin Roosevelt's New Deal) decided that in this instance rulings under the law of supply and demand were to be suspended and the liquidation of marginal farm producers enjoined. The socially tolerable limit of price fluctuation had been exceeded. To this day, we have laws which regulate the tolerable limits of price fluctuation in agricultural commodities relative to other products.

We also have laws which set a minimum floor on wage rates. No matter how great the surplus of labor, under law an employer may no longer pay an employee less than the minimum wage. This is a direct contravention of the law of supply and demand and an expression of the conviction that free price fluctuations must be contained within socially tolerable limits.

What would American manufacturers say if tomorrow all tariffs were to be abolished? What would the farmers say if tomorrow price supports on agricultural products were to be removed? What would laboring men say if minimum wage rates were to be abolished? Obviously the question is a reductio ad absurdum. Today nobody really wants prices to fluctuate with perfect freedom.

How then do we meet the problem of determining the socially tolerable limits of price fluctuation in markets other than the labor market and the money market? Tariffs, of course, are an effort to put a floor under the market for some manufactured goods. But that the problem cuts much deeper than can be handled by tariffs alone is proved by the existence in no less than 18 States of laws which compel private industry to recognize price agreements designed for the express purpose of keeping price fluctuations within socially tolerable limits. In over one-third of the States of the Union, a perfectly free price fluctuation is prohibited by law.

During the first 4 years of the New Deal, the NRA was set up for the express purpose of determining fair prices and controlling the socially intolerable fluctuations in prices that might have been brought about by the unfettered play of demand and supply.

For many years thereafter, as the Attorney General attests in the Life article, the efforts of businessmen to stabilize prices, or fix them, if you prefer a harsher word, was sanctioned, or at least condoned, in that the maximum penalty was a slap on the wrist in the form of a fine that did less economic injury to all concerned than the continuation of the violations. Business then went on again, as usual. But the violation was condoned, not because "everybody was doing it". (This is putting the cart before the horse.) Everybody was doing it because it was the only way in which to limit the excessive price fluctuations that nobody wanted.

The heart of the problem is that the antitrust laws, if endorsed to the letter, would have the effect of destroying their own reason for being. General Electric and Westinghouse would, in a relatively short time, become the only competitors in their field. In the case of practically all the major cyclical industries—steel, machinery and equipment, textiles—the entire market would soon be preempted by the strongest company if prices were allowed to fluctuate without control.

The cyclical swings in demand for electrical equipment are extremely wide. When demand falls so low as it does at times in this industry, the economic compulsion, if no price controls are enforced, is to lower the selling price below the cost of production in order to absorb at least a portion of the overhead and general administrative expense that must continue whether the companies are doing a satisfactory volume of business or not. The problem is especially relevant to General Electric, for GE is not one industry but dozens of industries. Some of these industries in fact a majority, make profits in most years. A minority may suffer losses during a cyclical recession. If the loss divisions of General Electric had to operate in a perfectly free price economy, they would drop their prices as low as was necessary to capture the total demand during a cyclical depression. The losses in those divisions would be paid for to the extent of 52 percent by tax rebates on the profitable divisions of the company. The small producer, who had no profitable divisions to absorb the losses sustained in the unprofitable market, would simply have to go out of business. In time, General Electric and Westinghouse would stand alone on the field, the sole survivors, and the giant monopolies that the law had intended to prevent.

Thus, the big fellow in the cyclical industries is on the horns of a dilemma. If he fixes prices or stabilizes them, he may be guilty of conspiracy to violate the antitrust laws. On the other hand, if he observes this section of the law and is governed only by the law of supply and demand, he soon destroys all his competition and emerges as the monopoly power in his field and a violator of section II of the same law. Which horn would Judge Ganey prefer to sit on? Which perch would the Attorney General prefer? Where does the editor of Life think would be the moral seat?

Here, then, is the confusion we actually live in.

In truth, the United States has not been betrayed by crooks, as Life blares, nor has its ideology been subverted, as Judge Ganey charges. Yet the American people are in real danger: their leadership has failed them. It simply has not done its job. Would that it were possible to say merely that the leadership was either hypocritical or ignorant. Were this the truth, the remedy would be clear. Unfortunately, the far more terrifying truth of the matter is that the leadership is probably neither hypocritical nor ignorant, but schizophrenic—that is to say, compulsively determined to believe in a fantasy that is at odds with reality. Naturally, it reacts in blind rage when its dream world is impunged. If the Attorney General truly desires both completely unrestricted price fluctuation and protection of the small businessman, and if the fantasy that America lives in a free price economy is breaking on the rocks of everyday living, before our very eyes, would it not be wiser, instead of striking out in a rage at a few victims of the circumstances, to explore the possibility of writing laws that could govern in reality? Reflective citizens might well say, in the words of the Attorney General, "We will not accept this. We ought to be able to do better."

Keynote Address Delivered at the 1961 Annual State Convention of the South Dakota Young GOP College Federation

EXTENSION OF REMARKS

OF

HON. FRANCIS CASE

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Wednesday, April 12, 1961

Mr. CASE of South Dakota. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the text of the keynote address delivered at the 1961 annual convention of the South Dakota GOP College Federation, at Huron, S. Dak., on March 25, 1961.

Once in a great while a significant contribution is made in the broad scope and sweep of philosophy, principles, and ideals which in one sense are described as politics but in a broader sense are the great American ideal. Such a contribution was the address by Bob Ruddy, of Aberdeen, a University of South Dakota student, who served as past pres-

ident of the University of South Dakota Young Republican Club of 1959–60.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

KEYNOTE ADDRESS GIVEN AT 1961 ANNUAL STATE CONVENTION OF SOUTH DAKOTA YOUNG GOP COLLEGE FEDERATION HELD AT HURON, S. DAK., ON MARCH 25, 1961

(Presented by Bob Ruddy of Aberdeen, a University of South Dakota student who served as past president of the University of South Dakota Young Republican Club, in 1959–60 as State chairman of the college federation, in 1960–61 as chairman of region VIII (four Midwestern States) in the national college federation, and who was voted at the recent State convention as recipient of the first annual "Outstanding Young Republican" award presented by the South Dakota College Federation.)

It is significant that we are gathered here today during a period which has a great meaning for all of us. The year 1961 marks an important date in the history of all South Dakotans, for it was 100 years ago that this land in which we live gained the status of a Territory.

Dakota, the wild land, has been conquered. From out of the barren wilderness of the frontier, strong men and women had claimed a piece of land and called it their domain. This was not an easy task. In fact, it was exceedingly difficult.

The problems they faced were legion: harsh winters, hostile Indians, a scarcity of food and water, and the inconveniences and hardships of the Dakota prairies, to name just a few. In addition, they met and solved the ultimate problem that all men who desire to live together in harmony must somehow solve, how to govern themselves.

IN SOUTH DAKOTA POLITICS

Then men and women who accomplished this task were not supermen, but mortal men. As mortal as you or I and with the same traits of greatness and weakness. Nor were they old men, ths eepolitical forefathers. On the contrary, most of them were in their early thirties and some younger still. Yet these men and women blazed a trail in South Dakota politics that I believe should be emulated by us today.

It should be emulated because this State is lacking an important substance, a substance that is lacking now but was present in pioneer days, and—of most consequence at the present time—a substance that is necessary if this State is to keep pace with the rest of the Nation to maintain for this State the one product that it can least afford to lose—youth.

The advance report for the 1960 census shows that, from 1950 to 1960, our State lost 21.6 percent of its population between the ages of 20 and 24, and 22.7 percent of those between 25 and 29. Figures such as these indicate that something is drastically wrong with the health of South Dakota. Young people leave this State because they feel that it has little future. This is wrong.

It is wrong because South Dakota stands on the verge of fulfilling its great promise. It will not be fulfilled, however, until we have restored that missing substance—the substance that will keep the young people here, by demonstrating to them that at least one agency in this State is cognizant of their problems, is interested in them, and will make an all-out effort to realistically solve them.

POLITICAL LEADERSHIP OF YOUNG PEOPLE

That missing substance that we must restore in order to do all of this is the voice and the political leadership of the young people themselves. What we lack in this State is a symbol of hope for the future, an indication of promise and planning that can be demonstrated to others by a forceful, energetic, forward-looking political movement.

Our State discovered, developed, and led by young men and women has seen the pendulum swing to the opposite extreme to such an extent that our youthful viewpoint is rarely expressed, our leadership conspicuous by its absence.

I have been privileged to sit in at times with the leaders of our party. I have watched our State legislators in action. I have examined the various candidates for political office, and always I am bothered by the same questions:

"Where are the energetic young leaders in our State? Why have we seen the pendulum swing the other way? Is our State destined to remain devoid of young leadership? Can we afford to remain this way?"

IF YOU MAKE UP YOUR MIND

The answer is no. It cannot and it will not, but only if you are ready to recognize that the solution to the problem lies within this group. It will not if you make up your mind that it is time the pendulum started to swing back again. The initiative must come from this group, for you are best suited to fill the void that now exists. The initiative must come from this group because every action must have a reaction.

Sometime during the past century—and particularly during the past quarter of a century—the young people of this State let the reins of leadership slip from their hands and we must take up once again those reins so that we will have some influence with the political dynasty of this State.

The initiative must come from this group, because the first move on the downhill slide was made by our age group, so consequently the initial move to start on the road back must also be with our group. As each beginning has an end, each end is also a beginning. This can be the end of one era and the beginning of another.

MY PLEA TO YOU

And so, my fellow students, this is my plea to you. Let us pledge ourselves to restore to the youth of South Dakota the position in State government that it once held, and to which it rightfully belongs.

Let us do this by utilizing once again those qualities that enabled the pioneers of our State to form a territory from a wilderness: leadership, initiative, the courage of their convictions and loyalty to a cause.

To accomplish this purpose, it will be necessary for the college federation to set up a twofold plan of action designed to give strength to our position, for our voice and our leadership will never be recognized unless we speak from strength.

ON BEHALF OF THE PARTY

First, we must step up our activities on behalf of the Republican Party. The past campaign afforded us an opportunity to work for our party, and the response was most gratifying. It was gratifying because we have gained the respect and the gratitude of the senior party, and we can take pride in the fact that we contributed to the Republican victory in this State.

This, however, should not be considered as the end but rather only the beginning. We must be active every year, not just in election years. It was gratifying for another reason, and that is because many of us found that working for a political party is exciting, interesting and educational. In addition to that, it fulfilled a need that we all have—the need to feel that we are doing something to better the society in which we live.

It is upon this basis that I believe we can expand our activities and that, although this year is not an election year, we can continue to seek out means by which we might do our part.

In this area, we should strive to reach a mutual agreement with the Young Republican League as to which projects will be theirs, and which projects will be ours. The keynote should be cooperation and not competition, but we should enter into this agreement with both organizations realistically accepting the fact that we are equals—both dedicated toward the same end.

MUCH EFFORT ON OUR PART

To sit in the councils of the party, and to be accepted by the senior Republicans, will require work and much effort on our part. Our strength will be in proportion to the work we accomplish. We cannot expect to receive the position we desire on a silver platter.

The second part of the plan will be more difficult to accomplish and may take longer because we are sadly lacking in this area. We must educate our fellow students in political philosophy. If our voice is to be heard it must ring with the sound of authority, and authority can only come with knowledge.

The problems that will confront us in our task of educating ourselves will be divided primarily into two groups. You can expect to find some opposition from both our elders and our fellow students.

Unfortunately, we are living in a period when society, and particularly school authorities, have adopted a policy of encouraging coddling rather than maturity—protection rather than stability. Society will not encourage you to speak out, you must take the initiative yourself. We can, however, succeed if we pursue our objective with dignity, thoughtfulness, and honesty.

WE SUFFER LESS

Political apathy is a result of political ignorance. Those that know nothing or understand nothing of political problems care not for political problems. This is a sickness of the body politic that paralyzes all segments of our population, not just the young. In fact, my experience has shown that we suffer less from this malady than do the others.

The tragedy is that we are in the position of being able to do better. What more logical function could our organization have than to stimulate our fellow students in the quest of political knowledge? You will find no greater opportunity for such an undertaking, capitalizing on the atmosphere of learning that surrounds every college campus.
